KEY PRODUCT FEATURES

WHAT ARE YOU INVESTING IN?

- You are investing in a collective investment scheme that is a sub-fund of the Luxembourg incorporated SICAV Threadneedle (Lux), which seeks to achieve long term capital appreciation by investing principally in equity securities in the technology sector.

- The distribution policies of the Share Classes are as follows:

Share Classes whose denomination ends in a “P” or “C”: Dividend, if declared, will be distributed. Dividends may include an element of capital which will have an impact on capital appreciation. The payment of dividends will result in an immediate decrease in the net asset value per share regardless of whether or not they are paid out of capital.

Other Share Classes: No dividend distribution. Income, if any, will be re-invested.

Refer to Paragraphs 1, 2, 5 and 19.1 of the Singapore Prospectus for further information on features of the product.

Investment Strategy

- The Portfolio will invest principally in transferable securities of companies with business operations in technology and technology-related industries worldwide.
- The Portfolio may invest in transferable securities of issuers of any size and domiciled in any country. The Portfolio will normally invest its assets in any equity securities, including common stock, securities convertible or exchangeable into common stock, rights and warrants to purchase common stock and depositary receipts representing ownership interest in these equity securities.
- The Portfolio may invest up to 25% of its assets in preferred stock and Investment Grade debt securities.
- **The Portfolio may use derivatives for hedging and efficient portfolio management.**
- Hedging between the currency of the Class and the base currency of the Portfolio will be carried out for Classes whose denomination ends in a “H” or “C”. These Classes will be hedged, with the objective of minimising currency risk exposure. This activity may increase or decrease the return to investors in those Classes.

Refer to Paragraph 5 of the Singapore Prospectus for further information on the investment strategy.

¹ The Singapore Prospectus is available for collection during normal Singapore business hours from Singapore distributors for the Portfolio or accessible at www.columbiathreadneedle.sg.

² Provided for available unit classes inception before 31 March 2018.

KEY RISKS

WHAT ARE THE KEY RISKS OF THIS INVESTMENT?

The value of the product and its dividends or coupons (if any) may rise or fall. These risk factors may cause you to lose some or all of your investment:

Refer to Paragraph 8 of the Singapore Prospectus for further information on the risk of the product.

Market and Credit Risks

■ You are exposed to general market risks.

- The value of investments may fall as well as rise and you may not get back the sum originally invested, especially if investments are not held for the long term.

■ You are exposed to risks of investments in the technology sector.

- The Portfolio invests in companies with business operations in technology and technology-related industries and such sector concentration may add more volatility than a more broadly diversified portfolio.

■ You are exposed to exchange rate risks.

- Where investments are made by the Portfolio in assets that are denominated in currencies other than USD (the base currency of the Portfolio), changes in exchange rates may affect the value of your investments.
- The Portfolio and share class offered may not be denominated in SGD and you may therefore be exposed to additional exchange rate risks if your reference currency is SGD.

Liquidity Risks

■ The Portfolio is not listed in Singapore and you can redeem only on Valuation Dates (subject to the opening hours of the Singapore distributors).

- There is no secondary market for the Portfolio in Singapore. All redemption requests should be submitted in the manner set out in the Singapore Prospectus.

■ Your right to request for redemption may be suspended or deferred in certain circumstances.

Product-Specific Risks

■ You are exposed to volatility risks.

- The Portfolio may experience significant price volatility.

■ You are exposed to derivatives risks.

- The use of derivatives by the Portfolio may increase the volatility of the Portfolio and may involve a small investment of cash relative to the magnitude of risk assumed. In addition, these techniques could result in a loss if the counterparty of the transaction does not perform as promised.
- If the Management Company or the Sub-Advisor judges market conditions incorrectly or employs a strategy that does not correlate well with the Portfolio’s investments, these techniques could result in a loss.
