The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued;
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities in undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Sub-Fund's net asset value.
- Units and shares of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

- The exchange rates used for the valuation of financial instruments listed in a currency other than the Sub-Fund's reference currency are the exchange rates published the WM Reuters fixing on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment)

multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta

multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Sub-Fund has exceeded its objectives and are invoiced to the Sub-Fund;
- Transfer commissions invoiced to the Sub-Fund.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	maximum 0.40% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commission	Net assets	None

⁽¹⁾ including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Accounting currency

The Sub-Fund accounting is carried out in Euro.

Indication of accountancy changes declared to each of the shareholders individually

- - Occurred change: None.
- - Future change: None.

Other changes declared to each of the shareholders individually *(Not certified by the auditor)*

- - Occurred change: None.
- - Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Acc share class: accumulation of all distributable amounts.

3.5. Receivables and Debts: breakdown by type

Breakdown of items comprising "other receivables" and "other debts," in particular the breakdown of forward foreign exchange transactions by type of transaction (buy/sell).

Receivables	1,205,223.12
Future currency exchange operations:	
Future purchases of currency	-
Total traded amount of future Sales of currencies	-
Other receivables:	
Deferred settlement sales	1,183,581.00
Amounts receivable	21,642.12
-	-
-	-
-	-
Other operations	-
Debts	1,228,571.86
Future currency exchange operations:	
Future sales of currencies	-
Total traded amount of future Purchases of currencies	-
Other debts:	
Deferred settlement purchases	1,205,223.12
Accrued expenses	23,348.74
-	-
-	-
-	-
Other operations	-

3.6. Shareholders' equities

	Subscriptions		Redemptions	
	Number of equities	Amount	Number of equities	Amount
Equity category issued/redeemed during the fiscal year:	3,208,695	44,540,383.96	4,498,700	66,152,040.40
Subscription / redemption commission		-		-
Retrocessions		-		-
Fees paid to the sub-fund		-		-

3.7. Management fees

Operating and management fees (fixed fees) as % of the average net assets	0.40
Performance commissions (variable fees): amount of costs for the year	-
Retrocession of management fees:	
- Total amount of fees retroceded to the Compartment	-
- Breakdown by "target" CIU:	
- CIU 1	-
- CIU 2	-

3.8. Commitments given and received

3.8.1. Description of guarantees received by the Sub-Fund with indication of the capital guarantees	None
3.8.2. Description of the other commitments received and/or given	None

3.9. Other information

3.9.1. Current value of the financial instruments that are the subject of temporary acquisition:	
- Financial instruments sold under forward repurchase agreements	-
- Other temporary operations	-
3.9.2. Current value of the financial instruments comprising security deposits:	
Financial instruments received as guarantees and not included in the balance sheet:	
- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-
Financial estimates given as guarantees and maintained in their original item:	
- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-
3.9.3. Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (Sicav) and CIU managed by these entities:	
- CIU securities	-
- Swaps	-763,512.36

3.10. Allocation of the profit and loss table *(in the Compartment's accounting currency)*

3.12. Table of the profit and loss and other characteristic elements of the Compartment during the last 5 fiscal years

Currency EUR	29.10.2021	30.10.2020	31.10.2019	31.10.2018	30.06.2017
Net assets	71,132,219.92	138,592,070.56	118,154,895.07	48,841,779.16	50,528,713.83
Number of outstanding equities	5,671,402	6,961,407	6,455,734	2,213,910	2,137,787
Net asset value	12.5422	19.9086	18.3023	22.0613	23.6359
Unit distribution on net capital gains and losses (including interim payments)	-	-	-	-	-
Unit distribution (including advances)	-	-	-	-	-
Unit tax credit transferred to holders (natural persons) (1)	-	-	-	-	-
Unit capitalisation (2)	-8.30	0.72	-5.20	-0.74	-5.71

(1) In pursuant to the Fiscal Instruction of 4 March 1993 of the French Tax Department, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits between the circulating units on that date.

(2) The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of outstanding units. This calculation method is applied from 1 January 2013.

Compartment creation date: 19 April 2018

SUB-FUND OF THE MULTI UNITS FRANCE SICAV

Compartments / feeder	LYXOR CAC 40 DAILY (-1X) INVERSE UCITS ETF is a sub-fund of the MULTI UNITS FRANCE Sicav.
Management Company	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
Depository and Custodian	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

Information about investments and management

Classification

Equities from countries in the European Union.

The Lyxor CAC Mid 60 (DR) UCITS ETF sub-fund (the "Sub-Fund") permanently exposed at least 60% to one or more markets of equities issued in one or more European Union countries, including, where applicable, the euro zone markets.

The Compartment is an index-based fund of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution

Dist share classes: the Board of Directors reserves the right to distribute, one or more times per year, all or part of the result and/or to accumulate it.

Management objective

The Compartment is a passively managed index-based UCITS.

The management objective of this Sub-Fund is to replicate the upward or downward evolution of the CAC Mid 60 Gross Total Return index (net dividends reinvested) (the "Benchmark Index"), listed in US Dollars (USD), while insofar as possible minimising the tracking error between the Sub-Fund's performances and those of the Benchmark Index.

The anticipated level of the ex-post tracking error under normal market conditions is 1%.

Benchmark indicator

The Benchmark Index is a "Gross Total Return" index (gross dividends reinvested), which means that the Benchmark Index's performance includes the gross dividends paid by its underlying equities.

The Benchmark Index is an index weighted by free-float market capitalisation, measuring the performance of 60 mid-sized stocks listed on Euronext Paris regulated markets.

Eligible securities are classified by free float and exchangeable capital. The best-ranked securities that are not part of the CAC Large 60 index are selected.

The Benchmark Index is an equity index calculated and published by the supplier of Euronext indices.

The Benchmark Index is an index that measures the performance of the 60 best-ranked stocks that are not part of the CAC Large 60 Index. A buffer zone is applicable where current constituents ranked 56th to 65th take priority over candidate stocks that are not part of the CAC Mid 60 or CAC Large 60 indices at the time of the review. The weight of each stock in the index is adjusted according to its market capitalisation, based on the free float. The free float is rounded up to the upper limit in 5% increments.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator's components are available on the website: <https://www.euronext.com/en>
The monitored performance is that of the Benchmark Indicator closing prices.

Benchmark indicator publication

The closing price of the Benchmark is available on the website: <https://www.euronext.com/en>

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Euronext administrator of the Benchmark Indicator is included in the register of administrators and benchmark indices maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmarks used which describes the measures to be implemented in the event of substantial changes to an index or the cessation of provision of that index.

Benchmark indicator revision and composition

The review of the composition and number of shares takes place quarterly at the close of the 3rd Friday of March, June, September and December.

The exact composition and revision rules of the Benchmark published by Euronext are available on the website: <https://www.euronext.com/en>

The above-mentioned frequency of rebalancing has no effect on costs as part of the implementation of the investment strategy.

Investment strategy

1. Strategy employed

The Sub-Fund will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In order to seek the highest possible correlation with the performance of the Benchmark, the Sub-Fund will achieve its management objective via a direct replication method, which means that the Sub-Fund will invest in a basket of assets comprising the Benchmark Index and/or financial instruments representative of all or part of the securities comprising the Benchmark Index.

In addition, the sub-fund may use forward financial instruments ("FFIs"). Futures in which the sub-fund is likely to invest include contracts such as index futures, futures on all or part of the Benchmark Index components, and hedging swaps entered into to minimise the Sub-Fund's tracking error.

