KEY RISKS	
WHAT ARE THE KEY RISKS OF THIS INVESTMENT? <p>The value of the Fund may rise or fall. You may lose some or all of your investment depending on the performance of the underlying securities. Factors that may affect the performance of these securities include, without limitation, market risks, fluctuations in interest rates and foreign exchange rates, political instability, exchange controls, changes in taxation and foreign investment policies. Some of the key risks associated with the Fund are described below.</p>	Refer to “Risks” in Section 15 and “Appendix 1” of the Prospectus for further information.
Market Risks	
You are exposed to market risk. <p>Prices of the securities owned by the Fund and/or the Underlying Funds may rise or fall in response to changes in economic conditions, political conditions, interest rates, and market sentiment. These may cause the price of units of the Fund to go up or down.</p>	
Liquidity Risks	
You are exposed to liquidity risk. <p>The securities that the Fund and/or the Underlying Funds own may at times lack liquidity thereby affecting their value or ease of disposal. The manager may, subject to the trust deed, limit the total number of units which unit holders may dispose if the total number of units to be disposed on any dealing day exceeds 10%.</p>	
Product-Specific Risks	
You are exposed to currency risk. <p>The assets and income of the Fund and/or the Underlying Funds will be substantially denominated in currencies other than the Singapore dollar. Currency fluctuations between foreign currencies and the Singapore dollar may affect the income and valuation of the assets of the Fund in ways unrelated to business performance.</p>	

You are exposed to regulatory risk.

The investment objectives and parameters of the Fund and/or the Underlying Funds are restricted by legislative and regulatory guidelines. There may be a risk that legislative or regulatory changes may make it less likely for the Fund to achieve its objectives.

You are exposed to regional and emerging markets risk.

The Fund and/or the Underlying Funds may experience increased volatility as emerging markets lack the diversity of global markets. Exposure to emerging markets also increases potential volatility in your portfolio as the region's legal, judicial and regulatory infrastructure is still developing and this may create uncertainty for investors.

You are exposed to additional risks related to the Underlying Fund of the Aberdeen China Opportunities Fund's ("ACOF") investment in Chinese securities through the use of a Qualified Foreign Institutional Investor ("QFII") licence.

If the creditors of the QFII successfully assert that the securities and other assets in the nominee accounts are owned by the QFII and not the underlying fund of the ACOF, the creditors of the QFII may seek payment from the assets of the Underlying Fund of the ACOF, which could in turn affect the net asset value of the Fund.

You may be exposed to derivatives risk.

The Underlying Funds (excluding Aberdeen Global – Indian Equity Fund) may use financial derivatives instruments for the purposes of hedging and/or efficient portfolio management.
