Performance for additional share classes is shown later in this document.

Past performance is not an indicator of future performance.

Source for performance: T. Rowe Price. Fund performance is calculated using the official NAV with dividends reinvested, if any. The value of the investment will vary and is not guaranteed. It will be affected by changes in the exchange rate between the base currency of the fund and the subscription currency, if different. Sales charges (up to a maximum of 5% for the A Class), taxes and other locally applied costs have not been deducted and if applicable, they will reduce the performance figures.

Please note that no management fees are charged to the Z, S and J share classes. No administration agent fees are charged to the J Class. No expenses or any other fees are charged to the Z class. Fee arrangements for the Z, S and J share classes are made directly with the investment manager. Please see the prospectus for further information.

Where the base currency of the fund differs from the share class currency, exchange rate movements may affect returns.

Hedged share classes (denoted by 'h') utilize investment techniques to mitigate currency risk between the underlying investment currency(ies) of the fund and the currency of the hedged share class. The costs of doing so will be charged to the share class and there is no guarantee that such hedging will be effective.

Performance data will be displayed when a share class has more than 1 year history of returns.

The indicative benchmark is 60% MSCI AC World Index (Developed Markets only hedged to USD), 28% Bloomberg Barclays Global Aggregate Bond Index (hedged to USD) and 12% USD LIBOR.

Risks - The following risks are materially relevant to the fund (refer to prospectus for further details):

China Interbank Bond Market risk - market volatility and potential lack of liquidity due to low trading volume of certain debt securities in the China Interbank Bond Market may result in prices of certain debt securities traded on such market fluctuating significantly.

Country risk (Russia and Ukraine) - in these countries, risks associated with custody, counterparties and market volatility are higher than in developed countries.

Credit risk - a bond or money market security could lose value if the issuer's financial health deteriorates.

Currency risk - changes in currency exchange rates could reduce investment gains or increase investment losses.

Default risk - the issuers of certain bonds could become unable to make payments on their bonds.

Derivatives risk - derivatives may result in losses that are significantly greater than the cost of the derivative.

Emerging markets risk - emerging markets are less established than developed markets and therefore involve higher risks.

Interest rate risk - when interest rates rise, bond values generally fall. This risk is generally greater the longer the maturity of a bond investment and the higher its credit quality.

Liquidity risk - any security could become hard to value or to sell at a desired time and price.

Small and mid-cap risk - stocks of small and mid-size companies can be more volatile than stocks of larger companies.

Style risk - different investment styles typically go in and out of favour depending on market conditions and investor sentiment.
