## UBS Emerging Ec. Global Short Term

UBS Emerging Market Funds &gt; Bonds

For institutional/  
professional investors only

### Fund description

- The fund invests worldwide in short-term-maturity fixed income instruments and currency instruments from emerging economies.
- The fund portfolio's average remaining maturity may not exceed 12 months.
- The investment objective is to achieve an attractive performance mainly based on the return of currencies and short-term interest rates from emerging market countries.
- Currencies and short-term interest rates are actively managed.

Bonds	69.5
Floating Rate Notes	18.4
Notes	11.5
Swaps	0.6
Other Securities	0.0
Options	0.0
Credit default swaps	0.0

## Key benefits

- Participate in the upside potential of local currency instruments
- Invest in a broadly diversified and actively managed portfolio of well-selected local currencies and short dated securities
- Benefit from a global investment team with a consistent investment philosophy and a disciplined investment process with a strong focus on risk management

## Risks

The fund offers higher return potential than a high-quality money market portfolio and therefore bears a higher risk. In addition, emerging markets are at an early stage of development which can typically involve a high level of price volatility and other specific risks such as lower market transparency, regulatory hurdles, corporate governance and political and social challenges. All investments are subject to market fluctuations. Every fund has specific risks, which can significantly increase under unusual market conditions. The fund can use derivatives, which may result in additional risks (particularly counterparty risk).
