EUROPEAN EQUITY

MORNINGSTAR™ Ranking as of 31/01/2018 in the category Eurozone Flex-Cap Equity : ★★

Fund size : EUR 347,18 mil.

GENERAL INFORMATION

Investment objective

The UCITS' investment objective is to seek performance through exposure to equity markets, primarily in the Eurozone, by selecting, on a discretionary basis, securities from an investment scope comparable to the MSCI EMU index.

Monthly comment

Equity markets closed February visibly down, after a sharp correction in the wake of the strong gains made in January, and the shift in volatility. This correction has now extended to the credit market, with spreads widening. While interest rates have continued to rise in the United States, they have remained relatively stable in the euro zone, with even the 10-year bund dipping 4 bps over the month. This illustrates a change in perception of monetary policies when comparing the United States and the euro zone, while the inflation data shows no particular pressure on Europe (+1.2% in France and the euro zone). The euro seized the opportunity to slacken a little, closing at 1.22 against the dollar, after testing levels of 1.25, a critical level for the outlook on corporate earnings. The Q4 earnings reports have been sturdy, showing growth staging a stronger recovery in 2018, with significant upgrades. The acceleration in organic growth is particularly visible in the cyclical sectors, technology, and other sectors such as hotels and media, which have been rewarded in the portfolio. In contrast, the sectors that are more defensive and sensitive to rate hikes have been penalised.

PERFORMANCES

Benchmark (Index) : MSCI EMU (NR) (EUR)

Market index (NR index) : MSCI EMU (NR) (EUR)

Index : Former benchmark expressed in price index chained with official benchmark expressed net dividend reinvested - NR index: Market index corresponding to the benchmark, dividend reinvested.

PRODUCT RISKS AND DISCLAIMERS

The information used to value the assets of this UCITS is taken primarily from various pricing sources available on the market and/or from information provided by brokers, prime brokers or external custodians, administrative agents/managers of target funds or other products, specialists duly authorised for this purpose by this UCITS and/or its management company (where applicable), and/or directly from this UCITS and/or its management company (where applicable). With regard to index levels and compositions, the main sources used are data distributors.

Please note that the main risks of this UCITS are as follows :

- Equity risk
- Discretionary management risk
- Capital risk
- Interest rate risk
- Credit risk
- Currency risk

Details on the target subscribers provisions and on applicable Risks of this UCITS is found in the full prospectus or in the partial prospectus for those subfunds authorised for distribution in Switzerland of this UCITS. The regulation, the full prospectus, the partial prospectus for subfunds authorised for distribution in Switzerland, the key investor information document (where applicable) and the annual, semi-annual and quarterly reports are available upon request from Edmond de Rothschild Asset Management (France), its distributors and/or representatives and/or the following correspondents:

France	:	Edmond de Rothschild Asset Management (France)	47, Rue du Faubourg St-Honoré	Cedex 08 Paris 75401	France

and/or on the following website (<http://funds.edram.com>), in order that investors analyse the risks and build their own opinion, independently from any entity of the Edmond de Rothschild Group. Investors are invited to request the opinion of their Legal Counsel where necessary, to ensure the suitability of the investment with regards to their financial situation, experience and investment objectives.

The numerical data, comments and analyses in this presentation reflect the opinion of Edmond de Rothschild Asset Management (France) with respect to the markets and their trends, regulation and tax issues, on the basis of its own expertise, economic analyses and information available as of today. The figures mentioned refer to past years. Past performance and ratings are not indicative of future performance and ratings. Past performance can be misleading. The value of units or shares of funds and the returns are subject to fluctuation, and investors may not get back the full amount invested. Performance data is calculated on a dividend reinvested basis. These performances do not take into account the fees and expenses collected on the issue or redemption of shares/units, or taxes levied in the client's country of residence.

The fund's investment policy does not necessarily anticipate a correlation between the fund and the mentioned benchmark. As a result, the performance of this UCITS may differ from that of the benchmark.

Morningstar ratings should not be considered as recommendations to buy, sell or hold units of the this UCITS above-mentioned.

The Morningstar rating applies to funds with at least three years of history. It takes the Fund's subscription fees, risk-free returns, and volatility into account in order to calculate each fund's MRAR ratio (Morningstar Risk-Adjusted Return). The funds are then ranked in descending order of MRAR: the top 10 percent receive 5 stars, the following 22.5% receive 4 stars, the next 35% 3 stars, the following 22.5% 2 stars, and the final 10% receive 1 star. The funds are classified within 300 European categories.

DEFINITIONS

The **PERFORMANCE**, often expressed as a % makes it possible to measure the capital gain or loss of an investment over a period (10% = gain of 10 units for every 100 invested). Performance can also be expressed per annum. This is equivalent to extrapolating the performance of a fund over any period to a one-year period. In either case, a loss is indicated by a negative percentage and a gain by a positive percentage.

The **VOLATILITY** of a security is the difference between performance and average performance and therefore makes it possible to gauge the consistency of performance obtained. It comprises a measure of risk. If this is zero, the individual performances are identical. The higher it is, the greater the difference between individual performances.

The **TRACKING ERROR** shows the volatility of a fund's relative performance against that of its benchmark. It shows the difference between performances and their average and so makes it possible to gauge the consistency of relative performance. The lower the tracking error, the closer the fund's performance is to that of its benchmark.

The **INFORMATION RATIO** represents the relative performance obtained by the fund manager for each agreed volatility point in comparison with the benchmark. To some degree, it is this measurement that makes it possible to establish whether the additional risk taken by the fund manager is, in comparison with the benchmark, rewarding or otherwise.

