Unit tax credit transferred to holders (natural persons) ⁽¹⁾	-	-	-	-	-
Unit capitalisation*	-	-223.53	-	470.43	1,369.22

* The amounts of the unit distribution, the unit capitalisation and the tax credits are indicated in the accounting currency of the Sub-Fund. The unit capitalisation corresponds to the sum of profit and loss and net capital gains or losses on the number of circulating units. This calculation method is applied from 1 January 2013.
⁽¹⁾ In pursuant to the Fiscal Instruction of 4 March 1993 of the French Tax Department, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits between the circulating units on that date.

report**

SUB-FUND OF THE MULTI UNITS FRANCE SICAV

Compartments / feeder	LYXOR CAC 40 (DR) UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
Management Company	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy – 92987 Paris La Défense Cedex.
Depository and Custodian	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

Information on the investments and management

Classification:

French equities.

At all times, a minimum of 60% of the assets of the Lyxor CAC 40 (DR) UCITS ETF subfund (“Subfund”) is exposed to the French equity market. The Compartment is an index-based fund of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution:

Dist and J-EUR share classes: the Board of Directors reserves the right to distribute one or more times per year all or part of the distributable amounts and/or to accumulate them.

Acc share classes: accumulation of all distributable amounts.

Management objective:

The Compartment is a passively managed index-based UCITS.

The investment objective of this Subfund is to track the upward and downward performance of the CAC 40 GROSS TOTAL RETURN index (net dividends reinvested) (“Benchmark”), listed in euros, while minimising the tracking error between the Subfund’s performance and the Benchmark’s performance as much as possible.

The anticipated level of the ex-post tracking error under normal market conditions is 0.05%.

Benchmark indicator:

The Benchmark is an index weighted by free-float market capitalisation measuring the performance of 40 stocks listed on Euronext Paris regulated markets.

Eligible stocks are chosen for their large market capitalisation, their sector representativeness and the large volume of transactions concerning them. As the main benchmark of the Paris Stock Exchange, its variations are highly correlated with those of the market as a whole.

The Benchmark Indicator is a Gross Total Return index, which means that the Benchmark's performance includes the gross dividends paid by its underlying equities.

A full description of the Benchmark and its construction methodology and information on the composition and respective weightings of the Benchmark components are available on the website: <https://www.euronext.com/en>.

The monitored performance is that of the Benchmark Index closing price.

Benchmark indicator publication

The Benchmark Indicator is calculated on a daily basis at closing prices using the official closing stock market prices for the constituent stocks. The Benchmark Indicator is also calculated in real time every day that the Benchmark Indicator is published.

The closing price of the Benchmark is available on the website: <https://www.euronext.com/en>

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Euronext administrator of the Benchmark Indicator is included in the register of administrators and benchmark indices maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmarks used which describes the measures to be implemented in the event of substantial changes to an index or the cessation of provision of that index.

Benchmark indicator revision and composition

The revision of the Reference Indicator takes place quarterly.

The exact composition and the rules for revising the Benchmark published by Nyse-Euronext as well as information on the composition of the Benchmark are available on the website: <https://www.euronext.com/en>

The frequency of rebalancing mentioned above has no effect on costs in the implementation of the investment strategy.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009. In pursuit of the greatest possible correlation with the performance of the Benchmark, the Subfund will use a direct replication method, which means that the Subfund will invest in a basket of assets made up of the equities comprising the Benchmark and/or financial instruments representative of all or part of the equities comprising the Benchmark.

In addition, the sub-fund may use forward financial instruments ("FFIs"). Futures in which the sub-fund is likely to invest include contracts such as index futures, futures on all or part of the Benchmark Index components, and hedging swaps entered into to minimise the Sub-Fund's tracking error.

When pursuant to its investment strategy (e.g. use of futures) the Sub-Fund is required to hold cash, the manager in the best interest of the unitholders may use deposits with credit institutions, and or invest cash in balance sheet assets and/or off-balance sheet assets (as described below).

The Subfund may use efficient portfolio management techniques in accordance with the provisions of Article R214-18 of the French Monetary and Financial Code and, in particular, temporary disposals of securities.

In order to allow investors to benefit from transparency on the direct replication method used (full replication of the Benchmark) and its consequences in terms of assets held by the Subfund, information on the updated composition of the basket of balance sheet assets held in the Subfund's portfolio is available on the page dedicated to the Subfund available on the website www.lyxoretif.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

As part of the management of its exposure, the Compartment may be exposed up to 20 % of its assets in equities from a single issuing entity. This 20% limit may be increased to 35% for a single issuing entity, when this proves to be justified by exceptional market conditions, particularly when certain securities are largely dominant and/or in the event of high volatility of a financial instrument or securities linked to an economic sector represented in the Benchmark Index, in particular in the event of a public offering affecting one of the securities making up the Benchmark Index or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Index.

The Subfund is eligible for share-based savings plans (PEA). At all times, the Subfund complies with the asset constraints enabling it to be acquired under an equity savings plan (PEA), namely holding more than 75% of shares in companies that have their registered office in a Member State of the European Union or in another State party to the European Economic Area agreement that has entered into a tax treaty with France containing an administrative assistance clause with a view to combating fraud and tax evasion.

The Subfund may serve as a vehicle for unit-linked life insurance contracts. In this case, the manager intends to use mainly the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Sub-Fund will mainly be invested in the securities described below:

• Equities

The Compartment may hold international equities in accordance with regulatory ratios. The Sub-Fund will be mainly invested in the shares comprising the Benchmark Index.

• Holding of shares or units in other UCI or investment funds

The Sub-Fund may invest up to 10% of its assets in units or shares of the following CIS or investment funds:

- French or foreign UCITS compliant with Directive 2009/65/EC - For the purposes of these investments, the Sub-Fund may subscribe for units or shares in UCITS managed by the Management Company or a company to which it is linked.

When the Subfund receives collateral in the form of securities, subject to the terms and limits of paragraph 8 below in this section, it acquires full title to these securities, and they are therefore included among the balance sheet assets to which it has full title.

3. Off-balance sheet assets (derivative instruments)

The Sub-Fund may invest in the following FFIs:

• Eligible markets:

- regulated
- organised
- over-the-counter

• Risks in which the Sub-Fund wishes to trade:

- Equities

• Purpose (all transactions must be consistent with the investment objective):

- hedging
- exposure

• Type of instruments used:

- futures: on equities and indices
- forward exchange contracts

• Strategy for using derivatives to achieve the investment objective:

- General hedging of the portfolio, certain risks, securities, etc. - up to 100% of assets
- reconstitution of synthetic exposure to assets and risks - up to 100% of assets

Counterparties to OTC derivatives traded by the Subfund will be selected in accordance with the Management Company's best-execution policies (including the "Order execution by asset type" table referred to in the Appendix). The above-mentioned policy can be accessed at the following address: <https://www.lyxor.com/politique-de-best-execution-liam-January-2020-fr> The counterparty to financial derivative instruments will not have discretionary power over the composition of the Sub-Fund's investment portfolio, nor over the underlying assets of the derivatives within the limits and conditions provided for by the regulations.

Situations of conflict of interest may arise between the Management Company and Société Générale when Société Générale acts as a counterparty to FFIs. These situations are governed by the Management Company's conflict of interest management policy.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20 % of its net assets, the Compartment can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10 % of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

The Subfund may use various techniques to manage its portfolio efficiently in compliance with Article R214-18 of the French Monetary and Financial Code, including the temporary sale of securities.

- Maximum proportion of assets under management that may be covered by securities financing contracts: up to 25% of the Subfund's assets.
- Expected proportion of assets under management that can be financed by securities transactions: 0% of the Subfund's assets

In this context, the Management Company has appointed Societe Generale as an intermediary (hereinafter the "Agent"). In the event of recourse to an Agent, it may be authorised (i) to carry out, on behalf of the Sub-Fund, securities lending transactions, governed by GMSLA (Global Master Securities Lending Agreements) and/or any other internationally recognised framework agreements, and (ii) to invest, on behalf of the MF, the cash received as collateral for these securities lending transactions, in accordance with and within the limits defined by the securities lending agreement, the rules of this prospectus and the regulations in force.

As a reminder, the Management Company is an entity of the Societe Generale Group and is therefore linked to the Agent.

Where Société Générale S.A. is appointed as Agent, it is not authorised to act as a counterparty to securities lending transactions. If such temporary sales are used:

- the Subfund will be entitled to all income from such transactions securities, net of any direct and indirect operating costs fees.
- the above operational costs/fees related to efficient portfolio management techniques will be those incurred by the Management Company, the Agent (if applicable) and/or the other intermediaries involved in these transactions in connection with their services;
- the direct or indirect operating costs/fees will be calculated as a percentage of the gross income generated by the Subfund. Information on operational, direct and indirect fees/costs and the identity of the entities to which these fees/costs are paid will be mentioned in the Sub-Fund's annual report.
- income from the lending of securities will be paid to the Subfund after deduction of any direct and indirect operating costs/fees that may be borne by the Agent and the Management Company To the extent that these fees/costs, direct and indirect, do not increase the operating costs of the Sub-Fund, they have been excluded from current expenses.

The Compartment's annual report will include, where applicable, the following details:

- the exposure generated through effective portfolio management techniques;
- the identity of the counterparty(ies) to these effective portfolio management techniques;
- the nature and amount of any collateral received to reduce the Subfund's counterparty risk, and;
- the income generated by efficient portfolio management techniques over the relevant period, and any associated direct and indirect operating costs/fees.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of temporary purchases and sales of securities, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depository. As such, the received financial guarantees will be listed amongst the Compartment's assets. In the event of default by the counterparty, the Compartment may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt towards the Compartment as part of the guaranteed transaction. Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) they must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;
- (c) they must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) they must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20 % of the Sub-Fund's net asset value;
- (e) the Sub-Fund's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and
- Such financial guarantees consist of at least six different issues of which none exceeds 30% of the Sub-Fund's assets.

In compliance with the aforesaid conditions, the guarantees received by the Sub-Fund can include:

In compliance with the aforesaid conditions, the guarantees received by the Sub-Fund can include:

- (i) liquid assets or equivalents, notably including short-term bank assets and money market instruments;

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market money-market instruments
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e)(above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points
- (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Subfund's Management Company will apply a margin to the financial collateral received by the Subfund in these temporary sales of securities. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Collateral received in a currency other than the euro may be subject to an additional margin. Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged. Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Compartment may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

COUNTERPARTY SELECTION POLICY

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (financial futures and temporary acquisitions and disposals of securities) on behalf of the Mutual Fund.

The selection of counterparties for financial contracts and financial intermediaries is performed rigorously from among the reputable counterparties and intermediaries in the market, on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes various criteria into consideration to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating
- Quantitative criteria based on the CDS LT spread (absolute criteria, volatility and comparison with a reference group, etc.) Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: www.lyxor.com, section "regulatory information".

Risk profile:

The Subfund will mainly invest in the Benchmark financial instruments selected by the Management Company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Equity risk

An equity price can vary upwards or downwards, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

If, when the Compartment (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Sub-Fund's equities on a place of listing can be affected by any suspension, that could notably be due to: i) suspension or stoppage of the calculation of the Benchmark Index, and/or ii) trading in the market(s) in the Benchmark's underlying assets is suspended, and/or iii) an exchange cannot obtain or calculate the Subfund's indicative net asset value, and/or iv) a market maker fails to comply with an exchange's rules, and/or

v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

- Risk related to the use of effective portfolio management techniques

In the event that the counterparty to the efficient portfolio management technique (hereinafter referred to as the "EPMT") processed by the Sub-Fund fails to provide the counterparty, the Sub-Fund may be exposed to a risk in the event that the value of the guarantees received by the MF is lower than the value of the assets of the MF transferred to the counterparty under the EPMT in question. This risk could materialise in particular in the event of (i) a poor valuation of the securities subject to this transaction and/or (ii) adverse market movements and/or (iii) a deterioration in the credit rating of issuers of securities received as collateral and/or (iv) illiquidity of the market on which the collateral received is admitted to listing. Unitholders should note that (i) EPMTs may be entered into with Societe Generale (entity of the same group as the Management Company) and/or (ii) that Societe Generale may be appointed as agent of the Subfund under the EPMTs.

- Risks related to the management of guarantees

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Index" are understood to mean the following situations:

- i) The Benchmark Index is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark is permanently cancelled by the index provider,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Index (other than a minor modification such as the adjustment of the underlyings of this Benchmark Index or of the respective weightings between its various components), that cannot be effectively replicated by the Sub-Fund at a reasonable cost.
- v) One or more components of the Benchmark Index becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark components are exposed to higher transaction costs for execution or settlement/delivery or to specific tax constraints, and these costs are not reflected in the Benchmark's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

- Risk related to the use of derivative instruments

The Compartment may use over-the-counter forward Financial Instruments ("FFIs") or listed FFIs, in particular futures contracts and/or hedging swaps. These FFIs can result in a series of risks on the level of the contract that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Index, risk related to the tax regime, risk related to the regulations, and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI contract, which could affect the Sub-Fund's net asset value.

Investing in futures may involve a high level of risk. The amount required to trade certain FFIs is potentially much lower than the exposure obtained through these instruments, which implies a "leverage" at the level of each transaction. A relatively limited market movement would then have a proportionately very high impact, which could be favourable or unfavourable to the Fund.

The market value of forward financial instruments is highly volatile and may therefore be subject to significant fluctuations.

The Sub-Fund may use OTC futures. Over-the-counter transactions may be less liquid than transactions traded on organised markets, where trading volumes are generally higher, and their prices may be more volatile.

- Sustainability risks

The Sub-Fund does not consider sustainability factors in the investment decision-making process but remains exposed to sustainability risks. The occurrence of such risks could have a negative impact on the value of the investments made by the Sub-Fund. Additional information can be found in the "Sustainability Information" section of the Prospectus.

Subscribers concerned and typical investor profile:

The Acc and Dist shares of the Subfund are open to any subscriber.

J-EUR shares are open to all subscribers but are especially dedicated to institutional investors. Investors subscribing to this Subfund are seeking exposure to French equity markets.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers. The minimum recommended investment term is greater than 5 years.

"U.S. Persons" (as defined in the prospectus - see "COMMERCIAL INFORMATION") may not invest in the Sub-Fund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy-92800 Puteaux.*
- *Creation date of the Multi Units France Sicav: 04 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 06 June 2018.*
- *Compartment creation date: 05 September 2019.*

activity report

The fund tracks the performance of the CAC 40 Total Return Indx EUR index (Ticker: CACR).

Performance trend at the closing date:

Share name	ISIN	Share currency	Performance from 28/02/19 to 31/10/19			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor CAC 40 (DR) UCITS ETF - Dist	FR0007052782	EUR	51.86% ⁽¹⁾	52.20%		106.83%
Lyxor CAC 40 (DR) UCITS ETF - J-EUR	FR0011122233	EUR	51.86% ⁽¹⁾	52.20%		211.20%
Lyxor CAC 40 (DR) UCITS ETF - Acc	FR0013380607	EUR	51.86% ⁽¹⁾	52.20%		50.04%

⁽¹⁾ "The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs (for example the index rebalancing cost);
- taxation incurred in relation to the methodology used in the Benchmark;
- possible use by the manager of sampling or advanced index management techniques;

The tracking error realised is 0.0191%. The target tracking error over the period was 0.05%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams. This difference is considered insignificant.

The fund complies with the PEA eligibility constraints at all times, the details of which are available on request from the management company. During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

This Fund is covered by Article 6 of Regulation (EU) 2019/2088 (the "SFDR Regulation"). It does not promote environmental and/or social characteristics and does not aim to invest sustainably

Transparency of environmentally sustainable investments in periodic reports under Regulation (EU) 2020/852

Regulation (EU) 2020/852 on the establishment of a framework for promoting sustainable investments (the "Taxonomy Regulation") sets out the criteria for determining whether an economic activity is environmentally sustainable in the European Union.

According to the Taxonomy Regulation, an activity can be considered "sustainable" if it contributes substantially to one of the 6 environmental objectives set out in the Taxonomy Regulation, including climate change mitigation and adaptation, pollution prevention and reduction, or the protection and restoration of biodiversity and ecosystems.

In addition, in order to be considered to be sustainable, this economic activity must respect the principle of "not to cause significant harm" to one of the other five objectives of the Taxonomy Regulation and must also comply with basic social criteria (alignment to OECD and UN guidelines on business and human rights).

In accordance with article 7 of the Taxonomy Regulation, the management company draws investors' attention to the fact that the underlying investments of this Fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Provision of environmental, social and governance (ESG) information - in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website [Lyxor.com](https://www.lyxor.com) and is revised each

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

(a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

•French, German & Luxembourgish Funds (Fonds Communs de Placement - FCP) and SICAV (*)

•Securities of issuers domiciled in Europe: in order to prevent excessive costs inherent in the voting process, Lyxor participates in general meetings when the consolidated holding represents more than 0.10% of the company's capital

•Securities of issuers domiciled in the United States: Lyxor will exercise its voting rights on its largest consolidated holdings •Equity securities of issuers

domiciled in Japan: Lyxor will exercise its right to vote on its largest consolidated holdings

(*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership.

In terms of engagement, Lyxor has defined an engagement policy that is structured around three axes: an engagement related to general meetings, an engagement related to environmental, social and/or governance issues, and an engagement related to climate. This third axis comprises four engagement campaigns:

•The first campaign related to the Climate Action 100+ initiative, committing Lyxor to ask companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosure) recommendations.

•The second campaign related to plastics and the circular economy.

•The third campaign related to localized water management.

•The fourth campaign related to responsible cleantech.

This fund is part of the following campaigns: Climate Action 100+, Corporate Governance, ESG, General meeting, Plastic & Circular Economy, Responsible Cleantech

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

•Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy). •Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns

•Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.

•Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.

•Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.

•In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,

•In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to

controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website [Lyxor.com](https://www.lyxor.com)

Active Ownership - Operational set up:

In addition to the internal analysis carried out, Lyxor uses the services of ISS (Institutional Shareholder Services), as a proxy advisor.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

Engagement policy:

To carry out its engagement campaigns, Lyxor can:

organize one-on-one meetings with management, board members, investor relations, sustainable development teams or any person within the company who can provide answers to the issue;

partner with other management companies to gain greater leverage with targeted companies; (iii) join working groups or initiatives specializing in certain areas.

Description of how the results of the analysis on ESG issues are integrated in investment policies

In terms of engagement, the details are presented below.

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website [Lyxor.com](https://www.lyxor.com).

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

2. Description of how the results of the analysis implemented on ESG criteria, in particular exposure to climate risks, are integrated into the investment policy

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint
 - Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.
- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:
 - The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
 - Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
 - A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).
- With regard to carbon risk management:
 - Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).
- In regards with the portfolio's exposure to issuers offering environmental solutions:
 - Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).
- In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present:

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuers in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

For each issuer (Corporate & Government), ESG Industry sector classification is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The ESG score calculated at the portfolio level measures the capacity of the underlying issuers to manage the risks and key opportunities associated with environmental, social and governance factors. The risk scale ranges from 0 (high risk) to 10 (low risk). Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: employment, social relations, health and safety, training, compliance with ILO conventions
- Governance: Board of Directors or Supervisory Board, Audit and Internal Control, Executive Compensation

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source: The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Measures the portfolio's exposure to companies experiencing controversies relating to their compliance with international standards as a function of their degree of severity:

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: indicates that the company is not involved in any major controversies
- None: Sovereign and/or Company not covered

Red Flag 0%
Orange Flag 18%
Yellow Flag 61%
Green Flag 21%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2021

Carbon Emissions (tons CO2e/\$M invested)	Carbon Intensity (tons CO2e/\$M sales)	Weighted Average Carbon Intensity (tons CO2e/\$M sales)	Portfolio rated by weight	100%
			Scope 1 reported (vs estimated)	99%
			Scope 2 reported (vs estimated)	97%
			Scope 1 & 2 estimations are based on MSCI methodology	
104	238	144		

Carbon Measurement methodology

The GreenHouse Gas Protocol (GHG Protocol) was launched in 2001 by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: direct emissions resulting from the burning of fossil fuel resources owned or controlled by the company.
- Scope 2: indirect emissions related to the purchase or production of electricity.
- Scope 3: all other indirect emissions, from the extended supply chain to the transport of goods and persons.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio invested in both equities and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt. All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or the portion of the company's revenue earned from fossil fuel energies or the portion of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon:	
Fossil Fuel Reserves	10%
Thermal Coal	0%
Natural Gaz	8%
Oil	8%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of : \$ 1,000,000

Thermal Coal (Tons)	0
Gas (MMBOE)	0.0024
Oil (MMBOE)	0.0022

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

tCO2e/\$M invested	
Metallurgical Coal	168.6
Thermal Coal	0.0
Oil	965.5
Gas	779.5
Total	1,913.6

These metrics include only corporate issuers rated in Carbon.

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges - this is the case with oil sands, which have been targeted as being particularly climate-unfriendly. With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	177.6
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	177.6
Other	1,736.0

These metrics include only corporate issuers rated in Carbon.

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	0.8%	11.2%	4.3%
Some efforts	99.2%	88.8%	91.8%
Limited efforts/Information	0.0%	0.0%	2.6%
No effort/No evidence	0.0%	0.0%	1.3%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

•Asset stranding: risk of holding assets which may become stranded

•Operational Transition: risk of increase in operational costs

•Product Transition: risk of a decrease in demand for high-carbon products and services

•Neutral: low exposure to transition risks

•Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low- carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.1
Low carbon transition management Score	6.8
Operational Transition	9.0%
Product Transition	9.0%
Neutral	72.0%
Solutions	8.1%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The issuer data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Share of issuers in terms of power generation in portfolio	9.5%
--	------

Source: MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	14.1%	Liquid Fuel	0.7%	Natural Gas	57.5%
Nuclear	8.7%	Renewables	13.8%	Thermal Coal	5.3%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. Those issuers are likely to benefit from a low carbon transition

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	22%
20-49.9%	9%
50-100%	1%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	22.7%	Energy Efficiency	22.7%	Green Building	4.1%
Pollution Prevention	6.1%	Sustainable Water	6.1%	Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions. These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	0.7%	Energy Efficiency	3.7%	Green Building	0.6%
Pollution Prevention	0.1%	Sustainable Water	0.3%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Corporate physical risk indicators

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	4%
Coldwave	32%
Flood	4%
Heatwave	8%
Hurricane	2%
Water Stress	42%
Wildfire	8%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks.

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	2.5%	85.9%	11.5%	87.9%	7.2%	4.8%
Carbon Emissions	2.9%	47.6%	49.5%	78.2%	12.0%	9.9%
Electronic Waste	5.0%	5.4%	89.7%	99.5%		0.5%
Opportunities in Green Building	3.1%	55.3%	41.6%	99.5%	0.1%	0.4%
Opp's in Renewable Energy	7.2%	76.6%	16.2%	97.4%		2.6%
Packaging Material & Waste	10.0%	47.7%	42.3%	79.4%		20.6%
Water Stress	6.7%	90.4%	3.0%	33.7%	45.9%	20.3%
Toxic Emissions & Waste				38.7%	40.1%	21.2%

Temperature - Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

- A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,
- An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates a carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Level of alignment	>3°C
Hedging	97.9%
Alignment Trajectory in % Weight	
<1.5°C	6.7%
1.5-2°C	28.0%
2-3°C	27.4%
>3°C	37.9%

LYXOR CAC 40 (DR) UCITS ETF (compartment of the Multi Units France Sicav)

Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

Overview of General Meetings

The table here shows the number of General Meetings in which Lyxor participated compared with all those held by the issuers present in the fund.

Number of meetings	46
Number of Voted Meetings	39
Participation rate at General Meetings	84.8%

Breakdown of voting instructions

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
Reorg. and Mergers	81.8%	18.2%	0.0%
Antitakeover	14.3%	85.7%	0.0%
Routine/Business	96.2%	2.7%	1.1%
Board of Directors	83.4%	16.6%	0.0%
Capitalization	86.6%	12.9%	0.5%
Non-Salary Comp.	93.4%	5.5%	1.1%
Miscellaneous	33.3%	0.0%	66.7%
Shareholders Proposals	0.0%	100.0%	0.0%

Geographed breakdown

In 2021, Lyxor's voting scope was issuers domiciled in Europe, in United States and in Japan.

The data details the geographical distribution of the General Meetings at which the Lyxor CAC 40 (DR) UCITS ETF fund participated during the financial year.

France	89.7%
Netherlands	7.7%
Luxembourg	2.6%

Engagement

This fund is part of the following campaigns: Climate Action 100+, Corporate Governance, ESG, General meeting, Plastic & Circular Economy, Responsible Cleantech

Climate Action 100+: In 2018, Lyxor joined the Climate Action 100+, an international initiative led by investors to engage systemically with important greenhouse gas emitters and other companies across the global economy that have significant opportunities to drive the clean energy transition and help achieve the goals of the Paris Agreement.

Through this initiative, Lyxor aims to obtain commitments from the Boards of Directors or Supervisory Boards and/or key executives in order to:

1. Implement a strong governance framework that clearly articulates the Board's responsibility and oversight for climate risks;
2. Take action to reduce greenhouse gas emissions across the value chain, in line with the Paris Agreement's goal of limiting global average temperature increase to well below 2°C above pre-industrial levels and to move, as far as possible, to a 1.5°C trajectory. This implies the ambition to achieve the goal of carbon neutrality (net zero emissions) by 2050;
3. Improve reporting in accordance with the final recommendations of the Taskforce on Climate-related Financial Disclosures (TCFD) and the Global Investor Coalition on Climate Change (if applicable) to enable investors to assess the robustness of corporate strategies against a range of climate scenarios, including well below 2°C, and to improve investment decision-making.

ESG: The consideration of environmental, social and/or governance issues is at the heart of Lyxor's responsible investor strategy. Lyxor therefore considers that it is the responsibility of the Board to supervise the definition of the company's non-financial and climate risks and opportunities, as well as the strategy implemented by management with regards to this risk/opportunity analysis. The objective of Lyxor on this type of engagement is to work with companies to encourage them to improve their Corporate Social Responsibility practices.

Corporate Governance: Outside the general assembly period, Lyxor promotes regular dialogue with companies on corporate governance issues such as changes in the composition of the Board and its committees, succession plans, the role and functions of the lead director, changes in the remuneration policy, etc.

Plastic & Circular Economy: Lyxor joined a collaborative engagement campaign on the theme of plastic and the circular economy. The objective is to understand with key players what the stakes of plastic are and how to integrate the associated risks throughout the value chain.

Throughout this initial three-year engagement campaign, Lyxor and the various stakeholders are addressing key issues, such as life-cycle analysis, which is crucial in establishing a circular economy, or the quality of recycled materials and the confidence in the material, one of the main challenges to increase the use of recycled plastics. In addition to assessing the commitment of companies, Lyxor explores practical issues regarding the establishment of a circular economy and exchanges on best market practices in order to find sustainable and accessible solutions for all stakeholders.

Responsible Cleantech: Lyxor initiated in 2020 a thematic campaign on clean and responsible technologies. The objective of this engagement campaign is to implement a holistic approach to assess and manage ESG risks associated with the development of this type of technology. In addition to assessing companies' practices, this campaign aims to identify potential points of vigilance and improvement and work together in the search for sustainable solutions.

More specifically, this thematic commitment aims to:

- Apply a life-cycle approach to clean technology products;
- Catalyze more sustainable production of some of the most popular cleantech solutions;
- Explore ways to more effectively address environmental and social risks in production and supply chain.

Overview of engagement campaigns over the year

The table shows the number of engagement campaigns conducted by Lyxor during the year compared to the number of issuers present in the fund.

Number of companies under engagement	25
Number of engagement	43
Number of companies under engagement / Number of companies in the fund	64%

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des marchés financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 ("AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 ("UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors. The Lyxor International Asset Management compensation policy notably ensures appropriate risk management and adherence to compliance on the part of its employees.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No "carried interest" was paid during the financial year.

Lyxor's best selection and execution policy

Information on best selection and execution policies is available at: www.lyxor.com.

Transparency of securities financing operations and reuse of financial instruments SFTR regulation

(Accounting currency of the CIU)

During the financial year, the UCI did not carry out any transactions subject to the SFTR regulation, namely no repurchase transactions, securities or commodities lending/borrowing, buy-sell back or sell-buy back transactions, margin lending transactions and total return swaps (TRS).

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information, in the evolving context of the Covid-19 crisis.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded. However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- - Units and equities in undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Sub-Fund's net asset value.
- Units and shares of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Subfund's net asset value

Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Sub-Fund's reference currency are the exchange rates published the fixing WM Reuters on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the CIS) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Sub-Fund) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Sub-Fund, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Sub-Fund has exceeded its objectives and are invoiced to the Sub-Fund;
- Transfer commissions invoiced to the Sub-Fund.
- Direct and indirect operating costs/fees related to temporary purchases and sales of securities

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Sub-Fund	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	Maximum 0.25 % per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commission	Net assets	None
Direct and indirect operating costs/fees related to temporary acquisitions and disposals of securities	Amount of income generated by these operations	Maximum 20% for the Management Company; maximum 15% for the Agent

⁽¹⁾ including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Accounting currency

The Compartment accounting is carried out in Euro.

Indication of accountancy changes declared to each of the shareholders individually

- - Occurred change: None.
- - Future change: None.

Other changes declared to each of the shareholders individually *((Not certified by the statutory auditor))*

- - Occurred change: None.
- - Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Dist and J-EUR share classes: the Board of Directors reserves the right to distribute, one or more times per year, all or part of the result and/or to accumulate it.

Acc share classes: accumulation of all distributable amounts.

LYXOR CAC 40 (DR) UCITS ETF does not benefit in any way from sponsorship, support, or promotion and is not sold by Euronext or its subsidiaries ("Euronext") (collectively referred to as "Holders").

The Holders make no warranties or representations, express or implied, either as to the results to be obtained from the use of the CAC 40 GROSS TOTAL RETURN ("Index") and/or the level at which the Index stands at any particular time or on any particular day or otherwise.

The Index is calculated by or on behalf of Euronext. The Holders shall not (whether as a result of negligence or otherwise) be liable for any error affecting the Index in respect of anyone and they shall not be obliged to inform any person of any error affecting the Index.

2 Evolution of the net assets

K-EUR, J-EUR, Daily Hedged to USD - Dist, Daily Hedged to GBP -Dist, Daily Hedged to CHF -Dist share classes:

the Board of Directors reserves the right to distribute, one or more times per year, all or part of the result and/or to accumulate it.

Acc, Daily Hedged to USD - Acc, Daily Hedged to GBP - Acc and Daily Hedged to CHF - Acc share classes: Capitalisation of all the amounts available for distribution.

Management objective:

The Compartment is a passively managed index-based UCITS.

The investment objective of this Subfund is to track the upward and downward performance of the EURO STOXX 50® NET RETURN index (net dividends reinvested) ("Benchmark"), listed in euros and representative of the performance of 50 blue chips on the eurozone market while minimising the tracking error between the Subfund's performance and the Benchmark's performance as much as possible.