When pursuant to its investment strategy (e.g. use of futures) the Sub-Fund is required to hold cash, the manager in the best interest of the unitholders may use deposits with credit institutions, and or invest cash in balance sheet assets and/or off-balance sheet assets (as described below). In order to optimise the direct tracking method with respect to the Benchmark, the Sub-Fund, represented by its appointed financial manager, may decide to use a "sampling" technique consisting in investing in a selection of representative securities composing the Benchmark in order to limit the costs associated with investment in the various components of the Benchmark. A sampling replication strategy could notably lead the Sub-Fund to invest in a selection of representative securities (and not all securities) comprising the Benchmark, in proportions different from those of the Benchmark Index or even to invest in securities other than the Benchmark Index components. The website www.lyxoretf.com offers a page dedicated to the Sub-Fund, which notably allows investors to benefit from transparency on the direct replication method used (full replication of the Benchmark Index or sampling to limit replication costs). The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

As part of the management of its exposure, the Sub-Fund may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit may be increased to 35% for a single issuing entity, when this proves to be justified by exceptional market conditions, particularly when certain securities are largely dominant and/or in the event of high volatility of a financial instrument or securities linked to an economic sector represented in the Benchmark Index, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator. In this case, the manager intends to use mainly the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Sub-Fund will mainly be invested in the securities described below:

Equities

The Sub-Fund will be mainly invested in the shares comprising the Benchmark Index.

Ownership of shares or units of other CIS or investment funds

The Sub-Fund may invest up to 10% of its assets in units or shares of the following CIS or investment funds:

French or foreign UCITS compliant with Directive 2009/65/EC - For the purposes of these investments, the Sub-Fund may subscribe for units or shares in UCITS managed by the Management Company or a company to which it is linked.

The Sub-Fund will permanently invest a minimum of 75% of its assets in companies that have their registered office in a Member State of the European Union, or in another State party to the Treaty on the European Economic Area that has entered into a tax agreement with France containing an administrative assistance clause with a view to combating fraud or tax evasion. This minimum holding level allows eligibility for the Equity Savings Plan.

When the Sub-Fund receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Sub-Fund, given that they are received by the Sub-Fund in full ownership.

3. Off-balance sheet assets (derivative instruments)

The Sub-Fund may invest in the following FFIs:

Nature of the intervention markets:

- regulated
- organised
- over-the-counter

Risks in which the Sub-Fund wishes to trade:

- equity

Types of operations, all transactions must be limited to achieving the management objective :

- hedging
- exposure

Type of instruments used:

- futures: on equities and indices
- forward exchange contracts

Strategy for using derivatives to achieve the investment objective:

- General hedging of the portfolio, certain risks, securities, etc. - up to 100% of assets
- reconstitution of synthetic exposure to assets and risks - up to 100% of assets

The counterparties of OTC derivatives processed by the Sub-Fund will be selected in accordance with the Management Company's best execution policies (including the execution matrix by asset type mentioned in the Appendix). The above-mentioned policy can be accessed at the following address: <https://www.lyxor.com/politique-de-meilleure-execution-liam-janvier-2020-fr>

Counterparties to futures will have no discretion over the composition of the Sub-Fund's investment portfolio over the underlying assets of these futures, in accordance with regulatory limits and requirements.

Situations of conflict of interest may arise between the Management Company and Societe Generale when Societe Generale acts as a counterparty to FFIs. These situations are governed by the Management Company's conflict of interest management policy.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Sub-Fund can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

The Sub-Fund may use efficient portfolio management techniques in accordance with the provisions of Article R214-18 of the French Monetary and Financial Code and in particular:

Type of transactions used

- Lending and borrowing of securities within the meaning of the French Monetary and Financial Code,

Types of operations, all transactions must be limited to achieving the investment objective

- Optimisation of the Sub-Fund's revenues;
- Maximum proportion of assets under management that may be covered by securities financing contracts: up to 25% of the Sub-Fund's assets.
- Expected proportion of assets under management that can be financed by securities transactions: 0% of the Sub-Fund's assets

In this context, the Management Company has appointed Societe Generale as an intermediary (hereinafter the "Agent"). In the event of recourse to temporary sales, the Agent may be authorised (i) to carry out, on behalf of the Sub-Fund, securities lending transactions, governed by GMSLA (Global Master Securities Lending Agreements) and/or any other internationally recognised framework agreements, and (ii) to invest, on behalf of the Sub-Fund, the cash received as collateral for these securities lending transactions, in accordance with and within the limits defined by the securities lending agreement, the rules of this prospectus and the regulations in force.

As a reminder, the Management Company is an entity of the Societe Generale Group and is therefore linked to the Agent.

Where Société Générale S.A. is appointed as Agent, it is not authorised to act as a counterparty in securities lending transactions.

In the event of the use of such temporary transfers

- All income arising from these transactions, net of direct and indirect operational costs/fees will be returned to the Sub-Fund;
- The above-mentioned operational fees/costs, related to efficient portfolio management techniques, are those incurred by the management company, the Agent (if applicable) and/or the other intermediaries involved in these operations in connection with their services;
- These direct or indirect operating fees/costs will be calculated as a percentage of the gross income generated by the Sub-Fund. Information on operational, direct and indirect fees/costs and the identity of the entities to which these fees/costs are paid will be mentioned in the Sub-Fund's annual report; and
- Income generated by securities lending transactions (less direct and indirect operating costs incurred by the Agent and, where applicable, by the management company) should be paid to the relevant Sub-Fund. To the extent that these fees/costs, direct and indirect, do not increase the operating costs of the Sub-Fund, they have been excluded from current expenses.

The Multi Units France Sicav annual report will include, where applicable, the following details:

- The exposure generated through effective portfolio management techniques;
- The identity of the counterparty(ies) to these effective portfolio management techniques;
- The type and amount of guarantees received by the MF in order to reduce counterparty risk; and
- Income from effective portfolio management techniques for the whole period concerned, as well as direct and indirect operational costs and expenses incurred.

8. Financial guarantees

In all cases in which the Sub-Fund is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Sub-Fund's use of forward swap contracts traded over the counter, the Sub-Fund can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Sub-Fund is totally neutralised.

Any financial guarantee received by the Sub-Fund will be provided to the Sub-Fund in full ownership and listed in the Sub-Fund's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Sub-Fund's assets.

Any financial guarantee received by the Sub-Fund within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) Collateral must be valued at its mark-to-market price at least daily, and assets with highly volatile prices are not acceptable as collateral, unless a sufficiently prudent discount or "haircut" is applied;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) The collateral must be sufficiently diversified in terms of country, market, and issuer, with exposure to any single issuer not exceeding 20% of the Sub-Fund's net asset value.

The Sub-Fund's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Sub-Fund may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- Such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and
- Such financial guarantees consist of at least six different issues of which none exceeds 30% of the Sub-Fund's assets.

In compliance with the aforesaid conditions, the guarantees received by the Sub-Fund can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State or by its local government entities, or by an EU, regional, or global supranational institution or organisation, or by any country provided that conditions (a) to (e) above are fully complied with;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged.

Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) Deposited with an enabled institution;
- (ii) Invested in high-quality State bonds;
- (iii) Used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) Invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Sub-Fund may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Sub-Fund is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

Counterparty selection policy

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Sub-Fund. The selection of counterparties for financial contracts and financial intermediaries is performed rigorously from among the reputable counterparties and intermediaries in the market, on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes various criteria into consideration to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating;
- Quantitative criteria based on the CDS LT spread (absolute criteria, volatility and comparison with a reference group, etc.)

Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information about this policy and on the relative importance of the execution criteria for each asset class, please visit our website: www.lyxor.com, “regulatory information” section.

Risk profile

The Sub-Fund will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartiment, the shareholder is primarily exposed to the following risks:

Equity risk

An equity price can vary upwards or downwards, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

Counterparty risk

The Sub-Fund is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as “OTC derivatives”) and/or efficient portfolio management techniques (hereinafter referred to as “EPMTs”). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Sub-Fund may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realisation of this risk may result in losses for the Sub-Fund and have an impact on the ability of the Sub-Fund to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Sub-Fund's assets per counterparty.

Capital loss risk

The initially invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the initially invested amount may not be recovered, notably should the performance of the Benchmark Index be negative over the investment period.

