

FUND FACT SHEET

Loomis Sayles Global Opportunistic Bond Fund

APRIL 2019

FUND HIGHLIGHTS

- Flexible, go-anywhere bond portfolio investing primarily in investment grade debt securities worldwide.
- Focus on investment grade government and corporate debt with opportunistic allocations to emerging markets, below-investment grade debt, and other fixed income asset classes.
- Combines bottom-up security selection with top-down strategic macroeconomic views.
- Five key sources of alpha: security and sector selection, country allocation, currency allocation, and yield curve positioning.

PERFORMANCE DATA SHOWN REPRESENTS PAST PERFORMANCE AND IS NOT A GUARANTEE OF FUTURE RESULTS. More recent performance may be lower or higher. Principal value and returns fluctuate over time (including as a result of currency fluctuations) so that shares, when redeemed, will be worth more or less than their original cost. Performance shown is net of all fund expenses, but does not include the effect of sales charges, taxation or paying agent charges, and assumes reinvestment of dividends. If such charges were included, returns would have been lower. Performance for other share classes will be more or less depending on differences in fees and sales charges. Please see additional notes on page 3 & 4 of this material for important information.

SHARE CLASS: H-I/A (EUR)

ABOUT THE FUND

Investment Objective

Achieve high returns through capital growth and income.

MANAGEMENT

Investment Manager Natixis IM S.A.

Delegate Investment Manager Loomis Sayles

Loomis, Sayles & Company has served the needs of institutional and individual investors for more than 80 years. As an actively managed, multi-style investment manager, the firm offers both traditional and highly specialized asset classes. Employing an opportunistic approach, balanced with disciplined, bottom-up research and quantitative risk analysis, the investment teams strive to produce above-average returns across asset classes and categories.

Headquarters Boston

Founded 1926

Assets Under Management U.S.\$ 234.4/€ 205.0 (Billion) (31/12/2018)

Calculation of performance during periods of share class inactivity (if applicable)

For periods when certain share classes were unsubscribed or not yet created (the "inactive share classes"), performance is imputed using the actual performance of the fund's active share class which has been determined by the management company as having the closest characteristics to such inactive share class and adjusting it based on the difference in TERs and, where applicable, converting the net asset value of the active share class into the currency of quotation of the inactive share class. The quoted performance for such inactive share class is the result of an indicative calculation.

Illustrative Growth of 10,000

The graph compares the growth of 10,000 in a fund with that of an index. The total returns are not adjusted to reflect sales charges or the effects of taxation, but are adjusted to reflect actual ongoing fund expenses, and assume reinvestment of dividends and capital gains. If adjusted, sales charges would reduce the performance quoted. The index is an unmanaged portfolio of specified securities and cannot be invested in directly. The index does not reflect any initial or ongoing expenses. A fund's portfolio may differ significantly from the securities in the index. The index is chosen by the fund manager.

Morningstar Rating and Category

The Morningstar Rating is calculated for funds with at least a three-year history. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a fund's monthly performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of funds in each category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars and the bottom 10% receive 1 star. The Overall Morningstar Rating for a mutual fund is derived from a weighted average of the performance figures associated with its three-, five- and 10-year (if applicable) Morningstar Rating metrics.

© 2019 Morningstar, Inc. All Rights Reserved. The information contained herein: (1) is proprietary to Morningstar; (2) may not be copied or distributed; and (3) is not warranted to be accurate, complete or timely. Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. Past performance is no guarantee of future results.

Risk Measures

The Risk & Reward Profile includes a "synthetic risk and reward indicator" (SRRI), as defined by the European Securities and Markets Authority (ESMA). This risk measure is calculated based on volatility of returns, in other words fluctuations in the net asset value (NAV) of the fund. The indicator is presented on a numerical scale of 1 to 7, where 1 is low and 7 high.

The risk measures below are calculated for funds with at least a three-year history.

Alpha measures the difference between a fund's actual returns and its expected performance, given its level of risk (as measured by beta). Alpha is often seen as a measure of the value added or subtracted by a portfolio manager.

Beta is a measure of a fund's sensitivity to market movements. A portfolio with a beta greater than 1 is more volatile than the market, and a portfolio with a beta less than 1 is less volatile than the market.

R-squared reflects the percentage of a fund's movements that are explained by movements in its benchmark index, showing the degree of correlation between the fund and the benchmark. This figure is also helpful in assessing how likely it is that alpha and beta are statistically significant.

The Sharpe ratio uses standard deviation and excess return to determine reward per unit of risk.

Standard deviation is a statistical measure of the volatility of the fund's returns.

Tracking Error is reported as a standard deviation percentage difference between the performance of the portfolio and the performance of the reference index. The lower the Tracking Error, the more the fund performance resembles to the performance of its reference index.

The Information Ratio is the difference between the fund's average annualized performance and the reference index divided by the standard deviation of the Tracking Error. The information ratio measures the portfolio manager's ability to generate excess returns

relative to the reference index.

Asset Allocation

Cash offset for Derivatives represents the amount of cash the portfolio manager should borrow if he's Long exposed via derivatives and vice versa.

The weighting of the portfolio in various asset classes, including "Other," is shown in this table. "Other" includes security types that are not neatly classified in the other asset classes, such as convertible bonds and preferred stocks.

