

# Key Investor Information

This document provides you with key investor information about this fund. It is not marketing material. The information is required by law to help you understand the nature and the risks of investing in this fund. You are advised to read it so you can make an informed decision about whether to invest.

## HSBC Global Investment Funds - Global Macro

Class M1CHUSD LU0449517464

A sub-fund of **HSBC Global Investment Funds** (the "UCITS"), managed by HSBC Investment Funds (Luxembourg) S.A.

### Objectives and investment policy

- ▶ The aim is to provide stable growth in the value of your investment over time, above that of the fund's benchmark, independent of how different types of investments perform.
- ▶ The fund will hold cash in any currency, shares in companies and debt issued by companies or governments from any country.
- ▶ The fund will mainly use derivatives to meet its objective. The fund may also use derivatives to sell exposure to shares and debt issued by companies and governments that the fund does not hold (short selling).
- ▶ The fund does not track a benchmark. Consideration may be given to a reference benchmark when selecting investments. The reference benchmark for the fund is EUR 1 month EURIBOR.
- ▶ Currency hedging is carried out in respect of the share class. The aim is to protect against exchange rate fluctuations between the share class currency USD and the base currency of the fund EUR.
- ▶ The reference benchmark, shown in the past performance section, does not take account of currency hedging. There may be a greater difference between the past performance of the share class and the reference benchmark than for other share classes in the fund.
- ▶ You may sell your investment on any working day by submitting an application to the Administrator before the dealing deadline.
- ▶ Income is rolled up into the value of your investment.
- ▶ Recommendation: this fund may not be appropriate for investors who plan to withdraw their money within a period of 3 years.

### Risk and reward profile

#### More about this rating

The rating is based on price volatility over the last five years, and is an indicator of absolute risk. Historical data may not be a reliable indication for the future. The value of an investment, and any income from it, may fall as well as rise, and you may not get back the amount you originally invested. The rating is not guaranteed to remain unchanged and the categorisation may shift over time. The lowest rating does not mean a risk-free investment.

#### Why is this fund in category 4?

Emerging markets are at an early stage of development and typically experience higher levels of return fluctuation than well-established economies. Absolute return products target lower volatility coupled with a stable growth objective.

#### Risks materially relevant not adequately captured by the SRRI

- ▶ **Interest rate risk** As interest rates rise debt securities will fall in value. The value of debt securities is inversely proportional to interest rate movements.
- ▶ **Credit risk** Issuers of debt securities may fail to meet their regular interest and/or capital repayment obligations. All credit instruments therefore have potential for default. Higher yielding securities are more likely to default.
- ▶ **Exchange rate risk** Investing in assets denominated in a currency other than that of the investor's own currency perspective exposes the value of the investment to exchange rate fluctuations.
- ▶ **Derivative risk** The value of derivative contracts is dependent upon the performance of an underlying asset. A small movement in the value of the underlying can cause a large movement in the value of the derivative. Unlike exchange traded derivatives, over-the-counter (OTC) derivatives have credit risk associated with the counterparty or institution facilitating the trade.
- ▶ **Operational risk** The main risks are related to systems and process failures. Investment processes are overseen by independent risk functions which are subject to independent audit and supervised by regulators.

## Charges for this fund

The charges you pay are used to pay the running costs of the fund, including the marketing and distribution costs. These charges reduce the potential growth of the investment.

One-off charges taken before or after you invest	
Entry charge	5.54%
Exit charge	0.00%
Charges taken from the fund over a year	
Ongoing charge	1.80%
Charges taken from the fund under certain specific conditions	
Performance fee	20% a year of any returns the fund achieves above the benchmark for these fees, the USD 1 month LIBOR. In the fund's last financial year the performance fee was 0.00%.

The Entry and Exit charges shown are the maximum that may be charged. In some cases you may pay less. You can obtain the actual charges from your financial adviser.

A conversion charge of up to 1% of the Net Asset Value of the Shares which are being converted may be payable to the relevant distributor.

The ongoing charges figure is based on last year's expenses for the year ending 31/03/2016. Charges may vary from year to year.

Further information on Charges can be found in Section 2.10, "Charges and Expenses" of the full Prospectus.

## Past performance

Past performance is not a guide to future performance; the value of your investment and any income from it can go down as well as up. The past performance of this share class is calculated in USD.

Performance returns are based on the net asset value with distributable income reinvested. Past performance takes account of all ongoing charges, but not entry and exit charges.

The fund was launched on 18/06/2007.

The investment benchmark for the fund, for comparison purposes only, is the EUR 1 month EURIBOR.

Insufficient data is available to provide past performance figures.
