RELX PLC	Industrials	3.1	0.1
WOLTERS KLUWER NV	Industrials	3.0	0.0

Investment Objective

The fund aims to achieve income and long-term capital growth principally through investments in income producing equity securities globally. The Investment Manager will target investments which it believes offer attractive dividend yields in addition to price appreciation. As this fund may invest globally, it may be exposed to countries considered to be emerging markets.

Definition of Terms

Annualised Volatility is a measure of how variable returns for a fund or comparative market index have been around their historical average. Two funds may produce the same return over a period. The fund whose monthly returns have varied less will have a lower annualised volatility and will be considered to have achieved its returns with less risk.

Beta is a measure of a fund's sensitivity to market movement (as represented by a market index). The beta of the market is 1.00 by definition. A beta of 1.10 shows that the fund could be expected to perform 10% better than the index in up markets and 10% worse in down markets, assuming all other factors remain constant. Conversely, a beta of 0.85 indicates that the fund could be expected to perform 15% worse than the market return during up markets and 15% better during down markets.

Sharpe Ratio is a measure of a fund's risk adjusted performance taking into account the return on a risk-free investment. The ratio allows an investor to assess whether the fund is generating adequate returns for the level of risk it is taking. The higher the ratio, the better the risk-adjusted performance has been. If the ratio is negative, the fund has returned less than the risk-free rate.

Active Money is the sum of the fund's overweight positions (including effective cash) when compared to the market index.

A position combines all equity investments (including derivatives) linked to an issuing company. Derivatives are included on an exposure basis so they reflect the equivalent underlying shares needed to generate the same return. Geographic and sector breakdown tables are calculated using the positions methodology.

The CPF interest rate for the Ordinary Account (OA) is based on the 12-month fixed deposit and month-end savings rates of the major local banks. Under the CPF Act, the Board pays a minimum interest of 2.5% per annum when this interest formula yields a lower rate. The CPF Board pays an extra interest rate of 1% per annum on the first \$60,000 of a CPF member's combined balances, including up to \$20,000 in the OA. The first \$20,000 in the OA will not be allowed to be invested under the CPF Investment Scheme. FIL Investment Management (Singapore) Limited [FIMSL] (Co. Reg. No.: 199006300E) is a responsible entity for the fund in Singapore. Prospectus of the fund is available from FIMSL or its distributors upon request. Potential investors should read the prospectus before investing. All views expressed and references to specific securities are included for illustration only, and should not be construed as an offer or recommendation. This document is for information only and does not have regard to the specific investment objectives, financial situation and particular needs of the person who may receive it. Potential investor should seek advice from a financial adviser before investing. If that potential investor chooses not to seek advice from a financial adviser, he should consider whether the fund is suitable for him. Past performance of the fund is not indicative of the future performance. Prices can go up and down. The value of the shares of the fund and the income accruing to them may fall or rise. Investors investing in a fund denominated in a non-local currency should be aware of exchange rate risk. The fund is not available to US citizens, residents or greencard holders.
