The Sub-Fund may use financial derivative instruments for the purposes of hedging and efficient portfolio management. The net market exposure of the Sub-Fund will typically range between 80% and 100% of the Sub-Fund's net assets.

### Risk and Reward Profile

The above rating is based on the historic volatility of the Net Asset Value of the Share Class over the last five years and may not be a reliable indication of the future risk profile of the Share Class.

The risk and reward category shown above is not guaranteed to remain unchanged and may change over time.

A Share Class with the lowest risk rating does not mean a risk-free investment.

**Why is this Share Class in this category?** This Share Class is classified in category 7 because its Net Asset Value has shown very high fluctuations historically.

#### Other material risks:

- The value of your investment may fall as well as rise and you may get back less than you originally invested.
- Because the Sub-Fund is aggressively managed, volatility may be high as the Sub-Fund may take larger position sizes, may have high turnover of holdings and at times may have a significant exposure to certain areas of the market.
- The value of equity securities may go down as well as up in response to the performance of individual companies and general market conditions.

- The single market in which the Sub-Fund invests may be subject to particular political and economic risks, and as a result, the Sub-Fund may be more volatile than more broadly diversified funds.
- Emerging markets may be subject to increased risks, including less developed custody and settlement practices, higher volatility and lower liquidity than non emerging market securities.
- The Sub-Fund may be concentrated in a limited number of securities and as a result, may be more volatile than more broadly diversified funds.
- The Sub-Fund may hold significant investments in securities of smaller companies which may be less liquid, more volatile and tend to carry greater financial risk than securities of larger companies.
- There is a risk that the Sub-Fund may not participate fully in a rise in the market due to the fact that it may allocate up to 20% of the portfolio in cash.
- Investors should be aware that there is a Brazilian Presidential Decree in force, as amended from time to time, detailing the current IOF tax rate (Tax on Financial Operations), that applies to foreign exchange inflows and outflows. The application of the IOF tax may reduce the Net Asset Value per share.
- Movements in currency exchange rates can adversely affect the return of your investment. The currency hedging that may be used to minimise the effect of currency fluctuations may not always be successful.
- Further information about risks can be found in "Appendix IV - Risk Factors" of the Prospectus.