Liquidity risk (primary market)

If, when the Sub-Fund (or one of its counterparties for future financial instrument (“FFI”)) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase/sale price discrepancies, the value and/or liquidity of the Sub-Fund could be negatively affected.

Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Index, this can also have consequences on the processes related to the subscription, conversion or redemption of units.

Risks related to the absence of perfect replication

Replicating the Benchmark by investing in all components of the Benchmark can be costly or very difficult to operate. The Sub-Fund's manager may also use optimisation techniques, in particular the sampling technique, which consists in investing in a selection of representative securities (and not all securities) comprising the Benchmark, in proportions different from those of the Benchmark Index or even investing in securities other than the components of the index or financial futures. The use of these optimisation techniques may lead to an increase in the ex-post tracking error and will notably lead to different performances between the Sub-Fund and the Benchmark Index.

Liquidity risk on a place of listing

The ETF's equity price can deviate from its indicative net asset value. The liquidity of the Sub-Fund's units or equities on a place of listing can be affected by any suspension, that could notably be due to:

- (i). Suspension or stoppage of the calculation of the Benchmark Index, and/or;
- (ii). Suspension of the market(s) of the underlyings used by the Benchmark Index, and/or;
- (iii). The impossibility for a given place of listing to obtain or calculate the Sub-Fund's indicative net asset value, and/or;
- (iv). A market maker's violation of the rules applicable to this marketplace, and/or;
- (v). A failure of this marketplace's IT or electronic systems.

Risk related to the use of effective portfolio management techniques

In the event that the counterparty to the efficient portfolio management technique (hereinafter referred to as the “EPMT”) processed by the Sub-Fund fails to provide the counterparty, the Sub-Fund may be exposed to a risk in the event that the value of the guarantees received by the MF is lower than the value of the assets of the MF transferred to the counterparty under the EPMT in question. This risk could materialise in particular in the event of (i) a poor valuation of the securities subject to this transaction and/or (ii) adverse market movements and/or (iii) a deterioration in the credit rating of issuers of securities received as collateral and/or (iv) illiquidity of the market on which the collateral received is admitted to listing. Unitholders should note that (i) EPMTs may be entered into with Societe Generale (entity of the same group as the Management Company) and/or (ii) that Societe Generale may be appointed as agent of the Sub-Fund under the EPMTs.

Risks related to collateral management

Operational risk:

The Sub-Fund may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365. Legal risk

The Sub-Fund may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

Risk that the management objective may only be partially achieved

Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Index, notably should one or more of the following risks arise:

Risk related to the use of forward financial instruments

On an ancillary basis, the Sub-Fund may use over-the-counter forward Financial Instruments or listed FFIs, in particular futures contracts and/or hedging swaps. These FFIs can result in a series of risks on the level of the contract that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Index, risk related to the tax regime, risk related to the regulations, and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI contract, which could affect the Sub-Fund's net asset value.

Investing in futures may involve a high level of risk. The amount required to trade certain FFIs is potentially much lower than the exposure obtained through these instruments, which implies a “leverage” at the level of each transaction. A relatively limited market movement would then have a proportionately very high impact, which could be favourable or unfavourable to the Fund.

The market value of forward financial instruments is highly volatile and may therefore be subject to significant fluctuations.

The Sub-Fund may use OTC futures. Over-the-counter transactions may be less liquid than transactions traded on organised markets, where trading volumes are generally higher, and their prices may be more volatile.

Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Sub-Fund is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Sub-Fund's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Sub-Fund's underlyings can affect the Sub-Fund's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Sub-Fund (and/or to its counterparty in the FFI), the Sub-Fund's net asset value may be affected.

Risk related to regulations

In case of change of the regulations in any country in which the Sub-Fund is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Sub-Fund's underlyings, the Sub-Fund's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Sub-Fund's equities. The calculation of the Sub-Fund's net asset value can also be affected.

If the event persists, the Sub-Fund's manager will decide on measures having to be adopted, which can have an impact on the Sub-Fund's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Index is considered to be incorrect or not reflective of the market's actual evolution;
- ii) The Benchmark Index is definitively discontinued by its supplier;
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark;
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings of this Benchmark Indicator or of the respective weightings between its various components), which cannot be effectively replicated by the Sub-Fund at a reasonable cost;
- v) One or more components of the Benchmark Index becomes illiquid, with the listing on an organised market being suspended, or components traded over-the-counter (such as bonds, for example) become illiquid;
- vi) The Benchmark Index's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Index's performance.

Risk related to a corporate action comprising the Benchmark Index

Should the issuer of a security underlying the Benchmark Index undertake an unanticipated review of a corporate action ("CA"), that contradicts a prior and official announcement that had resulted in a valuation of the CA by the Sub-Fund (and/or in a valuation of the CA by the Sub-Fund's counterparty in a future financial instrument), the Sub-Fund's net asset value may be affected, notably should the actual treatment of the CA by the Sub-Fund differ from the CA's treatment in the methodology used by the Benchmark Index.

Sustainability risks

The Sub-Fund does not consider sustainability factors in the investment decision-making process but remains exposed to sustainability risks. The occurrence of such risks could have a negative impact on the value of the investments made by the Sub-Fund. Additional information can be found in the "Sustainability Information" section of the Prospectus.

Subscribers concerned and typical investor profile:

The Sub-Fund is open to any subscriber wishing to gain exposure to the performance of the 60 best-ranked stocks that are not part of the CAC Large 60 Index.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for three years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Sub-Fund's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers. The minimum recommended investment term is greater than 5 years.

"U.S. Persons" (as defined below - see "COMMERCIAL INFORMATION") may not invest in the Sub-Fund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

• The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Sub-Fund's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy-92800 Puteaux.

• Creation date of the Multi Units France Sicav: 04 March 2002.

• Compartment approval date by the AMF (Financial Markets Authority): 15 February 2018.

• Compartment creation date: 19 April 2018.

activity report

The fund replicates the performance of the CAC MID60 GRO TR INDEX EUR index (Ticker: CM1GR).

Performance trend at the closing date:

Share name	ISIN	Share curren cy	Performance from 28/02/19 to 31/10/19			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor CAC MID 60 (DR) UCITS ETF - Dist	FR0011041334	EUR	45.80% ⁽¹⁾	46.65%		153.59%

⁽¹⁾ "The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs (for example the index rebalancing cost);
- taxation incurred in relation to the methodology used in the Benchmark;
- possible use by the manager of sampling or advanced index management techniques;

The tracking error realised is 0.0762%. The target tracking error over the period was 1%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

The fund complies with the PEA eligibility constraints at all times, the details of which are available on request from the management company. During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the SICAV that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: The method chosen is the commitment method.

This Fund is covered by Article 6 of Regulation (EU) 2019/2088 (the "SFDR Regulation"). It does not promote environmental and/or social characteristics and does not aim to invest sustainably

Transparency of environmentally sustainable investments in periodic reports under Regulation (EU) 2020/852

Regulation (EU) 2020/852 on the establishment of a framework for promoting sustainable investments (the "Taxonomy Regulation") sets out the criteria for determining whether an economic activity is environmentally sustainable in the European Union.

According to the Taxonomy Regulation, an activity can be considered "sustainable" if it contributes substantially to one of the 6 environmental objectives set out in the Taxonomy Regulation, including climate change mitigation and adaptation, pollution prevention and reduction, or the protection and restoration of biodiversity and ecosystems.

In addition, in order to be considered sustainable, this economic activity must respect the principle of "do no significant harm" along with one of the other five objectives of the Taxonomy Regulation and must also comply with basic social criteria (alignment with OECD and UN guidelines on business and human rights).