The anticipated level of the ex-post tracking error under normal market conditions is 0.50%.

Benchmark indicator:

The Benchmark is a subset of the EURO STOXX index. It is made up of the 50 largest stocks belonging to the eurozone member countries. These securities are selected for their market capitalisation, liquidity and sector representativeness. The Benchmark strives to comply with a weighting by country and by economic sector that reflects as much as possible the economic structure of the euro zone.

Benchmark Index publication

The composition of this Benchmark is revised each year.

The Benchmark is a "Net Return" index, which means that the Benchmark's performance includes the net dividends paid by its underlying equities.

A full description of the Benchmark and its construction methodology and information on the composition and respective weightings of the Benchmark components are available on the website: <http://www.stoxx.com/indices>

The above-mentioned frequency of rebalancing has no effect on costs as part of the implementation of the investment strategy.

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Euronext administrator of the Benchmark Indicator, STOXX Ltd., is included in the register of administrators and benchmark indices maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmarks used which describes the measures to be implemented in the event of substantial changes to an index or disappearance of that index.

Benchmark Index revision and composition

The performance tracked is that of the index closing price.

The full methodology is available at the following address : www.stoxx.com/indices/

Investment strategy:

1. Strategy employed

The Sub-Fund will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In order to seek the highest possible correlation with the performance of the Benchmark Indicator, the Sub-Fund will use a direct replication method, which means that the Sub-Fund will invest in a basket of assets made up of the securities comprising the Benchmark Indicator and/or financial instruments representative of all or part of the securities comprising the Benchmark Indicator.

In addition, the sub-fund may use forward financial instruments ("FFIs"). FFIs in which the sub-fund is likely to invest include contracts such as index futures, futures on all or part of the Benchmark Index constituents, and hedging swaps entered into to minimise the Subfund's tracking error.

Where the Subfund's investment strategy (e.g. use of futures) requires it to hold cash, the Manager may, in the best interests of the holders, use deposits with credit institutions and/or invest cash in on-balance sheet assets and/or off-balance sheet assets (as described below).

In order to optimise the direct tracking method with respect to the Benchmark, the Compartment, represented by the Management Company, may decide to use a "sampling" technique consisting in investing in a selection of representative securities composing the Benchmark in order to limit the costs associated with investment in the various components of the Benchmark. A replication-by-sampling strategy could notably lead the Subfund to invest in a representative selection (rather than all) of securities comprising the Benchmark, in proportions different from those of the Benchmark Index or even to invest in securities other than the Benchmark Index constituents.

In order to allow investors to benefit from transparency on the direct tracking method used (full tracking of the Benchmark or sampling to limit replication costs) and its consequences in terms of assets held by the Subfund, information on the updated composition of the basket of balance sheet assets held in the Subfund's portfolio is available on the page dedicated to the Subfund available on the website www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

The Sub-Fund will permanently invest a minimum of 75% of its assets in companies that have their registered office in a Member State of the European Union, or in another State party to the Treaty on the European Economic Area that has entered into a tax agreement with France containing an administrative assistance clause with a view to combating fraud or tax evasion. This minimum holding level allows eligibility for the Equity Savings Plan.

As part of the management of its exposure, the Sub-Fund may be exposed up to 20 % of its assets in equities from a single issuing entity. This limit of 20% may be raised to 35% for a single issuing entity, where this proves to be justified by exceptional market conditions, particularly when certain securities are largely dominant and/or in the event of high volatility of a financial instrument or securities linked to an economic sector represented in the Benchmark Indicator, particularly in the event of a public offer affecting one of the securities comprising the Benchmark Indicator or in the event of a significant liquidity restriction affecting one or more financial instruments included in the Benchmark Indicator. In this case, the manager intends to use mainly the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Sub-Fund will mainly be invested in the securities described below:

• Equities

The Compartment may hold international equities in accordance with regulatory ratios.

The Subfund will be mainly invested in the stocks comprising the Benchmark Index.

• Holding shares or units of other UCIs or investment funds

The Subfund may invest up to 10% of its assets in units or shares of the following UCIs or investment funds:

-French or foreign UCITS compliant with Directive 2009/65/EC – For the purposes of these investments, the Subfund may subscribe for units or shares in UCITS managed by the Management Company or a company to which it is linked.

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

3. Off-balance sheet assets (derivative instruments)

On an ancillary basis, the Subfund may use futures traded on a regulated or over-the-counter market.

The counterparty of the financial futures will have no discretionary power regarding the composition of the Subfund's portfolio, nor regarding the underlying assets of the financial futures within the limit and under the conditions set out by the regulations.

Situations of conflict of interest may arise between the Management Company and Société Générale when Société Générale acts as a counterparty the FFIs. These situations are governed by the Management Company's conflict of interest management policy.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20 % of its net assets, the Sub-Fund can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10 % of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

The Sub-Fund may use effective portfolio management techniques in accordance with the provisions of Article R214-18 of the French Monetary and Financial Code and in particular temporary sales of financial securities.

-Maximum proportion of assets under management that may be covered by securities financing contracts: up to 25% of the Subfund's assets.

-Expected proportion of assets under management that can be financed by securities transactions: 0% of the Subfund's assets

In this context, the Management Company has appointed Societe Generale as an intermediary (hereinafter the "Agent"). If temporary sales are used, the Agent may be authorised (i) to carry out, on behalf of the Sub-Fund, securities lending transactions governed by GMSLAs (Global Master Securities Lending Agreements) and/or any other internationally recognised framework agreements, and (ii) to invest, on behalf of the Sub-Fund, the cash received as collateral for these securities lending transactions, in accordance with and within the limits defined by the securities lending agreement, the rules of this prospectus and the regulations in force.

As a reminder, the Management Company is an entity of the Societe Generale Group and is therefore linked to the Agent.

Where Societe Generale S.A. is appointed as Agent, it is not authorised to act as a counterparty in securities

lending transactions. If such temporary sales are used:

- the Subfund will be entitled to all income from such transactions securities, net of any direct and indirect operating costs fees.
- the above operational costs/fees related to efficient portfolio management techniques will be those incurred by the Management Company, the Agent (if applicable) and/or the other intermediaries involved in these transactions in connection with their services;
- the direct or indirect operating costs/fees will be calculated as a percentage of the gross income generated by the Subfund. Information on direct and indirect operational fees/costs and the identity of the entities to which these fees/costs are paid will be mentioned in the Sub-Fund's annual report; and
- income from the lending of securities will be paid to the Subfund after deduction of any direct and indirect operating costs/fees that may be borne by the Agent and the Management Company. To the extent that these direct and indirect fees/costs do not increase the operating costs of the Sub-Fund, they have been excluded from current expenses.

The Compartment's annual report will include, where applicable, the following details:

- the exposure generated through efficient portfolio management techniques;
- the identity of the counterparty(ies) to these effective portfolio management techniques;
- the nature and amount of any collateral received to reduce the Subfund's counterparty risk, and;
- the income generated by efficient portfolio management techniques over the relevant period, and any associated direct and indirect operating costs/fees.

8. Financial guarantees

In all cases in which the Subfund is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Subfund's use of temporary purchases and sales of securities, the Subfund can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Sub-Fund's assets. In the event of default by the counterparty, the Subfund may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt towards the Subfund as part of the guaranteed transaction. Any financial guarantee received by the Sub-Fund within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) The collateral must be sufficiently diversified in terms of country, market, and issuer, with exposure to any single issuer not exceeding 20% of the Subfund's net asset value.
- (e) The Subfund's Management Company must be able to enforce this collateral in full and at any time without having to consult with the counterparty or obtain its approval.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and
- such securities collateral consists of at least six different issues of securities of which no single issue exceeds 30% of the Subfund's assets.

In compliance with the aforesaid conditions, the guarantees received by the Sub-Fund can include:

- (i) liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) bonds issued or guaranteed by an OECD Member State by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e)(above) have been fully met;
- (iii) shares or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) shares or units issued by UCITS investing primarily in bonds/equities as indicated in points
- (v) and (vi) below;
- (v) bonds issued or guaranteed by first-class issuers offering suitable liquidity;
- (vi) equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged.

Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality government bonds;
- (iii) used for reverse repurchase transactions, provided that these are entered into with lending institutions that are subject to prudential supervision and that the UCITS is able to withdraw the total amount of its cash collateral and the accrued interest at any time.
- (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the MF may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

COUNTERPARTY SELECTION POLICY

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Sub-Fund. The selection of counterparties to financial contracts and financial intermediaries is carried out rigorously from among the reputable counterparties and intermediaries in the market on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes into consideration various criteria to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating
- Quantitative criteria based on the CDS LT spread (absolute criteria, volatility and comparison with a reference group, etc.)

Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: www.lyxor.com, section "regulatory information".

Risk profile:

The Sub-Fund will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Sub-Fund, the shareholder is primarily exposed to the following risks:

- Equity risk

An equity price can vary upwards or downwards, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Index be negative over the investment period.

- Liquidity risk (primary market)

If, when the Subfund (or one of its counterparties for forward financial instruments, or "FFIs") adjusts its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase/sale price discrepancies, the value and/or liquidity of the Subfund could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Risks related to the absence of perfect replication

Replicating the Benchmark Index by investing in all constituents of said Benchmark Index can be costly or very difficult to operate. The Subfund's manager may also use optimisation techniques, in particular the sampling technique, which consists in investing in a selection of representative securities (and not all securities) comprising the Benchmark Index, in proportions different from those of the Benchmark Index or even investing in securities other than the constituents of the index or financial futures. The use of these optimisation techniques may lead to an increase in the ex-post tracking error and will notably lead to a performance gap between the Subfund and the Benchmark Index.

- Liquidity risk on a place of listing

The Sub-Fund's equity price can deviate from its indicative net asset value. The liquidity of the Sub-Fund's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) the calculation of the Benchmark is suspended or stopped, and/or
- ii) trading in the market(s) in the Benchmark's underlying assets is suspended, and/or
- iii) an exchange cannot obtain or calculate the Subfund's indicative net asset value, and/or
- iv) a market maker fails to comply with an exchange's rules, and/or
- v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Subfund is exposed in particular to counterparty risk as a result of its use of over-the-counter financial contracts ("OTC Derivatives") and/or efficient portfolio management techniques ("EPMT"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

- Risk related to the use of effective portfolio management techniques

In the event that the counterparty to the efficient portfolio management technique (hereinafter referred to as the "EPMT") processed by the Subfund fails to provide the counterparty, the Subfund may be exposed to a risk in the event that the value of the guarantees received by the Subfund is lower than the value of the assets of the Subfund transferred to the counterparty under the EPMT in question. This risk could materialise in particular in the event of (i) a poor valuation of the securities subject to this transaction and/or (ii) adverse market movements and/or (iii) a deterioration in the credit rating of issuers of securities received as collateral and/or (iv) illiquidity of the market on which the collateral received is admitted to listing. Unitholders should note that (i) EPMTs may be entered into with Société Générale (entity of the same group as the Management Company) and/or (ii) that Société Générale may be appointed as agent of the Subfund under the EPMTs.

- Risks related to the management of guarantees

Operational risk:

The Sub-Fund may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Sub-Fund may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk related to the use of derivative instruments

The Subfund may use over-the-counter futures or listed futures, in particular futures contracts and/or hedging swaps. These FFIs can result in a series of risks on the level of the contract that include, but are not limited to: counterparty risk, event affecting the hedging, event affecting the Benchmark Index, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI contract, which could affect the Subfund's net asset value.

Investing in FFIs may involve a high level of risk. The amount required to trade certain FFIs is potentially much lower than the exposure obtained through these instruments, which entails a leverage effect at the level of each transaction. A relatively limited market movement would then have a proportionately very high impact, which could be favourable or unfavourable to the Subfund.

The market value of forward financial instruments is highly volatile and may therefore be subject to significant fluctuations.

The Sub-Fund may use OTC futures. Over-the-counter transactions may be less liquid than transactions traded on organised markets, where trading volumes are generally higher, and their prices may be more volatile.

- Risk that the management objective will only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Index, notably should one or more of the following risks arise:

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Sub-Fund is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Sub-Fund's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Sub-Fund (and/or to its counterparty in the FFI), the Sub-Fund's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Sub-Fund is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to regulations applicable to the underlyings

In case of change of the regulations applicable to the Sub-Fund's underlyings, the Sub-Fund's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Index, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Sub-Fund equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Sub-Fund's manager will decide on measures having to be adopted, which can have an impact on the Sub-Fund's net asset value.

“Events affecting the Benchmark Index” are understood to mean the following situations:

- i) The Benchmark is deemed to be inaccurate or does not reflect actual market developments,
- ii) The Benchmark is permanently cancelled by the index provider,
- iii) The supplier of the index is incapable of providing the level or value of the Benchmark,
- iv) The index provider makes a material change in the Benchmark calculation formula or method (other than a minor modification such as an adjustment to this Benchmark's underlying components or their respective weightings) that the Subfund cannot effectively replicate at a reasonable cost;
- v) one or more Benchmark components become illiquid because they are no longer traded on a regulated market or because their over-the-counter trading (e.g. bonds) is disrupted;
- vi) The Benchmark components are exposed to higher transaction costs for execution or settlement/delivery, or to specific tax constraints and these costs are not reflected in the Benchmark's performance.

- Corporate action risk

Should the issuer of a security underlying the Benchmark Index undertake an unanticipated review of a corporate action that contradicts a prior and official announcement that had resulted in a valuation of the corporate by the Subfund (and/or in a valuation of the corporate action by the Subfund's counterparty in a forward financial instrument), the Subfund's net asset value may be affected, notably should the actual treatment of the corporate action by the Subfund differ from the corporate action's treatment in the methodology used by the Benchmark Index.

- Currency hedging risk linked to Daily Hedged to USD share classes - Acc and Dist

In order to hedge the USD/EUR currency risk on the Daily Hedged to USD - Dist and the Daily Hedged to EUR - Acc share classes, the Compartment uses a hedging strategy to reduce the impact of the change between the Benchmark's currency and the currency of the share class. Due to the daily implementation of this hedge and its imperfection, the Daily Hedged to USD - Acc and USD - Dist share classes may be subject to costs or downward market movements impacting the net asset value of the share.

- Currency hedging risk linked to Daily Hedged to GBP - Acc and GBP - Dist share classes

In order to hedge the GBP/EUR currency risk on the Daily Hedged to GBP - Dist and the Daily Hedged to EUR - Acc share classes, the Compartment uses a hedging strategy to reduce the impact of the change between the Benchmark's currency and the currency of the share class. Due to the daily implementation of this hedge and its imperfection, the Daily Hedged to GBP - Acc and GBP - Dist share classes may be subject to costs or downward market movements impacting the net asset value of the share.

- Currency hedging risk linked to Daily Hedged to CHF - Acc and CHF - Dist share classes

In order to hedge the GBP/EUR currency risk on the Daily Hedged to CHF - Dist and the Daily Hedged to CHF - Acc share classes, the Subfund uses a hedging strategy to reduce the impact of the change between the Benchmark's currency and the currency of the share class.

Due to the daily implementation of this hedge and its imperfection, the Daily Hedged to CHF - Acc and CHF - Dist share classes may be subject to costs or downward market movements impacting the net asset value of the share.

- Sustainability risks

The Sub-Fund does not consider sustainability factors in the investment decision-making process but remains exposed to sustainability risks. The occurrence of such risks could have a negative impact on the value of the investments made by the Sub-Fund. Additional information can be found in the "Sustainability Information" section of the Prospectus.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

The J-EUR and K-EUR share classes are intended for institutional investors whose initial subscription is at least €100,000.

At each Net Asset Value date, K-EUR and J-EUR shareholders must hold at least €100,000 in shares or redeem their entire position in the K-EUR and J-EUR shares.

Investors subscribing to this Subfund are seeking exposure to Spanish equity markets. The amount that it is reasonable to invest in this Sub-Fund depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment term is greater than 5 years.

"U.S. Persons" (as defined in the prospectus - see "COMMERCIAL INFORMATION") may not invest in the Sub-Fund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

The Sub-Fund's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy-92800 Puteaux.*
- *Creation date of the Multi Units France Sicav: 04 March 2002.*
- *Sub-Fund approval date by the AMF (French Financial Regulatory Authority): 06 June 2018.*
- *Compartment creation date: 20 September 2018.*

business report

The fund replicates the performance of the EURO STOXX 50 R EUR index (Ticker: SX5T).

Performance trend at the closing date:

Share name	ISIN	Share currency	Performance for the fiscal year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor EURO STOXX 50 (DR) UCITS ETF - Acc	FR0007054358	EUR	46.99% ⁽¹⁾	46.43%		75.21%
Lyxor EURO STOXX 50 (DR) UCITS ETF - Daily Hedged to CHF - Acc	FR0012399731	CHF	46.57% ⁽¹⁾	46.16% ⁽²⁾		34.84%
Lyxor EURO STOXX 50 (DR) UCITS ETF - Daily Hedged to GBP - Acc	FR0012399772	GBP	47.48% ⁽¹⁾	47.17% ⁽²⁾		57.09%
Lyxor EURO STOXX 50 (DR) UCITS ETF - Daily Hedged to USD - Acc	FR0012399806	USD	48.05% ⁽¹⁾	47.67% ⁽²⁾		87.83%

⁽¹⁾ "The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- Index replication costs (for example the index rebalancing cost);
- taxation incurred in relation to the methodology used in the Benchmark Index;
- possible use by the manager of sampling or advanced index management techniques;"

⁽²⁾ "The appropriate comparison element is the hedged version of the Benchmark Index".

The tracking error realised is 0.2350%. The target tracking error over the period was 0.5%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

The fund complies with the PEA eligibility constraints at all times, the details of which are available on request from the management company. During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor) None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

This Fund is covered by Article 6 of Regulation (EU) 2019/2088 (the "SFDR Regulation"). It does not promote environmental and/or social characteristics and does not aim to invest sustainably

Transparency of environmentally sustainable investments in periodic reports under Regulation (EU) 2020/852

Regulation (EU) 2020/852 on the establishment of a framework for promoting sustainable investments (the "Taxonomy Regulation") sets out the criteria for determining whether an economic activity is environmentally sustainable in the European Union.

According to the Taxonomy Regulation, an activity can be considered "sustainable" if it contributes substantially to one of the 6 environmental objectives set out in the Taxonomy Regulation, including climate change mitigation and adaptation, pollution prevention and reduction, or the protection and restoration of biodiversity and ecosystems.

In addition, in order to be considered to be sustainable, this economic activity must respect the principle of "not to cause significant harm" to one of the other five objectives of the Taxonomy Regulation and must also comply with basic social criteria (alignment to OECD and UN guidelines on business and human rights).

In accordance with article 7 of the Taxonomy Regulation, the management company draws investors' attention to the fact that the underlying investments of this Fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Provision of environmental, social and governance (ESG) information - in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website [Lyxor.com](https://www.lyxor.com) and is revised each

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

(a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

- French, German & Luxembourgish Funds (Fonds Communs de Placement - FCP) and SICAV (*)
- Securities of issuers domiciled in Europe: in order to prevent excessive costs inherent in the voting process, Lyxor participates in general meetings when the consolidated holding represents more than 0.10% of the company's capital
- Securities of issuers domiciled in the United States: Lyxor will exercise its right to vote on its largest consolidated holdings
- Securities of issuers domiciled in Japan: Lyxor will exercise its right to vote on its largest consolidated holdings

(*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership.

In terms of engagement, Lyxor has defined an engagement policy that is structured around three axes: an engagement related to general meetings, an engagement related to environmental, social and/or governance issues, and an engagement related to climate. This third axis comprises four engagement campaigns:

- The first campaign related to the Climate Action 100+ initiative, committing Lyxor to ask companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosure) recommendations.
- The second campaign related to plastics and the circular economy.
- The third campaign related to localized water management.
- The fourth campaign related to responsible cleantech.

This fund is part of the following campaigns: Climate Action 100+, Corporate Governance, ESG, General meeting, Plastic & Circular Economy, Responsible Cleantech

b) Description of the general information used for the analysis implemented on ESG criteria

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website [Lyxor.com](https://www.lyxor.com)

Active Ownership - Operational set up:

In addition to the internal analysis carried out, Lyxor uses the services of ISS (Institutional Shareholder Services), as a proxy advisor.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

Engagement policy:

To carry out its engagement campaigns, Lyxor can:

- (i) organize one-on-one meetings with management, board members, investor relations, sustainable development teams or any person within the company who can provide answers to the issue;
- (ii) partner with other management companies to gain greater leverage with targeted companies; (iii) join working groups or initiatives specializing in certain areas.

Description of how the results of the analysis on ESG issues are integrated in investment policies

In terms of engagement, the details are presented below.

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website [Lyxor.com](https://www.lyxor.com).

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

2. Description of how the results of the analysis implemented on ESG criteria, in particular exposure to climate risks, are integrated into the investment policy

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuers in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations

Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

LYXOR EURO STOXX 50 (DR) UCITS ETF (compartment of the Multi Units France Sicav)

For each issuer (Corporate & Government), ESG Industry sector classification is provided by MSCI ESG Ratings.
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The ESG score calculated at the portfolio level measures the capacity of the underlying issuers to manage the risks and key opportunities associated with environmental, social and governance factors. The risk scale ranges from 0 (high risk) to 10 (low risk). Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: employment, employer-employee relations, health and safety, training, compliance with ILO conventions
- Governance: board of directors or supervisory board, audit and internal control, executive pay

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Externalities Environementales, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source: The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Measures the portfolio's exposure to companies experiencing controversies relating to their compliance with international standards as a function of their degree of severity:

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 2%
Orange Flag 26%
Yellow Flag 47%
Green Flag 25%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2021

Carbon Emissions (tons CO2e/\$M invested)	Carbon Intensity (tons CO2e/\$M sales)	Weighted Average Carbon Intensity tons (CO2e/\$M sales)	Portfolio rated by weight	
57	147	159	Scope 1 reported (vs estimated)	100%
			Scope 2 reported (vs estimated)	99%
			Scope 1 & 2 estimations are based on MSCI methodology	98%

Carbon Measurement methodology

The GreenHouse Gas Protocol (GHG Protocol) was launched in 2001 by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: direct emissions resulting from the burning of fossil fuel resources owned or controlled by the company.
- Scope 2: indirect emissions related to the purchase or production of electricity.
- Scope 3: all other indirect emissions, from the extended supply chain to the transport of goods and persons.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio invested in both equities and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest - total debt.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or the portion of the company's revenue earned from fossil fuel energies or the portion of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon:

Fossil Fuel Reserves	8%
Thermal Coal	0%
Natural Gas	8%
Oil	8%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of : \$ 1,000,000

Thermal Coal (Tons)	0
Gas (MMBOE)	0.0020
Oil (MMBOE)	0.0017

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	753.8
Gas	647.7
Total	1,401.6

These metrics include only corporate issuers rated in Carbon.

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges - this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	93.4
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	93.4
Other	1,308.1

These metrics include only corporate issuers rated in Carbon.

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Carbon reduction objectives
Aggressive efforts	1.9%	7.6%	12.8%
Some efforts	93.1%	89.5%	79.5%
Limited efforts/Information	0.0%	0.0%	1.8%
No effort/No evidence	5.1%	2.9%	6.0%

Low Carbon Transition Score

The Low Carbon Transition Score⁽¹⁾ uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low- carbon products.

Low carbon transition score	5.8
Low carbon transition management Score	6.3
Operational Transition	12.1%
Product Transition	12.1%
Neutral	70.6%
Solutions	2.7%

(1) Metric developed by MSCI

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The issuer data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source: MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)					
Hydro	20.4%	Liquid Fuel	4.3%	Natural Gas	36.6%
Nuclear	12.8%	Renewables	22.9%	Thermal Coal	3.0%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	16.6%	Energy Efficiency	24.6%	Green Building	1.7%
Pollution Prevention	4.5%	Sustainable Water	5.1%	Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	0.6%	Energy Efficiency	2.5%	Green Building	0.1%
Pollution Prevention	0.1%	Sustainable Water	0.1%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Corporate physical risk indicators

1. Physical Risk drivers by fund - High Climate Change Scenario 0

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

SeaLevelRise	4%
Coldwave	31%
Flood	3%
Heatwave	8%
Hurricane	2%
Water Stress	42%
Wildfire	9%

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks.

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	10.4%	70.2%	19.4%	90.1%	5.9%	4.0%
Carbon Emissions	2.4%	45.2%	52.4%	78.5%	10.8%	10.7%
Electronic Waste	3.7%	17.1%	79.2%	100.0%		
Opportunities in Green Building	3.1%	58.9%	37.9%	99.1%	0.9%	
Opp's in Renewable Energy	8.3%	80.6%	11.1%	96.5%	1.1%	2.4%
Packaging Material & Waste	13.5%	41.5%	45.0%	85.2%		14.8%
Water Stress	8.7%	84.5%	6.8%	51.6%	31.2%	17.1%
Toxic Emissions & Waste				42.8%	37.1%	20.1%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Level of alignment	>3°C
Hedging	97.2%

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

-A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,

-An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Alignment Trajectory in % Weight	
<1.5°C	22.7%
1.5-2°C	19.6%
2-3°C	16.2%
>3°C	41.5%

Each approach allocates a carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since 1 January.

Overview of General Meetings

This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of General Meetings	58
Number of General Meetings voted	54
Participation rate at General Meetings	93.1%

Breakdown of voting instructions

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
Capitalization	93.3%	6.1%	0.6%
Routine/Business	93.9%	6.1%	0.0%
Board of Directors	91.5%	8.5%	0.0%
Non-Salary Comp.	91.1%	7.8%	1.1%
Reorg. and Mergers	100.0%	0.0%	0.0%
Shareholder resolutions	33.3%	33.3%	33.3%
Miscellaneous	71.4%	0.0%	28.6%
Antitakeover	100.0%	0.0%	0.0%
Other/Misc	100.0%	0.0%	0.0%

Geographed breakdown

In 2021, Lyxor's voting scope was issuers domiciled in Europe, in United States and in Japan.

The data details the geographical distribution of the General Meetings at which the Lyxor EURO STOXX 50 (DR) UCITS ETF fund participated during the financial year.

Ireland	9.3%
Germany	25.9%
Netherlands	13.0%
Finland	1.9%
Spain	7.4%
France	35.2%
Belgium	1.9%
Italy	5.6%

Engagement

This fund is part of the following campaigns: Climate Action 100+, Corporate Governance, ESG, General meeting, Plastic & Circular Economy, Responsible Cleantech

Climate Action 100+: In 2018, Lyxor joined the Climate Action 100+, an international initiative led by investors to engage systemically with important greenhouse gas emitters and other companies across the global economy that have significant opportunities to drive the clean energy transition and help achieve the goals of the Paris Agreement.

Through this initiative, Lyxor aims to obtain commitments from the Boards of Directors or Supervisory Boards and/or key executives in order to:

1. Implement a strong governance framework that clearly articulates the Board's responsibility and oversight for climate risks;
2. Take action to reduce greenhouse gas emissions across the value chain, in line with the Paris Agreement's goal of limiting global average temperature increase to well below 2°C above pre-industrial levels and to move, as far as possible, to a 1.5°C trajectory. This implies the ambition to achieve the goal of carbon neutrality (net zero emissions) by 2050;
3. Improve reporting in accordance with the final recommendations of the Taskforce on Climate-related Financial Disclosures (TCFD) and the Global Investor Coalition on Climate Change (if applicable) to enable investors to assess the robustness of corporate strategies against a range of climate scenarios, including well below 2°C, and to improve investment decision-making.

ESG: The consideration of environmental, social and/or governance issues is at the heart of Lyxor's responsible investor strategy. Lyxor therefore considers that it is the responsibility of the Board to supervise the definition of the company's non-financial and climate risks and opportunities, as well as the strategy implemented by management with regards to this risk/opportunity analysis. The objective of Lyxor on this type of engagement is to work with companies to encourage them to improve their Corporate Social Responsibility (CSR) practices.

Corporate Governance: Outside the general meeting period, Lyxor promotes regular dialogue with companies on corporate governance issues such as changes in the composition of the Board and its committees, succession plans, the role and functions of the lead director, changes in the remuneration policy, etc.

Plastic & Circular Economy: Lyxor joined a collaborative engagement campaign on the theme of plastic and the circular economy. The objective is to understand with key players what the stakes of plastic are and how to integrate the associated risks throughout the value chain.

Throughout this initial three-year engagement campaign, Lyxor and the various stakeholders are addressing key issues, such as life-cycle analysis, which is crucial in establishing a circular economy, or the quality of recycled materials and the confidence in the material, one of the main challenges to increase the use of recycled plastics. In addition to assessing the commitment of companies, Lyxor explores practical issues regarding the establishment of a circular economy and exchanges on best market practices in order to find sustainable and accessible solutions for all stakeholders.

Responsible Cleantech: Lyxor initiated in 2020 a thematic campaign on clean and responsible technologies. The objective of this engagement campaign is to implement a holistic approach to assess and manage ESG risks associated with the development of this type of technology. In addition to assessing companies' practices, this campaign aims to identify potential points of vigilance and improvement and work together in the search for sustainable solutions.

More specifically, this thematic commitment aims to:

- Apply a life-cycle approach to clean technology products;
- Catalyze more sustainable production of some of the most popular cleantech solutions;
- Explore ways to more effectively address environmental and social risks in production and supply chain.

Localized Water Management: Aware of the growing challenge of water management, Lyxor launched a collaborative thematic engagement campaign on water management in 2020. Most companies are aware of the importance of water management issues but do not make them a priority. The objective of this campaign is to remedy this phenomenon so that all companies can integrate these issues throughout their value chain.

The starting point for good management of water-related issues is to properly map the risks and associated impacts that fall under the direct and indirect control of companies. In addition to assessing companies' practices, the idea is to mobilize them more on this topic, in other words, to ensure that companies' approach to water risk assessment and management:

- Proactively and effectively contributes to long-term business continuity;
- Is environmentally sustainable;
- Respects the development needs of the countries concerned.

Engagement overview over the year

The table shows the number of engagement campaigns conducted by Lyxor during the year compared to the number of issuers present in the fund.

Number of companies under engagement	27
Number of engagement	46
Number of companies under engagement / Number of companies in the fund	55%

Breakdown by country

The data present the geographical breakdown of the issuers concerned by an engagement campaign over the financial year by the fund.

Netherlands	11%
Belgium	4%
France	41%
Italy	11%
Germany	17%
Spain	11%
Ireland	4%

Breakdown by engagement campaigns carried out by the fund over the year

For the year, the fund participated in the various engagement campaigns presented below and conducted by Lyxor.

For more details on Lyxor's engagement activities, an annual report is available on the Lyxor website: <https://www.lyxor.com/en/socially-responsible-investment>

General Meeting	22%
Climate Action 100+	7%
ESG	43%
Localized Water Management	4%
Responsible Cleantech	2%
Corporate Governance Roadshow	17%
Plastic & Circular Economy	4%

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des marchés financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 ("AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 ("UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management compensation policy notably ensures appropriate risk management and adherence to compliance on the part of its employees.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No "carried interest" was paid during the financial year.