In the table, allocation to the classes is shown for long positions, short positions, and net (long positions net of short) positions. These statistics summarize what the managers are buying and how they are positioning the portfolio. When short positions are captured in these portfolio statistics, investors get a more robust description of the funds' exposure and risk.

Equity Portfolio Statistics (if applicable)

The referenced data elements below are a weighted average of the long equity holdings in the portfolio.

The Price/Earnings ratio is a weighted average of the price/earnings ratios of the stocks in the underlying fund's portfolio. The P/E ratio of a stock is calculated by dividing the current price of the stock by its trailing 12-months' earnings per share.

The Price/Cash Flow ratio is a weighted average of the price/cash-flow ratios of the stocks in a fund's portfolio. Price/cashflow shows the ability of a business to generate cash and acts as a gauge of liquidity and solvency.

The Price/Book ratio is a weighted average of the price/book ratios of all the stocks in the underlying fund's portfolio. The P/B ratio of a company is calculated by dividing the market price of its stock by the company's per-share book value. Stocks with negative book values are excluded from this calculation.

Fixed-Income Portfolio Statistics (if applicable)

The referenced data elements below are a weighted average of the long fixed income holdings in the portfolio.

Duration measures the sensitivity of a fixed income security's price to changes in interest rates.

Average maturity is a weighted average of all the maturities of the bonds in a portfolio, computed by weighting each maturity date by the market value of the security.

Modified Duration is inversely related to percentage change in price on an average for a specific change in yield.

Dividend Yield is the rate of return on an investment expressed as a percent. Yield is calculated by dividing the amount you receive annually in dividends or interest by the amount you spent to buy the investment.

Fund Charges

The ongoing charges figure is based on expenses for the year ending December 2018. It excludes the portfolio transaction costs, except in the case of an entry/exit charge paid by the SICAV when buying or selling units in another collective investment undertaking.

CDSC (if applicable): Investors in class C Shares who redeem some or all of their Shares within one year from the date of their subscription may however be levied a contingent deferred sales charge ("CDSC") that will be retained by the financial institution through which the subscription of Shares was made by deduction from the redemption proceeds paid to the relevant investor.

Investors in class CW Shares who redeem some or all of their Shares within the first 3 years from the date of their subscription may however be subject to a contingent deferred sales charge ("CDSC") that will be retained by the financial institution through which the subscription of Shares was made by deducting such charge from the redemption proceeds paid to the relevant investor.

For more information about potential charges such as charges relating to excessive trading or market-timing practices please refer to the Fund's prospectus and the KIID.

Special Risk Considerations

Derivatives/Counterparty risks: Funds may enter into listed and unlisted derivative contracts in order to have an exposure to underlying assets or to protect their direct assets. Payments on these contracts vary with changes of the value of the underlying assets. These contracts may cause the Funds to have a higher market exposure than they would have otherwise, which may in some cases increase losses. Unlisted contracts are agreed with a specific counterparty. If the counterparty goes into liquidation or fails or defaults on the contract, the Fund could suffer a loss. Because they are not listed, these contracts can be difficult to price.

Changing Interest Rate risk: The value of fixed income securities held by a fund will rise or fall inversely with changes in interest rates. When interest rates decline, the market value of fixed income securities tends to increase. Interest rates typically vary from one country to the next for reasons including rapid fluctuations of a country's money supply, changes in demand by businesses and consumers to borrow money, and actual or anticipated changes in the rate of inflation.

Credit risk: Funds investing in debt securities issued by a corporate, bank or sovereign organization are exposed to the possibility that this issuer will not be able to reimburse debt holders (principal and interest payment). In addition, if after acquisition the perceived risk of failure increases, the value of such securities is likely to decrease.

Structured Instrument risk (including securitizations): Funds investing in structured instruments (securities linked to the performance of underlying assets, foreign currencies, indices of securities, interest rates, or other financial indicators) may wish to be exposed to an underlying asset or to secure their direct assets. Payments on such structured instruments may vary with changes of the value of the underlying assets. Funds investing in structured instruments issued by a corporate, bank or other organization are exposed to the possibility that this issuer will not be able to reimburse the holders. In addition, these instruments can involve significant economic leverage. As a result, funds may gain a higher market exposure than they would have otherwise, which may in some cases increase losses. Finally, funds may not be able to sell structured instruments quickly and easily. Securitizations result from complex financial configurations that may contain both legal and specific risks pertaining to the characteristics of the underlying assets. Historical data may not be a reliable indication for the future. Please refer to the prospectus for additional details on risks.

Bloomberg Barclays Global Aggregate Index covers the most liquid portion of the global investment grade fixedrate bond market, including government, credit (e.g. Corporate), and collateralized securities. This Index is shown for comparative purposes only. Index Source: Bloomberg Barclays.

The fund is a sub-fund of Natixis International Funds (Dublin) I which is organized as an investment company with variable capital under the laws of Ireland and is authorized by the financial regulator (Central Bank of Ireland) as a UCITS.

Natixis Investment Managers S.A., a Luxembourg management company authorized by the CSSF, is a Société anonyme with capital of 14 000 000 euros - RCS Luxembourg B 115843.