In accordance with article 7 of the Taxonomy Regulation, the management company draws investors' attention to the fact that the underlying investments of this Fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Provision of environmental, social and governance (ESG) information - in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organisation to integrate Environmental, Social, and Governance ("ESG") issues into our investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each

Integration of sustainability risks by Lyxor in its investment decision-making processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

(a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

- French, German & Luxembourgish Funds (Fonds Communs de Placement - FCP) and SICAV (*)
- Securities of issuers domiciled in Europe: in order to prevent excessive costs inherent in the voting process, Lyxor participates in general meetings when the consolidated holding represents more than 0.10% of the company's capital
- Securities of issuers domiciled in the United States: Lyxor will exercise its right to vote on its largest consolidated holdings
- Securities of issuers domiciled in Japan: Lyxor will exercise its right to vote on its largest consolidated holdings

(*) Except the vehicles using a method of synthetic replication, which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership.

In terms of engagement, Lyxor has defined an engagement policy that is structured around three axes: an engagement related to general meetings, an engagement related to environmental, social and/or governance issues, and an engagement related to climate. This third axis comprises four engagement campaigns:

• The first campaign related to the Climate Action 100+ initiative, committing Lyxor to ask companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosure) recommendations.

• The second campaign related to plastics and the circular economy.

• The third campaign related to localized water management.

• The fourth campaign related to responsible cleantech.

This fund is part of the following campaigns: Corporate Governance, General Meeting

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (in connection with Lyxor's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets (PME/ETI).
- In the global context of the Societe Generale Group's Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defence policy,
- In the global context of the Societe Generale Group's Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website Lyxor.com.

Active Ownership - Operational set up:

In addition to the internal analysis carried out, Lyxor uses the services of ISS (Institutional Shareholder Services), as a proxy advisor.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies), proxy voting forms are filled out and sent to the relevant issuers by post.

Engagement policy:

To carry out its engagement campaigns, Lyxor can:

- organise one-on-one meetings with management, board members, investor relations, sustainable development teams or any person within the company who can provide answers to the issue;
- partner with other management companies to gain greater leverage with targeted companies;
- join working groups or initiatives specialising in certain areas.

Description of how the results of the analysis on ESG issues are integrated in investment policies

In terms of engagement, the details are presented below.

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Lyxor.com website.

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

•Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

•Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions:

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuers in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund

Portfolio ESG Rating as of October 2021

ESG score	Environment	Social	Governance
5.6	6.2	5.3	5.5

Portfolio rated 100%
Nb Securities rated 59

Leaders (AAA, AA) 44%
Average (A, BBB, BB) 43%
Worst (B, CCC) 11%

For each issuer (Corporate & Government), ESG Industry sector classification is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The ESG score calculated at the portfolio level measures the capacity of the underlying issuers to manage the risks and key opportunities associated with environmental, social and governance factors. The risk scale ranges from 0 (high risk) to 10 (low risk). Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For sectors and themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For companies, exposure to measures and management of ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: employment, social relations, health and safety, training, compliance with ILO conventions
- Governance: Board of Directors or Supervisory Board, Audit and Internal Control, Executive Compensation

For governments, exposure to measures and management of ESG issues cover the following themes:

- Environment: Externalities Environementales, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source: The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Measures the portfolio's exposure to companies experiencing controversies relating to their compliance with international standards as a function of their degree of severity:

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: indicates that the company is not involved in any major controversies
- None: Sovereign and/or Company not covered

Red Flag 0%
Orange Flag 5%
Yellow Flag 9%
Green Flag 84%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2021

Carbon Emissions (tons CO ₂ e/\$M invested)	Carbon Intensity (tons CO ₂ e/\$M sales)	Weighted Average Carbon Intensity (tons CO ₂ e/\$M sales)	Portfolio rated by weight	100%
45	66	79	Scope 1 reported (vs estimated)	95%
			Scope 2 reported (vs estimated)	73%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GreenHouse Gas Protocol (GHG Protocol) was launched in 2001 by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on reported data and/or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: direct emissions resulting from the burning of fossil fuel resources owned or controlled by the company.

- Scope 2: indirect emissions related to the purchase or production of electricity.

- Scope 3: other indirect emissions from the extended supply chain to the transport of goods and persons.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO₂e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO₂ e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested

- Carbon intensity (tons CO₂e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales

- Weighted Average Carbon Intensity (tons CO₂e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO₂ emissions standardised by revenue), and these intensities are weighted by the weight of the companies in the portfolio.

These measures do not take into account all emissions induced by the company particularly, those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalisation as a way to measure this ownership by multiplying the amount invested by a factor in tCO₂/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions and fossil fuel reserves induced by its investments. Lyxor has decided to use the enterprise value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO₂/\$ of enterprise value, with the definition of enterprise value as the most recent available fiscal year-end enterprise value including cash (USD)*. Moreover only the use of the enterprise value enables the analysis of a portfolio invested in both equities and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest - total debt.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage or MWh generated from fossil fuels or the portion of the company's revenues earned from fossil fuels or the portion of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon:

Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gaz	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of : \$ 1,000,000

Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO₂ using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO₂e/\$M invested

Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum of high-impact fossil fuel reserves	0.0
Other	0.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorise them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Management of Energy Consumption and Operational Efficiency	Target Effort
Aggressive efforts	1.8%	0.8%	5.0%
Some efforts	87.7%	92.2%	67.3%
Limited efforts/Information	6.7%	3.3%	3.8%
No effort/No evidence	3.8%	3.7%	24.0%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

•Asset stranding: risk of holding assets which may become stranded

•Operational Transition: risk of increase in operational costs

•Product Transition: risk of a decrease in demand for high-carbon products and services

•Neutral: low exposure to transition risks

•Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low- carbon product.

(1) Metric developed by MSCI

Low carbon transition score	6.0
Low carbon transition management Score	5.3
Operational Transition	6.9%
Product Transition	6.9%
Neutral	72.2%
Solutions	7.4%

Energy Mix of energy producers within the portfolio

A company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The issuer data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source: MSCI ESG Research

Share of issuers in terms of power generation in portfolio	1.8%
--	------

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	0.0%	Liquid fuel	Natural Gas	Nuclear
Renewables	82.2%	Thermal Coal	13.8%	

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. Those issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuers with revenue dedicated to environmental solutions between:	
0-19.9%	12%
20-49.9%	3%
50-100%	5%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	9.8%	Energy Efficiency	15.3%	Green Building	9.1%
Pollution Prevention	5.1%	Sustainable Water	1.3%	Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	2.2%	Energy Efficiency	0.5%	Green Building	3.3%
Pollution Prevention	0.3%	Sustainable Water	0.0%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum percentage of revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the "Do No Significant Harm" and "Minimum Social Safeguards criteria" of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

% estimated EU Taxo 6.4%

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	1%
Coldwave	33%
Flood	3%
Heatwave	9%
Hurricane	2%
Water Stress	43%
Wildfire	9%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.).

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure - analyses the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	3.8%	93.3%	3.0%	90.2%	9.2%	0.6%
Carbon Emissions	2.6%	14.4%	52.0%	68.3%	28.5%	3.2%
Electronic Waste	3.8%	7.2%	89.0%	96.0%	3.8%	0.2%
Opportunities in Green Building	2.7%	47.2%	50.1%	93.0%	3.5%	3.6%
Opp's in Renewable Energy	5.0%	60.4%	34.6%	98.6%		1.4%
Packaging Material & Waste	7.9%	28.8%	63.3%	88.9%		11.1%
Water Stress	5.3%	93.6%	1.1%	56.3%	37.6%	6.1%
Toxic Emissions & Waste				56.5%	33.0%	10.5%

Temperature - Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

- A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,
- An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates a carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Level of alignment	26°C
Hedging	86.9%
Alignment Trajectory in % Weight	
<1.5°C	27.9%
1.5-2°C	7.7%
2-3°C	13.6%
>3°C	50.8%

Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

Meeting overview

This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	65
Number of Voted Meetings	9
Participation rate at General Meetings	13.8%

Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
Directors Related	72.3%	27.7%	0.0%
Capitalization	79.1%	20.9%	0.0%
Routine/Business	93.3%	2.2%	4.4%
Non-Salary Comp.	76.1%	19.6%	4.3%

Breakdown by country

In 2021, Lyxor's voting scope was issuers domiciled in Europe, in United States and in Japan.