Lyxor's best selection and execution policy

Information on best selection and execution policies is available at: www.lyxor.com.

Transparency of securities financing operations and reuse of financial instruments SFTR regulation

(Accounting currency of the CIS)

During the financial year, the UCI did not carry out any transactions subject to the SFTR regulation, namely no repurchase transactions, securities or commodities lending/borrowing, buy-sell back or sell-buy back transactions, margin lending transactions and total return swaps (TRS).

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information, in the evolving context of the Covid-19 crisis.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- - Units and equities in undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Sub-Fund's net asset value.
- - Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Sub-Fund's reference currency are the exchange rates published the fixing WM Reuters on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the CIU) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional transactions is equal to the price of the underlying security (in the currency of the subfund) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Sub-Fund).

Operation and management fees

These fees include all of the fees invoiced directly to the Sub-Fund, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transfer commission which, if relevant, may notably be collected by the custodian and management company.

For this Sub-Fund, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Sub-Fund has exceeded its objectives and are invoiced to the Sub-Fund;
- activity fees charged to the Subfund;
- direct and indirect operating costs/fees related to temporary purchases and sales of securities.

For more details on the fees actually invoiced to the Sub-Fund, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Sub-Fund	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	Maximum 0.20 % per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commission	Net assets	None
Direct and indirect operating costs/fees related to temporary acquisitions and disposals of securities	Amount of income generated by these operations	20% maximum for the Management Company; 15% maximum for the Agent

⁽¹⁾ including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Off-balance sheet				
Hedging	-	-	-	-
Other operations	-	-	-	-

3.5. Receivables and Debts: breakdown by type

Breakdown of items comprising "other receivables" and "other payables", in particular the breakdown of forward foreign exchange transactions by type of transaction (buy/sell).

Receivables	260,242,393.42
Future currency exchange operations:	
Future purchases of currency	7,584,044.29
Total traded amount of future Sales of currencies	240,803,840.45
Other receivables:	
Coupons receivable	1,370,219.61
Deferred settlement sales	8,403,859.72
Security deposit	347,661.50
Other receivables:	1,732,767.85
-	-
Other operations	-
Debts	755,497,800.31
Future currency exchange operations:	
Future sales of currencies	239,304,014.69
Total traded amount of future Purchases of currencies	7,643,526.08
Other debts:	
Accrued expenses	626,282.43
Deferred settlement purchases	53,000,795.00
Sundry debtors and creditors	32,825.87
Account payable	446,486,496.52
Suspense accounts	8,403,859.72
Other operations	-

3.6. Shareholders' equities

Equity category issued/redeemed during the fiscal year:	Number of equities	Subscriptions		Redemptions	
		Amount	Number of equities	Amount	
Acc shares / FR0013346681	1,947,072	66,387,735.04	51,513,786	1,880,122,342.31

3.8. Commitments given and received

3.8.1. Description of guarantees received by the Sub-Fund with indication of the capital guarantees	None
3.8.2. Description of the other commitments received and/or given	None

3.9. Other information

3.9.1. Current value of the financial instruments that are the subject of temporary acquisition:

- Financial instruments sold under forward repurchase agreements	-
- Other temporary operations	-

3.9.2. Current value of the financial instruments comprising security deposits:

Financial instruments received as guarantees and not included in the balance sheet:

- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-

Financial instruments given as guarantees and maintained in their original item:

- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-

3.9.3. Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (Sicav) and CIU managed by these entities:

- CIS securities	-
- Swaps	-

3.10. Allocation of the profit and loss table *(in the Sub-Fund's accounting currency)*

APPENDIX TO THE REPORT intended for Swiss subscribers

This appendix makes the annual report with the FINMA requirements for the marketing in Switzerland. **It has not been certified by the statutory auditors auditors.**

Subfund country of origin:

France.

Representative of the Swiss Compartment

Société Générale, Paris, Zurich Branch, has been authorised by the FINMA as the Fund's representative in Switzerland while also assuming the payment service. The prospectus, articles of association, annual and semi-annual reports of the Fund, the KIIDs as well as the list of purchases and sales made by the Fund during the financial year can be obtained on request and at no cost from the representative's head office in Switzerland, Société Générale, Paris, Zurich Branch, Talacker 50, PO Box 5070, 8021 Zurich.

Calculation of the Total Expense Ratio (in compliance with the recommendations of the Swiss Funds & Asset Management Association SFAMA)

Annual closing of the collective investment:	31-Oct	
Average assets of the fund for the period from 01/11/19 to 30/10/20:	4,886,486,416.98	
UCITS management commission:	0.20	% including tax

Excerpt from the income statement

Expenses in euros	Half-yearly report	Annual report	Half-yearly report
	31/10/2019	30/04/2020	30/10/2020
Fund management commission	11,457,269.86	5,037,044.84	9,747,829.01
Performance fee to be paid to the manager of collective investments of capital	0.00	0.00	0.00
Depository bank commission	0.00	0.00	0.00
Other expenses	0.00	0.00	0.00
Taxes	0.00	0.00	0.00
Total operating expenses	11,457,269.86	5,037,044.84	9,747,829.01

Calculation of the TER for 12 months, from 01/11/19 to 30/10/20:

LYXOR EURO STOXX 50 (DR) UCITS ETF
(compartment of the Multi Units France Sicav) - Fiscal year ending on 29/10/2021

Performance of the subfund

The performance of the sub-fund's units calculated in accordance with the principles of the Swiss Fund Association are detailed below:

	Annual performance from 31/10/2020 to 29/10/2021	Annual performance from 31/10/2019 to 30/10/2020	Annual performance from 31/10/2018 to 31/10/2019
LYXOR EURO STOXX 50 (DR)UCITS ETF			
Unit - Acc	+46.99%	-15.88%	+16.47%
Daily hedged to USD - Acc unit	+48.05%	-15.63%	+19.89%
Daily Hedged to GBP - Acc unit	+47.48%	-19.06%	+17.28%
Daily Hedged to CHF - Acc unit	+46.57%	-15.98%	+15.89%

Euro Stoxx 50 Net Return (EUR)

'Acc' share	+46.43%	-16.21%	+15.91%
Daily hedged to USD - Acc unit	+47.67%	-15.93%	+19.52%
Daily Hedged to GBP - Acc unit	+47.17%	-19.10%	+17.04%
Daily Hedged to CHF - Acc unit	+46.16%	-16.12%	+15.63%

Past performances are no indicator of future performances. The performances indicated here do not take into account the impact of possible subscription and redemption commissions and costs of Compartment units.

LYXOR PEA OBLIGATIONS D'ÉTAT EURO UCITS ETF

activity
report

SUB-FUND OF THE MULTI UNITS FRANCE SICAV

FISCAL YEAR ENDING ON: 29.10.2021

Compartments / feeder	LYXOR PEA OBLIGATIONS D'ÉTAT EURO UCITS ETF is a sub-fund of the MULTI UNITS FRANCE SICAV.
Management Company	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy – 92987 Paris La Défense Cedex.
Depository and Custodian	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

Information on the investments and management

Terms of determination and allocation of amounts available for distribution:

Acc share classes: accumulation of all distributable amounts.

Dist share classes: the Board of Directors reserves the right to distribute, one or more times per year, all or part of the result and/or to accumulate it. Net capital gains will be accumulated.

Management objective:

The Compartment is a passively managed index-based UCITS.

The Subfund's investment objective is to track the upward and downward performance of the FTSE MTS Eurozone Government Bond IG (Mid Price) index (Ex-CNO Etrix) ("Benchmark") listed in euros (EUR), while minimising the tracking error between the Subfund's performance and the Benchmark's performance as much as possible.

The expected level of ex-post tracking error under normal market conditions is 0.50%. **Benchmark**

indicator:

The Benchmark is a "Total Return" index (i.e. all coupons detached by the Benchmark components are reinvested in the Benchmark).

The Benchmark is composed of bonds issued by the governments of eurozone countries, weighted by country and representing a full spectrum of maturities.

To be eligible for inclusion in the Benchmark, bonds must meet the following criteria:

- (i) They must pay a fixed rate of interest on a principal amount that will be fully repaid upon maturity, be denominated in euros, be non-convertible, and incorporate no options;
- (ii) They must have been issued by a Eurozone Member State selected by FTSE MTS from the list of countries given an Investment Grade credit rating by at least two of the three credit rating agencies: Standard & Poor's, Moody's, and Fitch;
- (iii) They must be traded on the MTS platform;
- (iv) The minimum bond issuance size is 2 billion euros;

The performance tracked is that of the Benchmark's closing price at 5:15 pm CET. **Benchmark**

indicator publication

The Benchmark's closing price is available on the website: <http://www.ftserussell.com/>.

Pursuant to European Parliament and Council Regulation (EU) 2016/1011 of 8 June 2016, the administrator of the Benchmark has until 31 December 2023 to apply to the competent authority for the necessary certification or registration where applicable.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmarks used which describes the measures to be implemented in the event of substantial changes to an index or the cessation of provision of that index.

Benchmark Index revision and composition

The Benchmark's composition is revalued and rebalanced monthly.

A full description of the Benchmark and its construction methodology and information on the composition and respective weightings of the Benchmark components are available on the website: <http://www.ftserussell.com/>.

The frequency of rebalancing mentioned above has no effect on costs in the implementation of the investment strategy.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Index, the Sub-Fund will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The Subfund's securities will be mainly international equities, in all economic sectors and listed in all markets, including small-cap exchanges.

At all times, the Subfund will invest at least 75% of its assets in the equities of companies with head offices in a Member State of the European Union or in another country that is a member of the European Economic Area and has signed a tax convention with France that includes an administrative assistance clause for the purpose of fighting tax fraud and evasion. This minimum investment requirement qualifies the Subfund for French "PEA" equity savings plans.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the future exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the website: www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

As part of the management of its exposure, the Sub-Fund may be exposed up to 20 % of its assets in debt issued by a member state of the OECD. This 20% limit can be increased to 35% for a single bond, when this is justified by exceptional market conditions and in particular when certain securities are largely dominant, or a debt issue is highly volatile, or a political and/or economic event has affected or may affect the estimated debt of an issuing country or its credit rating, or in any other event that is likely to affect the liquidity of a Benchmark security.

Notwithstanding the above, exposure to securities guaranteed or issued by a given issuer can account for up to 35% of assets and up to 100% if the Subfund is exposed to at least 6 issues of which none exceeds 30% of assets. The aforementioned securities must be financial instruments issued or guaranteed by an OECD member state, the local authorities of a Member State of the European Union or party to the EEA agreement.

Targeted interest-rate sensitivity of the UCITS:	Between 5 and 10.
Currency of the securities to which the Subfund is exposed:	Euro: 0% to 100% of net assets Other: 0% to 10% of net assets.
Currency risk to which the Subfund is exposed:	Maximum of 10% of net assets.
Geographic regions of the issuers of the securities to which the Subfund is exposed:	Geographic region: Eurozone: 0% to 100% of net assets. Emerging countries: 0% to 10% of net assets.

In the present case, the appointed financial manager intends to use mainly the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Sub-Fund may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets.

The aforementioned equities will be chosen on the basis of criteria:

- Of eligibility, in particular:

- o their inclusion in a major stock exchange index;
- o Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation);
- o o rating of the country of the issuer's head office (requirement of a minimum threshold of S&P rating or equivalent).
- Of diversification, notably:
 - o Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in R.214-21 of the French Monetary and Financial Code;
 - o geography;
 - o sector.

For more information on the abovementioned eligibility and diversification criteria, investors can visit the website: www.lyxoretf.com

The investment in undertaking for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Compartment. As part of these investments, the Sub-Fund may subscribe for units or shares of UCITS managed by the management company or a company to which it is linked. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of the future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Subfund will use OTC index-linked swaps that swap the value of the Subfund's assets (or the value of any other financial instrument the Subfund may hold) for the value of the Benchmark (as described in paragraph 1 of this section).

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including future financial instruments other than index-linked swaps.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Sub-Fund's investment portfolio, nor regarding the underlying assets of the future financial instruments. When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/fees and its ability to achieve its management objective may also be negatively impacted. Where the Sub-Fund enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20 % of its net assets, the Compartment can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10 % of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Sub-Fund is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Sub-Fund's use of forward swap contracts traded over the counter, the Sub-Fund can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depository. As such, the received financial guarantees will be listed amongst the Compartment's assets. In the event of default by the counterparty, the Compartment may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt towards the Compartment as part of the guaranteed transaction.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20 % of the Sub-Fund's net asset value;
- (e) The Sub-Fund's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and
- Such financial guarantees consist of at least six different issues of which none exceeds 30% of the Sub-Fund's assets.

In compliance with the aforesaid conditions, the guarantees received by the Sub-Fund can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e)(above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) shares or units of UCITS that invest mainly in the bonds and/or equities indicated in (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Sub-Fund's management company will apply a margin to the financial guarantees received by the Sub-Fund. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if

applicable). Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged. Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;

- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money-market funds as defined in the guidelines for a common definition of European undertakings for collective investment.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Compartment may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

COUNTERPARTY SELECTION POLICY

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (financial futures and temporary acquisitions and disposals of securities) on behalf of the Mutual Fund. The selection of counterparties for financial contracts and financial intermediaries is performed rigorously from among the reputable counterparties and intermediaries in the market, on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes various criteria into consideration to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating
- Quantitative criteria based on the CDS LT spread (absolute criteria, volatility and comparison with a reference group, etc.)

Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: www.lyxor.com, section "regulatory information".

Risk profile:

The Subfund will be invested primarily in financial instruments selected by the Management Company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Capital loss risk

The initially invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the initially invested amount may not be recovered, notably should the performance of the Benchmark Index be negative over the investment period.

- Interest rate risk

The price of a bond or other debt security is affected by changes in interest rates. The price of most debt securities increases when interest rates decline and decreases when interest rates rise. Bonds with relatively long maturities (which is the case of those in the Benchmark) are more sensitive to changes in interest rates and are therefore more volatile investments than debt securities with shorter maturities.

- Credit risk

The Subfund could be adversely affected by a downgrade of the credit rating of one or more issuers of bonds in the Benchmark. This downgrade could mean a higher risk that such an issuer might default and could decrease the bond's value.

- Counterparty risk

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective.

In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

- Risks related to collateral management

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Liquidity risk (primary market)

If, when the Sub-Fund (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Sub-Fund could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Index, this can also have consequences on the processes related to the subscription, conversion or redemption of units.

- Liquidity risk on a place of listing

The ETF's equity price can deviate from its indicative net asset value. The liquidity of the Subfund's shares on an exchange may be adversely affected by a suspension of or disruption in market operation, such as one of the following events:

- i) suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) trading in the market(s) in the Benchmark's underlying assets is suspended, and/or
- iii) an exchange cannot obtain or calculate the Subfund's indicative net asset value, and/or
- iv) a market maker fails to comply with an exchange's rules, and/or
- v) A failure of this marketplace's IT or electronic systems.

- Currency risk associated with listing exchanges

The Sub-Fund may be listed on an exchange or multilateral trading facility in a currency that is not the currency of the Benchmark. Investors who purchase shares in the Subfund in a currency other than the Benchmark's currency are exposed to currency risk. As a result, due to exchange rate fluctuations, the value of an investment made in a currency other than that of the Benchmark may decrease even though the value of the Benchmark increases.

- Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Index, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to achieve its investment objective, the Sub-Fund uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Index. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Index, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Sub-Fund equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Index is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Index is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Index,
- iv) the index provider makes a material change in the Benchmark calculation formula or method (other than a minor modification such as an adjustment to the Benchmark's underlying components or their respective weightings) that the Subfund cannot effectively replicate at a reasonable cost.
- v) one or more Benchmark components become illiquid because they are no longer traded on a regulated market or because their over-the-counter trading (e.g. bonds) is disrupted;
- vi) the Benchmark components are exposed to higher transaction costs for execution or settlement/delivery or to specific tax constraints, and these costs are not reflected in the Benchmark's performance.

- Risk related to a corporate action comprising the Benchmark Index

Should the issuer of a security underlying the Benchmark Index undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Sub-Fund (and/or in a valuation of the ST by the Sub-Fund's counterparty in a future financial instrument), the Sub-Fund's net asset value may be affected, notably should the actual treatment of the ST by the Sub-Fund differ from the ST's treatment in the methodology used by the Benchmark Index.

- Sustainability risks

The Sub-Fund does not consider sustainability factors in the investment decision-making process but remains exposed to sustainability risks. The occurrence of such risks could have a negative impact on the value of the investments made by the Sub-Fund. Additional information can be found in the "Sustainability Information" section of the Prospectus.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

Investors in this Subfund are seeking exposure to the performance, whether positive or negative, of the investment grade eurozone bond segment.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers. The minimum recommended investment term is greater than 5 years.

"U.S. Persons" (as defined in the prospectus - see "COMMERCIAL INFORMATION") may not invest in the Sub-Fund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy-92800 Puteaux.
- Creation date of the Multi Units France Sicav: 04 March 2002.
- Compartment approval date by the AMF (Financial Markets Authority): 07 August 2018.
- Compartment creation date: 17 December 2018.

The fund replicates the performance of the FTSE MTS Eurozone Government Bond IG (Mid Price) Index (Ex-CNO Etrix) EUR (Ticker: FMMPIEG5).

Performance trend at the closing date:

Share name	ISIN	Share currency	Performance from 28/02/19 to 31/10/19			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor PEA Obligations d'État Euro UCITS ETF - Acc	FR0013346681	EUR	-3.77% ⁽¹⁾	-3.38%		6.91%

⁽¹⁾ "The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs (for example the index rebalancing cost);
- taxation incurred in relation to the methodology used in the Benchmark Index»

The tracking error realised is 0.0064%. The target tracking error over the period was 0.5%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

The fund complies with the PEA eligibility constraints at all times, the details of which are available on request from the management company.

Index Linked Swap's counterparty is: Société Générale.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor) None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

This Fund is covered by Article 6 of Regulation (EU) 2019/2088 (the "SFDR Regulation"). It does not promote environmental and/or social characteristics and does not aim to invest sustainably

Transparency of environmentally sustainable investments in periodic reports under Regulation (EU) 2020/852

Regulation (EU) 2020/852 on the establishment of a framework for promoting sustainable investments (the "Taxonomy Regulation") sets out the criteria for determining whether an economic activity is environmentally sustainable in the European Union.

According to the Taxonomy Regulation, an activity can be considered "sustainable" if it contributes substantially to one of the 6 environmental objectives set out in the Taxonomy Regulation, including climate change mitigation and adaptation, pollution prevention and reduction, or the protection and restoration of biodiversity and ecosystems.

In addition, in order to be considered to be sustainable, this economic activity must respect the principle of "not to cause significant harm" to one of the other five objectives of the Taxonomy Regulation and must also comply with basic social criteria (alignment to OECD and UN guidelines on business and human rights).

In accordance with article 7 of the Taxonomy Regulation, the management company draws investors' attention to the fact that the underlying investments of this Fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Provision of environmental, social and governance (ESG) information - in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

(a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

To the basket of assets held by the fund, the fund applies an exclusion of issuers associated with serious and repeated violations of the Principles of the United Nations Global Compact and regulatory requirements related to controversial sectors and products. This list is supplemented by a list of companies to exclude in the context of applying the Defence sector policy due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy.
- In the global context of the Société Générale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products.

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution.

The post trade control is on NAV frequency basis.

Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint
 - Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.
- In view of The Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:
 - The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
 - Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
 - A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).
- With regard to carbon risk management:
 - Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).
- In regards with the portfolio's exposure to issuers offering environmental solutions:
 - Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).
- In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :
For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :
 - the Germanwatch climate performance index score
 - the environment performance score
 - the Environmental Vulnerability index

For corporate issuers in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

LYXOR PEA OBLIGATIONS D'ÉTAT EURO UCITS ETF (compartment of the Multi Units France Sicav)

•Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
•Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations
-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of October 2021

ESG score	Environment	Social	Governance	Portfolio rated	100%
6.6	4.2	7.8	7.1	Nb Securities rated	188

Pillars	Themes	Score	Weight	Themes	Score	Weight
Environment		0.0	0.0%		4.2	25.0%
	Climat Change	0.0	0.0%	Environmental Externalities	6.7	7.0%
	Environmental Opportunities	0.0	0.0%	Natural Resource	3.2	18.0%
	Natural Capital	0.0	0.0%			
	Pollution & Waste	0.0	0.0%			
Social		0.0	0.0%		7.8	25.0%
	Human Capital	0.0	0.0%	Human Capital	8.2	15.0%

	Social Opportunities	0.0	0.0%			
	Stakeholder Opposition	0.0	0.0%			
Governance		0.0	0.0%		7.1	50.0%
				Financial Governance	6.0	20.0%
				Political Governance	7.9	30.0%

Breakdown of companies according to their ESG rating

Sector	AAA	AA	A	BBB	BB	B	CCC	Not Rated	Leaders (AAA,AA)	28%
Financials		27.6%	32.7%	39.7%					Average (A, BBB,BB)	72%
Industrials										0%

For each issuer (Corporate & Government), ESG Industry sector classification is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The ESG score calculated at the portfolio level measures the capacity of the underlying issuers to manage the risks and key opportunities associated with environmental, social and governance factors. The risk scale ranges from 0 (high risk) to 10 (low risk). Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: employment, social relations, health and safety, training, compliance with ILO conventions
- Governance: Board of Directors or Supervisory Board, Audit and Internal Control, Executive Compensation

Source: The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

LYXOR PEA OBLIGATIONS D'ÉTAT EURO UCITS ETF (compartment of the Multi Units France Sicav)

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2021

Carbon Emissions (tons CO2e/\$M invested)	Carbon Intensity (tons CO2e/\$M sales)	Weighted Average Carbon Intensity (tons CO2e/\$M sales)	Portfolio rated by weight	100%
0	0	207	Scope 1 reported (vs estimated)	0%
			Scope 2 reported (vs estimated)	0%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GreenHouse Gas Protocol (GHG Protocol) was launched in 2001 by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: direct emissions resulting from the burning of fossil fuel resources owned or controlled by the company.
 - Scope 2: indirect emissions related to the purchase or production of electricity.
 - Scope 3: all other indirect emissions, from the extended supply chain to the transport of goods and persons.
- The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio invested in both equities and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest - total debt.

All Carbon & Climate metrics are calculated on benchmark index.

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

% estimated EU Taxo 0.0%

Indicator of climate performance of sovereign issuers

This indicator gives the score weighted by the weighting of sovereign issuers in the portfolio of the Germanwatch climate performance index.

Climate performance indicator of sovereign issuers in the portfolio

Score **52.0**

Level **Intermediate**

Environmental performance score of sovereign issuers

Evaluates a country's environmental performance. Three data points are used to assess this sub-factor:

(1) the population affected by natural disasters,

(2) a change in the forest cover,

(3) the trend in greenhouse gas (GHG) intensity.

Regions with a higher proportion of the population affected by natural disasters, reduction of

forest cover and increased GHG intensity are achieving poor results. (Score: 0-10)

Environmental performance score of sovereign issuers in the portfolio

Score **7.3**

Sovereign Environmental Vulnerability Index

The Environmental Vulnerability Index reflects the measure of a country's natural environment exposure to damage and degradation. This index contains indicators on weather and climate, geology, geography, ecosystem resources and services, high winds, dry periods, endemics, frequency of earthquake, tsunamis, volcanic eruptions, etc.

The rating scale is:

less than 215 (resilient),

greater than 215 (at risk),

greater than 265 (vulnerable) and

greater than 315 (highly vulnerable),

greater than 365 (extremely vulnerable).

(Source: vulnerability index)

Score **364.8**

Level **Highly vulnerable**

Temperature - Alignment of the portfolio with the Paris Agreement

Lyxor has developed its own approach to assess the alignment of its sovereign bond portfolios with the climate challenges of the Paris Agreement. It aims to determine whether a country's emission reduction ambition is in line with different climate scenarios, with different temperature targets.

It takes into account the emissions generated by the public administration, as well as the emissions generated by companies operating in the territory of that country and the emissions generated by households.

The emissions trajectory of a country is compared with theoretical trajectories based on 5 different climate scenarios:

- The Net Zero 2050 scenario of the International Energy Agency (IEA NZE2050),

- The Sustainable Development Scenario 1.65-1.8°C of the International Energy Agency (IEA SDS 1.65-1.8°C)

- The Stated Policies Scenario 2.7°C of the International Energy Agency (IEA STEPS 2.7°C),

- The trajectory limiting global warming to 1.5°C of the Emissions Gap Report 2019 of the United Nations Environmental Programme (UNEP 1.5°C),

- The trajectory limiting global warming to 2°C of the Emissions Gap Report 2019 of the United Nations Environmental Programme (UNEP 2°C).

For more information on the methodology: <https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Percentage of assets covered by the approach **94%**

Fund's assets aligned with each climate scenario

Climate scenario	Aligned	Not Aligned
IEA NZE 2050	21%	79%
IEA SDS 1.65/1.8°C	24%	76%
IEA STEPS 2.7°C	100%	0%
UNEP 1.5°C	0%	100%
UNEP 2°C	0%	100%

Coverage of alignment measurement against different climate scenarios is insufficient for the fund

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des marchés financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 ("AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 ("UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management compensation policy notably ensures appropriate risk management and adherence to compliance on the part of its employees.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No "carried interest" was paid during the financial year.

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information, in the evolving context of the Covid-19 crisis.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded. However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- - Units and equities in undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Sub-Fund's net asset value.
- Units and shares of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Subfund's net asset value

Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

The exchange rates used for the assessment of financial instruments listed in a currency other than the Sub-Fund's reference currency are the exchange rates published the fixing WM Reuters on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the CIS) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Sub-Fund) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Sub-Fund, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Sub-Fund has exceeded its objectives and are invoiced to the Sub-Fund;
- Transfer commissions invoiced to the Sub-Fund.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Sub-Fund	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	Maximum 0.40 % per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commission	Net assets	None

⁽¹⁾ including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Accounting currency

The Compartment accounting is carried out in Euro.

Indication of accountancy changes declared to each of the shareholders individually

-- Occurred change: None.

-- Future change: None.

Other changes declared to each of the shareholders individually *(Not certified by the auditor)*

-- Occurred change: None.

-- Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Acc share classes: accumulation of all distributable amounts.

Dist share classes: the Board of Directors reserves the right to distribute, one or more times per year, all or part of the result and/or to accumulate it. Net capital gains will be accumulated.

Unit tax credit transferred to holders (natural persons) ⁽¹⁾	-	-	-	-	-
Unit capitalisation*	-1.72	1.56	-2.37	-	-

* The amounts of the unit distribution, the unit capitalisation and the tax credits are indicated in the accounting currency of the Compartment. The unit capitalisation corresponds to the sum of profit and loss and net capital gains or losses on the number of circulating units. This calculation method is applied from 1 January 2013.

⁽¹⁾ In pursuant to the Fiscal Instruction of 4 March 1993 of the French Tax Department, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits between the circulating units on that date.

LYXOR MSCI GREECE UCITS ETF

activity
report

SUB-FUND OF THE MULTI UNITS FRANCE SICAV

FISCAL YEAR ENDING ON: 29.10.2021

Compartments / feeder	LYXOR MSCI GREECE UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
Management Company	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
Depository and Custodian	SOCIETE GENERALE 75886 Paris Cedex 18.
Auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

Information on the investments and management

Classification:

Equities from countries in the European Union.

At least 60% of the Subfund is permanently exposed to one or more markets of equities issued in one or more eurozone countries, possibly including the French market.

The Sub-Fund is an index-based fund of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution:

The Management Company reserves the right to distribute, on one or more occasions during the year, all or part of the distributable amounts and/or to capitalise them.

Management objective:

The Compartment is a passively managed index-based UCITS.

The management objective of this Subfund is to replicate the upward or downward evolution of MSCI Greece IMI + Coca-Cola 20-35 Net Total Return index (the “Benchmark Index”), listed in Euros (EUR), while minimising as much as possible, the tracking error between the Subfund’s performances and those of the Benchmark Index. The anticipated level of the ex-post tracking error under normal market conditions is 0.3%.

Benchmark indicator

Benchmark Index description

The Benchmark Index is a “dividends reinvested” index, which means that the Benchmark Index’s performance includes the net dividends paid by its underlying equities.

The Benchmark Index is an equity index, weighted by the float-adjusted market capitalisation, calculated and published by international index provider MSCI Inc.

It is composed of shares of big-, mid-, and small-cap stocks domiciled and/or listed in Greece, defined according to the criteria of MSCI Inc. The Benchmark Index is representative of the performance of companies domiciled and/or listed in Greece. It notably covers 99% of the float-adjusted market capitalisation of the equities of companies domiciled and/or listed in Greece.

The MSCI methodology and its calculation method entail the Benchmark Index being made up of a variable number of companies. An exhaustive description and the complete methodology for the construction of the Benchmark Index as well as information on the composition and relative weights of the Benchmark Index’s components are available online at: www.msci.com

The monitored performance is that of the Benchmark Index closing prices.

Benchmark Index revision and composition

The revision of the Benchmark Index takes place quarterly.

The exact composition and revision rules of the Benchmark Index published by MSCI are available online at www.msci.com

The above-mentioned frequency of rebalancing has no effect on costs as part of the implementation of the investment strategy.

Benchmark Index publication

The value of the Benchmark Indicator and the list of its components are available on the MSCI website: www.msci.com. The Benchmark Indicator is calculated daily at the closing price using the official closing prices of the stock exchanges on which the constituent securities are listed.

The Benchmark Index is calculated in real time each trading day.

The Benchmark Index is available in real time via Reuters and Bloomberg.

The closing price of the Benchmark Indicator is available on the website of www.msci.com. The administrator of the Benchmark Indicator is MSCI Limited.

The administrator of the Benchmark Index is entered in the register of administrators and benchmark indices maintained by the ESMA. In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmark indices used, describing the measures to be implemented in the event of substantial changes to an index or termination of supply of that index.

Investment strategy:

1. Strategy employed

The Subfund will comply with the investment rules dictated by the European Directive no. 2009/65/EC of 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Index, the Subfund will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Subfund's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Index.

The securities held as assets by the Subfund may notably be securities that make up the Benchmark Index, as well as other European equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Sub-Fund's portfolio and (ii) the market value of the future exchange operation entered into by the Sub-Fund are available on the page dedicated to the Sub-Fund at www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

The Subfund will permanently invest a minimum of 75% of its assets in companies that have their registered office in a Member State of the European Union, or in another State party to the Treaty on the European Economic Area that has entered into a tax treaty with France containing an administrative assistance clause to combat fraud or tax evasion. This minimum holding level allows eligibility for the Equity Savings Plan.

As part of the management of its exposure, the Subfund may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Index, in particular in the event of a public offering affecting one of the securities making up the Benchmark Index or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Index.

In this case, the manager intends to use mainly the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Sub-Fund may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets.

