INVESTMENT OBJECTIVE

The Fund aims to make a return for you through a mixture of generating income and growing the amount you originally invested. It mainly invests in bonds that pay a fixed interest.

INVESTMENT POLICY

The Fund targets better returns than its benchmark, the BAML European Currencies High Yield Constrained Ex. Sub Financials Index. The Fund may invest substantially away from this index if justified by market conditions. At least half of the Fund's investments will be in fixed income bonds issued by companies based in the European Union which pay a comparatively high income, rated below investment grade by a credit rating agency. At least half of the Fund's investments will be in currencies of European Union countries. Up to half of the Fund's assets may be denominated in currencies of non-European countries whose sovereign long term debt rating is investment grade. The Fund may use derivatives (such as futures, options and swaps, which are linked to the rise and fall of other assets) to achieve the investment objective and to reduce risk or manage the Fund more efficiently.

RISK CONSIDERATIONS

- Investing in high yield corporate bonds offers you the chance to gain higher returns through growing your capital and generating income. Nevertheless, there is a greater risk that the organisation which issued the bond will fail, which means you may lose some or all of your original investment
- There may be cases where an organisation with which we trade assets or derivatives (usually a financial institution such as a bank) may be unable to fulfil its obligations, which could cause losses to the Fund
- At times, the market for high yield bonds may dry up, which could make it difficult to sell these bonds, or the Fund may only be able to sell them at a discount
- BlueBay could suffer from a failure of its processes, systems and controls - or from such a failure at an organisation on which we rely in order to deliver our services - which could lead to losses for the Fund
- Where a subscription involves a foreign exchange transaction, changes in rates of exchange may have an adverse effect on the value of investments

NOTES

- Spread Duration** – is a bond's price sensitivity to spread changes.
- Performance shown for 1yr periods onwards are annualised figures