The data details the geographical distribution of the General Meetings at which the Lyxor CAC MID 60 (DR) UCITS ETF fund participated during the financial year.

France	66.7%
Luxembourg	33.3%

Engagement

This fund is part of the following campaigns: Corporate Governance, General Meeting

Corporate Governance: Outside the general meeting period, Lyxor promotes regular dialogue with companies on corporate governance issues such as changes in the composition of the Board and its committees, succession plans, the role and functions of the lead director, changes in the remuneration policy, etc.

Engagement overview over the year

The table shows the number of engagement campaigns conducted by Lyxor during the year compared to the number of issuers present in the fund.

Number of companies under engagement	0
Number of engagement	0
Number of companies under engagement / Number of companies in the fund	0%

Breakdown by country

The data present the geographical breakdown of the issuers concerned by an engagement campaign over the financial year by the fund.

Breakdown by engagement campaigns carried out by the fund over the year

For the year, the fund participated in the various engagement campaigns presented below and conducted by Lyxor.

For more details on Lyxor's engagement activities, an annual report is available on the Lyxor website: <https://www.Lyxor.com/investissement-socialement-responsable>

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (“AIFM Directive”) and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (“UCITS V Directive”), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management compensation policy notably ensures appropriate risk management and adherence to compliance on the part of its employees.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregate Remuneration (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No “carried interest” was paid during the financial year.

Lyxor's best selection and execution policy

Information on best selection and execution policies is available at www.lyxor.com.

Transparency of securities financing operations and reuse of financial instruments SFTR regulation

(Accounting currency of the CIU)

During the fiscal year, the UCI did not carry out any transactions subject to the SFTR, namely no repurchase transactions, securities or commodities lending/borrowing, buy/sell back or sell/buy back transactions, margin lending transactions or total return swaps (TRS).

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information, in the evolving context of the Covid-19 crisis.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued;
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities in undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Sub-Fund's net asset value.
- Units and shares of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

- The exchange rates used for the valuation of financial instruments listed in a currency other than the Sub-Fund's reference currency are the exchange rates published the WM Reuters fixing on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the CIS) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Sub-Fund) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Sub-Fund has exceeded its objectives and are invoiced to the Sub-Fund;
- Transfer commissions invoiced to the Sub-Fund.
- direct and indirect operating costs/fees related to temporary purchases and sales of securities.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	maximum 0.50% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commission	Net assets	None
Direct and indirect operating costs/fees related to temporary acquisitions and disposals of securities	Amount of income generated by these operations	20% maximum for the Management Company; 15% maximum for the Agent

⁽¹⁾ including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Accounting currency

The Sub-Fund accounting is carried out in Euro.

LYXOR INTERNATIONAL ASSET MANAGEMENT (LIAM)

LYXOR EURO OVERNIGHT RETURN UCITS ETF

FISCAL YEAR ENDING ON: 29.10.2021

Compartments / feeder	LYXOR EURO OVERNIGHT RETURN UCITS ETF is a sub-fund of the MULTI UNITS FRANCE Sicav.
Management Company	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
Depository and Custodian	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

Information about investments and management

Classification:

The Lyxor Euro Overnight Return UCITS ETF sub-fund (the “Sub-Fund”) is an index UCITS ETF.

Terms of determination and allocation of amounts available for distribution:

Acc share class: Capitalisation of all the amounts available for distribution.

Management objective:

The Compartment is a passively managed index-based UCITS.

The Sub-Fund’s objective is to track, both upwards and downwards, the trend of the Solactive Euro Overnight Return Index (gross dividends reinvested) (the “Benchmark”), denominated in euro (EUR), while minimising the tracking error between the performance of the Sub-Fund and that of its Benchmark.

The anticipated level of the ex-post tracking error under normal market conditions is 0.20%.

Benchmark indicator

The Benchmark is the Solactive Euro Overnight Return Index (gross dividends reinvested), which is a Total Return index (i.e. which compounds interest).

The Benchmark Index is calculated and maintained by Solactive AG.

The Benchmark is calculated using the EONIA (European Overnight Index Average) rate, which is the daily reference rate for unsecured interbank deposits (i.e. not secured by securities) carried out overnight in the eurozone.

Calculated by the European Central Bank and distributed by the European Banking Federation, the EONIA rate is the average, weighted by amounts, of the rates actually traded on the euro interbank money market during the day by a sample of 57 major banks for deposits/loans up to the next business day. It is one of the two reference rates on the money market in the eurozone, with EURIBOR, which covers the durations ranging from one week to one year.

The Benchmark is calculated according to the following formula:

where $IINV[T+1]$ represents the index on date T+1;

$IINV[T]$ the index of the previous business day;

$n[T+2,T+3]$, the effective number of days between T+2 and T+3;

rE the EONIA fixing published on T between 6:45 pm and 7:00 pm.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator’s components are available on the website: <https://www.solactive.com>. Additional information can also be found on the website: www.euribor.ebf.eu. The performance tracked is that of the fixing of the Benchmark Indicator determined by Solactive AG.

Benchmark indicator publication

Solactive AG is responsible for calculating and publishing the value of the Benchmark.

The characteristics of the Benchmark are available at: <https://www.solactive.com>

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the administrator Solactive AG of the Benchmark Solactive Euro Overnight Return Index is entered in the register of administrators and benchmarks maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmarks used which describes the measures to be implemented in the event of substantial changes to an index or the cessation of provision of that index.

Benchmark indicator revision and composition

Given the particularity of the Benchmark, based solely on the EONIA rate, it is not expected that the Benchmark will be subject to periodic revisions.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Index, the Sub-Fund will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Sub-Fund's assets, which will consist of balance sheet assets (excluding any securities received as collateral), for (ii) the value of securities comprising the Benchmark.

The securities held as assets by the Sub-Fund may notably be securities that make up the Benchmark Index, as well as other international equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Sub-Fund's portfolio and (ii) the market value of the swap transaction entered into by the Sub-Fund is available on the page dedicated to the Sub-Fund on the website: www.lyxoretf.com

The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

As part of the management of its exposure, up to 20% of the Sub-Fund's assets may be exposed to the shares of a single issuer.

This limit of 20% may be raised to 35% for a single bond when this proves to be justified by exceptional market conditions, particularly when certain securities are largely dominant and or in the event of high volatility of a debt issue, and/or a political and/or economic event having or which may have an impact on the assessment of the debt of an issuing State and or affecting the financial rating of an issuing State or any other event likely to affect the liquidity of a financial security included in the Benchmark.

Notwithstanding the assumptions referred to in the paragraph above, securities guaranteed or issued by a single issuer may represent up to 35% of the assets, and 100% of the assets if the UCITS holds at least 6 issues, none of which exceeds 30% of the assets. The securities concerned are financial instruments issued or guaranteed by an OECD Member State, local authorities of a Member State of the European Union or party to the EEA agreement.

In this case, the manager intends to use mainly the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Sub-Fund may hold eurozone securities, in accordance with the ratios provided for by regulations.

The aforementioned financial securities will be bonds selected on the basis of criteria

Of eligibility, in particular:

- Senior debt;
- Fixed maturity;
- Maximum residual maturity;
- Minimum issue size;
- Minimum threshold S&P's rating or equivalent.

Of diversification, notably:

- Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code);
- Geographical area;
- Sector.

For more information on the above-mentioned eligibility and diversification criteria, notably the list of eligible indices, investors can visit the website: www.lyxoretff.com

At least 60% of the value of the Sub-Fund's assets corresponds to balance sheet assets with a residual maturity of two years or more.

