

UBS (Lux) Bond SICAV – Global Corporates (USD) (CHF hedged) I-A1-acc

Data as of the end of June 2018

Portrait

- Invests in global corporate bonds mainly from the investment grade universe.
- Careful security and sector selection and active duration management.
- Investment target is to achieve as high a return as possible in line with the development of the global corporate bond market.
- Even though the credit quality of the portfolio is investment grade, the default risk is higher with corporate bonds than with government paper. Changes in interest rates have an effect on the value of the portfolio. This requires corresponding risk tolerance and capacity. All investments are subject to market fluctuations. Every fund has specific risks, which can significantly increase under unusual market conditions. The fund can use derivatives, which may result in additional risks (particularly counterparty risk).
