KEY RISKS

WHAT ARE THE KEY RISKS OF THIS INVESTMENT?

The value of the Fund may rise or fall. You may lose some or all of your investment depending on the performance of the underlying securities. Factors that may affect the performance of these securities include, without limitation, market risks, fluctuations in interest rates and foreign exchange rates, political instability, exchange controls, changes in taxation and foreign investment policies. Some of the key risks associated with the Fund are described below.

Refer to "Risks" in Section 15 and "Appendix 1" of the Prospectus for further information.

Market Risks

You are exposed to market risk.
Prices of the securities owned by the Underlying Fund may rise or fall in response to changes in economic conditions, political conditions, interest rates, and market sentiment. These may cause the price of units of the Fund to go up or down.

Liquidity Risks

You are exposed to liquidity risk.
The securities that the Underlying Fund owns may at times lack liquidity thereby affecting their value or ease of disposal. The manager may, subject to the trust deed, limit the total number of units which unit holders may dispose if the total number of units to be disposed on any dealing day exceeds 10%.

Product-Specific Risks

You may be exposed to currency risk.
The assets and income of the Underlying Fund will be substantially denominated in currencies other than the Singapore dollar. Currency fluctuations between foreign currencies and the Singapore dollar may affect the income and valuation of the assets of the Underlying Fund in ways unrelated to business performance.

You are exposed to regulatory risk.
The investment objectives and parameters of the Underlying Fund are restricted by legislative and regulatory guidelines. There may be a risk that legislative or regulatory changes may make it less likely for the Fund to achieve its objectives.

You are exposed to single country risk.
The Underlying Fund invests in a single country market, making it more concentrated and potentially more volatile than if it invested across regional or global markets.