The aforementioned equities will be chosen on the basis of criteria

Of eligibility, in particular:

- Subordination to the main market indices or to the Benchmark Index;
- Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation);

- Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent) with respect to diversification, notably:
- Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Article R.214-21 of the French Monetary and Financial Code);
- Geographical area;
- Sector.

For more information on the above-mentioned eligibility and diversification criteria, investors can visit www.lyxoretf.com

The investment in undertaking for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Sub-Fund. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law. As part of these investments, the Sub-Fund may subscribe for units or shares of UCITS managed by the management company or a company to which it is linked.

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of the future optimisation of the Sub-Fund's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Subfund will have recourse to derivatives including index-linked swaps traded over-the-counter, exchanging the value of the equities in the Subfund's assets (or of any other asset held by the Subfund, where appropriate) against the value of the Benchmark Index (in compliance with the description contained in this section's paragraph 1 above).

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

As part of a future optimisation of the Sub-Fund management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including future financial instruments other than index-linked swaps.

Situations of conflict of interest may arise between the Management Company and Société Générale when Société Générale acts as a counterparty the FFIs. These situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Sub-Fund may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/fees and its ability to achieve its management objective may also be negatively impacted. Where the Sub-Fund enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Sub-Fund's portfolio, nor regarding the underlying assets of the future financial instruments.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Sub-Fund can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Subfund may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

None. The Subfund will not have recourse to transactions for the temporary purchase or sale of securities.

8. Financial guarantees

In all cases in which the Sub-Fund is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Sub-Fund's use of forward swap contracts traded over the counter, the Sub-Fund can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Sub-

Fund's assets. In the event of default by the counterparty, the Subfund may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt towards the Subfund as part of the guaranteed transaction.

Any financial guarantee received by the Sub-Fund within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (f) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading facility with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (g) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious haircut;
- (h) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (i) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Subfund's net asset value;
- (j) The Subfund's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Fund may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- Such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State or (iv) a public international organisation to which one or more Member States belong;
- Such financial guarantees consist of at least six different issues of which none exceeds 30% of the Subfund's assets.

In compliance with the aforesaid conditions, the guarantees received by the Sub-Fund can include:

- (vii) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (viii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (ix) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (x) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (xi) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (xii) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Sub-Fund's management company will apply a margin to the financial guarantees received by the Sub-Fund. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged. Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;

(iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (TRS or EPMT), the Subfund may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

Counterparty selection policy

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Sub-Fund. The selection of counterparties to financial contracts and financial intermediaries is carried out rigorously from among the reputable counterparties and intermediaries in the market on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes into consideration various criteria to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating;
- Quantitative criteria based on the CDS LT spread (absolute criteria, volatility and comparison with a reference group, etc.).

Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: www.lyxor.com, “regulatory information” section.

Risk profile:

The Sub-Fund will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Subfund, the unitholder is primarily exposed to the following risks:

Equity risk

An equity price can vary upwards or downwards, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Index be negative over the investment period.

Liquidity risk (primary market)

If, when the Subfund (or one of its counterparties for forward financial instruments, or “FFIs”) adjusts its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase/sale price discrepancies, the value and/or liquidity of the Subfund could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

Liquidity risk on a place of listing

The Subfund’s equity price can deviate from its indicative net asset value. The liquidity of the Compartment’s equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Index, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Index, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Sub-Fund’s indicative net asset value, and/or
- iv) A market maker’s violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace’s IT or electronic systems.

Concentration risk

The Subfund is exposed to the risk of bankruptcy, default or any other type of default by any counterparty with which it has entered into a contract or transaction. It is particularly exposed to counterparty risk resulting from its use of over-the-counter forward financial instruments with Societe Generale or with any other counterparty. In accordance with UCITS regulations, the counterparty risk (whether this counterparty is Societe Generale or another entity) may not exceed 10% of the total value of the Compartment's assets per counterparty.

Risks related to collateral management

Operational risk:

The Subfund may bear an operational risk linked to defaults or errors by the various players involved in the management of securities financing transaction guarantees and/or total return swaps (TRS). This risk arises only in the context of the management of guarantees for securities financing transactions and total return swaps as referred to in Regulation (EU) 2015/2365.

Legal risk

The Subfund may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

Risk related to the exposure to emerging markets

The Subfund's exposure to emerging markets results in a greater risk of loss that would exist in the event of investments carried out within traditional developed markets. In particular, the operating and supervision rules in an emerging market may differ from the standards applicable to developed markets. The exposure to emerging markets notably results in: increased volatility of the markets, lower transaction volumes, the risk of economic and/or political instability, an unstable or uncertain fiscal and/or regulatory regime, risks of closing of the markets, government restrictions on foreign investments and interruption or restriction of the convertibility or transferability of any of the currencies comprising the Benchmark Index.

Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Index, notably should one or more of the following risks arise:

Risk related to the use of derivative instruments

In order to achieve its investment objective, the Sub-Fund uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Index. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Index, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Sub-Fund is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Sub-Fund's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Sub-Fund (and/or to its counterparty in the FFI), the Sub-Fund's net asset value may be affected.

Risk related to regulations

In case of change of the regulations in any country in which the Subfund is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Sub-Fund's underlyings, the Sub-Fund's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

Risk related to events affecting the Benchmark Index

In case of events affecting the Benchmark Index, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Sub-Fund equities. The calculation of the Compartment's net asset value can also be affected. If the event persists, the Sub-Fund's manager will decide on measures having to be adopted, which can have an impact on the Sub-Fund's net asset value.

"Events affecting the Benchmark Index" are understood to mean the following situations:

- i) The Benchmark Index is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Index is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Index,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Index (other than a minor modification such as the adjustment of the underlyings of this Benchmark Index or of the respective weightings between its various components), that cannot be effectively replicated by the Sub-Fund at a reasonable cost.

- v) One or more components of the Benchmark Index becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Index's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Index's performance.

Securities transaction risk

Should the issuer of a security underlying the Benchmark Index undertake an unanticipated review of a corporate action that contradicts a prior and official announcement that had resulted in a valuation of the corporate by the Subfund (and/or in a valuation of the corporate action by the Subfund's counterparty in a forward financial instrument), the Subfund's net asset value may be affected, notably should the actual treatment of the corporate action by the Subfund differ from the corporate action's treatment in the methodology used by the Benchmark Index.

Risk related to low diversification of the Benchmark Index

The Benchmark Index to which the investors are exposed covers a given region, sector or strategy and therefore does not necessarily allow for as broad a diversification of the assets as would be the case of a Benchmark Index that is exposed to several regions, sectors or strategies. The exposure to such a Benchmark Index with such low diversification can result in greater volatility than in more diversified markets. Nevertheless, the diversification rules resulting from the UCITS standards always apply to the Subfund's underlyings.

Risk associated with investing in mid-cap companies

The Subfund is exposed to mid-cap companies and, more specifically, to securities from the equity markets of mid-sized enterprises and intermediate-sized companies (*Entreprises de Taille Intermédiaire*, ETI), which may increase market and liquidity risks. Market movements are therefore more pronounced both upwards and downwards, and faster than for big caps. The net asset value of the Subfund may have the same behaviour and therefore decline more quickly and significantly than a similar investment in big-cap securities.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

The Subfund is aimed at subscribers who wish to gain exposure to the Greek equity market, regardless of its evolution.

The amount that it is reasonable to invest in this Sub-Fund depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify your investments so as to avoid an exposure only to this Sub-Fund's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment term is greater than 5 years.

"U.S. Persons" (as defined below – see "COMMERCIAL INFORMATION") may not invest in the Subfund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Sub-Fund's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy-92800 Puteaux.*
- *Creation date of the Multi Units France Sicav: 04 March 2002.*
- *Sub-Fund approval date by the AMF (French Financial Regulatory Authority): 05 January 2007.*
- *Compartment creation date: 09 May 2019.*

Activity report

The fund replicates the performance of the MSCI Greece IMI + Coca-Cola 20-35 Net Return EUR Index EUR (Ticker: NE714828).

Performance trend at the closing date:

Share name	ISIN	Share currency	Performance for the fiscal year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor MSCI Greece UCITS ETF - Dist	FR0010405431	EUR	64.29% ⁽¹⁾	65.87%	-	-90.22%

⁽¹⁾ "The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs (for example, the cost of rebalancing the index);
- taxation incurred in relation to the methodology used in the Benchmark Index"

The tracking error realised is 0.0416%. The target tracking error over the period was 0.3%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

The fund complies with the PEA eligibility constraints at all times, the details of which are available on request from the management company.

Index Linked Swap's counterparty is: Goldman Sachs.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

This Fund is covered by Article 6 of Regulation (EU) 2019/2088 (the "SFDR Regulation"). It does not promote environmental and/or social characteristics and does not aim to invest sustainably

Transparency of environmentally sustainable investments in periodic reports under Regulation (EU) 2020/852

Regulation (EU) 2020/852 on the establishment of a framework for promoting sustainable investments (the "Taxonomy Regulation") sets out the criteria for determining whether an economic activity is environmentally sustainable in the European Union.

According to the Taxonomy Regulation, an activity can be considered "sustainable" if it contributes substantially to one of the 6 environmental objectives set out in the Taxonomy Regulation, including climate change mitigation and adaptation, pollution prevention and reduction, or the protection and restoration of biodiversity and ecosystems.

In addition, in order to be considered to be sustainable, this economic activity must respect the principle of "not to cause significant harm" to one of the other five objectives of the Taxonomy Regulation and must also comply with basic social criteria (alignment to OECD and UN guidelines on business and human rights).

In accordance with article 7 of the Taxonomy Regulation, the management company draws investors' attention to the fact that the underlying investments of this Fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Provision of environmental, social and governance (ESG) information - in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website [Lyxor.com](https://www.lyxor.com) and is revised each

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues

To the basket of assets held by the fund, the fund applies an exclusion of issuers associated with serious and repeated violations of the Principles of the United Nations Global Compact and regulatory requirements related to controversial sectors and products. This list is supplemented by a list of companies to be excluded due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological chemical, nuclear or radiological weapons).

b) Information used for the analysis implemented on ESG criteria

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

- The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.
- Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:
- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns.
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to rate its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to rate its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and rating methodology applied to interests in SMEs.
- In the global context of the Société Générale Group Environmental and Social Policies, Lyxor used the Defence List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defence policy,
- In the global context of the Société Générale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to

controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Methodology and implementation of this analysis

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution.

The post trade control is on NAV frequency basis.

d) Presentation of the integration of analysis results in the investment policy

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website [Lyxor.com](https://www.lyxor.com).

The exclusion described above is applied to the fund holdings.

2. Description of how the results of the analysis implemented on ESG criteria, in particular exposure to climate risks, are integrated into the investment policy

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint
 - Measuring the GHG emissions of its investments provides investors with an indication of their Current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.
- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:
 - The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
 - Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e /\$ M invested),
 - A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal , oil sands, oil and shale gas).
- With regard to carbon risk management:
 - Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).
- In regards with the portfolio's exposure to issuers offering environmental solutions:
 - Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).
- In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present:

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuers in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

LYXOR MSCI GREECE UCITS ETF (compartment of the Multi Units France Sicav)

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations
- In regards to the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by Lyxor applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of October 2021

ESG score	Environment	Social	Governance
5.7	6.9	5.7	5.0

Portfolio rated 100%
Nb Securities rated 21

For each issuer (Corporate & Government), ESG Industry sector classification is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The ESG score calculated at the portfolio level measures the capacity of the underlying issuers to manage the risks and key opportunities associated with environmental, social and governance factors. The risk scale ranges from 0 (high risk) to 10 (low risk). Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: employment, employer-employee relations, health and safety, training, compliance with ILO conventions
- Governance: board of directors or supervisory board, audit and internal control, executive pay

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source: The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Measures the portfolio's exposure to companies experiencing controversies relating to their compliance with international standards as a function of their degree of severity:

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 0%
Orange Flag 0%
Yellow Flag 17%
Green Flag 49%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2021

Carbon Emissions (tons CO2e/\$M invested)	Carbon Intensity (tons CO2e/\$M sales)	Weighted Average Carbon Intensity tons (CO2e/\$M sales)	Portfolio rated by weight	99%
325	725	442	Scope 1 reported (vs estimated)	59%
			Scope 2 reported (vs estimated)	74%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GreenHouse Gas Protocol (GHG Protocol) was launched in 2001 by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: direct emissions resulting from the burning of fossil fuel resources owned or controlled by the company.
- Scope 2: indirect emissions related to the purchase or production of electricity.
- Scope 3: all other indirect emissions, from the extended supply chain to the transport of goods and persons.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio invested in both equities and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest - total debt.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or the portion of the company's revenue earned from fossil fuel energies or the portion of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon:

Fossil Fuel Reserves	4%
Thermal Coal	4%
Natural Gaz	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of : \$1,000,000

Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

These metrics include only corporate issuers rated in Carbon.

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges - this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	0.0

These metrics include only corporate issuers rated in Carbon.

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	2.0%	0.0%	0.0%
Some efforts	79.5%	95.3%	53.3%
Limited efforts/Information	9.9%	3.6%	0.8%
No effort/No evidence	7.6%	1.1%	45.9%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low- carbon products.

(1) Metric developed by MSCI

Low carbon transition score	5.9
Low carbon transition management Score	5.1
Operational Transition	14.9%
Product Transition	14.9%
Neutral	78.1%
Solutions	3.8%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The issuer data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source: MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)					
Hydro	6.1%	Liquid Fuel	8.0%	Natural Gas	52.7%
Nuclear		Renewables	14.8%	Thermal Coal	18.3%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	14.1%	Energy Efficiency	0.0%	Green Building	8.4%
Pollution Prevention	1.8%	Sustainable Water	1.2%	Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	2.5%	Energy Efficiency	0.0%	Green Building	0.0%
Pollution Prevention	0.0%	Sustainable Water	0.3%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

% estimated EU Taxo **2.9%**

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

SeaLevelRise	1%
Coldwave	26%
Flood	1%
Heatwave	9% 1%
Hurricane	55%
Water Stress	8%
Wildfire	

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks.

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure – analyses the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyses the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	9.4%	90.6%		100.0%		
Carbon Emissions		96.1%	3.9%	100.0%		
Electronic Waste	4.0%	6.9%	89.1%	100.0%		
Opportunities in Green Building	0.3%	95.1%	4.6%	99.6%	0.4%	
Opp's in Renewable Energy	17.7%	75.8%	6.5%	100.0%		
Packaging Material & Waste	12.3%	1.5%	86.2%	67.4%		32.6%
Water Stress	9.5%	31.5%	59.1%	52.3%	15.2%	32.6%
Toxic Emissions & Waste				99.7%	0.3%	

Temperature - Alignment of the portfolio with the Paris Agreement

Coverage of alignment measurement against different climate scenarios is insufficient for the fund

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des marchés financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 ("AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 ("UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management compensation policy notably ensures appropriate risk management and adherence to compliance on the part of its employees.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No “carried interest” was paid during the financial year.

Transparency of securities financing operations and reuse of financial instruments SFTR regulation

(Accounting currency of the CIS)

1. General information.

1.1. Amount of securities and raw materials loaned in proportion with the total assets that can be loaned, defined as excluding the cash and cash equivalents.

	Securities lending
% of assets that can be loaned	-

1.2. Amount of the assets committed to each type of securities financing operation and total return swap, expressed in absolute value (in the currency of the collective investment undertaking) and in proportion with the assets under management of the collective investment undertaking

	Securities lending ⁽¹⁾	Securities borrowing ⁽²⁾	Repo operations ⁽³⁾	Reverse repo operations ⁽⁴⁾	TRS ⁽⁵⁾
Absolute value	-	-	-	-	121,695,693.60
% of assets under management	-	-	-	-	100.00

⁽¹⁾ The amount of assets engaged in securities lending transactions corresponds to the market value of the securities lent at the balance sheet date.

⁽²⁾ The amount of assets engaged in securities borrowing transactions corresponds to the market value of the guarantees (cash or securities) delivered by the fund as part of the securities borrowing on the balance sheet date.

⁽³⁾ The amount of assets engaged in repurchase transactions corresponds to the market value of the securities repurchased on the balance sheet date.

⁽⁴⁾ The amount of assets engaged in reverse repurchase transactions corresponds to the market value of securities purchased under repurchase agreements at the balance sheet date.

⁽⁵⁾ The amount of assets committed in the TRS corresponds (i) for the TRS for which the management company has undertaken to deliver a basket of securities to the TRS counterparty, to the market value of the basket of securities committed in the TRS, increased by the market value of the TRS on the accounting date and/or (ii) for the TRS for which the management company does not deliver a basket of securities, to the value of the nominal value of the TRS on the balance sheet date.

2. Concentration data

2.1. The ten biggest issuers of guarantees for all types of securities financing operations and total return swaps (breakdown of the volumes of guarantees and raw materials received, with the names of the issuers).

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information in the evolving context of the Covid-19 crisis.

Assessment rules

The Sub-Fund's assets are valued according to the applicable laws and regulations, and more particularly the rules defined in Regulation No. 2014-01 of the French regulatory accounting committee (CRC) dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are valued using the following specific methods:

- Negotiable debt securities ("NDS") with a residual maturity upon acquisition that of 3 months or less are assessed with a straight-line extension over the residual maturity of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS whose residual lifespan at acquisition is greater than 3 months but whose residual lifespan on the net asset value closing date is equal to or less than 3 months are valued by spreading out the difference between the last adopted current value and their redemption value on a straight-line basis over the residual lifespan. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS whose the residual lifespan on the net asset value closing date is greater than 3 months are valued at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- Futures traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are valued at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable trading value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and shares of French UCITS are valued at the last net asset value known on the calculation date of the Sub-Fund's net asset value.
- Units and shares of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

The exchange rates used for the assessment of financial instruments listed in a currency other than the Sub-Fund's reference currency are the WM Reuters fixing rates on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under "Financial instruments" according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under "Other temporary operations".

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the CIU) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional transactions is equal to the price of the underlying security (in the currency of the subfund) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Sub-Fund).

Operation and management fees

These fees include all of the fees invoiced directly to the Sub-Fund, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transfer commission which, if relevant, may notably be collected by the custodian and management company.

For this Sub-Fund, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Sub-Fund has exceeded its objectives and are invoiced to the Sub-Fund;
- Transfer commissions invoiced to the Sub-Fund.

For more details on the fees actually invoiced to the Sub-Fund, refer to the Statistical Part of the Key Investor Information Document (KIID).

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative fees external to the portfolio management company (Statutory auditor, Custodian, distribution, lawyers) ⁽¹⁾	Net assets	maximum 0.45% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Outperformance commission	Net assets	None
Transactions commissions	Collection on each transaction	None

⁽¹⁾ including all fees excluding transaction fees, performance fees and fees related to investments in UCITS or investment funds.

Accounting currency

The Compartment accounting is carried out in Euro.

Indication of accountancy changes declared to each of the shareholders individually

- - Occurred change: None.
- - Future change: None.

Other changes declared to each of the shareholders individually *(Not certified by the auditor)*

- - Occurred change: None.
- - Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

The Management Company reserves the right to distribute, on one or more occasions during the year, all or part of the distributable amounts and/or to capitalise them.

The Sub-Fund is in no way sponsored, endorsed, sold or promoted by MSCI Inc. ("MSCI"), or by any MSCI subsidiary, or by any of the entities involved in the preparation of the MSCI indices. The MSCI indices are the exclusive property of MSCI and the MSCI indices are trademarks belonging to MSCI or its subsidiaries and have been the subject of a licence granted, for certain requirements, to Lyxor International Asset Management. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the preparation or calculation of the MSCI indices makes any declaration or issues any express or implicit guarantee relative to holders of the Sub-Fund's shares or more generally to the public, with regard to the appropriateness of a transaction involving mutual fund equities in general or the Sub-Fund's equities in particular, or regarding the ability of any MSCI index to replicate the performance of the overall equity market. MSCI or its subsidiaries are the owners of certain names, registered trademarks and of the MSCI indices that are determined, composed and calculated by MSCI without discussion with Lyxor International Asset Management or the Sub-Fund. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the preparation of the MSCI indices is required to take into account the needs of Lyxor International Asset Management or of the holders of the Sub-Fund's shares when determining, composing or calculating the MSCI indices. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the preparation of the MSCI indices makes any decision regarding the launch date, the price, the quantity of the Sub-Fund's shares, or even the determination and calculation of the formula used to establish the Fund's net asset value. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the preparation of the MSCI indices assumes any liability or obligation with regard to the Sub-Fund's administration, management or marketing.

THOUGH MSCI OBTAINS INFORMATION FOR INTEGRATION OR USE IN THE CALCULATION OF THE INDICES FROM SOURCES THAT MSCI CONSIDERS TO BE RELIABLE, NEITHER MSCI NOR ANY OTHER PARTY INVOLVED IN THE CREATION OR CALCULATION OF THE MSCI INDICES GUARANTEES THE EXACTNESS AND/OR EXHAUSTIVE NATURE OF THE INDICES OR OF ANY INCLUDED DATA. NEITHER MSCI NOR ANY OTHER PARTY INVOLVED IN THE CREATION OF A CALCULATION FOR THE MSCI INDICES GIVES ANY EXPRESS OR IMPLICIT GUARANTEE AS TO THE RESULTS THAT MAY BE OBTAINED BY THE HOLDER OF A MSCI LICENCE, THE CUSTOMERS OF THE SAID LICENSEE AS WELL AS THE COUNTERPARTIES, HOLDERS OF UNITS IN THE SUB-FUND OR ANY OTHER PERSON OR ENTITY, BASED ON THE USE OF THE INDICES OR OF ANY DATA INCLUDED WITH REGARD TO THE RIGHTS GRANTED BY LICENCE OR FOR ANY OTHER USE. NEITHER MSCI NOR ANY OTHER PARTY GIVES EXPRESS OR IMPLICIT GUARANTEES AND MSCI REJECTS ALL GUARANTEES REGARDING THE COMMERCIAL VALUE OR ADEQUACY FOR A SPECIFIC USAGE OF THE INDICES OR INCLUDED DATA. NOTWITHSTANDING THE ABOVE, UNDER NO CIRCUMSTANCES MAY THE LIABILITY OF MSCI OR OF ANY OTHER PARTY BE SOUGHT WITH REGARD TO ANY DAMAGES, WHETHER DIRECT, INDIRECT OR OTHER (INCLUDING THE LOSS OF EARNINGS), EVEN IN CASE OF KNOWLEDGE OF THE POSSIBILITY OF SUCH DAMAGES.

3.5. Receivables and Debts: breakdown by type

Details of the elements comprising the "other receivables" and "other debts" items, notably breakdown of the future foreign exchange operations by type of operation (purchase/sale).

Receivables	581,645.65
Future currency exchange operations:	
Future purchases of currency	-
Total traded amount of future Sales of currencies	-
Other receivables:	
Amounts receivable	365,838.11
Deferred settlement sales	215,807.54
-	-
-	-
-	-
Other operations	-
Debts	625,291.19
Future currency exchange operations:	
Future sales of currencies	-
Total traded amount of future Purchases of currencies	-
Other debts:	
Deferred settlement purchases	581,635.65
Accrued expenses	43,182.30
Sundry Debtors and Creditors	473.24
-	-
-	-
Other operations	-

3.6. Shareholders' equities

	Subscriptions		Redemptions	
	Number of equities	Amount	Number of equities	Amount
Number of equities issued/redeemed during the fiscal year	7,534,864	6,757,992.09	41,527,341	39,492,268.87
Subscription / redemption commission		4,142.21		82,432.91
Retrocessions		-		-
Fees paid to the sub-fund		4,142.21		82,432.91

3.7. Management fees

Operating and management fees (fixed fees) as % of the average net assets	0.45
Performance commissions (variable fees): amount of costs for the year	-
Retrocession of management fees:	
- Total amount of fees retroceded to the Compartment	-
- Breakdown by "target" CIS:	
- CIU 1	-
- CIU 2	-

3.8. Commitments given and received

3.8.1. Description of guarantees received by the Sub-Fund with indication of the capital guarantees.....	none
3.8.2. Description of the other commitments received and/or given	none

3.9. Other information

3.9.1. Current value of the financial instruments that are the subject of temporary acquisition:	
- Financial instruments sold under forward repurchase agreements	-
- Other temporary operations	-
3.9.2. Current value of the financial instruments comprising security deposits:	
Financial instruments received as guarantees and not included in the balance sheet:	
- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-
Financial instruments given as guarantees and maintained in their original item:	
- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-
3.9.3. Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (Sicav) and CIU managed by these entities:	
- CIS securities	-
- Swaps	-

3.10. Allocation of the profit and loss table *(in the Sub-Fund's accounting currency)*

3.12. Table of the profit and loss and other characteristic elements of the Sub-Fund during the last 5 financial years

Currency					
EUR	29.10.2021	30.10.2020	31.10.2019	31.08.2018	31.08.2017
Net assets	121,695,693.60	96,610,254.29	195,972,552.72	190,189,939.67	205,655,344.67
Number of outstanding equities	122,466,006	156,458,483	194,848,305	214,833,542	203,386,431
Net asset value	0.9937	0.6174	1.0057	0.8852	1.0111
Unit distribution on net capital gains and losses (including advances)	-	-	-	-	-
Unit distribution (including interim dividends)	0.02	0.01	0.02	0.02	0.02
Unit tax credit transferred to holders (natural persons) ⁽¹⁾	-	-	-	-	-
Capitalisation unit ⁽²⁾	0.05	-0.30	0.00	-0.11	0.24

⁽¹⁾ In pursuant to the Fiscal Instruction of 4 March 1993 of the French Tax Department, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits between the circulating units on that date.

⁽²⁾ The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of outstanding units. This calculation method is applied from 1 January 2013.

Compartment creation date: 09 May 2019.

4 Inventory at 29.10.2021

LYXOR MSCI INDIA UCITS ETF

**annual
report**

SUB-FUND OF THE MULTI UNITS FRANCE SICAV

FISCAL YEAR ENDING ON: 29.10.2021

LYXOR MSCI INDIA UCITS ETF
(compartment of the Multi Units France Sicav)

Compartments / feeder	LYXOR MSCI INDIA UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
Management Company	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
Depository and Custodian	SOCIETE GENERALE 75886 Paris Cedex 18.
Auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

Information about investments and management

Classification:

International equities.

At least 60 % of the Sub-Fund is permanently exposed in a foreign equity market or in equity markets of several countries, possibly including the French market.

The Sub-Fund is an index-based fund of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution:

For the Acc (EUR) and Acc (USD) share classes: Capitalisation of all the amounts available for distribution.

Management objective:

The Compartment is a passively managed index-based UCITS.

The management objective of this Sub-Fund is to replicate the upward or downward evolution of the MSCI India Net Total Return index (the “Benchmark Index”), listed in US Dollars (USD), while minimising as much as possible, the tracking error between the Sub-Fund’s performances and those of the Benchmark Index.

The anticipated level of the ex-post tracking error under normal market conditions is 0.1%.

Benchmark indicator

The Benchmark Index is a “dividends reinvested” index, which means that the Benchmark Index’s performance includes the net dividends paid by its underlying equities.

The Benchmark Index is an equity index, weighted by the float-adjusted market capitalisation, calculated and published by international index provider MSCI Inc.

The Benchmark Index consists exclusively of Indian big- and mid-cap stocks and retains the fundamental characteristics of the MSCI indices, namely: adjustment of the market capitalisation of the securities in the Benchmark Index on the basis of the float and sector classification according to the Global Industry Classification Standard (GICS) classification.

The objective of the Benchmark Index is to represent 85% of the capitalisation that is adjusted on the basis of the float for each group of industries in the Indian market.

By targeting 85% of the representativeness of each industry group, the Benchmark Index comprises 85% of the market capitalisation of the Indian market, while also reflecting the market’s economic diversity.

The MSCI methodology and its calculation method entail the Benchmark Index being made up of a variable number of companies. An exhaustive description and the complete methodology for the construction of the Benchmark Index as well as information on the composition and relative weights of the Benchmark Index’s components are available online at: www.msci.com.

The monitored performance is that of the Benchmark Index closing prices.

Benchmark Index revision and composition

The Benchmark Index is reviewed on a quarterly basis.

The exact composition and revision rules of the Benchmark Index published by MSCI are available online at: www.msci.com

The above-mentioned frequency of rebalancing has no effect on costs as part of the implementation of the investment strategy.

Benchmark Index publication

The value of the Benchmark Index and the list of its constituents are available on MSCI's website at www.msci.com.

The Benchmark Index is calculated on a daily basis at closing prices using the official closing stock market prices for the constituent stocks.

The Benchmark Index is calculated in real time each trading day.

The Benchmark Index is available in real time via Reuters and Bloomberg.

The closing price of the Benchmark Index is available on MSCI's website at www.msci.com.

The benchmark index administrator is MSCI Limited.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the administrator of the Benchmark Index has until 31 December 2023 to request authorisation or registration, where applicable, from the competent authority.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmark indices used, describing the measures to be implemented in the event of substantial changes to an index or termination of supply of that index.

Investment strategy:

The Sub-Fund will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Index, the Sub-Fund will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Sub-Fund's assets, which will consist of balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Index.

The securities held as assets by the Sub-Fund may notably be securities that make up the Benchmark Index, as well as other international equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralised.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Sub-Fund's portfolio and (ii) the market value of the future exchange operation entered into by the Sub-Fund are available on the page dedicated to the Sub-Fund on the website www.lyxoretf.com

The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

As part of the management of its exposure, the Sub-Fund may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Index, in particular in the event of a public offering affecting one of the securities making up the Benchmark Index or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Index.

In this case, the manager intends to use mainly the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Sub-Fund may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets.

The aforementioned equities will be chosen on the basis of criteria

Of eligibility, in particular:

- Subordination to the main market indices or to the Benchmark Index;
- Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation);
- Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent)..

Of diversification, notably:

- Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Article R.214-21 of the French Monetary and Financial Code);
- Geographical;
- Sectorial.

For more information on the above eligibility and diversification criteria, investors can visit the website: www.lyxoretff.com

The investment in undertakings for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the net assets. The manager will not invest in units or equities of AIFs or other investment funds that were formed under a foreign law. The Sub-Fund may invest in the units or shares of UCITS managed by the management company or by a company that is related to the management company.

When the Sub-Fund receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Sub-Fund, given that they are received by the Sub-Fund in full ownership.

As part of the future optimisation of the Sub-Fund's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Sub-Fund will have recourse to index-linked swaps traded over-the-counter, exchanging the value of the Sub-Fund's assets (or of any other financial instrument or asset held by the Sub-Fund, where appropriate) against the value of the Benchmark Index (in compliance with the description contained in this section's paragraph 1 above):

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

As part of a future optimisation of the Sub-Fund management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including future financial instruments other than index-linked swaps.

