## Objectives and Investment Policy

**Objective:** Seeks to maintain value over the recommended holding period and provide a return above money market rates.

**Portfolio securities:** The Sub-Fund invests mainly in money market securities and deposits with credit institutions whose residual maturity is not more than 397 days, with non-euro exposure hedged back to the euro. The Sub-Fund may also invest directly or indirectly in a broad range of currencies from around the world. The Sub-Fund may not invest in below-investment grade securities. Non-sovereign money market securities invested by the Sub-Fund shall be rated in one of the two highest ratings categories by each recognised credit rating agency that has rated the security or their equivalent as determined by the Management Company. If the Sub-Fund buys a security whose rating subsequently falls below B- (Standard & Poor's and Fitch) or B3 (Moody's) or is considered to be of comparable quality by the Management Company, the Sub-Fund will sell the security. The Sub-Fund may use derivatives to reduce various risks, for efficient portfolio management and as a way to gain exposure to currency strategies.

## Risk and Reward Profile

Lower Risk (not-risk free)

Lower Potential Reward

Higher Risk  
 Higher Potential Reward

### What does this risk indicator mean?

The above risk indicator ranks potential risk and reward and is based on medium-term volatility (how sharply the Sub-Fund's actual or estimated unit price has gone up and down over five years). Historical data, such as that used in calculating this synthetic indicator, may not be a reliable indication of the future risk profile of the Sub-Fund. The lowest category does not mean a 'risk-free' investment. The Sub-Fund's risk indicator is not guaranteed and may change over time. The Sub-Fund's risk category reflects the fact that as an asset class money market securities tend to be less volatile than most other types of investment. For un-hedged currency classes, exchange rate movements may affect the risk indicator where the currency of the underlying investments differs from the currency of the unit class.

### Additional key risks:

The risk indicator reflects market conditions of recent years and may not adequately capture the following additional key risks of the Sub-Fund:

**Credit risk:** The issuers of bonds held by the Sub-Fund may fail to pay principal or interest due.

**Operational risk:** Losses may occur due to human error or omission, process errors, system disruptions or external events.