The **ALPHA** corresponds to the fund's average performance. More specifically, it measures the fund managers' added value while cancelling out market influence, which cannot be controlled. This measure is expressed as a percentage.

The **SHARPE RATIO** shows the fund's outperformance against a zero-risk interest rate (the Eonia, in this case), adjusted for fund volatility.

The **BETA** measures the market's influence (represented by a benchmark) on the performance of a fund. It shows the average variation of the fund's NAV, for each variation of 1% in the benchmark. If beta is 0.8, this means that for each 1% movement in the benchmark, the fund moves 0.8%.

The **CORRELATION COEFFICIENT** defines the direction and degree of dependence between two variables. It ranges from -1 to +1. Positive correlation means that the benchmark and the fund move in the same direction, negative correlation means that they move in opposite directions. When correlation is close to zero, the benchmark's influence on the fund is very low.

The **R2** or the **DETERMINATION COEFFICIENT** measures to what extent variations in fund performance are explained by variations in the benchmark. Mathematically, it is the square of the correlation coefficient. It always has a value of between 0 and 1.

The **GAIN FREQUENCY** represents the percentage of positive returns for a defined frequency.

The **MAX GAIN** represents the maximum return recorded from a series of periodic return payments.

The **MAX DRAWDOWN** is the maximum loss recorded over a series of periodic returns.

The **PAYBACK PERIOD** measures the time required to recover the maximum drawdown. It is often expressed in days or months. Payback begins with the return paid following the maximum loss.

The **PE = Price Earnings**. This ratio is equivalent to the ratio between the price of a share and the earnings per share. It is also known as the Earnings Capitalisation Multiple. The result is the weighted average of the PE of the securities in the portfolios.

The **VAR EPS = Variation in Earnings Per Share**. The result is the weighted average of the VAR EPS of the securities in the portfolios.

The **PCF = Price to Cash Flow**. This is the ratio between the price of a share and the cash-flow generated per share (Cash flow per share). The result is the weighted average of the PCF of the securities in the portfolios.

The **PBV = Price to Book Value**. This ratio is equivalent to the ratio between the price of a share and the book value of its equity. The result is the weighted average of the PBV of the securities in the portfolios.

The **PEG = Price Earnings Growth**. This is calculated by dividing the PE by the average growth rates for expected profits in future years.

The **YIELD** = This ratio is the ratio of dividend per share and share price. The returns are gross before deduction of taxes and shall take into account tax credits, if any. For example, for French and German companies, tax credits are included. In Singapore and Malaysia, the company returns are based on net dividends after corporate taxes. For a fund, the performance equals the weighted average yields of all portfolio holdings which have seconded a dividend. This ratio is expressed in % per year.

OVERLAY MANAGEMENT is an approach based on the hedging of existing risks (equities, interest rate, currency, etc.) in a portfolio.

UCITS means "Undertaking for Collective Investment in Transferable Securities". This category of financial products includes the Mutual Fund (FCP) and the Société d'Investissement à Capital Variable (SICAV).

UCI means "Undertaking for Collective Investment". This category of financial products includes the Mutual Fund (FCP) and the Société d'Investissement à Capital Variable (SICAV). There are two categories of UCI, namely UCITS "Undertakings for Collective Investment in Transferable Securities" and AIFs "Alternative Investment Funds".

SICAV (Société d'Investissement à Capital Variable) means open-ended investment company with variable capital.

FUND means "Mutual Fund".

PEA ELIGIBLE: Eligible fund Savings Plan in Action. This measure depends on the individual situation of each client.

RISK SCALE

Risk and reward profile

Synthetic risk/return indicator ranks the fund on a scale from 1 to 7 (1 being the less risky ranking, 7 being the most risky ranking). This rating system is based on average fluctuations in the fund's net asset value over the past five years, i.e. the scale of changes in the index securities, both up and down. If the net asset value is less than 5 years old, the rating is determined by other regulatory calculation methods. Historic data such as those used to calculate the synthetic indicator may not be a reliable indication of the future risk profile. The current category is neither a guarantee nor an objective. Category 1 does not signify a risk free investment. For more details on the methodology of the ranking, please consult the key investor information document (KIID) of the fund.

This fund is rated in category 6, reflecting that it can be up to 110% exposed to equities markets, which presents a high risk/reward profile.

Fund size : EUR 347,18 mil.

METHODOLOGY

(a) Carbon Footprint :

Our carbon measures rely on the data supplied by the companies and updated annually (annual report, Carbon Disclosure Project) or estimated by third-party data providers (Bloomberg). We then produce several indicators calculated as follows:

Carbon Footprint (in tonnes of CO2 equivalent per million euros invested):

It measures the volume of greenhouse gas (GHG) emissions for which the portfolio is responsible in proportion to its capital share. If an investor holds 1% of a company's market capitalisation, they are responsible for 1% of that company's emissions (in tonnes of CO2 equivalent).

Company Share = (price*number of shares held) / Market capitalisation

Absolute Carbon Footprint = $\sum (\text{Company Share}(i) * \text{Company Emissions}(i))$

Carbon Footprint = Absolute Carbon Footprint / Fund Net Assets

Carbon emissions include Scope 1 + Scope 2

Scope 1 emissions: direct emissions of greenhouse gases (fuels, refrigerant fluids, fuel for vehicles owned)

Scope 2 emissions: indirect emissions (electricity, steam purchase)