Situations of conflict of interest may arise between the Management Company and Societe Generale when Societe Generale acts as a counterparty the FFIs. These situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Sub-Fund may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/fees and its ability to achieve its management objective may also be negatively impacted. Where the Sub-Fund enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

The counterparty of the above-mentioned forward financial instruments will have no discretionary power regarding the composition of the Sub-Fund's portfolio, nor regarding the underlying assets of the forward financial instruments within the limit and under the conditions set out by the regulations.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Sub-Fund can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

The Sub-Fund may temporarily borrow cash for up to 10% of its net assets, in particular to optimise its cash management.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Sub-Fund is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Sub-Fund's use of forward swap contracts traded over the counter, the Sub-Fund can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations.

The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralised.

Any financial guarantee received by the Sub-Fund will be provided to the Sub-Fund in full ownership and listed in the Sub-Fund's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Sub-Fund's assets. In the event of default by the counterparty, the Sub-Fund may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt towards the Sub-Fund as part of the guaranteed transaction.

Any financial guarantee received by the Sub-Fund within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Sub-Fund's net asset value;
- (e) The Sub-Fund's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- Such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State or (iv) a public international organisation to which one or more Member States belong; and
- That this collateral comes from at least six different issues, none of which exceeds 30% of the Sub-Fund's assets.

In compliance with the aforesaid conditions, the guarantees received by the Subfund can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e)(above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Sub-Fund's management company will apply a margin to the financial guarantees received by the Sub-Fund. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged. Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;

- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Sub-Fund may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Sub-Fund is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

Counterparty selection policy

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Sub-Fund. The selection of counterparties to financial contracts and financial intermediaries is carried out rigorously from among the reputable counterparties and intermediaries in the market on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes into consideration various criteria to define the initial universe of authorised counterparties:

- - Qualitative criteria based on the Standard and Poors LT rating;

- - Quantitative criteria based on the LT CDS spread (absolute criteria, volatility and comparison with a reference group, etc.). Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: www.lyxor.com, regulatory information section.

Risk profile:

The Sub-Fund will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Sub-Fund, the shareholder is primarily exposed to the following risks:

Equity risk

An equity price can vary upwards or downwards, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

Risk related to the exposure to Emerging markets

The Sub-Fund's exposure to emerging markets results in a greater risk of loss that would exist in the event of investments carried out within traditional developed markets. In particular, the operating and supervision rules in an emerging market may differ from the standards applicable to developed markets. The exposure to emerging markets notably results in: increased volatility of the markets, lower transaction volumes, the risk of economic and/or political instability, an unstable or uncertain fiscal and/or regulatory regime, risks of closing of the markets, government restrictions on foreign investments and interruption or restriction of the convertibility or transferability of any of the currencies comprising the Benchmark Index.

Counterparty risk

The Sub-Fund is exposed to the risk of bankruptcy, default or any other type of default by any counterparty with which it has entered into a contract or transaction. It is particularly exposed to the counterparty risk resulting from its use of forward financial instruments (FFIs) traded over-the-counter with Societe Generale or with any other counterparty. In accordance with UCITS regulations, the counterparty risk (whether this counterparty is Societe Generale or another entity) may not exceed 10% of the total value of the Sub-Fund's assets per counterparty.

Capital loss risk

The capital invested initially is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the amount invested initially may not be recovered, notably should the performance of the Benchmark Index be negative over the investment period.

Liquidity risk (primary market)

If, when the Sub-Fund (or one of its counterparties for a FFI) adjusts its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase/sale price discrepancies, the value and/or liquidity of the Sub-Fund could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

Risk related to low diversification of the Benchmark Index

The Benchmark Index to which the investors are exposed covers a given region, sector or strategy and therefore does not necessarily allow for as broad a diversification of the assets as would be the case of an index that is exposed to several regions, sectors or strategies. The exposure to such a Benchmark Index with such low diversification can result in greater volatility than in more diversified markets. Nevertheless, the diversification rules resulting from the UCITS standards always apply to the Sub-Fund's underlyings.

Liquidity risk on a place of listing

The ETF's equity price can deviate from its indicative net asset value. The liquidity of the Sub-Fund's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Index, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Index, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Subfund's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

Risk that the management objective may only be partially achieved

Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Index, notably should one or more of the following risks arise:

Risk related to the use of derivative instruments

In order to achieve its investment objective, the Sub-Fund uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Index. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Index, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Sub-Fund's net asset value.

Risks related to collateral management

Operational risk:

The Sub-Fund may bear an operational risk linked to defaults or errors by the various players involved in the management of securities financing transaction guarantees and/or total return swaps (TRS). This risk arises only in the context of the management of guarantees for securities financing transactions and total return swaps as referred to in Regulation (EU) 2015/2365.

Legal risk

The Sub-Fund may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Sub-Fund is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Sub-Fund's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Sub-Fund's underlyings can affect the Sub-Fund's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Sub-Fund (and/or to its counterparty in the FFI), the Sub-Fund's net asset value may be affected.

Risk related to regulations

In case of change of the regulations in any country in which the Sub-Fund is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Sub-Fund's underlyings, the Sub-Fund's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

Risk related to events affecting the Benchmark Index

In case of events affecting the Benchmark Index, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Sub-Fund equities. The calculation of the Sub-Fund's net asset value can also be affected.

If the event persists, the Sub-Fund's manager will decide on measures having to be adopted, which can have an impact on the Sub-Fund's net asset value.

"Events affecting the Benchmark Index" are understood to mean the following situations:

- i) The Benchmark Index is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Index is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Index,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Index (other than a minor modification such as the adjustment of the underlyings of this Benchmark Index or of the respective weightings between its various components), that cannot be effectively replicated by the Sub-Fund at a reasonable cost,
- v) One or more components of the Benchmark Index becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Index's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Index's performance.

Securities transaction risk

A corporate action impacting a constituent of the Benchmark Index may be subject to an unexpected modification and contrary to the prior official announcement. As the valuation of this corporate action by the Sub-Fund is based on the initial announcement, the net asset value of the Sub-Fund may be adversely affected in the event of an unexpected change. In addition, the Fund's performance may differ from that of the Benchmark Index if the treatment of the corporate action by the Sub-Fund differs from the treatment of the corporate action provided for by the Benchmark Index methodology.

Exchange risk linked to the Benchmark Index

The Sub-Fund is exposed to an exchange risk to the extent that the underlying securities making up the Benchmark Index could be listed in a currency other than that of the Benchmark Index, or be derivatives of securities listed in a currency other than that of the Benchmark Index. Fluctuating exchange rates are then likely to negatively affect the Benchmark Index monitored by the Sub-Fund.

Exchange risk linked to the "Acc - EUR" share class

The above-mentioned share class is exposed to an exchange risk to the extent that it is listed in a currency other than that of the Benchmark Index. Consequently, the net asset value of the aforesaid share class can decline despite an increase of the value of the Benchmark Index, as a result of exchange rate fluctuations.

Sustainability risks

The Sub-Fund does not consider sustainability factors in the investment decision-making process but remains exposed to sustainability risks. The occurrence of such risks could have a negative impact on the value of the investments made by the Sub-Fund. Additional information is available in the "Sustainability Information" section of the Prospectus.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

The Subfund is aimed at subscribers who wish to gain exposure to the Indian equities market.

The amount that it is reasonable to invest in this Sub-Fund depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Sub-Fund's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers. The minimum recommended investment term is greater than 5 years.

“U.S. Persons” (as defined below – see “COMMERCIAL INFORMATION”) may not invest in the Sub-Fund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Sub-Fund's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy-92800 Puteaux.*
- *Creation date of the Multi Units France Sicav: 04 March 2002.*
- *Sub-Fund approval date by the AMF (French Financial Regulatory Authority): 29 March 2019.*
- *Compartment creation date: 09 May 2019.*

activity report

The fund replicates the performance of the MSCI Daily TR Net Emerging Markets India USD index (Ticker: NDEUSIA).

Performance trend at the closing date:

Share name	ISIN	Share curren cy	Performance for the fiscal year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor MSCI India UCITS ETF - Acc (EUR)	FR0010361683	EUR	48.64% ⁽¹⁾	51.20% ⁽³⁾	-0.65% ⁽²⁾	161.19%
Lyxor MSCI India UCITS ETF - Acc (USD)	FR0010375766	USD	47.66% ⁽¹⁾	50.21%	-	124.94%

⁽¹⁾ "The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs (for example, the cost of rebalancing the index);
- taxation incurred in relation to the methodology used in the Benchmark;

⁽²⁾ "As the unit is not valued in the currency of the index, the change in its net asset value is subject to foreign exchange risk over the financial year.

The calculation methodology for the Foreign Exchange rate during the period is share currency/index currency".

⁽³⁾ "Where the Benchmark Index is denominated in a currency other than the currency of the Unit, the performance of the Benchmark Index is first converted into the currency of the Unit for the sake of clarity and comparison. For this purpose, a foreign exchange transaction (at the WM Reuters 5:00 p.m. rate on the relevant day) is applied daily to the value of the Benchmark Index".

The tracking error realised is 0.0381%. The target tracking error over the period was 0.1%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams. This difference is considered insignificant.

Index Linked Swap's counterparty is: Société Générale.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. The Management Company has adapted its working organisation to this new environment to maintain an efficient operating, trading and investment process. The Board of Directors and the Management Company continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the UCIs that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

LYXOR MSCI INDIA UCITS ETF

(compartment of the Multi Units France Sicav)

This Fund is covered by Article 6 of Regulation (EU) 2019/2088 (the "SFDR Regulation"). It does not promote environmental and/or social characteristics and does not aim to invest sustainably

Transparency of environmentally sustainable investments in periodic reports under Regulation (EU) 2020/852

Regulation (EU) 2020/852 on the establishment of a framework for promoting sustainable investments (the "Taxonomy Regulation") sets out the criteria for determining whether an economic activity is environmentally sustainable in the European Union.

According to the Taxonomy Regulation, an activity can be considered "sustainable" if it contributes substantially to one of the 6 environmental objectives set out in the Taxonomy Regulation, including climate change mitigation and adaptation, pollution prevention and reduction, or the protection and restoration of biodiversity and ecosystems.

In addition, in order to be considered to be sustainable, this economic activity must respect the principle of "not to cause significant harm" to one of the other five objectives of the Taxonomy Regulation and must also comply with basic social criteria (alignment to OECD and UN guidelines on business and human rights).

In accordance with article 7 of the Taxonomy Regulation, the management company draws investors' attention to the fact that the underlying investments of this Fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Provision of environmental, social and governance (ESG) information - in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

11. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website [Lyxor.com](https://www.lyxor.com) and is revised each

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

(a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

To the basket of assets held by the fund, the fund applies an exclusion of issuers associated with serious and repeated violations of the Principles of the United Nations Global Compact and regulatory requirements related to controversial sectors and products. This list is supplemented by a list of companies to be excluded due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological chemical, nuclear or radiological weapons, etc.).

b) Description of the general information used for the analysis implemented on ESG criteria

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (in connection with Lyxor's voting policy). • Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution.

The post trade control is on NAV frequency basis.

Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the [Lyxor.com](https://www.lyxor.com) website.

The exclusion described above is applied to the fund holdings.

2. Description of how the results of the analysis implemented on ESG criteria, in particular exposure to climate risks, are integrated into the investment policy

LYXOR extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

• Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

• Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

• Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

- Regarding the physical risk, and more specifically biodiversity and land use, Lyxor has chosen to present:

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuers in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

LYXOR MSCI INDIA UCITS ETF (compartment of the Multi Units France Sicav)

•Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations

Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

LYXOR MSCI INDIA UCITS ETF (compartment of the Multi Units France Sicav)

For each issuer (Corporate & Government), ESG Industry sector classification is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The ESG score calculated at the portfolio level measures the capacity of the underlying issuers to manage the risks and key opportunities associated with environmental, social and governance factors. The risk scale ranges from 0 (high risk) to 10 (low risk). Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: employment, social relations, health and safety, training, compliance with ILO conventions
- Governance: Board of Directors or Supervisory Board, Audit and Internal Control, Executive Compensation

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source: The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on the benchmark index.

Portfolio Exposure to ESG Controversies

Measures the portfolio's exposure to companies experiencing controversies relating to their compliance with international standards as a function of their degree of severity:

Red: Indicates that a company is involved in one or more very severe controversies;

- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;

- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;

- Green: Indicates that the company is not involved in any major controversies.

- None: Sovereign and/or Company not covered

Red Flag	0%
Orange Flag	14%
Yellow Flag	17%
Green Flag	69%

LYXOR MSCI INDIA UCITS ETF (compartment of the Multi Units France Sicav)

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2021

Carbon Emissions (tons CO2e/\$M invested)	Carbon Intensity (tons CO2e/\$M sales)	Weighted Average Carbon Intensity tons (CO2e/\$M sales)	Portfolio rated by weight	100%
210	738	573	Scope 1 reported (vs estimated)	79%
			Scope 2 reported (vs estimated)	58%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GreenHouse Gas Protocol (GHG Protocol) was launched in 2001 by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: direct emissions resulting from the burning of fossil fuel resources owned or controlled by the company.
 - Scope 2: indirect emissions related to the purchase or production of electricity.
 - Scope 3: all other indirect emissions, from the extended supply chain to the transport of goods and persons.
- The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure the carbon emissions of its portfolios, LYXOR used market capitalisation by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is expressed in tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD)*. Moreover only the use of the Enterprise Value enables the analysis of a portfolio invested in both equities and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest - total debt.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or the portion of the company's revenue earned from fossil fuel energies or the portion of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon:	
Fossil Fuel Reserves	24%
Thermal Coal	4%
Natural Gaz	20%
Oil	20%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the Based on investment of : \$ 1,000,000 portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Thermal Coal (Tons)	4,282
Gas (MMBOE)	0.0006
Oil (MMBOE)	0.0005

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	3,539.3
Thermal Coal	7,820.3
Oil	230.5
Gas	171.7
Total	11,780.1

LYXOR MSCI INDIA UCITS ETF (compartment of the Multi Units France Sicav)

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges - this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Thermal Coal	7,820.3
Oil Sands	0.0
Shale Oil or Shale Gas	26.4
Sum High Impact Reserves	7,846.8
Other	3,933.3

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	1.7%	1.1%	3.2%
Some efforts	88.2%	95.3%	38.8%
Limited efforts/Information	4.3%	0.5%	2.2%
No effort/No evidence	4.7%	2.5%	55.8%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low- carbon products.

(1) Metric developed by MSCI

Low carbon transition score	5.8
Low carbon transition management Score	3.9
Operational Transition	12.0%
Product Transition	12.0%
Neutral	65.0%
Solutions	3.6%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

Share of issuers in terms of power generation in portfolio	6.9%
--	------

The issuer data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source: MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)				
Hydro	1.2%	Liquid Fuel	Natural Gas	3.3%
	Renewables	4.2%	Thermal coal	91.3%
				Nuclear

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the Issuer with a revenue dedicated to environmental solutions portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention between: or sustainable construction. These issuers are likely to benefit from a low carbon transition.

	0-19.9%	30%
The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).	20-49.9%	1%
	50-100%	1%

These metrics include only corporate issuers rated in Carbon.

Weight of Companies Offering Clean Technology Solutions				
Alternative Energy	12.5%	Energy Efficiency	27.0%	Green Building
Pollution Prevention	12.6%	Sustainable Water	2.2%	Sustainable Agriculture
				0.3%
				0.9%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution				
Alternative Energy	0.7%	Energy Efficiency	1.1%	Green Building
Pollution Prevention	0.3%	Sustainable Water	0.0%	Sustainable Agriculture
				0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

% estimated EU Taxo 1.9%

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	4%
Coldwave	19%
Flood	2%
Heatwave	8%
Hurricane	2%
Water Stress	47%
Wildfire	18%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.).

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure - analyses the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	0.2%	21.4%	78.4%	73.7%	23.0%	3.2%
Carbon Emissions	0.4%	90.5%	9.1%	74.5%	14.2%	11.3%
Electronic Waste	1.5%	73.0%	25.5%	99.3%	0.2%	0.5%
Opportunities in Green Building	0.5%	89.8%	9.7%	99.6%	0.4%	0.0%
Opp's in Renewable Energy	1.5%	25.8%	72.7%	97.0%	1.3%	1.7%
Packaging Material & Waste	74.8%	19.0%	6.2%	84.7%		15.3%
Water Stress	1.2%	23.5%	75.2%	52.0%	34.1%	13.9%
Toxic Emissions & Waste				57.4%	20.3%	22.3%

Temperature - Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

-A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,

-An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Level of alignment	2.5°C

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des marchés financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 ("AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 ("UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management compensation policy notably ensures appropriate risk management and adherence to compliance on the part of its employees.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the French Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No "carried interest" was paid during the financial year.

Lyxor's best selection and execution policy

1 accounting rules & methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information, in the evolving context of the Covid-19 crisis.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value.

When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued;
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities of UCITS operating under French law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value;
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Sub-Fund's reference currency are the exchange rates published the fixing WM Reuters on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment)

multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transfer commission which, if relevant, may notably be collected by the custodian and the delegated financial manager.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions, these commissions reward the delegated financial manager when the Compartment has exceeded its objectives and are invoiced to the Compartment;
- Transfer commissions invoiced to the Sub-Fund.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative fees external to the portfolio management company (Auditor, Depository, distribution, lawyers) including tax ⁽¹⁾	Net assets	maximum 0.85 % per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Outperformance commission	Net assets	None
Transactions commissions	Collection on each transaction	None

(1) including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Accounting currency

The Compartment accounting is carried out in Euro.

SUB-FUND OF THE MULTI UNITS FRANCE SICAV

LYXOR NEW ENERGY UCITS ETF
(compartment of the Multi Units France Sicav)

Compartments / feeder	LYXOR NEW ENERGY (DR) UCITS ETF is a sub-fund of the MULTI UNITS FRANCE SICAV.
Management Company	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy – 92987 Paris La Défense Cedex.
Depository and Custodian	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

Information on the investments and management

Classification:

International equities.

At least 60% of the Lyxor New Energy UCITS ETF Compartment is permanently exposed in a foreign equity market or in equity markets of several countries, possibly including the French market.

The Compartment is an index-based fund of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution:

Share class Dist: The management company reserves the right to distribute all or part of the distributable amounts once or several times per year and/or to capitalise them.

Acc share class: Capitalisation of all the amounts available for distribution.

Management objective:

The Compartment is a passively managed index-based UCITS.

The management objective of this Compartment is to replicate the upward or downward evolution of the World Alternative Energy Index CW Net Total Return (the "Benchmark Indicator"), listed in Euros (EUR), while insofar as possible minimizing the tracking error between the Compartment's performances and those of the Benchmark Indicator.

The Benchmark Indicator is a reflection of the performance of the global renewable energy sector, which includes companies that prioritize clean energy in their production process and invest in the development of renewable energies, energy efficiency and the decentralization of the energy supply.

The Compartment promotes environmental and/or social characteristics within the meaning of Article 8 of the SFDR. The maximum anticipated level of the ex-post tracking error under normal market conditions is 2%.

Benchmark indicator:

The Benchmark Indicator is the World Alternative Energy Index CW Net Total Return (net dividends reinvested) ("Cap-Weighted").

The Benchmark Indicator is an equity index administered by Societe Generale, calculated by Solactive AG, based on a model designed by Robeco SAM (Sustainable Asset Management).

The Benchmark Indicator is a benchmark index dedicated to the renewable energy sector.

The Benchmark Indicator is made up of securities listed on the markets of Europe, America, Asia and Oceania, a significant number of which derive from one of the following three business sectors:

- Renewable energy: construction, engineering services, equipment and operation of installations for the production and transmission of onshore and offshore wind energy, solar power, hydropower, geothermal energy, biomass, biofuels, tidal energy,
- Energy efficiency: smart grids, materials and technologies for the construction of energy efficient buildings and for the transformation of existing buildings into energy-efficient buildings, smart temperature and humidity management technologies for energy management, automation and software for the residential, commercial, tertiary, data centres, industrial and infrastructure sectors,

- Decentralisation of the supply of energy systems for the storage, conversion and non-centralised distribution of electricity, in a local location close to the point of consumption, in small-scale units intended for limited user groups, for the residential, commercial and industrial sectors. On-board batteries for electric vehicles and consumer electronics, fixed-site batteries, backup systems, electric vehicle charging, home automation, contributing to the autonomy and resilience of electricity supply.

The initial investment universe consists of the components of the Solactive GBS Developed Markets Ail Cap Index and the Solactive Emerging Markets Large Cap Index, to which the various criteria set out below are applied. Companies considered to be in violation of one of the principles of the United Nations Global Compact are excluded from the investment universe. The Global Compact offers a simple, universal and voluntary commitment framework, which is based on ten principles relating to respect for human rights, international labour standards, the environment and the fight against corruption.

In accordance with the Societe Generale group's defence sector policy, companies involved in activities related to prohibited or controversial weapons (anti-personnel mines, cluster bombs, depleted uranium weapons) are also excluded from the investment universe.

The Benchmark Indicator's methodology aims to select as constituents of the Benchmark Indicator only shares issued by companies with more than 40% of their turnover in the three business sectors mentioned above, and therefore promotes environmental characteristics by investing in companies that generate a portion of their revenue in activities considered to favour the energy transition.

The Benchmark Indicator weighting is calculated on the basis of the free-float capitalisations of each of the adjusted components, taking into account optimal liquidity and maximum exposure criteria as indicated in the Benchmark Indicator's methodology.

The monitored performance is that of the Benchmark Indicator closing prices.

A full description of the Benchmark and its construction methodology and information on the composition and respective weightings of the Benchmark components are available on the website: <https://www.sgindex.com>.

Benchmark indicator revision and composition

The Benchmark Indicator is analysed and rebalanced every six months (January and July of each year).

The exact composition and revision rules of the Benchmark Indicator are available on the website:

<https://www.solactive.com>.

The above-mentioned frequency of rebalancing has no effect on costs as part of the implementation of the Investment Strategy.

Benchmark indicator publication

The Benchmark Indicator is calculated on a daily basis using the official closing stock market prices for the constituent stocks.

The closing price of the Benchmark Indicator is available on the website: <https://www.solactive.com>.

The Benchmark Indicator administrator is registered on the register of administrators and benchmarks maintained by ESMA. In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmark indices used, describing the measures to be implemented in the event of substantial changes to an index or termination of supply of that index.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009. In order to seek the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will achieve its management objective via a direct replication method, which means that the Compartment will invest in a basket of assets comprising the Benchmark Indicator and/or financial instruments representative of all or part of the securities comprising the Benchmark Indicator.

In addition, the compartment may use forward financial instruments ("FFIs"). Futures in which the compartment is likely to invest include contracts such as index futures, futures on all or part of the components of the Benchmark Indicator, and hedging swaps carried out to minimise the tracking error of the Compartment.

In accordance with its investment strategy, the Compartment may hold cash (for example, when using futures). In this case, the manager may, in the best interest of unitholders, deposit this cash with a credit institution or invest it in balance-sheet assets and/or off-balance-sheet assets (as described below).

As part of the optimisation of the direct replication method of the Benchmark Indicator, the Compartment, represented by its delegated financial manager, may decide to use a so-called "sampling" technique consisting of investing in a selection of representative securities making up the Benchmark Indicator, with the aim of limiting the costs associated with investing in the different components of the Benchmark Indicator. A sampling replication strategy could notably lead the Compartment to invest in a selection of representative securities (and not all securities) comprising the Benchmark Indicator, in proportions different from those of the Benchmark Indicator or even to invest in securities other than the Benchmark Indicator components.

The Compartment also reserves the right, in particular with the aim of gaining exposure to securities traded on emerging markets that fall within the composition of the Benchmark Indicator and whose access may be particularly costly and/or complex, to have recourse to financial instruments such as debt instruments or over-the-counter FFIs, including swaps, futures and CFDs.

In order to allow investors to benefit from transparency on the direct replication method used (full replication of the Benchmark Indicator or sampling to limit replication costs) and on its consequences in terms of assets held by the Compartment, information on the updated composition of the basket of balance sheet assets held in the Compartment's portfolio is available on the page dedicated to the Compartment accessible on the website www.lyxoretf.com. The update frequency and/or the date of updating the aforesaid information is also indicated on the same page of the aforesaid website. The update frequency and/or the date of updating the aforesaid information is also indicated on the same page of the aforesaid website.

As part of the management of its exposure, the Compartment may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit may be increased to 35% for a single issuing entity, when this proves to be justified by exceptional market conditions, particularly when certain securities are largely dominant and/or in the event of high volatility of a financial instrument or securities linked to an economic sector represented in the Benchmark Index, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

In this case, the manager intends to use mainly the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Compartment will mainly be invested in the securities described below: Equities

The Compartment may hold international equities in accordance with regulatory ratios.

The Sub-Fund will be mainly invested in the shares comprising the Benchmark Index.

Ownership of shares or units in other UCIs or investment funds

The Compartment may invest up to 10% of its assets in units or shares of the following UCIs or investment funds:

- French or foreign UCITS compliant with Directive 2009/65/EC - For the purposes of these investments, the Sub-Fund may subscribe for units or shares in UCITS managed by the Management Company or a company to which it is linked.

3. Off-balance sheet assets (derivative instruments)

The Sub-Fund may invest in the following FFIs: Nature of the intervention markets:

- regulated
- organised
- over-the-counter

Risks in which the Compartment wishes to trade:

- Equities

Types of transactions, all transactions must be limited to achieving the management objective:

- hedging
- exposure

Type of instruments used:

- futures: on equities and indices
- total return swaps: on equities and indices (see proportions detailed below),
- forward exchange contracts

Strategy for using derivatives to achieve the investment objective:

- General hedging of the portfolio, certain risks, securities, etc. - up to 100% of assets
- reconstitution of synthetic exposure to assets, risks - up to 100% of the asset

The counterparties of OTC derivatives processed by the Sub-Fund will be selected in accordance with the Management Company's best execution policies (including the execution matrix by asset type mentioned in the Appendix). The above-mentioned policy can be accessed at the following address: <https://www.lyxor.com/politique-de-meilleure-execution-liam-janvier-2020-fr> :

LYXOR NEW ENERGY UCITS ETF

(compartment of the Multi Units France Sicav)

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 10% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 0% of the assets under management.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/fees and its ability to achieve its management objective may also be negatively impacted. Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or the contract for which the counterparty is in default.

The counterparty of the aforesaid future financial instruments will have no discretionary power regarding the composition of the Compartment's portfolio, nor regarding the underlying assets of the future financial instruments within the limit and under the conditions provided by regulations.

Situations of conflict of interest may arise between the Management Company and Societe Generale when Societe Generale acts as a counterparty to financial futures instruments (FFIs). These situations are governed by the Management Company's conflict of interest management policy.

4. Securities with integrated derivatives

Risks in which the manager wishes to trade:

- Equities

Types of operations, all transactions being limited to achieving the management objective:

- exposure
- other type (to be specified)

Type of instruments used: EMTN

Strategy for using embedded derivatives to achieve the investment objective: derivatives will be used on an ancillary basis up to 10% of the maximum net act).

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

The Compartment may use efficient portfolio management techniques in accordance with the provisions of Article R21 4-L 8 of the French Monetary and Financial Code and in particular:

Type of acquisition transactions used:

- securities lending and borrowing in accordance with the French Monetary and Financial Code

Types of operations, all transactions being limited to achieving the management objective:

- optimisation of the Compartment's revenues

Maximum proportion of assets under management that may be covered by securities financing contracts: up to 25% of the Compartment's assets.

Expected proportion of assets under management that can be financed by securities transactions: 0% of the Sub-Fund's assets.

In this context, the Management Company has appointed Societe Generale as an intermediary (hereinafter the "Agent"). In the event of recourse to temporary sales, the Agent may be authorised (i) to carry out, on behalf of the Compartment, securities lending transactions, governed by GMSLA (Global Master Securities Lending Agreements) and/or any other internationally recognised framework agreements, and (ii) to invest, on behalf of the Compartment, the cash received as collateral for these securities lending transactions, in accordance with and within the limits defined by the securities lending agreement, the rules of this prospectus and the regulations in force.

As a reminder, the Management Company is an entity of the Societe Generale Group and is therefore linked to the Agent.

Where Société Générale S.A. is appointed as Agent, it is not authorised to act as a counterparty in securities lending transactions.

In the event of the recourse to such temporary sales:

1. the Subfund will be entitled to all income from such transactions securities, net of any direct and indirect operating costs fees.
2. the above operational costs/fees related to efficient portfolio management techniques will be those incurred by the Management Company, the Agent (if applicable) and/or the other intermediaries involved in these transactions in connection with their services;
3. the direct or indirect operating costs/fees will be calculated as a percentage of the gross income generated by the Subfund. Information on operational, direct and indirect costs/fees and the entities to which these costs/fees are paid will be mentioned in the Compartment's annual report.
4. income from the lending of securities will be paid to the Subfund after deduction of any direct and indirect operating costs/fees that may be borne by the Agent and the Management Company To the extent that these fees/costs, direct and indirect, do not increase the operating costs of the Compartment, they have been excluded from current expenses.

The Compartment's annual report will include, where applicable, the following details:

- the exposure generated through effective portfolio management techniques;
- the identity of the counterparty(ies) to these effective portfolio management techniques;
- the type and amount of guarantees received by the Compartment in order to reduce counterparty risk; and
- income from effective portfolio management techniques for the whole period concerned, as well as direct and indirect operational costs and expenses incurred.

Situations of conflict of interest may arise between the Management Company and Societe Generale when Societe Generale acts as a counterparty to all transactions constituting efficient portfolio management techniques. These situations are governed by the Management Company's conflict of interest management policy.

8. Financial guarantees

In all cases in which the Sub-Fund is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Sub-Fund's use of forward swap contracts traded over the counter, the Sub-Fund can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets. In the event of default by the counterparty, the Compartment may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt towards the Compartment as part of the guaranteed transaction.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) any received collateral must be of high quality, highly liquid, and traded on a regulated market or in a multilateral trading system with transparent pricing in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Sub-Fund's net asset value;
- (e) The Subfund's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- Such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State or (iv) a public international organization to which one or more Member States belong; and
- Such financial guarantees consist of at least six different issues of which none exceeds 30% of the Sub-Fund's assets.

In compliance with the aforesaid conditions, the guarantees received by the Sub-Fund can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by supranational institutions and bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Sub-Fund's management company will apply a margin to the financial guarantees received by the Sub-Fund. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged. Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) Used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) Invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Compartment may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

Counterparty selection policy

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Compartment. The selection of counterparties for financial contracts and financial intermediaries is performed rigorously from among the reputable counterparties and intermediaries in the market, on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes various criteria into consideration to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating;
- Quantitative criteria based on the LT CDS spread (absolute criteria, volatility and comparison with a reference group, etc.). Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: www.lyxor.com, section "regulatory information".

Risk profile:

The shareholder's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

Equity risk

An equity price can vary upwards or downwards, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

Risk related to low diversification of the Benchmark Indicator

The Benchmark Indicator to which the investors are exposed covers a given region, sector or strategy and therefore does not necessarily allow for as broad a diversification of the assets as would be the case of an index that is exposed to several regions, sectors or strategies. The exposure to such an index with such low diversification can result in greater volatility than in more diversified markets. Nevertheless, the diversification rules resulting from the UCITS standards always apply to the Compartment's underlyings.

Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

Liquidity risk (primary market)

If, when the Compartment (or one of its counterparties for future financial instrument ("FFI")) adjusts its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase/sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

Risks related to the absence of perfect replication

Replicating the Benchmark Indicator by investing in all its components can be costly or very difficult operationally. The Sub-Fund's manager may also use optimisation techniques, in particular the sampling technique, which consists in investing in a selection of representative securities (and not all securities) comprising the Benchmark, in proportions different from those of the Benchmark Index or even investing in securities other than the components of the index or financial futures. The use of these optimisation techniques may lead to an increase in the tracking error exposed and will notably lead to different performances between the Compartment and the Benchmark Indicator.

Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Sub-Fund's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Index, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Sub-Fund's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

Counterparty risk

The Compartment is exposed to the risk of bankruptcy, default or any other type of default by any counterparty with which it has entered into a contract or transaction. It is particularly exposed to counterparty risk resulting from its use of over-the-counter forward financial instruments with Societe Generale or with any other counterparty. In accordance with UCITS regulations, the counterparty risk (whether this counterparty is Societe Generale or another entity) may not exceed 10% of the total value of the Compartment's assets per counterparty.

Risk related to the use of effective portfolio management techniques

In the event that the counterparty to the efficient portfolio management technique (hereinafter referred to as the "EPMT") processed by the Sub-Fund fails to provide the counterparty, the Sub-Fund may be exposed to a risk in the event that the value of the guarantees received by the MF is lower than the value of the assets of the MF transferred to the counterparty under the EPMT in question. This risk could materialise in particular in the event of (i) a poor valuation of the securities subject to this transaction and/or (ii) adverse market movements and/or (iii) a deterioration in the credit rating of issuers of securities received as collateral and/or (iv) illiquidity of the market on which the collateral received is admitted to listing. Unitholders should note that (i) EPMTs may be entered into with Societe Generale (entity of the same group as the Management Company) and/or (ii) that Societe Generale may be appointed as agent of the Subfund under the EPMTs.

Risks related to collateral management

Operational risk:

LYXOR NEW ENERGY UCITS ETF

(compartment of the Multi Units France Sicav)

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

Risk related to the use of derivative instruments

The Compartment may use over-the-counter Future Financial Instruments (FFIs) or listed FFIs, in particular futures contracts and/or hedging swaps. These FFIs can result in a series of risks on the level of the contract that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Index, risk related to the tax regime, risk related to the regulations, and liquidity risk. These risks can directly affect a FFI and may result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

Investing in futures may involve a high level of risk. The amount required to trade certain FFIs is potentially much lower than the exposure obtained through these instruments, which implies a "leverage" at the level of each transaction. A relatively limited market movement would then have a proportionately very high impact, which could be favourable or unfavourable to the Fund.

The market value of forward financial instruments is highly volatile and may therefore be subject to significant fluctuations.

The Sub-Fund may use OTC futures. Over-the-counter transactions may be less liquid than transactions traded on organised markets, where trading volumes are generally higher, and their prices may be more volatile.

Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Index is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Index,
- iv) The index supplier makes a significant change to the formula or calculation method of the Benchmark (other than a minor modification such as the adjustment of the underlyings of this Benchmark or of the respective weightings among its various components) that cannot be effectively replicated by the Sub-Fund at a reasonable cost.
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

Securities transaction risk

LYXOR NEW ENERGY UCITS ETF

(compartment of the Multi Units France Sicav)

Should the issuer of a security underlying the Benchmark Index undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Sub-Fund (and/or in a valuation of the ST by the Sub-Fund's counterparty in a future financial instrument), the Sub-Fund's net asset value may be affected, notably should the actual treatment of the ST by the Sub-Fund differ from the ST's treatment in the methodology used by the Benchmark Index.

Exchange risk linked to the Benchmark Indicator

The Compartment is exposed to an exchange risk to the extent that the underlying securities making up the Benchmark Indicator could be listed in a currency other than that of the Benchmark Indicator, or be derivatives of securities listed in a currency other than that of the Benchmark Indicator. Fluctuating exchange rates are then likely to negatively affect the Benchmark Indicator monitored by the Compartment.

Sustainability risks

As part of the management of sustainability risks, the Management Company relies on the administrator of the Benchmark Indicator, whose methodology incorporates sustainability risks as a result of investing in equities issued by companies generating a portion of their revenues in activities considered to promote the energy transition. Such integration has a direct impact on the Benchmark Indicator's investment universe. However, there is no guarantee that sustainability risks will be fully neutralised and the occurrence of such risks could have a negative impact on the value of the assets included in the Benchmark Indicator. For more information on the Benchmark Indicator's methodology, please refer to the website: <https://www.sgindex.com>. Additional information is also available in the "Sustainability Information" section of the Prospectus.

Sustainability risk of the investment

The Benchmark Indicator's methodology does not guarantee the sustainability of the investment made. It selects equities issued by companies with more than 40% of their turnover in the three business sectors mentioned in the "Benchmark Indicator" section below, comprising activities considered to favour the ecological transition.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

The investor who subscribes to this Compartment wishes to gain exposure to the equity market of companies whose main source of income is activities relating to the renewable energy business sectors.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers. The minimum recommended investment term is greater than 5 years.

"U.S. Persons" (as defined below - see "COMMERCIAL INFORMATION") may not invest in the Compartment.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy-92800 Puteaux.
- Creation date of the Multi Units France Sicav: 04 March 2002.
- Compartment approval date by the AMF (Financial Markets Authority): 10 October 2007.
- Compartment creation date: 05 September 2019.

activity report

The fund replicates the performance of the MSCI Daily TR Net Emerging Markets India USD index (Ticker: NDEUSIA).

Performance trend at the closing date:

Share name	ISIN	Share currency	Performance from 28/02/19 to 31/10/19			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor MSCI New Energy ESG Filtered (DR) UCITS ETF - Dist	FR0010524777	EUR	33.57% ⁽¹⁾	34.44%		36.07%
Lyxor MSCI New Energy ESG Filtered (DR) UCITS ETF - Acc	FR0014002CG3	EUR	11.66% ⁽¹⁾	11.94%		11.66%

⁽¹⁾ "The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs (for example the index rebalancing cost);
- taxation incurred in relation to the methodology used in the Benchmark;
- possible use by the manager of sampling or advanced index management techniques;

The tracking error realised is 0.1675%. The target tracking error over the period was 0.3%.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission *(not audited by the auditor)*

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

LYXOR NEW ENERGY UCITS ETF

(compartment of the Multi Units France Sicav)

Transparency of sustainable investments in periodic reports

Pursuant to Article 11 of Regulation (EU) 2019/2088 on the publication of sustainability information in the financial services sector (the "SFDR Regulation"), the overall sustainability impact of the financial product is described using the following sustainability indicators:

Indicator	Portfolio				Parent Index			
	October2021		October2020		October2021		October2020	
	Measurement of the indicator	% coverage of indicator	Measurement of the indicator	% coverage of indicator	Measurement of the indicator	% coverage of indicator	Measurement of the indicator	% coverage of indicator
Energy efficiency	12.8%	100%	14.0%	98%	12.7%	100%		
% independent members on Board of Directors	82.9%	100%	82.2%	99%	72.5%	73%		
Carbon intensities weighted average (Scope 1&2) tCo2e	138.3	100%	620.8	98%	343.9	100%		
% of women on the Board of Directors	32.2%	100%	29.4%	99.4%	23.3%	93%		
Alternative energy	35.1%	100%	27.6%	98%	40.1%	100%		
Human rights concerns		100%				93%		
- Compliance	96.8%				86.2%			
- Non-compliance	0.0%				0.0%			
- Watch list	3.2%				6.4%			
Controversies on human capital issues		100%				93%		
- No concerns	96.8%				97.5%			
- Minor	0.0%				0.0%			
- Moderate	0.0%				0.0%			
- Serious	3.2%				2.5%			
- Very serious	0.0%				0.0%			

Weighted carbon intensity (TCO2e / \$m in sales)

This metric measures the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions standardised by turnover), and these intensities are weighted according to the companies' weight in the portfolio.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Serious and Very Serious Controversies regarding Human Capital issues

This indicator measures the seriousness of controversies related to the impact of a company's activities on human rights. Factors influencing this assessment include, but are not limited to, a history of involvement in human rights legal matters, widespread or flagrant complicity in murders, physical abuse or violation of other rights, resistance to improved practices, and criticisms of NGOs and/or other third party observers.

Assessment of Human Rights Concerns

This factor indicates whether the company is in compliance with the United Nations Guiding Principles for Business and Human Rights. The possible values are Fail, Watch List, or Pass.

Percentage of women on the Board of Directors

Percentage of the company's board members who are women. For companies with a two-tier board of directors, the calculation is based solely on the members of the Supervisory Board.

Percentage of independent members on the Board of Directors

The percentage of board members who meet the independence criteria defined by MSCI. These criteria consider a member paid or employed by the company (or former employee regardless of seniority), a family member or any person who has a close relationship with one of the executive members as non-independent. For companies with a two-tier board of directors, the calculation is based solely on the members of the Supervisory Board.

Contribution to Environmental Solutions - Energy efficiency

This indicator aims to measure the portfolio's exposure to issuers with revenues devoted to environmental solutions. It reflects the share of the company's revenues exposed to products and services that help address the world's major environmental challenges. It is calculated as the product of the issuer's weight in the portfolio or index and that of the percentage of revenues of each issuer generated in environmental and sustainable solutions.

Energy efficiency includes products and services that support maximising productivity in labour, transport, electricity and domestic applications with minimum energy consumption to ensure universal access to affordable, reliable and modern energy services.

Contribution to Environmental Solutions - Alternative energy

This indicator aims to measure the portfolio's exposure to issuers with revenues devoted to environmental solutions. It reflects the share of the company's revenues exposed to products and services that help address the world's major environmental challenges. It is calculated as the product of the issuer's weight in the portfolio or index and that of the percentage of revenues of each issuer generated in environmental and sustainable solutions.

Alternative energy includes products and services that support the transmission, distribution and production of renewable energy and alternative fuels to reduce carbon and pollutant emissions by supporting affordable and clean energy to combat climate change.

Transparency of environmentally sustainable investments in periodic reports

The Fund promotes environmental characteristics within the meaning of Article 6 of Regulation (EU) 2020/852 on the establishment of a framework for sustainable investments (the "Taxonomy Regulation").

The objective of the European Union Taxonomy Regulation is to identify economic activities considered environmentally sustainable ("Sustainable Activities").

The Taxonomy Regulation identifies these activities according to their contribution to six major environmental objectives: (i) climate change mitigation, (ii) climate change adaptation, (iii) sustainable use and protection of water and marine resources, (iv) transition to the circular economy (waste, prevention and recycling), (v) pollution prevention and control, and (vi) protection of healthy ecosystems.

In order to be considered to be sustainable, an economic activity must demonstrate that it contributes substantially to one or more of the six objectives, that it does not cause material harm to any of these objectives (principle known as "DNSH", "Do No Significant Harm") and that it is carried out in accordance with the minimum safeguards provided for in Article 18 of the Taxonomy Regulation. The DNSH principle applies only to investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities.

The Fund may invest partially in economic activities that contribute to the following environmental objectives: climate change mitigation and adaptation to climate change.

While the Fund may already hold investments in Sustainable Activities without being committed to compliance with a minimum investment share, the management company shall make its best efforts to ensure that this minimum share of the investments underlying the financial product made in Sustainable Activities is available as soon as reasonably possible after the entry into force of the regulatory technical standards related to the content and presentation of the information to be provided in accordance with Articles 8(4), 9(6) and 11(5) of Regulation (EU) 2019/2088 as amended by the Regulation (Regulatory Technical Standards with regard to the content and presentation of disclosures pursuant to Article 8(4), 9(6) and 11(5) of Regulation (EU) 2019/2088 as amended by the Taxonomy Regulation).

As data is available and calculation methodologies developed, the description of the extent to which the underlying investments are made in Sustainable Activities will be made available to investors. This information, as well as information relating to the proportion of enabling and transitional activities, will be included in a future version of the prospectus.

This commitment will be achieved gradually and on an ongoing basis by engaging in discussions with the index administrator to ensure that the latter integrates the requirements of the Taxonomy Regulation into the index methodology as soon as reasonably practicable. This will lead to a minimum degree of alignment of the portfolio with the Sustainable Activities that will be made available to investors at this time.

In the meantime, the degree of alignment of the portfolio with Sustainable Activities will not be available from investors.

If you have any questions, please contact the management company at the following address: client-services-etf@lyxor.com.

The management company draws investors' attention to the fact that the investments underlying the remaining portion of this financial product do not take into account the European Union's criteria for environmentally sustainable economic activities.

LYXOR NEW ENERGY UCITS ETF

(compartment of the Multi Units France Sicav)

Provision of environmental, social and governance (ESG) information – in accordance with Articles L.533-22-1 and D.533-16-1 of the French Monetary and Financial Code

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website [Lyxor.com](https://www.lyxor.com) and is revised each

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The Fund promotes environmental and/or social characteristics within the meaning of Article 8 of Regulation (EU) 2019/2088 (SFDR).

Environmental and/or social characteristics promoted by the Fund are met through the investment process. For further information in relation such characteristics, please refer to the prospectus of the Fund.

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

In accordance with Article D. 533-16-1 of the French Monetary and Financial Code, investors are informed that the UCI does not simultaneously take into account social, environmental and governance quality criteria in its investment policy.

For ETFs (Exchange Traded Funds) whose management objective is to replicate the performance of its benchmark via physical replication.

Applying an exclusion or selection of securities on the basis of ESG criteria would imply a deviation from the benchmark and therefore a higher tracking error.

Lyxor has implemented a shareholder commitment. Lyxor's voting policy is referenced in Lyxor's SRI policy and available on [Lyxor.com](https://www.lyxor.com)'s website. The voting scope defined by Lyxor for this fiscal year did not include this fund.

All the general actions carried out by the management company relating to ESG criteria are presented in the responsible investor policy available on the [Lyxor.com](https://www.lyxor.com) website.

2. Description of how the results of the analysis implemented on ESG criteria, in particular exposure to climate risks, are integrated into the investment policy

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint

•Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

•Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions:

•Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs). -In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

•the Germanwatch climate performance index score

•the environment performance score

•the Environmental Vulnerability index

For corporate issuers in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

•Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations

•Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

LYXOR NEW ENERGY UCITS ETF

Utilities	9.0%	7.0%	7.5%	1.0%					

For each issuer (Corporate & Government), ESG Industry sector classification is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The ESG score calculated at the portfolio level measures the capacity of the underlying issuers to manage the risks and key opportunities associated with environmental, social and governance factors. The risk scale ranges from 0 (high risk) to 10 (low risk). Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities

- Social: employment, social relations, health and safety, training, compliance with ILO conventions

- Governance: Board of Directors or Supervisory Board, Audit and Internal Control, Executive Compensation

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources

- Social: Human Capital, Economic Environment

- Governance: Financial Governance, Political Governance

Source: The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Measures the portfolio's exposure to companies experiencing controversies relating to their compliance with international standards as a function of their degree of severity:

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2021

Carbon Emissions (tons CO2e/\$M invested)	Carbon Intensity (tons CO2e/\$M sales)	Weighted Average Carbon Intensity tons (CO2e/\$M sales)	Portfolio rated by weight	100%
19	85	138	Scope 1 reported (vs estimated)	92%
			Scope 2 reported (vs estimated)	87%

Scope 1 & 2 estimations are based on MSCI methodology

Carbon rating methodology

The GreenHouse Gas Protocol (GHG Protocol) was launched in 2001 by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: direct emissions resulting from the burning of fossil fuel resources owned or controlled by the company.
- Scope 2: indirect emissions related to the purchase or production of electricity.
- Scope 3: all other indirect emissions, from the extended supply chain to the transport of goods and persons.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio invested in both equities and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest - total debt.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or the portion of the company's revenue earned from fossil fuel energies or the portion of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon:	0%
Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gaz	0%
Oil	

Stranded Assets: Fossil fuel reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of : \$ 1,000,000	0
Thermal Coal (Tons)	0.0000
Gas (MMBOE)	0.0000
Oil (MMBOE)	

Stranded Assets: Potential emissions from fossil fuel reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	0.0
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	

LYXOR NEW ENERGY UCITS ETF

(compartment of the Multi Units France Sicav)

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges - this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	0.0
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	23.9%	0.0%	0.0%
Some efforts	54.9%	77.6%	57.3%
Limited efforts/Information	1.8%	6.8%	13.8%
No effort/No evidence	19.4%	9.7%	28.9%

Low Carbon Transition Score

The Low Carbon Transition Score⁽¹⁾ uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

•Asset stranding: risk of holding assets which may become stranded

•Operational Transition: risk of increase in operational costs

•Product Transition: risk of a decrease in demand for high-carbon products and services

•Neutral: low exposure to transition risks

•Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low- carbon products.

(1) Metric developed by MSCI

Low carbon transition score	8.1
Low carbon transition management Score	7.4
	1.3%
	1.3%
Operational Transition	21.5%
Product Transition	73.9%
Neutral	
Solutions	

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The issuer data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source: MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)			
Hydro	34.5%	Liquid Fuel	0.0%
		Natural Gas	5.4%
Nuclear		Renewables	58.6%
		Thermal Coal	1.5%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	30%
20-49.9%	1%
50-100%	1%

Weight of Companies Offering Clean Technology Solutions			
Alternative Energy	73.8%	Energy Efficiency	49.4%
Pollution Prevention	1.6%	Sustainable Water	4.9%
		Green Building	0.0%
		Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution			
Alternative Energy	35.1%	Energy Efficiency	12.8%
Pollution Prevention	0.1%	Sustainable Water	0.1%
		Green Building	0.0%
		Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	5%
Coldwave	29%
Flood	2%
Heatwave	8%
Hurricane	2%
Water Stress	40%
Wildfire	15%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks.

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic segment			Business segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	10.5%	51.0%	38.5%	92.7%	7.2%	0.1%
Carbon Emissions	0.3%	31.3%	68.4%	73.7%	25.7%	0.6%
Electronic Waste	4.3%	2.9%	92.8%	93.4%	4.6%	2.0%
Opportunities in Green Building	0.3%	36.8%	62.9%	100.0%		
Opp's in Renewable Energy	4.2%	88.2%	7.6%	79.7%	1.6%	18.7%
Packaging Material & Waste	10.2%	53.3%	36.5%	98.5%		1.5%
Water Stress	20.0%	73.8%	6.2%	33.4%	59.6%	7.0%
Toxic Emissions & Waste				28.6%	68.0%	3.3%

Temperature - Alignment of the portfolio with the Paris Agreement

Coverage of alignment measurement against different climate scenarios is insufficient for the fund

Engagement

This fund is part of the following campaigns: Climate Action 100+, Corporate Governance, ESG, General meeting

Climate Action 100+: In 2018, Lyxor joined the Climate Action 100+, an international initiative led by investors to engage systemically with important greenhouse gas emitters and other companies across the global economy that have significant opportunities to drive the clean energy transition and help achieve the goals of the Paris Agreement.

Through this initiative, Lyxor aims to obtain commitments from the Boards of Directors or Supervisory Boards and/or key executives in order to:

1. Implement a strong governance framework that clearly articulates the Board's responsibility and oversight for climate risks;
2. Take action to reduce greenhouse gas emissions across the value chain, in line with the Paris Agreement's goal of limiting global average temperature increase to well below 2°C above pre-industrial levels and to move, as far as possible, to a 1.5°C trajectory. This implies the ambition to achieve the goal of carbon neutrality (net zero emissions) by 2050;
3. Improve reporting in accordance with the final recommendations of the Taskforce on Climate-related Financial Disclosures (TCFD) and the Global Investor Coalition on Climate Change (if applicable) to enable investors to assess the robustness of corporate strategies against a range of climate scenarios, including well below 2°C, and to improve investment decision-making.

ESG: The consideration of environmental, social and/or governance issues is at the heart of Lyxor's responsible investor strategy. Lyxor therefore considers that it is the responsibility of the Board to supervise the definition of the company's non-financial and climate risks and opportunities, as well as the strategy implemented by management with regards to this risk/opportunity analysis. The objective of Lyxor on this type of engagement is to work with companies to encourage them to improve their Corporate Social Responsibility practices.

Corporate Governance: Outside the general assembly period, Lyxor promotes regular dialogue with companies on corporate governance issues such as changes in the composition of the Board and its committees, succession plans, the role and functions of the lead director, changes in the remuneration policy, etc.

Engagement overview over the year

The table shows the number of engagement campaigns conducted by Lyxor during the year compared to the number of issuers present in the fund.

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des marchés financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 ("AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 ("UCITS V Directive"), applicable to the sector of fund managers.

LYXOR NEW ENERGY UCITS ETF

(compartment of the Multi Units France Sicav)

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management compensation policy notably ensures appropriate risk management and adherence to compliance on the part of its employees.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No “carried interest” was paid during the financial year.

Lyxor's best selection and execution policy

Information on best selection and execution policies is available at: www.lyxor.com.

Transparency of securities financing operations and reuse of financial instruments SFTR regulation

(Accounting currency of the CIU)

During the financial year, the UCI did not carry out any transactions subject to the SFTR regulation, namely no repurchase transactions, securities or commodities lending/borrowing, buy-sell back or sell-buy back transactions, margin lending transactions and total return swaps (TRS).

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information, in the evolving context of the Covid-19 crisis.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value.

When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued;
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities of UCITS operating under French law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value;
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

LYXOR NEW ENERGY UCITS ETF

(compartment of the Multi Units France Sicav)

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Sub-Fund's reference currency are the WM Reuters fixing rates on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under "Financial instruments" according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under "Other temporary operations".

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Sub-Fund) multiplied by the number of contracts multiplied by the face value. The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Sub-Fund) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Sub-Fund).

Operation and management fees

These fees include all of the fees invoiced directly to the Sub-Fund, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transfer commission which, if relevant, may notably be collected by the custodian and management company.

For this Sub-Fund, the following fees can be added to the operation and management fees (see summary table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Sub-Fund has exceeded its objectives and are invoiced to the Sub-Fund;
- Transfer commissions invoiced to the Sub-Fund.

For more details on the fees actually invoiced to the Sub-Fund, refer to the Statistical Part of the Key Investor Information Document (KIID).

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	maximum 0.60 % per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commission	Net assets	None

⁽¹⁾ including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Accounting currency

The Sub-Fund's accounting is carried out in euros.

PLANET MONDE

annual
report

SUB-FUND OF THE MULTI UNITS FRANCE SICAV

FISCAL YEAR ENDING ON: 29.10.2021

Compartments / feeder	PLANET MONDE is a compartment of the MULTI UNITS FRANCE Sicav
Management Company	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy – 92987 Paris La Défense Cedex.
Depository and Custodian	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

Information on the investments and management

Name

The Sub-Fund is a feeder fund. As such, the Sub-Fund permanently invests at least 85% or more of its assets in the units of Lyxor Planet, which is a mutual fund (FCP) governed by French law, hereinafter referred to as the “MASTER UCITS”.

The unit class of the MASTER UCITS invested by the Sub-Fund is the “Z - (EUR)” unit class, whose ISIN code is FR0010755769.

Terms of determination and allocation of amounts available for distribution

Capi Share class: Capitalisation of all the amounts available for distribution.

Management objective

The Sub-Fund is an actively managed feeder fund and is not managed in reference to an index.

The management objective of the Sub-Fund is identical to the management objective of the MASTER UCITS described in the section “INFORMATION ON THE MASTER UCITS”.

The performance of the Sub-Fund will differ from that of the MASTER UCITS due to the expenses incurred by the Sub-Fund and/or due to the Sub-Fund’s holding of cash.

INFORMATION ON THE MASTER UCITS

INVESTMENT OBJECTIVE

The management objective of the MASTER UCITS aims to achieve capital appreciation by capturing the performance of different global asset classes by investing in UCITS ETF, while limiting the average annual volatility of the MASTER UCITS at around 7%.

Benchmark indicator

No indicator is relevant with regard to the management techniques used.

MASTER UCITS BENCHMARK INDEX:

There is no relevant benchmark for this Sub-Fund.

ELIGIBILITY OF THE MASTER UCITS

In accordance with the objectives and investment policy described above, the MASTER UCITS may invest more than 50% of its net assets in units or shares of other UCITS.

Investment strategy

1. Strategy employed

As the Sub-Fund is a feeder fund of the MASTER UCITS, it must invest at least 85% of its assets in the shares of the MASTER UCITS, bearing in mind that its objective is to invest close to 100% of its net assets in units of the MASTER UCITS.

On an ancillary basis, the Sub-Fund may also hold cash.

A reminder of the investment strategy of the MASTER UCITS is mentioned in the paragraph below.

REMINDER OF THE INVESTMENT STRATEGY OF THE MASTER UCITS:

REFERENCE: IN THE PRESENT SECTION, "RECAP OF THE INVESTMENT STRATEGY OF THE MASTER UCITS", THE TERM "MANAGEMENT COMPANY" REFERS TO THE MANAGEMENT COMPANY OF THE MASTER FUND.

MASTER UCITS INVESTMENT POLICY

1. MASTER UCITS investment process

The MASTER UCITS will mainly invest in a portfolio of trackers (or ETFs) that are index-based UCITS that have been admitted to trading on a regulated market.

The investment strategy of the MASTER UCITS is based on proprietary methodology and tools developed by the Management Company to systematically assess the long-term risk and return prospects of the main global asset classes (equities, bonds, commodities and currencies) as part of geographical, sector or thematic approaches. The result is a diversified and flexible exposure that is constructed according to a discretionary and dynamic management process, in two stages:

(i) The construction of a "strategic portfolio", optimal for the MASTER UCITS, which, without reflecting an opinion on short-term market trends, aims to generate performance over time. This research follows the following process:

- 1. Definition of a short-, medium- and long-term macroeconomic scenario on money market rates, corporate profits and inflation in the geographical areas included in the allocation;*
- 2. Assessment of expected medium- and long-term returns on the main asset classes given this macroeconomic framework and their purchase prices. Such valuation is based on the traditional valuation models for these asset classes, developed and enriched by the Management Company;*
- 3. Calculation, based on these expected returns, of the "strategic portfolio", optimal for the MASTER UCITS in the medium to long term investing on a fundamental basis. To do this, we use various analysis tools developed by the Management Company (financial scenario generators, dynamic portfolio optimisers).*

(ii) This "strategic portfolio" is amended as necessary to reflect the Management Company's view on short-term trends in the various markets and the risks they represent.

This formalised management process therefore leads to an effective allocation consisting of vehicles representative of the asset classes selected for the composition of the "strategic portfolio" which is the result of positions taken with a medium- and long-term perspective (sensitive to the fundamental valuation of the various markets) and purely tactical positions (looking to take advantage of the short-term dynamics of the various asset classes).

This process does not provide for an overexposure mechanism through the use of forward financial instruments. The MASTER UCITS does not use leverage.

The investor's attention is drawn to the fact that the proportion of exposure to the various asset classes in the MASTER UCITS is likely to change significantly depending on their overvaluation/undervaluation cycles. Up to 100% of the Fund's assets will be exposed to units or shares of UCITS, particularly index-based UCITS, and will invest up to 30% of its assets in units or shares of alternative investment funds governed by French or foreign law ("AIF"), meeting the four criteria set out in Article R 214-13 of the French Monetary and Financial Code. Exposure limits:

- Exposure to the equity asset class will be between 0% and 80% of the assets of the MASTER UCITS, whose exposure limit will be increased to a maximum of 20% of the assets of the MASTER UCITS for small or mid-cap equities;*
- Exposure to the bond asset class will be between 0% and 80% of the assets of the MASTER UCITS, whose exposure limit will be increased to a maximum of 30% of the assets of the MASTER UCITS for high yield bonds;*
- Exposure to the commodity asset class will be between 0% and 30% of the assets of the MASTER UCITS;*
- Exposure to the fixed income asset class will be between 0% and 30% of the assets of the MASTER UCITS;*
- Exposure to the emerging country market asset class will be between 0% and 20% of the assets of the MASTER UCITS;*
- The MASTER UCITS will not be exposed directly, but only indirectly (e.g. through an index or fund units) to the commodity asset class;*

- The MASTER UCITS may be exposed to currency risks, equities, bonds and interest rates at two levels, the cumulative amount of which may in some cases represent up to 100% of the assets of the MASTER UCITS:

1. at the level of the MASTER UCITS assets, when the MASTER UCITS acquires directly-held securities or units of the UCITS and/or AIF denominated in a currency other than the euro. This will be limited to approximately 30% maximum of the assets of the MASTER UCITS; and

2. within the selected UCITS and/or AIF, where they involve exposure to currency risk. This will not be restricted to the MASTER UCITS.

The Management Company may also use forward financial instruments traded on regulated and/or over-the-counter markets. The manager may invest in these markets to hedge against foreign exchange risks. Transactions involving derivative instruments and securities with embedded derivatives will be carried out up to a maximum of 100% of the assets of the MASTER UCITS as part of currency risk hedging transactions.

The desired risk-taking for the MASTER UCITS naturally depends on market conditions and the outlook for returns on the various asset classes. However, the Management Company believes that the volatility of the MASTER UCITS will fluctuate around an average of 7%, a level similar to that of a balanced portfolio composed of 50% equities and 50% bonds.

Some asset classes are characterised by specific risks: small cap equities, emerging countries, high-yield bonds.

2. Balance sheet assets (excluding integrated derivatives)

- Ownership of shares or units of other UCIs or investment funds

The MASTER UCITS will invest up to 100% of the assets in UCITS, in particular index-based UCITS (or ETFs). These UCITS may comply with Directive 2009/65/EC (UCITS Directive) up to a total of 100% of the assets. In addition, these UCITS may be traded on organised markets such as the "NextTrack" segment of Euronext Paris S.A. Market makers undertake to continuously ensure a bid/ask spread on these UCITS in order to ensure minimum liquidity.

It may also be AIFunits or shares meeting the four criteria set out in Article R 214-13 of the French Monetary and Financial Code, up to a maximum of 30% of the total assets.

The Management Company may invest in Investment Funds managed by the Management Company, affiliated companies and/or entities of the Societe Generale Group.

- Equities

As part of the future optimisation of the MASTER UCITS' management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective. The MASTER UCITS may invest in baskets of equities.

- Debt securities

As part of the future optimisation of the MASTER UCITS' management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective. The MASTER UCITS may invest in baskets of ETNs or "Exchange Traded Notes".

The MASTER UCITS will not enter into total return swaps (TRS).