The investment in undertaking for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Compartment. As part of these investments, the Sub-Fund may subscribe for units or shares of UCITS managed by the management company or a company to which it is linked. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law. Securities guaranteed or issued by a single issuer may represent up to 35% of the assets, and 100% of the assets if the UCITS holds at least 6 issues, none of which exceeds 30% of the assets. The securities are instruments issued or guaranteed by an OECD Member State, local authorities of a Member State of the European Union or party to the EEA agreement. When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of the future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Sub-fund will have recourse to index-linked swaps traded over-the-counter, exchanging the value of the equities in the Sub-Fund's assets against the value of the Benchmark Index (in compliance with the description contained in this section's paragraph 1 above). As part of a future optimisation of the Sub-Fund's management, the manager reserves the right to use other instruments within the limits of the regulation to achieve the investment objective, for example including derivatives other than index-linked swaps.

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

The counterparty of the future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Sub-Fund's portfolio, nor regarding the underlying assets of the future financial instruments. When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted. Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Sub-Fund is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Sub-Fund's use of forward swap contracts traded over the counter, the Sub-Fund can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20 % of the Compartment's net asset value;
- (e) The Sub-Fund's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- Such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State or (iv) a public international organization to which one or more Member States belong; and
- Such financial guarantees consist of at least six different issues of which none exceeds 30% of the Sub-Fund's assets.

In compliance with the aforesaid conditions, the guarantees received by the Sub-Fund can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e)(above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Sub-Fund's management company will apply a margin to the financial guarantees received by the Sub-Fund. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged.

Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) Deposited with an enabled institution;
- (ii) Invested in high-quality State bonds;
- (iii) Used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) Invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Compartment may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

Counterparty selection policy

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Compartment. The selection of counterparties for financial contracts and financial intermediaries is performed rigorously from among the reputable counterparties and intermediaries in the market, on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes various criteria into consideration to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating;
- Quantitative criteria based on the LT CDS spread (absolute criteria, volatility and comparison with a reference group, etc.).

Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: www.lyxor.com, section "regulatory information".

Risk profile:

The Sub-Fund will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

Interest rate risk

The Sub-Fund is exposed to any changes in money markets following the decision of a central bank. Consequently, if interest rates fall below the level of management fees and other structural costs, the net asset value of the Sub-Fund may decrease.

Capital loss risk

The initially invested capital is not guaranteed. The investor consequently runs the risk of capital loss. All or part of the sums invested may not be recovered, notably should the performance of the Benchmark be negative over the investment period.

Liquidity risk (primary market)

If, when the Sub-Fund (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Sub-Fund could be negatively affected.

Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Sub-Fund's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or discontinuation of the calculation of the Benchmark, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Index, and/or;

- iii) The impossibility for a given place of listing to obtain or calculate the Sub-Fund's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

Counterparty risk

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

Risks related to collateral management

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

Risk related to the use of derivative instruments

In order to achieve its investment objective, the Sub-Fund uses OTC derivatives, which can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark. These derivatives can result in a series of risks at the level of the derivatives themselves, which notably include: counterparty risk, an event affecting the hedging, an event affecting the Benchmark, risk related to the tax treatment, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Index is considered to be incorrect or not reflective of the market's actual evolution;
- ii) The Benchmark Index is definitively discontinued by its supplier;
- iii) The Benchmark Provider is unable to provide its level or value;
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark (other than a minor modification such as the adjustment of the underlyings of this Benchmark or of the respective weightings between its various components) that cannot be efficiently replicated by the Sub-Fund at a reasonable cost;
- v) One or more components of the Benchmark Index becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Index's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Index's performance.

Securities transaction risk

Should the issuer of a security underlying the Benchmark undertake an unanticipated review of a securities transaction ("ST") that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Sub-Fund (and/or in a valuation of the ST by the Sub-Fund's counterparty to a derivative), the Sub-Fund's net asset value may be affected, notably should the actual treatment of the ST by the Sub-Fund differ from the ST's treatment in the methodology used by the Benchmark.

Risk related to a change of Benchmark Index pursuant to the regulations and the "Benchmark Reform", including the LIBOR, EURIBOR and other interest rates, equities, commodities, exchange rates and other types of benchmarks.

Interbank rates (including the LIBOR interbank rate, EURIBOR, exchange rates and other types of interest rates and indices that are considered as "benchmarks") are subject to ongoing national and international regulatory reforms. As a result of these reforms, benchmarks may perform differently than in the past or be discontinued, or there may be other unforeseeable consequences. These changes could have a small or major impact on the achievement of the Sub-Fund's investment objective. The main regulatory proposals and initiatives in this area include (among other things) the IOSCO Principles for Financial Benchmarks and the European Union Regulation on indices used as benchmarks in financial instruments and financial contracts or to measure the performance of investment funds (the "Benchmark Regulation").

Specifically with respect to interbank rates, the competent authorities have identified "risk-free rates" to be used as the main reference rates, including (i) for the Sterling LIBOR, a reformed version of the "Sterling Overnight Index Average" ("SONIA") index, establishing the SONIA as the primary reference of the sterling interest rate by the end of 2021, (ii) for EONIA and EURIBOR, a new short-term rate in euros (ESTER) as a new risk-free rate for the euro (replacing EONIA), and (iii) for USD LIBOR, the Secured Overnight Financing Rate (SOFR), established as the main reference for the US dollar interest rate. The risk-free rates have a different methodology and other significant differences compared to the interbank rates they are replacing and have little, if any, past data. Ongoing international and/or national reform initiatives and increased regulatory oversight of benchmarks could generally increase the costs and risks associated with administering or participating in the establishment of a benchmark and compliance with any applicable regulations or requirements. These factors may dissuade market participants from continuing to administer or contribute to benchmarks, trigger changes in the rules or methodologies used in benchmarks and/or lead to the discontinuation of benchmarks, including EURIBOR and LIBOR. This could result in a change in the benchmark or other consequences for the Sub-Fund, such as delisting or liquidation. Such a consequence could have an effect on the net asset value of the Sub-Fund and/or the calculation of the performance fees of the Sub-Fund, which cannot be valued at this time.

Sustainability risks

The Sub-Fund does not incorporate sustainability factors in the investment decision process, but is exposed to sustainability risks. The occurrence of such risks could have a negative impact on the value of the investments made by the Sub-Fund. Additional information is available in the "Sustainability Information" section of the Prospectus.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

Investors who subscribe to this Sub-Fund wish to gain exposure to the eurozone money market.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. For

To determine this amount, investors must take into account their personal wealth and/or estate, cash requirements at the present and for five years, as well as their desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment term is greater than one year. This minimum period must be assessed in particular in light of the quotation ranges of listings, brokerage fees and any stock exchange taxes borne by the investor.

“U.S. Persons” (as defined below - see “COMMERCIAL INFORMATION”) may not invest in the Sub-Fund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

activity report

The fund replicates the performance of the CAC40 Short Index EUR (Ticker:CACSH).

Performance trend at the closing date:

Share name	ISIN	Share currency	Performance from 28/02/19 to 31/10/19			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor Euro Overnight Return UCITS ETF - Acc	FR0010510800	EUR	-0.69% ⁽¹⁾	-0.48%		3.40%

⁽¹⁾ "The difference between the yearly performance of the fund and that of its Benchmark Index is due to:

- the management and the administrative fees;
- index replication costs (for example the index rebalancing cost);
- - taxation incurred in relation to the methodology used in the Benchmark Index»

The tracking error realised is 0.0000%. The target tracking error over the period was 0.2%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

Index Linked Swap's counterparty is: Société Générale.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

This Fund is covered by Article 6 of Regulation (EU) 2019/2088 (the "SFDR Regulation"). It does not promote environmental and/or social characteristics and does not aim to invest sustainably

Transparency of environmentally sustainable investments in periodic reports under Regulation (EU) 2020/852

Regulation (EU) 2020/852 on the establishment of a framework for promoting sustainable investments (the "Taxonomy Regulation") sets out the criteria for determining whether an economic activity is environmentally sustainable in the European Union.

