GENERAL INFORMATION

Investment objective

Over a recommended investment horizon of more than five years, the Product is managed with the aim of achieving an increase in its net asset value through exposure to mid-cap companies in Europe. The selection criteria will be described in the investment strategy. The Product is managed actively, which means that the Manager makes investment decisions in line with the Product's investment policy with a view to achieving the Product's objectives. This active-management process entails taking decisions regarding the selection of assets, regional allocations, sectoral views and overall market exposure. The Manager is in no way limited by the composition of the benchmark index in the positioning of the portfolio, and the Product may not hold all the components of the benchmark index, or even any of the components in question at all. Deviation from the benchmark index may be total or significant but, occasionally, may also be minor.

Climate alignment (°C)

Fund	3.23
Benchmark	3.47

Climate alignment (°C): the global warming trajectory (°C) of each company in the portfolio based on its carbon footprint (scopes 1, 2 and 3*), the efforts undertaken to reduce it and the strategy announced to contribute to the fight against global warming. The trajectory is derived from the individual company's performance compared to a warming trajectory of the global economy of 1.5°C. The trajectories of the companies in the portfolio are then aggregated. Ratios as of 31/01/2024

GLOSSARY

The VOLATILITY of a security is the difference between performance and average performance and therefore makes it possible to gauge the consistency of performance obtained. It comprises a measure of risk. If this is zero, the individual performances are identical. The higher it is, the greater the difference between individual performances.

The TRACKING ERROR shows the volatility of a fund's relative performance against that of its benchmark. It shows the difference between performances and their average and so makes it possible to gauge the consistency of relative performance. The lower the tracking error, the closer the fund's performance is to that of its benchmark.

The ALPHA corresponds to the fund's average performance. More specifically, it measures the fund managers' added value while cancelling out market influence, which cannot be controlled. This measure is expressed as a percentage.

The SHARPE RATIO shows the fund's outperformance against a zero-risk interest rate, adjusted for fund volatility.

Other definitions and methodologies are available at www.edmond-de-rothschild.com under the "Fund Center" tab in the fund's downloadable factsheet documentation.
