Where there are less than 5 years worth of data, missing returns are simulated using an appropriate benchmark. The SRRRI may change over time and should not be used as an indicator of future risk or returns. Are there any other particular risks?

The following risks may be materially relevant but may not always be

adequately captured by the synthetic risk indicator and may cause additional loss:

- Concentration risk: To the extent that the fund's investments are concentrated in a particular country, market, industry, sector or asset class, the fund may be susceptible to loss due to adverse occurrences affecting that country, market, industry, sector or asset class.

- Active management risk: Active management relies on anticipating various market developments and/or security selection. There is a risk at any given time that the fund may not be invested in the highest-performing markets or securities. The fund's net asset value may also decline.

- Financial, economic, regulatory and political risks: Financial instruments are impacted by various factors, including, without being exhaustive, the development of the financial market, the economic development of issuers who are themselves affected by the general world economic situation, and economic, regulatory and political conditions prevailing in the relevant country.