According to the Taxonomy Regulation, an activity can be considered "sustainable" if it contributes substantially to one of the 6 environmental objectives set out in the Taxonomy Regulation, including climate change mitigation and adaptation, pollution prevention and reduction, or the protection and restoration of biodiversity and ecosystems.

In addition, in order to be considered sustainable, this economic activity must respect the principle of "not causing significant harm" to one of the other five objectives of the Taxonomy Regulation and must also comply with basic social criteria (alignment with OECD and UN guidelines on business and human rights).

In accordance with article 7 of the Taxonomy Regulation, the management company draws investors' attention to the fact that the underlying investments of this Fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Provision of environmental, social and governance (ESG) information - in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organisation to integrate Environmental, Social, and Governance ("ESG") issues into our investment solutions. Lyxor's SRI Policy is available under the website [Lyxor.com](https://www.lyxor.com) and is revised each

Integration of sustainability risks by Lyxor in its investment decision-making processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

(a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

To the basket of assets held by the fund, the fund applies an exclusion of issuers associated with serious and repeated violations of the Principles of the United Nations Global Compact and regulatory requirements related to controversial sectors and products. This list is supplemented by a list of companies to be excluded due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological chemical, nuclear or radiological weapons, etc.).

b) Information used for the analysis implemented on ESG criteria

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (in connection with Lyxor's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets (PME/ETI).
- In the global context of the Societe Generale Group's Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defence policy,
- In the global context of the Societe Generale Group's Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution.

The post trade control is on NAV frequency basis.

Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the [Lyxor.com](https://www.lyxor.com) website.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

Measuring the GHG emissions of its investments is seen as a first step. This will give investors an indication of their financed issues.

After carefully analysing the available indicators and data in order to take into account and measure the transition risks that climate change poses to issuers, LYXOR will not report on these issues at this stage. We will work with our external suppliers to enhance our expertise to report and reflect the transition risk in the years to come.

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des marchés financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 ("AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 ("UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management compensation policy notably ensures appropriate risk management and adherence to compliance on the part of its employees.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No "carried interest" was paid during the financial year.

Lyxor's best selection and execution policy

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information, in the evolving context of the Covid-19 crisis.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued;
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities in undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Sub-Fund's net asset value.
- Units and shares of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

- The exchange rates used for the valuation of financial instruments listed in a currency other than the Sub-Fund's reference currency are the exchange rates published the WM Reuters fixing on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the CIS) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Sub-Fund) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions, these commissions reward the delegated financial manager when the Compartment has exceeded its objectives and are invoiced to the Compartment;
- Transfer commissions invoiced to the Sub-Fund.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	maximum 0.15% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commission	Net assets	None

(1) Including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Accounting currency

The Sub-Fund accounting is carried out in Euro.

Indication of accountancy changes declared to each of the shareholders individually

- - Occurred change: None.
- - Future change: None.

Other changes declared to each of the shareholders individually *(Not certified by the auditor)*

- - Occurred change: None.
- - Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Acc share class: Capitalisation of all the amounts available for distribution.

Lyxor Euro Overnight Return UCITS ETF is a French sub-fund approved by the French Financial Markets Authority. The prospectus of the Sub-Fund is available on the website www.lyxoretf.com or upon request from the Management Company.

The Sub-Fund does not benefit in any way from sponsorship, support, promotion and is not sold by Solactive AG. Solactive AG makes no warranties or undertakings, either expressly or implicitly, or as to the results to be obtained by using the Benchmark and/or the Benchmark's trademark or the level at which the Benchmark is located at a given time and on a given day or any other type. The Benchmark Index is calculated and published by Solactive AG. Solactive AG makes every effort to ensure that the Benchmark is correctly calculated. Regardless of its obligations towards the issuer, Solactive AG is under no obligation to report errors affecting the Benchmark to third parties, including the investors or financial intermediaries of the Sub-Fund. Neither the publication of the Benchmark Index by Solactive AG nor the license of the Benchmark or its trademark in connection with the Sub-Fund constitutes a recommendation by Solactive AG to invest in the shares of the Sub-Fund and under no circumstances represents a guarantee or an opinion of Solactive AG of an investment in the shares of the Sub-Fund. Solactive AG shall not be liable for the consequences of any opinions or opinions arising from this statement or any omission.

Net asset value	103.4032	104.1236	104.8294	105.4469	106.0599
Unit distribution on net capital gains and losses (including advances)	-	-	-	-	-
Unit distribution (including advances)	-	-	-	-	-
Unit tax credit transferred to holders (natural persons) ⁽¹⁾	-	-	-	-	-
Capitalisation unit ⁽²⁾	1.67	-0.02	1.13	-0.39	-1.62

(1) In pursuant to the Fiscal Instruction of 4 March 1993 of the French Tax Department, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits between the circulating units on that date.

(2) The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of outstanding units. This calculation method is applied from 1 January 2013.

Compartment creation date: 06 September 2018.

4 Inventory as of 29.10.2021

Acc share class: Capitalisation of all the amounts available for distribution.

Management objective:

The Compartment is a passively managed index-based UCITS.

The management objective of this Compartment is to replicate the upward or downward evolution of the MSCI ACWI IMI Water ESG Filtered Net Total Return index (the "Benchmark Indicator"), listed in US Dollars (USD), while insofar as possible minimizing the tracking error between the Compartment's performances and those of the Benchmark Indicator.

The Benchmark Indicator aims to represent the performance of securities whose activities are linked to the water theme such as water distribution, utilities and the supply of water-related equipment and water treatment. It excludes companies with an environmental, social and governance ("ESG") lag compared to the theme universe, based on an ESG score.

The Compartment promotes environmental and/or social characteristics within the meaning of Article 8 of the SFDR.

The maximum anticipated level of the ex-post tracking error under normal market conditions is 2%.

Benchmark indicator:

The Benchmark Indicator is the MSCI ACWI IMI Water ESG Filtered Net Total Return index (net dividends reinvested, which means that the Benchmark Indicator's performance includes the net dividends paid by its underlying equities).

The Benchmark Indicator is an equity index calculated and published by the constructor of international MSCI indices. Its characteristics are as follows:

- An investment universe identical to that of the MSCI ACWI Investable Market Index (IMI) (the "Parent Index"), including equities of large, mid- and small-cap companies in developed and emerging countries.

b) The Benchmark indicator selects companies in the Parent Index whose analysis reveals high exposure to activities such as water distribution, water utilities, water treatment or the supply of water-related equipment, including:

- All companies in the GICS Water Utility sub-sector,
- Companies for which the "relevance score" of their activity relative to the water theme (as defined by MSCI) is greater than 25% (or 75%, depending on the company's sector of activity), and
- Companies with sustainable water revenues greater than 15% of their total income. (the "Selected Universe")

C) The following is then applied to the companies of the Selected Universe:

- A negative ESG filter, which excludes:
 - Companies involved in controversial business activities such as controversial weapons, conventional weapons, nuclear weapons, civilian firearms, tobacco, thermal coal or oil sands, or which do not comply with the UN Global Compact.
 - Companies involved in serious ESG controversies, as determined by MSCI's ESG Controversies Score.
 - Companies non-aligned or highly unaligned with the following United Nations Sustainable Development Goals (SDGs) (as part of the MSCI Impact Solutions' SDG Alignment Framework): SDG 6 (Proprietary Water and Sanitation), SDG 13 (Measures relating to the fight against climate warming) or SDG 14 (Aquatic Life).
 - Companies without an ESG rating or ESG controversy score (as defined by MSCI).
 - Geographic and sectoral filters.

d) A "Screened Universe" is then determined:

