

HSBC Global Investment Funds - Global Emerging Markets Local Debt

Share Class EC

As at 31 May 2018

Investment Aim

The Fund invests for total return (meaning capital growth and income) in a diversified portfolio of bonds. The Fund can invest in both investment grade (rated as such by a credit ratings agency) and non-investment grade securities. The Fund also holds currency derivatives. The bonds owned by the Fund are issued or guaranteed by governments, government agencies or supranational bodies in emerging markets as well as by companies which are based or operate in emerging-markets. Although the Fund's holdings are mainly denominated in local currencies, the Fund can also hold securities denominated in US dollars and other currencies from developed countries. Up to 10% of the Fund's net assets may be invested in onshore Chinese bonds. The Fund may invest up to 10% of its net assets in convertible securities (bonds that convert to equities). See the Prospectus for a full description of the investment objectives and derivative usage.

Risk Disclosure

It is important to remember that the value of investments can go down as well as up and you may not get back the amount originally invested. Where overseas investments are held the rate of currency exchange may cause the value of such investments to go down as well as up. Investments in emerging markets are by their nature higher risk and potentially more volatile than those inherent in some established markets. The value of the underlying assets is strongly affected by interest rate fluctuations and by changes in the credit ratings of the underlying issuer of the assets. The fund can invest in sub investment grade bonds, which may produce a higher level of income than investment grade bonds, but carry increased risk of default on repayment. Stock market investments should be viewed as a medium to long term investment and should be held for at least three years. For a full list of risks, please refer to the Prospectus and KIID.