3. Off-balance sheet assets (derivative instruments)

To achieve its investment objective, the MASTER UCITS may carry out transactions in the following derivatives: Markets in which the Subfund invests:

- regulated
- organised
- over-the-counter

Risks in which the MASTER UCITS wishes to trade:

- equity
- fixed income
- exchange
- credit

Types of operations, all transactions must be limited to achieving the management objective:

- hedging
- exposure

Type of instruments used:

- options
- forward exchange contracts

Strategy for using derivatives to achieve the investment objective:

- general hedging of the portfolio, certain risks, currencies, interest rates, equities and bonds. - up to 100% of assets
- to achieve synthetic exposure to assets or risks – up to 100% of assets

The MASTER UCITS will use forward foreign exchange contracts to expose the fund to currency pairs as part of its investment strategy.

For unit classes that are not denominated in EUR, the MASTER UCITS will also enter into forward foreign exchange contracts between the currency of the unit class and the euro in order to hedge all or part of the foreign exchange risk specific to each unit class during the life of the MASTER UCITS.

In addition, the MASTER UCITS may use listed equity and/or bond options for hedging and exposure purposes.

4. Securities with embedded derivatives used by the MASTER UCITS

None.

5. Deposits made by the MASTER UCITS

Up to a maximum of 20% of its net assets, the MASTER UCITS can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowings by the MASTER UCITS

Up to a maximum of 10 % of its net assets, the MASTER UCITS can have recourse to its net assets and borrowings, in order to optimise its cash management.

7. Temporary purchases and sales of securities carried out by the MASTER UCITS

The manager will not have recourse to temporary securities acquisition and/or sale transactions.

8. Information relating to the financial guarantees of the MASTER UCITS

In all cases where the investment strategy used causes a counterparty risk to the MASTER UCITS, particularly in the context of the use by the MASTER UCITS of forward swap contracts traded over-the-counter and/or in the context of temporary purchases and sales of securities (the fund will not carry out these transactions), the MASTER UCITS may receive securities and/or cash that are considered collateral in order to reduce the counterparty risk associated with these transactions.

Any financial guarantee received by the MASTER UCITS will be provided to the MASTER UCITS in full ownership and listed in the MASTER UCITS account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the MASTER UCITS' assets. In the event of default by the counterparty, the MASTER UCITS may dispose of the assets received from the counterparty in order to settle the counterparty's debt to the MASTER UCITS as part of the secured transaction. Any financial guarantee received by the MASTER UCITS in this context must comply with the criteria defined by the laws and regulations in force, in particular in terms of liquidity, valuation, issuer credit quality, correlation, risks related to collateral management and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) any received guarantee must be of high quality, be of the same liquidity level as the minimum defined by the risk department of the management company and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) collateral must be valued at its mark-to-market price at least daily, and assets with highly volatile prices are not acceptable as collateral, unless a sufficiently prudent discount or "haircut" is applied;
- (c) they must comply with limits in terms of correlation (set by the Management Company's risk department) calculated under financial contracts within the framework of the EMIR regulations;
- (d) they must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the MASTER UCITS' net asset value;
- (e) the MASTER UCITS' Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

In compliance with the aforesaid conditions, the guarantees received by the MASTER UCITS can include:

- 1) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- 2) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by supranational institutions and bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- 3) Shares or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;

- 4) *Equities or units issued by UCIs investing primarily in bonds/equities as indicated in points 5) and 6) below;*
- 5) *Bonds issued or guaranteed by first-rate issuers offering appropriate liquidity [and whose financial rating is at least equal to BBB- (S&P and/or Fitch, and its equivalent at Moody's);*
- 6) *Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.*

Policy related to discounts:

The MASTER UCITS' management company will apply a margin to the financial guarantees received by the mutual fund. The applied margins will notably depend on the following criteria:

- *Nature of the asset received as guarantee;*
- *Maturity of the asset received as guarantee (if applicable);*
- *Rating of the issuer of the asset received as guarantee (if applicable).*

Collateral received in a currency other than the euro may be subject to an additional margin.

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged. Guarantees received in cash shall, at the discretion of the manager, be either:

- *deposited with an enabled institution;*
- *invested in high-quality State bonds;*
- *invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.*

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

Risk profile

The shareholder's money will be mainly invested in units of the MASTER UCITS.

The risk profile of the Sub-Fund is identical to that of the MASTER UCITS (as referred to below).

Reminder of the risk profile of the MASTER UCITS:

Capital loss risk

The capital invested in the MASTER UCITS is not guaranteed. Holders are likely to lose all or part of their initial investment.

Risk that the management objective of the MASTER UCITS will not be achieved

There can be no guarantee that the MASTER UCITS Management Objective will be met. There is no certainty that the Management Company will be able to allocate the assets of the MASTER UCITS in a profitable manner and the MASTER UCITS may suffer losses despite a simultaneous positive performance of certain financial markets.

Equity risk

The MASTER UCITS may be exposed directly or indirectly to equities. The price of a share may rise or fall, reflecting in particular changes in the risks associated with the issuing company or the economic situation of the corresponding market, but may also fluctuate according to investors' expectations. Equity markets have historically shown greater price volatility than fixed-income markets. In particular, the MASTER UCITS may be exposed to small and mid-cap companies, which may increase market and liquidity risks. These price variations may therefore have a negative impact on the net asset value of the MASTER UCITS.

Foreign exchange risk

The MASTER UCITS may be exposed to a foreign exchange risk resulting from its direct or indirect exposure to assets denominated in currencies other than the euro.

Fluctuations in the exchange rates of these currencies against the euro may therefore negatively affect the net asset value of the MASTER UCITS.

Interest rate risk

The price of a bond or debt instrument depends on changes in interest rates. In general, the price of a bond rises when interest rates fall, and the price falls when interest rates rise. Interest rate risk is generally higher for long duration or maturity investments. Changes in interest rates may therefore have a positive or negative impact on the net asset value of the MASTER UCITS.

Credit risk

If the issuer of a debt security (including convertible bonds) to which the MASTER UCITS is exposed directly or indirectly is no longer able to meet its maturities, the value of the security concerned may fall, resulting in a decrease in the net asset value of the MASTER UCITS. The deterioration in the credit quality of one or more issuers of debt securities to which the MASTER UCITS is directly or indirectly exposed may lead to a depreciation in the valuation of the securities in question and may therefore have a negative impact on the MASTER UCITS. In particular, the MASTER UCITS could be exposed to speculative bonds, rated non-investment grade. In the event of default or insolvency of the relevant issuer, these bonds may be subject to a risk of loss greater than that incurred by higher credit quality bonds.

Derivatives risks

The MASTER UCITS may use Financial Contracts, in particular forwards, listed options or over-the-counter swaps. Exposure to Financial Contracts may involve a high level of risk. The amount required to initiate a position in Financial Contracts is potentially much lower than the exposure obtained through these contracts, which implies a “leverage” at the level of each transaction. The market value of financial contracts is highly volatile and may therefore be subject to significant fluctuations. Over-the-counter transactions may be less liquid than transactions traded on organised markets, where trading volumes are generally higher, and their prices may be more volatile. These various fluctuations in value and price may therefore negatively affect the net asset value of the MASTER UCITS.

Investment in non-investment grade credit rating securities (speculative bonds or high yield) The MASTER UCITS will be exposed to speculative bonds rated “non-investment grade” (or high-yield bonds) or speculative bonds that are not rated by any agency but deemed to be of a quality comparable to non-investment grade bonds. In the event of default or insolvency of the relevant issuer, these bonds may be subject to a risk of loss, in income and/or capital, greater than that incurred by bonds with comparable characteristics but of higher credit quality. Their market value can also be more volatile.

Counterparty risk

The MASTER UCITS is particularly exposed to counterparty risk resulting from its use of OTC financial contracts and/or efficient portfolio management techniques. It is exposed to the risk of bankruptcy, default or any other type of default by any counterparty with which it has entered into a contract or transaction. In the event of default by the counterparty, the Financial Contract may be terminated early and the MASTER UCITS may, if necessary, enter into another contract with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realisation of this risk may result in losses for the MASTER UCITS and have an impact on the ability of the MASTER UCITS to achieve its management objective. In accordance with the regulations applicable to a mutual fund, the counterparty risk may not exceed 10% of the total value of the mutual fund’s assets per counterparty.

When Societe Generale acts as a counterparty for a Financial Contract or temporary purchase and/or sale of securities, conflicts of interest may arise between the management company of the MASTER UCITS and the counterparty. The Management Company manages these risks of conflict of interest by establishing procedures aimed at identifying and limiting them and ensuring that they are resolved fairly, if necessary.

Risks related to exposure to emerging and developing markets

Exposure to emerging markets carries a greater risk of loss than that applicable to investments in developed markets due, for example, to increased volatility in these markets or the risk of economic and/or political instability.

Commodity risk

Commodity markets often face greater and more variable risks than other markets. Commodity prices can therefore be very volatile, which could negatively impact the performance of the MASTER UCITS.

Sustainability risks

The MASTER UCITS does not consider sustainability factors in the investment decision-making process but remains exposed to sustainability risks. The occurrence of such risks could have a negative impact on the value of the investments made by the MASTER UCITS. Additional information is available in the “Sustainability Information” section of the prospectus of the MASTER UCITS.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

The Sub-Fund is intended for the needs of investors with low risk aversion. In particular, the level of risk depends on market conditions and return prospects for the different asset classes.

The investor's attention is therefore drawn to the fact that the proportion of the various financial securities in the assets of the MASTER UCITS is likely to change significantly depending on their overvaluation/undervaluation cycles.

The amount that it is reasonable to invest in this Sub-Fund depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for three years, but also your desire to take risks or, on the contrary, to prefer a cautious investment.

It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment term is greater than 3 years.

U.S. Persons (as defined in the "COMMERCIAL INFORMATION" prospectus) may not invest in the Sub-Fund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Sub-Fund's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy-92800 Puteaux.*
- *Creation date of the Multi Units France Sicav: 04 March 2002.*
- *Sub-Fund approval date by the AMF (French Financial Regulatory Authority): 28 June 2019.*
- *Compartment creation date: 19 July 2019.*

activity report

Between 30/10/2020 and 29/10/2021, Lyxor Planet Monde's performance was +15.66%, in line with that of the Master UCITS. This performance is in line with a year marked by the normalisation of the global economy. Overall, over the period, equity markets were up, mainly in developed markets, with emerging markets posting more limited gains. Over the period, bonds experienced a more complicated year, as the return of inflation led to an increase in long-term rates, which penalised the asset class in both Europe and the United States.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. The Management Company has adapted its working organisation to this new environment to maintain an efficient operating, trading and investment process. The Board of Directors and the Management Company continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission *(not audited by the auditor)*

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the UCI that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

This Fund is covered by Article 6 of Regulation (EU) 2019/2088 (the "SFDR Regulation"). It does not promote environmental and/or social characteristics and does not aim to invest sustainably

Transparency of environmentally sustainable investments in periodic reports under Regulation (EU) 2020/852

Regulation (EU) 2020/852 on the establishment of a framework for promoting sustainable investments (the "Taxonomy Regulation") sets out the criteria for determining whether an economic activity is environmentally sustainable in the European Union.

According to the Taxonomy Regulation, an activity can be considered "sustainable" if it contributes substantially to one of the 6 environmental objectives set out in the Taxonomy Regulation, including climate change mitigation and adaptation, pollution prevention and reduction, or the protection and restoration of biodiversity and ecosystems.

In addition, in order to be considered to be sustainable, this economic activity must respect the principle of "not to cause significant harm" to one of the other five objectives of the Taxonomy Regulation and must also comply with basic social criteria (alignment to OECD and UN guidelines on business and human rights).

In accordance with article 7 of the Taxonomy Regulation, the management company draws investors' attention to the fact that the underlying investments of this Fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Provision of environmental, social and governance (ESG) information - in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

11. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website [Lyxor.com](https://www.lyxor.com) and is revised each

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

In accordance with Article D. 533-16-1 of the French Monetary and Financial Code, investors are informed that the UCI does not simultaneously take into account social, environmental and governance quality criteria in its investment policy.

The fund is a structured fund in which the management company seeks to achieve its investment objectives mainly through the investment or use of financial derivative instruments (for example, swap, repo, debt securities (EMTN)).

Lyxor has implemented a shareholder commitment. Lyxor's voting policy is referenced in Lyxor's SRI policy and available on [Lyxor.com](https://www.lyxor.com)'s website. The voting scope defined by Lyxor for this fiscal year did not include this fund.

All the general actions carried out by the management company relating to ESG criteria are presented in the responsible investor policy available on the [Lyxor.com](https://www.lyxor.com) website.

2. Description of how the results of the analysis implemented on ESG criteria, in particular exposure to climate risks, are integrated into the investment policy

LYXOR extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuers in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations

Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

For each issuer (Corporate & Government), the ESG Industry sector classification is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The ESG score calculated at the portfolio level measures the capacity of the underlying issuers to manage the risks and key opportunities associated with environmental, social and governance factors. The risk scale ranges from 0 (high risk) to 10 (low risk). Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: employment, social relations, health and safety, training, compliance with ILO conventions
- Governance: Board of Directors or Supervisory Board, Audit and Internal Control, Executive Compensation

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source: The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on the exposure portfolio.

Portfolio Exposure to ESG Controversies

Measures the portfolio's exposure to companies experiencing controversies relating to their compliance with international standards as a function of their degree of severity:

Red: Indicates that a company is involved in one or more very severe controversies;

-Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;

- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;

- Green: Indicates that the company is not involved in any major controversies.

- None: Sovereign and/or Companies not covered

Red Flag	1%
Orange Flag	21%
Yellow Flag	24%
Green Flag	26%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2021

Carbon Emissions (tons CO2e/\$M invested)	Carbon Intensity (tons CO2e/\$M sales)	Weighted Average Carbon Intensity tons (CO2e/\$M sales)	Portfolio rated by weight	65%
23	129	151	Scope 1 reported (vs estimated)	97%
			Scope 2 reported (vs estimated)	93%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GreenHouse Gas Protocol (GHG Protocol) was launched in 2001 by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: direct emissions resulting from the burning of fossil fuel resources owned or controlled by the company.
- Scope 2: indirect emissions related to the purchase or production of electricity.
- Scope 3: all other indirect emissions, from the extended supply chain to the transport of goods and persons.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2e / \$M invested): they represent the carbon footprint of the standardised portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions standardised by revenue), and these intensities are weighted according to the companies' weight in the portfolio.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure the carbon emissions of its portfolios, LYXOR used market capitalisation by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio invested in both equities and bonds.

* EVIC = Market capitalisation at fiscal year-end date + preferred stock + minority interest + total debt. All Carbon & Climate metrics are calculated on exposure.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or the portion of the company's revenue earned from fossil fuel energies or the portion of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon:	
Fossil Fuel Reserves	3%
Thermal Coal	1%
Natural Gas	3%
Oil	3%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of : \$ 1,000,000	
Thermal Coal (Tons)	13
Gas (MMBOE)	0.0004
Oil (MMBOE)	0.0004

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	39.6
Thermal Coal	23.9
Oil	193.8
Gas	131.2
Total	394.3

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kWh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges - this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	23.9
Oil Sands	33.7
Shale Oil or Shale Gas	14.8
Sum High Impact Reserves	72.4
Other	321.9

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	3.4%	4.5%	4.7%
Some efforts	61.1%	64.0%	54.6%
Limited efforts/Information	2.2%	1.1%	1.9%
No effort/No evidence	4.5%	1.7%	10.1%

Low Carbon Transition Score

The Low Carbon Transition Score⁽¹⁾ uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
 - Operational Transition: risk of increase in operational costs
 - Product Transition: risk of a decrease in demand for high-carbon products and services
 - Neutral: low exposure to transition risks
 - Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low- carbon products.
- (1) Metric developed by MSCI

Low carbon transition score	4.4
Low carbon transition management Score	4.2
Operational Transition	4.6%
Product Transition	4.6%
Neutral	54.2%
Solutions	6.3%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The issuer data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source: MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	13.0%	Liquid Fuel	1.9%	Natural Gas	36.6%
Nuclear	17.0%	Renewables	18.8%	Thermal Coal	12.6%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Weight of Companies Offering Clean Technology Solutions			
Alternative Energy	8.2%	Energy Efficiency	22.7%
Pollution Prevention	4.3%	Sustainable Water	3.6%
		Green Building	1.2%
		Sustainable Agriculture	0.2%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution			
Alternative Energy	0.4%	Energy Efficiency	3.3%
Pollution Prevention	0.1%	Sustainable Water	0.1%
		Green Building	0.2%
		Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Climate performance indicator of sovereign issuers in the portfolio

Score 38.8

Level Very Bad

Environmental performance score of sovereign issuers

Evaluates a country's environmental performance. Three data points are used to assess this sub-factor:

(1) the population affected by natural disasters,

(2) a change in the forest cover,

(3) the trend in greenhouse gas (GHG) intensity.

Regions with a higher proportion of the population affected by natural disasters, reduction of

forest cover and increased GHG intensity are achieving poor results. (Score: 0-10)

Environmental performance score of sovereign issuers in the portfolio

Score 7.2

Sovereign Environmental Vulnerability Index

The Environmental Vulnerability Index reflects the measure of a country's natural environment exposure to damage and degradation. This index contains indicators on time and climate, geology, geography, ecosystem resources and services, violent winds, drought periods, endemic, frequency of earthquakes, tsunamis, volcanic eruptions, etc.

The rating scale is:

less than 215 (resilient),

greater than 215 (at risk),

greater than 265 (vulnerable) and

greater than 315 (highly vulnerable),

greater than 365 (extremely vulnerable).

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database. The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators. The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	2%
Coldwave	25%
Flood	2%
Heatwave	7%
Hurricane	4%
Water Stress	44%
Wildfire	15%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.).

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	3.9%	53.5%	42.7%	90.6%	6.5%	2.9%

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des marchés financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter "AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter "UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management compensation policy notably ensures appropriate risk management and adherence to compliance on the part of its employees.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the French Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual remuneration review campaign that was carried out during the course of the year, on the basis of the perimeter of the staff as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable remuneration are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable remuneration deferred from a previous financial year. No "carried interest" was paid during the financial year.

Lyxor's best selection and execution policy

Information on best selection and execution policies is available at www.lyxor.com.

Transparency of securities financing operations and reuse of financial instruments SFTR regulation

(Accounting currency of the CIS)

During the fiscal year, the UCI did not carry out any transactions subject to the SFTR, namely no repurchase transactions, securities or commodities lending/borrowing, buy/sell back or sell/buy back transactions, margin lending transactions or total return swaps (TRS).

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information in the evolving context of the Covid-19 crisis.

Assessment rules

The Sub-Fund's assets are valued according to the applicable laws and regulations, and more particularly the rules defined in Regulation No. 2014-01 of the French regulatory accounting committee (CRC) dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded. However, in the absence of significant transactions on a regulated market, the following financial instruments are valued using the following specific methods:

- Negotiable debt securities ("NDS") with a residual maturity upon acquisition that of 3 months or less are assessed with a straight-line extension over the residual maturity of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- Negotiable debt securities with a residual maturity of more than 3 months at the net asset value date are measured at the present value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- Futures traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable trading value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities of UCITS operating under French law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.
- Units and shares of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Sub-Fund's reference currency are the WM Reuters fixing rates on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under "Financial instruments" according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under "Other temporary operations".

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Sub-Fund) multiplied by the number of contracts multiplied by the face value. The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Sub-Fund) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Sub-Fund).

Operation and management fees

These fees include all of the fees invoiced directly to the Sub-Fund, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transfer commission which, if relevant, may notably be collected by the custodian and management company.

For this Sub-Fund, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Sub-Fund has exceeded its objectives and are invoiced to the Sub-Fund;
- Transfer commissions invoiced to the Sub-Fund.

For more details on the fees actually invoiced to the Sub-Fund, refer to the Statistical Part of the Key Investor Information Document (KIID).

Fees invoiced to the Sub-Fund	Basis	Schedule rate
Financial management fees and administrative fees external to the portfolio management company (Auditor, Depository, distribution, lawyers) including tax ⁽¹⁾	Net assets	Maximum 1.20% per year (including tax)

LYXOR GREEN BOND INDICIEL

annual
report

SUB-FUND OF THE MULTI UNITS FRANCE SICAV

FISCAL YEAR ENDING ON: 29.10.2021

Compartments / feeder	LYXOR GREEN BOND INDICIEL is a compartment of the MULTI UNITS FRANCE Sicav
Management Company	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy – 92987 Paris La Défense Cedex.
Depository and Custodian	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

Information on the investments and management

Terms of determination and allocation of amounts available for distribution:

Capi share class: accumulation of all distributable amounts.

Management objective:

The Sub-Fund is a feeder fund of a passive Luxembourg fund whose benchmark index is the Solactive Green Bond EUR USD IG index.

The management objective of the Sub-Fund is identical to the management objective of the MASTER UCITS described in the section “INFORMATION ON THE MASTER UCITS”.

The performance of the Sub-Fund will differ from that of the MASTER UCITS due to the expenses incurred by the Sub-Fund and/or due to the Sub-Fund’s holding of cash.

The objective of the Sub-Fund is to invest sustainably within the meaning of article 9 of the SFDR Regulation.

INFORMATION ON THE MASTER UCITS

INVESTMENT OBJECTIVE

The investment objective of MULTI UNITS LUXEMBOURG - Lyxor Green Bond (DR) UCITS ETF consists in following the trend, upwards or downwards, of the Solactive Green Bond EUR USD IG index (the “Index”) denominated in euros, in order to provide exposure to the green bond market, while minimizing the volatility of the difference between the return of the Sub-Fund and that of the Index (the “Tracking Error”).

For Monthly Hedged share classes, the Sub-Fund will also apply a monthly currency hedging strategy in order to minimise the impact of the evolution of the currency of each share class against the currencies of each component of the Index.

The expected tracking error under normal market conditions is 0.50% maximum.

Benchmark indicator:

To the extent that the Sub-Fund's investment objective is to invest in the shares of the MASTER UCITS, the relevant benchmark for the Sub-Fund is, by transparency, the benchmark index of the MASTER UCITS.

INFORMATION ON THE MASTER UCITS

MASTER UCITS BENCHMARK INDEX:

Objectives of the Index

The Index is representative of the performance of green bonds issued by investment grade entities and denominated in euros and US dollars. The purpose of issuing green bonds is to finance projects that have positive effects on the environment.

Index construction method

To be included in the Index, a bond must be considered a “green bond” by the Climate Bonds Initiative and meet specific criteria related to the size of the bond issue (minimum outstanding amount of 300 million), maturity (at least one year), rating (only bonds rated investment grade are eligible) and currency of denomination (only bonds denominated in EUR and USD are eligible)

The Climate Bonds Initiative is an investor-oriented, not-for-profit organisation that aims to promote large-scale investments to develop a low-carbon, climate-resilient economy (see <http://www.climatebonds.net/> for more information). The Climate Bonds Initiative has developed and adopted the following criteria to define the green bonds eligible for inclusion in the Index:

i) Environmentally themed (self-labelled) bonds: To be eligible, green bonds must be publicly declared by their issuers to be expected to benefit the environment through labelling. The most common eligible labels include, but are not limited to, “green”,

“climate consciousness”, “climate”, “environmental”, “carbon”, “sustainability” and “ESG” (environmental, social and governance). The issuer must use the label or description in a public document for the label to be valid (for example, in a press release, in a statement, in the bond’s prospectus or in the offering documents of the bond meeting the necessary criteria)

ii) Eligible bond structures, which include:

- Structures linked to assets or “use of proceeds” bonds, in which the proceeds from the sale of bonds are allocated to eligible green projects; and

- Asset-backed structures consisting of:

a) project-related bonds, which are eligible if they are backed by a sustainable project and the proceeds from the sale of bonds are used solely to finance the same sustainable project; and

b) securitised bonds, which are eligible if the proceeds are intended for sustainable projects or green assets.

iii) Use of Proceeds: Issuers must commit to using the proceeds from the sale of bonds in their entirety (net of any bond origination costs) to finance eligible sustainable projects or green assets. For example, bonds where more than 5% of the proceeds is used for general purposes of the company or projects that are not defined as sustainable, or bonds whose proceeds must be split between different projects (for example, an ESG obligation with separate social projects and sustainable projects) are not eligible for inclusion in the Index.

iv) Adhesion to the “Climate Bonds Taxonomy”: the proceeds of an eligible green bond must be used to finance eligible green assets or projects that are generally related to one of the following sectors (as described in the Climate Bond Taxonomy):

- Renewable and alternative energies*
- Energy Efficiency*
- Low carbon transport*
- Sustainable Water*
- Waste, recycling and pollution*
- Sustainable agriculture and forestry*
- Climate-resilient infrastructure and climate adaptation*

As further described in the “Climate Bonds Taxonomy”, areas of the above sectors may be excluded (for example, energy savings in fossil fuel extraction activities - for the energy efficiency category

- or discharge without gas capture - for waste category -) and related obligations are not eligible for inclusion in the Index.

More information can be found on the website: <http://www.climatebonds.net/> and <https://www.climatebonds.net/standard/taxonomy>

The Master UCITS follows a significant, binding non-financial approach that contributes and has positive impacts on the energy and ecological transition by permanently investing at least 90% of the Sub-Fund’s net asset value in green bonds comprising the Index. To be eligible for the Index, green bonds must meet the criteria defined by the Climate Bonds Initiative (as mentioned above). The Master UCITS has been awarded the Greenfin label.

By its methodology and the manner in which it is constructed (as described above), the Index is aligned with the sustainable investment objective of the Master UCITS and differs from a broad market index.

The limitations of the non-financial approach are mentioned in the section “Risk Warning” below.

To be able to integrate the Index, green bonds must follow a four-step process that includes: the identification of bonds used to finance environmental projects, the review of eligible bond structures, the assessment of the use of proceeds and the identification of green projects or assets that can be included in the Climate Bonds Initiative taxonomy. More information can be found on the website: <http://www.climatebonds.net/>.

The Index is weighted by market value, which means that the weight of its components is defined according to the outstanding amount of each bond. In particular, the Index is based on prices provided by Solactive and third-party sources. The Index is calculated daily. The Index is constructed, administered and managed by Solactive.

The composition of the Index is revised and reweighted on the last business day of the month. The frequency of reweightings as described above will affect costs in achieving the investment objective. In particular, this rebalancing of the Index may result in additional transaction costs.

The Index is a “total return” index (coupons detached from the index constituents are reinvested in the index). The method of constructing the Index (including the rules governing its reweighting and updating its composition and the impact on costs within the strategy) is described in detail at the following website: <https://www.solactive.com>.

Additional information on the Benchmark Index

Additional information on the Index, its composition, method of calculation and periodic revision and rebalancing rules and the general methodology for its design can be found at <https://www.solactive.com>. For more information on the Index, please refer to paragraph B “Investments by Indexing Sub-Funds” of Section I “Investment Objectives / Investment Powers and Restrictions”, contained in the main part of this Prospectus, as well as APPENDIX F - BENCHMARK INDEX REGULATIONS.

Investment strategy:

1. Strategy employed

As the Sub-Fund is a feeder fund of the MASTER UCITS, it must invest at least 85% of its assets in the shares of the MASTER UCITS, bearing in mind that its objective is to invest close to 100% of its net assets in units of the MASTER UCITS.

On an ancillary basis, the Sub-Fund may also hold cash.

A reminder of the investment strategy of the MASTER UCITS is mentioned in the paragraph below.

REMINDER OF THE INVESTMENT STRATEGY OF THE MASTER UCITS:

REFERENCE: IN THE PRESENT SECTION “RECAP OF THE INVESTMENT STRATEGY OF THE MASTER UCITS”, THE TERMS “MANAGEMENT COMPANY” REFER TO THE MANAGEMENT COMPANY OF THE MASTER FUND.

MASTER UCITS INVESTMENT POLICY

1. MASTER UCITS investment process

The MASTER UCITS will use the direct replication technique and may achieve its investment objective by investing in a portfolio of transferable securities or other eligible assets generally including the components of the financial index asset as set out in the relevant Appendix attached to this Prospectus and will apply the investment thresholds as set forth in the Prospectus.

In order to optimise this direct replication method, the Master UCITS may use a “sampling” technique which consists in investing in a selection of representative securities comprising the financial index as set out in the relevant Appendix and attached to the Prospectus.

According to this sampling technique, a Sub-Fund may invest in a selection of transferable securities representative of the financial index, as set out in the relevant Appendix and attached to this Prospectus, in proportions different from those of the financial index, or even invest in securities other than the components of the financial index.

In addition, and to some extent, the MASTER UCITS using the Direct Replication technique may also engage in transactions in financial derivative instruments (“FDIs”), primarily to achieve the objectives set out in (i) and (ii) below, which may include transactions in futures contracts, over-the-counter swaps, hedging swaps, forward contracts, non-deliverable forward contracts, spot foreign exchange transactions, in order to:

- Reduce tracking errors, or;*
- Optimise the management of its cash flow, or;*
- Reduce transaction costs or allow investment in illiquid or unavailable securities for regulatory or market reasons; or*
- Assist in achieving the investment objective and, for example, enable greater efficiency of the investment in the Financial Index or its components, or;*
- For other reasons that the Directors consider beneficial to the MASTER UCITS.*

If, under certain circumstances, the MASTER UCITS enters into an FDI contract, the counterparty for this FDI would be a senior financial institution specialising in this type of transaction. This counterparty will not have any discretionary power with regard to the composition of the MASTER UCITS portfolio or the underlying asset of the derivative financial instruments.

In order to allow investors to benefit from transparency on the Direct Replication method (full replication of the financial index or sampling to limit replication costs) and its consequences in terms of assets in the MASTER UCITS portfolio, information on the updated composition of the basket of assets held by the MASTER UCITS is available on the dedicated page of the MASTER UCITS on the website www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

The Master UCITS may, on an ancillary basis, hold cash and equivalent assets within the limits set forth in the Prospectus. Specific investment restrictions

The Master UCITS shall not invest more than 10% of its assets in units or shares of other UCITS. No investment in UCIs will be made.

Further information on the investment policy of the Sub-Fund can be found in the “Investment Restrictions” section of the section E. INVESTMENT TECHNIQUES, Chapter I/ Investment Objectives/Investment Powers and Restrictions of the Prospectus of MASTER UCITS.

INVESTMENT TECHNIQUES

The MASTER UCITS will not enter into reverse repurchase agreements, repurchase agreements or buy-and-sell transactions. The UCITS will enter into securities lending and borrowing transactions at an expected level of 0% of net assets and a maximum of 25% of net assets.

Risk profile:

The shareholder's money will be mainly invested in units of the MASTER UCITS.

The risk profile of the Sub-Fund is identical to that of the MASTER UCITS (as referred to below).

Reminder of the risk profile of the MASTER UCITS:

Capital loss risk

The capital invested in the MASTER UCITS is not guaranteed. Holders are likely to lose all or part of their initial investment.

Risk that the management objective of the MASTER UCITS will not be achieved

There can be no guarantee that the MASTER UCITS Management Objective will be met. There is no certainty that the Management Company will be able to allocate the assets of the MASTER UCITS in a profitable manner, and the MASTER UCITS may suffer losses despite a simultaneous positive performance of certain financial markets.

