Investment Manager: Natixis Asset Management, part of the Natixis group of companies

Objectives and Investment Policy

Investment objective:

The investment objective of Natixis Euro High Income Fund (the "Fund") is to provide high total investment return through a combination of income and capital appreciation.

Investment policy:

The Fund invests primarily in Euro-denominated debt securities rated below investment grade. Debt securities may include fixed income securities issued by companies worldwide, corporate debt securities and convertible bonds (up to 25%).

The Fund may invest up to one-third of its total assets in money market instruments or other securities, such as non- Euro-denominated securities or debt securities issued by issuers based in emerging countries.

The Fund is actively managed and uses a research-driven strategy in selecting securities.

The Fund uses derivatives for hedging and investment purpose and enters into securities lending and borrowing transactions as well as repurchase agreements.

The Reference Currency of the Fund is Euro.

The Fund is not managed relative to a specific reference index. However, for indicative purposes, the Fund's performance may be compared to the BofA Merrill Lynch Euro High Yield BB-B Rated Constrained Index.

Shareholders may redeem Shares on demand on any business day in Luxembourg. Income derived from the Fund is distributed for distributing Shares and reinvested for accumulating Shares, as further detailed in this document. Please refer to the section entitled "Subscription, Transfer, Conversion and Redemption of shares" of the Prospectus for additional information.

Recommendation: this Fund may not be appropriate for investors who plan to withdraw their money within less than 3 years.

Risk and Reward Profile

The Fund is ranked 4 on the synthetic risk and reward indicator scale, which is based on historical data. Due to its exposure to fixed income markets, the Fund may experience important volatility, as expressed by its rank on the above scale. Historical data may not be a reliable indication for the future. The risk category shown is not guaranteed and may shift over time. There is no capital guarantee or protection on the value of the Fund. The lowest category does not mean "risk free".

Special Risk Considerations

Below Investment Grade securities risk: If Funds invest in higher risk securities issued by company, financial or sovereign issuers, Funds have greater exposure to and are at a greater risk that this issuer will not be able to reimburse debt holders (principal and interest payment). In addition, if after acquisition the perceived risk of failure increases, the value of such securities is likely to decrease. Funds may also not be able to sell below investment grade securities quickly and easily. Finally, such securities may be subject to important price fluctuation.

Changing Interest rate risk: The value of fixed income securities held by a fund will rise or fall inversely with changes in interest rates. When interest rates decline, the market value of fixed income securities tends to increase. Interest rates typically vary from one country to the next for reasons including rapid fluctuations of a country's money supply, changes in demand by businesses and consumers to borrow money, and actual or anticipated changes in the rate of inflation.

Please refer to the section entitled "Specific Risks" of the Prospectus for additional details on risks.
