The risk indicator SRI rates this fund on a scale of 1 to 7. This indicator is used to assess the level of risk of this product in comparison to other funds and a category 1 rating does not mean that the investment is risk free. In addition, it indicates the likelihood that this product will incur losses in the event of market movements or our inability to pay you. This indicator assumes that you hold the product until the end of the recommended holding period of this fund. The actual risk may be very different if you choose to exit before the end of the recommended holding period of this Fund.

GENERAL INFORMATION

Investment objective

The Product's objective, over a recommended investment period of more than 5 years, is to outperform the benchmark index- the FTSE Gold Mines index -, net dividends reinvested, by selecting stocks, on a discretionary basis, predominantly in the gold sector and linked to the exploration, extraction, transformation and/or marketing of gold. The Product is managed actively, which means that the Manager makes investment decisions in line with the Product's investment policy with a view to achieving the Fund's objectives. This active management process includes taking decisions related to asset selection, regional allocation, sectoral views and overall market exposure. The Manager is in no way limited by the composition of the benchmark index in the positioning of the portfolio, and the Product may not hold all the components of the benchmark index, or even any of the components in question at all. The fund may diverge wholly or significantly from the benchmark index or, occasionally, very little.

PERFORMANCES

Performance (Basis 100 - Net of fees)

Benchmark (Index) : FTSE Gold Mines Index (NR) (USD)

The benchmark has changed since this UCI was created. The performance data for the benchmark has been chain-linked in order to take the successive changes into account.

Past performances and volatility are not a reliable indicator of future performance and volatility. They may vary over time. The performances shown do not take into account the fees and expenses borne at the time of issue and redemption of units but include ongoing charges, brokerage fees and any performance fees taken.

Climate alignment (°C)

Fund	4.97
Universe	4.84

Climate alignment (°C): the global warming trajectory (°C) of each company in the portfolio based on its carbon footprint (scopes 1, 2 and 3*), the efforts undertaken to reduce it and the strategy announced to contribute to the fight against global warming. The trajectory is derived from the individual company's performance compared to a warming trajectory of the global economy of 1.5°C. The trajectories of the companies in the portfolio are then aggregated. Ratios as of 29/02/2024

GHG emissions intensity (scopes 1 and 2)	Coverage
Fund	37.21 87.61%

GLOSSARY

The VOLATILITY of a security is the difference between performance and average performance and therefore makes it possible to gauge the consistency of performance obtained. It comprises a measure of risk. If this is zero, the individual performances are identical. The higher it is, the greater the difference between individual performances.

The TRACKING ERROR shows the volatility of a fund's relative performance against that of its benchmark. It shows the difference between performances and their average and so makes it possible to gauge the consistency of relative performance. The lower the tracking error, the closer the fund's performance is to that of its benchmark.

The ALPHA corresponds to the fund's average performance. More specifically, it measures the fund managers' added value while cancelling out market influence, which cannot be controlled. This measure is expressed as a percentage.

The SHARPE RATIO shows the fund's outperformance against a zero-risk interest rate, adjusted for fund volatility.

Other definitions and methodologies are available at www.edmond-de-rothschild.com under the "Fund Center" tab in the fund's downloadable factsheet documentation.