Securities lending risks

In the context of securities lending transactions, investors should in particular be aware that (A) in the event of default by the borrower of the securities lent by the Master UCITS, if the Lending Agent does not return them or compensate the Master UCITS under the indemnification clauses in the event of default by the borrower stipulated in the Agreement with the Lending Agent, there is a risk that the collateral received will be realised for a lower value than that of the securities lent, whether due to incorrect valuation, adverse market developments, deterioration in the credit rating of its issuers, or illiquidity of the market in which the collateral is traded; (B) the possible reinvestment of a cash guarantee may (i) generate a leverage effect with inherent risks and a risk of losses and volatility, (ii) introduce a market risk incompatible with the objectives of the UCITS Master or (iii) generate a return less than the amount of the collateral to be returned; and that (C) late return of loaned securities may restrict the ability of the Master UCITS to meet its delivery obligations under sales of securities.

Low diversification risk

Investors may be exposed to an index or strategy concentrated on a limited number of underlying securities and/or representing a specific region/sector/strategy and do not benefit from the same diversification as in the case of a broader index/strategy that would be exposed to several regions/sectors/strategies and/or more underlying securities. This may result in higher volatility than a diversified index/strategy and increased liquidity risk in the event of low liquidity or suspension of listing of one or more components of the index/strategy.

Risks related to sampling and optimisation techniques

It can be costly and difficult to replicate the performance of the Index/strategy by investing in each of its components. Some components may not be traded due, for example, to international embargoes or suspensions of listing on the market. The Sub-Fund's manager may also use optimisation and/or sampling techniques. These sampling techniques consist of investing in a selection of representative securities (and not all securities) comprising the Index/strategy, in proportions different from those of the Index/strategy. With respect to optimisation techniques, the Sub-Fund may invest in securities other than the components of the Index/strategy or in derivative instruments. The use of these techniques may result in an increase in the ex-post tracking error and lead to different performances between the Sub-Fund and the Index/strategy.

Liquidity risk of the Master UCITS (on the primary market)

The liquidity and/or value of the Master UCITS may be adversely affected if, when the Master UCITS (or a counterparty to a derivative financial instrument) rebalances its exposure, the underlying financial markets are closed, the transactions that can be executed there are limited or if the bid and offer spreads are abnormally wide there. Failure to execute orders due to low trading volumes may also affect the subscription, conversion and redemption processes of Shares.

Liquidity risk on the secondary market

Investors are advised to refer to Section V. Secondary Market for the Share Classes/Sub-Funds of ETFs with UCITS status, which appears in the main part of this prospectus.

Foreign exchange risk

The Master UCITS may be exposed to currency risk if (i) the components of the Benchmark Index/strategy are denominated in a currency other than that of the Class held by the investor, or (ii) certain classes of the Master UCITS are listed on certain exchanges and/or multilateral trading facilities in a currency other than that of the components of the Benchmark Index/strategy. Each investor may therefore be exposed to fluctuations in the exchange rate between the currency of their investment and the currency of each component of the Benchmark Index/strategy. These fluctuations may therefore have an adverse impact on the performance of each Shareholder's investment.

Investors should be aware that when their investment currency is different from the base currency of the Benchmark Index, the performance of their investment may vary from that of the benchmark due to fluctuations in the exchange rate. For example, the performance of any Shareholder's investment may be negative even if the value of the Benchmark Index increases.

Class Currency Hedging Risk

To hedge (fully or partially) the currency risk of the hedged Classes, the Master UCITS may use a hedging strategy that seeks to reduce the impact of fluctuations in the currency of the relevant Class against the currency of each component or of certain components of the Benchmark Index/strategy. However, the hedging strategy used by the Master UCITS may be imperfect due to the frequency of reweighting and the instruments used. The Net Asset Value of the relevant Class may then be affected by market movements in currencies that fluctuate upwards or downwards. In addition, hedging costs may also have a negative impact on the Net Asset Value of the relevant Class. The adoption of a currency hedging strategy for a Class may significantly limit the ability of holders of this Class to benefit from the increase in one or more currencies of the components of the Benchmark Index/strategy relative to the currency of that Class.

Interest rate risk

The price of a bond or debt instrument depends on changes in interest rates. In general, the price of a bond rises when interest rates fall, and the price falls when interest rates rise. Interest rate risk is generally higher for long duration or maturity investments. Changes in interest rates may therefore have a positive or negative impact on the net asset value of the MASTER UCITS.

Credit risk

If the issuer of a debt security (including convertible bonds) to which the MASTER UCITS is exposed directly or indirectly is no longer able to meet its maturities, the value of the security concerned may fall, resulting in a decrease in the net asset value of the MASTER UCITS. The deterioration in the credit quality of one or more issuers of debt securities to which the MASTER UCITS is directly or indirectly exposed may lead to a depreciation in the valuation of the securities in question and may therefore have a negative impact on the MASTER UCITS. In particular, the MASTER UCITS could be exposed to speculative bonds, rated non-investment grade. In the event of default or insolvency of the relevant issuer, these bonds may be subject to a risk of loss greater than that incurred by higher credit quality bonds.

Derivatives risks

The MASTER UCITS may use Financial Contracts, in particular forwards, listed options or over-the-counter swaps. Exposure to Financial Contracts may involve a high level of risk. The amount required to initiate a position in Financial Contracts is potentially much lower than the exposure obtained through these contracts, which implies a "leverage" at the level of each transaction. The market value of financial contracts is highly volatile and may therefore be subject to significant fluctuations. Over-the-counter transactions may be less liquid than transactions traded on organised markets, where trading volumes are generally higher, and their prices may be more volatile. These various fluctuations in value and price may therefore negatively affect the net asset value of the MASTER UCITS.

Counterparty risk

The MASTER UCITS is particularly exposed to counterparty risk resulting from its use of OTC financial contracts and/or efficient portfolio management techniques. It is exposed to the risk of bankruptcy, default or any other type of default by any counterparty with which it has entered into a contract or transaction.

In the event of default by the counterparty, the Financial Contract may be terminated early and the MASTER UCITS may, if necessary, enter into another contract with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realisation of this risk may result in losses for the MASTER UCITS and have an impact on the ability of the MASTER UCITS to achieve its management objective. In accordance with the regulations applicable to a mutual fund, the counterparty risk may not exceed 10% of the total value of the mutual fund's assets per counterparty. When Societe Generale acts as a counterparty for a Financial Contract or temporary purchase and/or sale of securities, conflicts of interest may arise between the management company of the MASTER UCITS and the counterparty. The Management Company manages these risks of conflict of interest by establishing procedures aimed at identifying and limiting them and ensuring that they are resolved fairly, if necessary.

Risks related to collateral management

Counterparty risk arising from investments in OTC financial derivative instruments is generally mitigated by the transfer or pledging of the collateral in favour of the Master UCITS. However, transactions may not be fully collateralised. The fees and returns attributable to the Master UCITS may not be backed by guarantees. If a counterparty defaults, the Master UCITS may be obliged to sell non-cash collateral received at the current market price. In such a case, the Master UCITS could suffer a loss due, among other things, to an inadequate estimate or monitoring of collateral, adverse market fluctuations, a deterioration in the credit rating of the issuers of guarantees or the illiquidity of the market on which the guarantee is traded. The difficulty in reselling the guarantees may delay or restrict the ability of the Master UCITS to honour redemption requests.

Risks related to exposure to emerging and developing markets

Exposure to emerging markets carries a greater risk of loss than that applicable to investments in developed markets due, for example, to increased volatility in these markets or the risk of economic and/or political instability.

Market risks related to controversy

Companies that have previously met the Index selection criteria and have therefore been included in the Index may be affected unexpectedly or suddenly by a serious controversy event that has a negative impact on their price and, consequently, the performance of the Master UCITS. This can happen when activities or practices of companies that were previously hidden suddenly come to light, and the resulting negative investor sentiment could drive their price down. When these companies are part of the existing components of the Index, they may remain in the Index and therefore continue to be held by the Master UCITS until the next planned rebalancing. At the time the Index excludes the securities concerned, the price of the securities may already have fallen and not yet recovered, and the Master UCITS could therefore sell the securities concerned at a relatively low price.

Limits of the extra-financial approach

The non-financial approach implemented by the Master UCITS is largely based on data from third parties that may be incomplete, inaccurate or unavailable from time to time. The Management Company is therefore dependent on the quality and reliability of this information. Finally, investments in green bonds can lead to sector biases in the global bond market. Sustainability risk:

As part of the sustainability risk management of the Master UCITS, the Management Company relies on the administrator of the Index, Solactive, whose methodology incorporates sustainability risks through the Index methodology as described above. Such integration has a direct impact on the Index's investment universe. However, there is no guarantee that sustainability risks will be fully neutralised, and the occurrence of such risks could have a negative impact on the value of the assets included in the Index. For more information on the Index methodology, please refer to the website: <https://www.solactive.com>. Additional information is also available in the "Sustainability Information" section of the Master UCITS prospectus.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

The Sub-Fund is intended for the needs of investors with low risk aversion. In particular, the level of risk depends on market conditions and return prospects for the different asset classes.

The investor's attention is therefore drawn to the fact that the proportion of the various financial securities in the assets of the MASTER UCITS is likely to change significantly depending on their overvaluation/undervaluation cycles.

The amount that it is reasonable to invest in this Sub-Fund depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for three years, but also your desire to take risks or, on the contrary, to prefer a cautious investment.

It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

LYXOR EURO STOXX 50 DAILY (2X) LEVERAGED UCITS ETF
(compartment of the Multi Units France Sicav)

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment term is greater than 3 years.

U.S. Persons (as defined in the “COMMERCIAL INFORMATION” prospectus) may not invest in the Sub-Fund.

Information: This exercise has an exceptional duration of 2 months and 16 days.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Sub-Fund's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy-92800 Puteaux.*
- *Creation date of the Multi Units France Sicav: 04 March 2002.*
- *Sub-Fund approval date by the AMF (French Financial Regulatory Authority): 21 January 2021.*
- *Compartment creation date: 16 August 2021.*

activity report

The net asset value of the Lyxor Green Bond Indiciel fund increased by -2.307% over the financial year to EUR 9.7693 at 29/10/2021.

The fund replicates the performance of the Solactive Green Bond EUR USD IG Index.

This index posted a variation of -2.08 % over the financial year.

This difference between the annual performance of the UCITS and that of its Benchmark Index is explained by the result of the various parameters below: - Operating and management fees as well as management fees external to the management company - The costs of accessing the replicated indexation on the local markets - Costs or gains related to the instruments used for the index replication.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. The Management Company has adapted its working organisation to this new environment to maintain an efficient operating, trading and investment process. The Board of Directors and the Management Company continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission *(not audited by the auditor)*

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the UCI that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

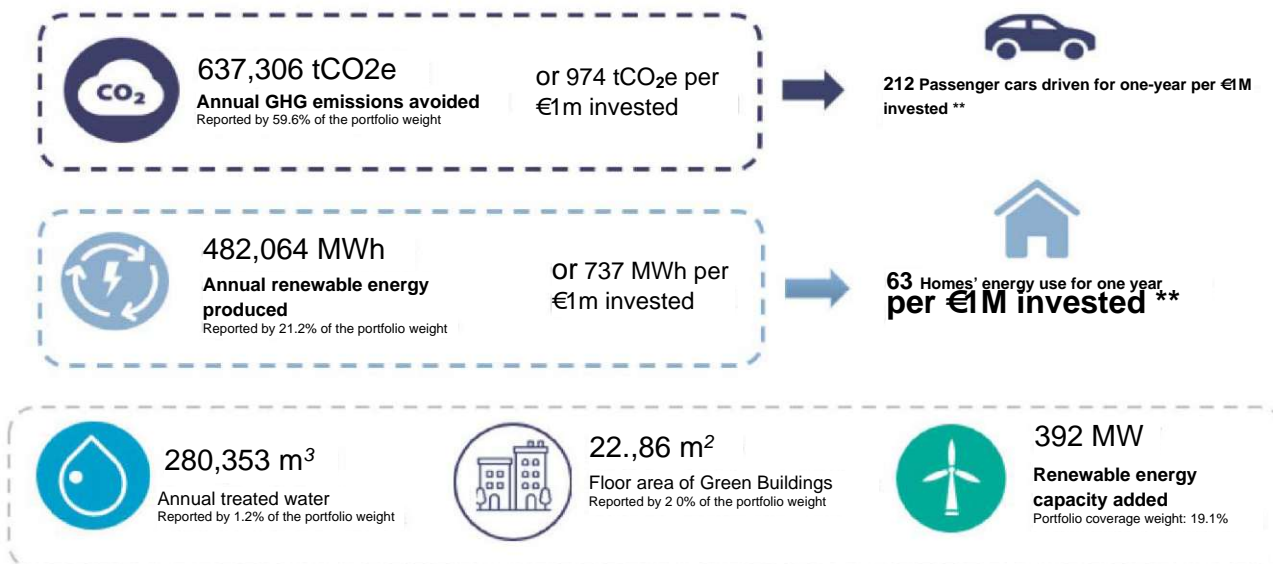

LYXOR EURO STOXX 50 DAILY (2X) LEVERAGED UCITS ETF (compartment of the Multi Units France Sicav)

Transparency of sustainable investments in periodic reports

Pursuant to Article 11 of Regulation (EU) 2019/2088 on the publication of sustainability information in the financial services sector (the "SFDR Regulation"), the overall sustainability impact of the financial product is described using the following sustainability indicators*:

Portfolio Impact Indicators

The following indicators are available for 61.13% of the portfolio weight*

* One or several of the relevant indicators are reported

** Source of the conversion tool: <https://www.epa.gov/energy/greenhouse-gas-equivalencies-calculator>

"Where an index has been designated as a benchmark, the description corresponds to a comparison between the overall sustainability impact of the financial product and the impacts of the designated index and a broad market index, using sustainability indicators.

Transparency of environmentally sustainable investments in periodic reports

The Fund may make an investment in an economic activity which contributes to the achievement of an environmental objective within the meaning of Article 5 of Regulation (EU) 2020/852 on establishing a framework to encourage sustainable investment (the "Taxonomy Regulations").

The objective of the European Union Taxonomy Regulation is to identify economic activities considered environmentally sustainable ("Sustainable Activities").

The Taxonomy Regulation identifies these activities according to their contribution to six major environmental objectives: (i) climate change mitigation, (ii) climate change adaptation, (iii) sustainable use and protection of water and marine resources, (iv) transition to the circular economy (waste, prevention and recycling), (v) pollution prevention and control, and (vi) protection of healthy ecosystems.

In order to be considered to be sustainable, an economic activity must demonstrate that it contributes substantially to one or more of the six objectives, that it does not cause significant harm to any of these objectives (principle known as "DNSH", meaning "Do No Significant Harm") and that it is carried out in accordance with the minimum safeguards provided for in Article 18 of the Taxonomy Regulation. The DNSH principle applies only to investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities.

The Fund may invest partially in economic activities that contribute to the following environmental objectives: climate change mitigation and adaptation to climate change.

While the Fund may already hold investments in Sustainable Activities without being committed to compliance with a minimum investment share, the management company shall make its best efforts to ensure that this minimum share of the investments underlying the financial product made in Sustainable Activities is available as soon as reasonably possible after the entry into force of the regulatory technical standards related to the content and presentation of the information to be provided in accordance with Articles 8(4), 9(6) and 11(5) of Regulation (EU) 2019/2088 as amended by the Regulation (Regulatory Technical Standards with regard to the content and presentation of disclosures pursuant to Article 8(4), 9(6) and 11(5) of Regulation (EU) 2019/2088 as amended by the Taxonomy Regulation).

As data is available and calculation methodologies developed, the description of the extent to which the underlying investments are made in Sustainable Activities will be made available to investors. This information, as well as information relating to the proportion of enabling and transitional activities, will be included in a future version of the prospectus.

This commitment will be achieved gradually and on an ongoing basis by engaging in discussions with the index administrator to ensure that the index administrator integrates the requirements of the Taxonomy Regulation into the index methodology as soon as reasonably practicable. This will lead to a minimum degree of alignment of the portfolio with the Sustainable Activities that will be made available to investors at this time.

In the meantime, the degree of alignment of the portfolio with Sustainable Activities will not be available from investors.

If you have any questions, please contact the management company at the following address: client-services-etf@lyxor.com.

The management company draws investors' attention to the fact that the investments underlying the remaining portion of this financial product do not take into account the European Union's criteria for environmentally sustainable economic activities.

Provision of environmental, social and governance (ESG) information - in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The Fund promotes environmental and/or social characteristics within the meaning of Article 9 of Regulation (EU) 2019/2088 (SFDR).

The Fund's sustainable investment objective is achieved through the investment process implemented. For further information in relation such characteristics, please refer to the prospectus of the Fund.

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

(a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

In terms of engagement, Lyxor has defined an engagement policy that is structured around three axes: an engagement related to general meetings, an engagement related to environmental, social and/or governance issues, and an engagement related to climate. This third axis comprises four engagement campaigns:

- The first campaign related to the Climate Action 100+ initiative, committing Lyxor to ask companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosure) recommendations.
- The second campaign related to plastics and the circular economy.
- The third campaign related to localized water management.
- The fourth campaign related to responsible cleantech.

This fund is part of the following campaigns: Climate Action 100+, Localized Water Management, Plastic & Circular Economy, Responsible Cleantech

Sustainability themed investments inherently contribute to addressing social and/or environmental challenges such as climate change, eco-efficiency and health.

For equities funds: the companies are eligible if their share of sales from the sector of activity is above a certain threshold, or if they are in a dominant position on the market in question.

For ETF funds which aim to track the benchmark index, the description of the ESG approach above applies to the Benchmark Index.

b) Description of the general information used for the analysis implemented on ESG criteria

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (in connection with Lyxor's voting policy). •Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

For ETF funds with a Sustainable Themed Investment approach :

The Lyxor ETF aims to track its benchmark Index.

The index is designed by an index provider and potentially with an advisor for ESG input data.(such as Robeco SAM, Equileap, CBI, etc.)

Details of the index methodology may be found on index provider website. Engagement policy:

To carry out its engagement campaigns, Lyxor can:

- organize one-on-one meetings with management, board members, investor relations, sustainable development teams or any person within the company who can provide answers to the issue;
- partner with other management companies to gain greater leverage with targeted companies;
- join working groups or initiatives specialising in certain areas.

Description of how the results of the analysis on ESG issues are integrated in investment policies

In terms of engagement, the details are presented below.

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The Lyxor Green Bonds (DR) UCITS ETF is invested in Green bonds which are fixed income securities whose proceeds are solely dedicated to the financing of eligible green projects focused on climate mitigation or adaptation efforts.

The Lyxor world water UCITS ETF aims to reproduce the performance of the index which consists of the 20 largest companies in the fields of water utilities, water infrastructure and water treatment.

The Lyxor new energy UCITS ETF aims to track the benchmark index which reflects the 20 largest stocks operating in the world alternative energy sector in the fields of renewable energy, energy efficiency, decentralization of energy supply.

The LYXOR ETF Gender aims to track the evolution of an index which lists the most advanced companies in terms of gender equality in management and production functions as well as in terms of remuneration, work-life balance, internal policies, transparency and accountability, among others.

2. Description of how the results of the analysis implemented on ESG criteria, in particular exposure to climate risks, are integrated into the investment policy

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),•Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),

- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score

- the environment performance score

- the Environmental Vulnerability index

For corporate issuers in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations

- Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

For each issuer (Corporate & Government), ESG Industry sector classification is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The ESG score calculated at the portfolio level measures the capacity of the underlying issuers to manage the risks and key opportunities associated with environmental, social and governance factors. The risk scale ranges from 0 (high risk) to 10 (low risk). Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: employment, social relations, health and safety, training, compliance with ILO conventions
- Governance: Board of Directors or Supervisory Board, Audit and Internal Control, Executive Compensation

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source: The Company carbon footprint data are provided by the MSCI agency. All ESG metrics are calculated on the exposure portfolio.

Portfolio Exposure to ESG Controversies

Measures the portfolio's exposure to companies experiencing controversies relating to their compliance with international standards as a function of their degree of severity:

Red: Indicates that a company is involved in one or more very severe controversies;

- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;

- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;

- Green: Indicates that the company is not involved in any major controversies.

- None: Sovereign and/or Company not covered

Red Flag	0%
Orange Flag	9%
Yellow Flag	13%
Green Flag	52%

LYXOR EURO STOXX 50 DAILY (2X) LEVERAGED UCITS ETF (compartment of the Multi Units France Sicav)

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2021

Carbon Emissions (tons CO2e/\$M invested)	Carbon Intensity (tons CO2e/\$M sales)	Weighted Average Carbon Intensity tons (CO2e/\$M sales)	Portfolio rated by weight	
49	417	364	Scope 1 reported (vs estimated)	96%
			Scope 2 reported (vs estimated)	91%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GreenHouse Gas Protocol (GHG Protocol) was launched in 2001 by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: direct emissions resulting from the burning of fossil fuel resources owned or controlled by the company.
- Scope 2: indirect emissions related to the purchase or production of electricity.
- Scope 3: all other indirect emissions, from the extended supply chain to the transport of goods and persons.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions standardised by revenue), and these intensities are weighted according to the companies' weight in the portfolio.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is expressed in tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD)*. Moreover only the use of the Enterprise Value enables the analysis of a portfolio invested in both equities and bonds.

* EVIC = Market capitalisation at fiscal year-end date + preferred stock + minority interest + total debt. All Carbon & Climate metrics are calculated on exposure.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or the portion of the company's revenue earned from fossil fuel energies or the portion of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon:

Fossil Fuel Reserves	5%
Thermal Coal	1%
Natural Gas	4%
Oil	4%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of : \$ 1,000,000

Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	1.6
Gas	9.7
Total	15.2

LYXOR EURO STOXX 50 DAILY (2X) LEVERAGED UCITS ETF

(compartment of the Multi Units France Sicav)

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges - this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	5.0
Sum High Impact Reserves	5.0
Other	10.2

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	12.3%	0.9%	1.8%
Some efforts	42.6%	67.7%	41.8%
Limited efforts/Information	3.9%	4.6%	10.3%
No effort/No evidence	12.4%	1.0%	20.8%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

•Asset stranding: risk of holding assets which may become stranded

•Operational Transition: risk of increase in operational costs

•Product Transition: risk of a decrease in demand for high-carbon products and services

•Neutral: low exposure to transition risks

•Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low- carbon products.

(1) Metric developed by MSCI

Low carbon transition score	4.5
Low carbon transition management Score	4.2
Operational Transition	7.5%
Product Transition	7.5%
Neutral	51.7%
Solutions	5.2%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The issuer data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source: MSCI ESG Research

Share of issuers in terms of power generation in portfolio	15.2%
--	-------

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	14.1%	Liquid Fuel	1.9%	Natural Gas	42.0%
Nuclear	19.7%	Renewables	14.6%	Thermal Coal	7.6%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	19%
20-49.9%	9%
50-100%	6%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	19.5%	Energy Efficiency	18.7%	Green Building	5.7%
Pollution Prevention	0.6%	Sustainable Water	1.4%	Sustainable Agriculture	0.7%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	2.6%	Energy Efficiency	3.0%	Green Building	2.4%
Pollution Prevention	0.0%	Sustainable Water	0.1%	Sustainable Agriculture	0.3%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

(3) the trend in greenhouse gas (GHG) intensity.

Regions with a higher proportion of the population affected by natural disasters, reduction of

forest cover and increased GHG intensity are achieving poor results. (Score: 0-10)

Environmental performance score of sovereign issuers in the portfolio

Score 7.5

Sovereign Environmental Vulnerability Index

The Environmental Vulnerability Index reflects the measure of a country's natural environment exposure to damage and degradation. This index contains indicators on time and climate, geology, geography, ecosystem resources and services, violent winds, drought periods, endemic, frequency of earthquakes, tsunamis, volcanic eruptions, etc.

The rating scale is:

less than 215 (resilient),

greater than 215 (at risk),

greater than 265 (vulnerable) and

greater than 315 (highly vulnerable),

greater than 365 (extremely vulnerable).

Level Highly vulnerable

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	5%
Coldwave	29%
Flood	3%
Heatwave	8%
Hurricane	4%
Water Stress	43%
Wildfire	8%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.).

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure – analyses the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyses the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	8.5%	74.8%	16.7%	81.3%	16.6%	2.2%
Carbon Emissions	2.5%	31.0%	66.4%	73.4%	24.7%	1.9%
Electronic Waste	2.2%	6.4%	91.4%	98.7%	0.1%	1.2%
Opportunities in Green Building	3.4%	32.0%	64.6%	94.5%	1.5%	4.0%
Opp's in Renewable Energy	4.6%	71.1%	24.3%	82.3%	8.4%	9.3%
Packaging Material & Waste	12.9%	21.4%	65.7%	98.7%		1.3%
Water Stress	22.9%	67.3%	9.7%	72.1%	18.6%	9.3%
Toxic Emissions & Waste				67.0%	25.2%	7.7%

Temperature - Alignment of the portfolio with the Paris Agreement

Coverage of alignment measurement against different climate scenarios is insufficient for the fund

LYXOR EURO STOXX 50 DAILY (2X) LEVERAGED UCITS ETF

(compartment of the Multi Units France Sicav)

Engagement

This fund is part of the following campaigns: Climate Action 100+, Localized Water Management, Plastic & Circular Economy, Responsible Cleantech

Climate Action 100+: In 2018, Lyxor joined the Climate Action 100+, an international initiative led by investors to engage systemically with important greenhouse gas emitters and other companies across the global economy that have significant opportunities to drive the clean energy transition and help achieve the goals of the Paris Agreement.

Through this initiative, Lyxor aims to obtain commitments from the Boards of Directors or Supervisory Boards and/or key executives in order to:

1. Implement a strong governance framework that clearly articulates the Board's responsibility and oversight for climate risks;
2. Take action to reduce greenhouse gas emissions across the value chain, in line with the Paris Agreement's goal of limiting global average temperature increase to well below 2°C above pre-industrial levels and to move, as far as possible, to a 1.5°C trajectory. This implies the ambition to achieve the goal of carbon neutrality (net zero emissions) by 2050;
3. Improve reporting in accordance with the final recommendations of the Taskforce on Climate-related Financial Disclosures (TCFD) and the Global Investor Coalition on Climate Change (if applicable) to enable investors to assess the robustness of corporate strategies against a range of climate scenarios, including well below 2°C, and to improve investment decision-making.

Plastic & Circular Economy: Lyxor joined a collaborative engagement campaign on the theme of plastic and the circular economy. The objective is to understand with key players what the stakes of plastic are and how to integrate the associated risks throughout the value chain.

Throughout this initial three-year engagement campaign, Lyxor and the various stakeholders are addressing key issues, such as life-cycle analysis, which is crucial in establishing a circular economy, or the quality of recycled materials and the confidence in the material, one of the main challenges to increase the use of recycled plastics. In addition to assessing the commitment of companies, Lyxor explores practical issues regarding the establishment of a circular economy and exchanges on best market practices in order to find sustainable and accessible solutions for all stakeholders.

Responsible Cleantech: Lyxor initiated in 2020 a thematic campaign on clean and responsible technologies. The objective of this engagement campaign is to implement a holistic approach to assess and manage ESG risks associated with the development of this type of technology. In addition to assessing companies' practices, this campaign aims to identify potential points of vigilance and improvement and work together in the search for sustainable solutions.

More specifically, this thematic commitment aims to:

-Apply a life-cycle approach to clean technology products;

-Catalyze more sustainable production of some of the most popular cleantech solutions;

-Explore ways to more effectively address environmental and social risks in production and supply chain.

Localized Water Management: Aware of the growing challenge of water management, Lyxor launched a collaborative thematic engagement campaign on water management in 2020. Most companies are aware of the importance of water management issues but do not make them a priority. The objective of this campaign is to remedy this phenomenon so that all companies can integrate these issues throughout their value chain.

The starting point for good management of water-related issues is to properly map the risks and associated impacts that fall under the direct and indirect control of companies. In addition to assessing companies' practices, the idea is to mobilize them more on this topic, in other words, to ensure that companies' approach to water risk assessment and management:

-Proactively and effectively contributes to long-term business continuity;

-Is environmentally sustainable;

-Respects the development needs of the countries concerned.

Engagement overview over the year

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des marchés financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1. Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 ("AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 ("UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management compensation policy notably ensures appropriate risk management and adherence to compliance on the part of its employees.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2. Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No "carried interest" was paid during the financial year.

Lyxor's best selection and execution policy

Information on best selection and execution policies is available at: www.lyxor.com.

Transparency of securities financing operations and reuse of financial instruments SFTR regulation

(Accounting currency of the CIS)

During the financial year, the UCI did not carry out any transactions subject to the SFTR regulation, namely no repurchase transactions, securities or commodities lending/borrowing, buy-sell back or sell-buy back transactions, margin lending transactions and total return swaps (TRS).

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information, in the evolving context of the Covid-19 crisis.

Information: This exercise has an exceptional duration of 2 months and 16 days.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded. However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
 - NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
 - Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
 - Deposits are assessed at their nominal value, plus any related interest that has accrued.
 - Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
 - Temporary securities acquisitions and sales are assessed at the market price.
 - Units and equities of UCITS operating under French law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.
 - Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.
 - Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Sub-Fund's reference currency are the exchange rates published the fixing WM Reuters on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the CIU) multiplied by the number of contracts multiplied by the face value. The commitment value for conditional transactions is equal to the price of the underlying security (in the currency of the subfund) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Sub-Fund).

Operation and management fees

These fees include all of the fees invoiced directly to the Sub-Fund, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transfer commission which, if relevant, may notably be collected by the custodian and management company.

For this Sub-Fund, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Sub-Fund has exceeded its objectives and are invoiced to the Sub-Fund;
- Transfer commissions invoiced to the Sub-Fund.

For more details on the fees actually invoiced to the MF, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Sub-Fund	Basis	Schedule rate
Financial management fees and administrative fees external to the portfolio management company (Auditor, Depository, distribution, lawyers) including tax ⁽¹⁾	Net assets	Maximum 0.45% per year (including tax)
Maximum indirect management costs (commissions and management fees)	Net assets	Maximum 0.4% per year (including tax)

3.12. Table of the profit and loss and other characteristic elements of the Sub-Fund during the last 5 fiscal years

Currency					
EUR	29.10.2021	-	-	-	-
Net assets	488,466.68	-	-	-	-
Number of outstanding equities	50,000	-	-	-	-
Net asset value	9.7693	-	-	-	-
Unit distribution on net capital gains and losses (including advances)	-	-	-	-	-
Unit distribution (including advances)	-	-	-	-	-
Unit tax credit transferred to holders (natural persons) ⁽¹⁾	-	-	-	-	-
Unit capitalisation ⁽²⁾	-0.01	-	-	-	-

⁽¹⁾ Pursuant to the Fiscal Instruction of 4 March 1993 of the French Tax Department, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits between the shares outstanding on that date.

⁽²⁾ The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of outstanding units. This calculation method is applied from 1 January 2013.

Compartment creation date: 16 August 2021.

4 Inventory as of 29.10.2021
