Subscription / Redemption

The subscription, conversion or redemption orders must be received by the Registrar and Transfer Agent on any Valuation Day no later than 3 p.m. Luxembourg time. Orders will be processed at the Net Asset Value applicable to such Valuation Day. The investor's attention is drawn to the existence of potential additional processing time due to the possible involvement of intermediaries such as Financial Advisers or distributors. The Net Asset Value of this Sub-Fund is calculated on a daily basis. Minimum initial investment: 100,000 euros or the equivalent in the relevant currency of the relevant Share class. Minimum subsequent investment: 10,000 euros or the equivalent in the relevant currency of the relevant Share class. Permanent minimum capital threshold of the Redex Share class: 1,000,000 euros or the equivalent in the relevant currency of the relevant Share Class.

Disclaimers

Performance calculations are net of management or distribution fees. Performance are shown as annual performance (365 days). Performance calculations are based on the reinvestment dividend.

Risk Ratios are calculated from gross performances. The ratings shown are those applicable at the time of publication of the document and not at the portfolio closing date. A change in rating between these two dates could therefore suggest that the rating conditions of the portfolio have not been complied with, even though the securities concerned could have been sold in the interim. If you have any questions on this subject, please contact your usual sales representative.

In the case where the currency of investment is different from the Fund's reference currency the gains are capable of varying considerably due to the fluctuations of the exchange rate.

Redex share class Risk factor relating to interest rate: Interest rate risk involves the risk that, when interest rates increase along the curve, as the market value of fixed-income securities tends to decline, as a result the Net Asset Value of standard shares tends to decrease. Conversely, when interest rates decline along the curve, the market value of fixed-income securities tends to increase, as a result, the Net Asset Value of the standard Shares tend to increase. Longterm fixed-income securities will normally have more price volatility because of this risk than short-term securities. The aim of the listed derivatives overlay strategy implemented at the Redex Share Class level is to reduce the exposure to interest rates parallel shifts along the curves. There fore, the impact of interest rates parallel shifts on the Redex Share Net Asset Value tends to be reduced compared to the impact of such move on the standard Shares. When interest rates increase, as the market value of fixed-income securities tends to decline, the market value of the overlay strategy tends to increase, as a result the impact of the interest rates increase on the value of the Redex Shares tends to be more limited. Conversely, when interest rates decline, the market value of fixed-income securities tends to increase, and the market value of the overlay strategy tends to decrease as a result the impact of the interest rates decrease on the value of the Redex Shares tends to be more limited.

The fund is registered for public distribution in Luxembourg. Please check the countries of registration with the asset manager, or on the web site www.axa-im-international.com, where a fund registration map is available.

The tax treatment relating to the holding, acquisition or disposal of shares or units in the fund depend on each investor's tax status or treatment and may be subject to change. Any potential investor is strongly encouraged to seek advice from its own tax advisors.
