Lower risk ←————→ Higher risk
Typically lower rewards Typically higher rewards

The Synthetic Risk and Reward Indicator (SRRI) table above shows how the Fund ranks in terms of potential risk and return. It is not a measure of the risk of capital loss but is essentially a measure of the previous ups and downs in value of the Fund. Please note that:

- historical data may not be a reliable indication for how the Fund will perform in the future.
- the risk category shown is not guaranteed to remain unchanged and may shift over time.
- even the lowest category does not mean your investment is 'risk free'.

The SRRI of the Fund is ranked at 6. The Fund is in category 6 because of the high range and frequency of price movements (volatility) of the underlying investments referenced by the Fund.

The following are risks materially relevant to the Fund which are not adequately captured by the SRRI:

- Risks associated with the financial and economic crisis affecting the European Monetary Union
- The following risk factors, which may not be an exhaustive list, apply to this Fund in respect of its investment in Russian based securities: Political and Economic Risks, Commercial and Credit Risks, Liquidity risks, Legal and Regulatory Risks and Operational Risks.

A more detailed description of all the risk factors that apply to the Fund is set out in the section entitled Risk Factors of the Prospectus.