- By following a "best-in-class" approach to favouring the best-rated companies from a non-financial point of view within their sector of activity by excluding companies in the lower quartile determined by an industry-adjusted ESG rating (as defined by MSCI). The MSCI ESG scoring methodology uses a rules-based methodology designed to measure a company's resilience to material long-term ESG risks in its sector. It is based on non-financial ESG criteria that focus on the cross-checking between a company's core business and sector-specific issues that could generate significant risks and opportunities for the company. The main ESG issues are weighted according to the impact and time horizon of the risk or opportunity. ESG criteria include, but are not limited to, water stress, carbon emissions, employee management and company ethics. The Compartment therefore follows a strong commitment-based non-financial approach that reduces the initial investment universe by at least 20% (expressed in number of issuers). The limitations of the non-financial approach are mentioned in the "Risk Profile" section below. Non-financial data covers more than 90% of eligible equities in the Parent Index. Non-ESG-rated companies are excluded from the index selection process;
- By applying a liquidity filter is applied to the filtered Universe; and
- By excluding companies that do not have revenues related to the sustainable water theme.

e) The index weights companies in the Filtered Universe according to the MSCI Adaptive Capped Index methodology (as defined by MSCI) and adjusts them taking into account maximum exposure criteria.

f) An iterative downweighting ensures that the carbon intensity and the weighted average of the independence score of the board of directors of the Benchmark Index are respectively lower and higher than those of the MSCI ACWI IMI Water Index.

The environmental and/or social characteristics promoted by the Compartment are implemented by the MSCI ESG rating methodology (as described above).

For more information on the general and specific environmental, social and governance (ESG) objectives targeted by the Compartment, please refer to the Compartment's Transparency Code available at <https://www.lyxoretf.com/>.

The Benchmark Indicator is a net total return index. A net total return index measures the performance of the index constituents on the basis that any dividends or distributions are included in the index returns after withholding tax.

The method of constructing the Benchmark Indicator (including the rules governing its re-weighting and updating its composition) can be found on the MSCI website at: www.msci.com

Benchmark indicator revision and composition

The Benchmark Indicator is reviewed every six months in May and November in order to coincide with the half-yearly revisions of the Parent Index on the same dates. The changes are implemented at the end of May and November.

The Eligible Universe and the Selected Universe are updated during the biannual review of the Benchmark Indicator.

The exact composition and revision rules of the Benchmark Indicator are available on the MSCI website: www.msci.com

The above-mentioned frequency of rebalancing has no effect on costs in the implementation of the investment strategy.

Benchmark indicator publication

The Benchmark Indicator is calculated on a daily basis using the official closing stock market prices for the constituent stocks. The Benchmark Indicator is also calculated in real time each trading day.

The closing price of the Benchmark Indicator is available on the website: www.msci.com.

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Euronext administrator of the Benchmark Index is included in the register of administrators and benchmark indices maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a benchmark monitoring procedure.

Investment strategy:

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009. In order to seek the highest possible correlation with the performance of the Benchmark, the Sub-Fund will achieve its management objective via a direct replication method, which means that the Sub-Fund will invest in a basket of assets comprising the Benchmark Index and/or financial instruments representative of all or part of the securities comprising the Benchmark Index.

In addition, the sub-fund may use forward financial instruments ("FFIs"). Futures in which the sub-fund is likely to invest include contracts such as index futures, futures on all or part of the Benchmark Index components, and hedging swaps entered into to minimise the Sub-Fund's tracking error.

When pursuant to its investment strategy (e.g. use of futures) the Sub-Fund is required to hold cash, the manager in the best interest of the unitholders may use deposits with credit institutions, and or invest cash in balance sheet assets and/or off-balance sheet assets (as described below).

As part of the optimisation of the Benchmark's direct replication method, the Sub-Fund, represented by its delegated financial manager, may decide to use a so-called "sampling" technique consisting of investing in a selection of representative securities comprising the Benchmark, with the aim of limiting the costs associated with investing in the different components of the Benchmark. A sampling replication strategy could notably lead the Sub-Fund to invest in a selection of representative securities (and not all securities) comprising the Benchmark, in proportions different from those of the Benchmark Index or even to invest in securities other than the Benchmark Index components.

The Compartment also reserves the right, particularly with the aim of gaining exposure to securities traded on emerging markets included in the Benchmark Indicator, access to which may be particularly costly and/or complex, to have recourse to financial instruments such as debt instruments or over-the-counter FFIs, including swaps, futures and CFDs.

To ensure that investors can benefit from transparency with regard to the direct replication method used (full replication of the Benchmark Index, or sampling to limit replication costs) and to its consequences in terms of assets held by the Compartment, information on the updated composition of the basket of balance sheet assets held in the Compartment's portfolio is available on the Compartment's dedicated page on the website www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

As part of the management of its exposure, the Sub-Fund may be exposed up to 20 % of its assets in equities from a single issuing entity. This 20% limit may be increased to 35% for a single issuing entity, when this proves to be justified by exceptional market conditions, particularly when certain securities are largely dominant and/or in the event of high volatility of a financial instrument or securities linked to an economic sector represented in the Benchmark Index, in particular in the event of a public offering affecting one of the securities making up the Benchmark Index or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Index.

In this case, the manager intends to use mainly the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Sub-Fund will mainly be invested in the securities described below:

- Equities

The Sub-Fund will be mainly invested in the shares comprising the Benchmark Index.

- Ownership of shares or units of other UCIs or investment funds

The Sub-Fund may invest up to 10% of its assets in units or shares of the following CIS or investment funds:

- French or foreign UCITS compliant with Directive 2009/65/EC - For the purposes of these investments, the Sub-Fund may subscribe for units or shares in UCITS managed by the Management Company or a company to which it is linked.

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership. As part of the future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Sub-Fund may invest in the following FFIs:

- Nature of the intervention markets:
 - regulated
 - organised
 - over-the-counter
- Risks in which the Compartment wishes to trade:
 - Equities
- Types of transactions, all transactions must be limited to achieving the management objective:
 - hedging
 - exposure
- Type of instruments used:
 - futures: on equities and indices
 - total return swap: on equities and indices (see proportions indicated below);
 - forward exchange contracts
- Strategy for using derivatives to achieve the investment objective:
 - General hedging of the portfolio, certain risks, securities, etc. - up to 100% of assets
 - reconstitution of synthetic exposure to assets and risks - up to 100% of assets

The counterparties of OTC derivatives processed by the Sub-Fund will be selected in accordance with the Management Company's best execution policies (including the execution matrix by asset type mentioned in the Appendix). The above-mentioned policy can be accessed at the following address: <https://www.lyxor.com/politique-de-meilleure-execution-liam-janvier-2020-fr>

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 10% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 0% of the assets under management.

The counterparty of the aforesaid future financial instruments will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments within the limit and under the conditions provided by regulations.

Situations of conflict of interest may arise between the Management Company and Société Générale when Société Générale acts as a counterparty to FFIs. These situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted. Where the Sub-Fund enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

4. Securities with integrated derivatives

- Risks in which the manager wishes to trade:
 - Equities
- Types of operations, all transactions being limited to achieving the management objective:
 - exposure
 - other type (to be specified)

• Type of instruments used:

- EMTN

• Strategy for using embedded derivatives to achieve the investment objective: derivatives will be used on an ancillary basis (up to a maximum of 10% of net assets).

5. Deposits

Up to a maximum of 20% of its net assets, the Sub-Fund can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10 % of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of temporary purchases and sales of securities and over-the-counter swap contracts, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized. Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20 % of the Sub-Fund's net asset value;
- (e) The Sub-Fund's Management Company must be able to realise this collateral in full and at any time without having to consult with the counterparty or obtain its approval.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and
- Such financial guarantees consist of at least six different issues of which none exceeds 30% of the Sub-Fund's assets.

In compliance with the aforesaid conditions, the guarantees received by the Sub-Fund can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e)(above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points
- (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;

- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Sub-Fund's management company will apply a margin to the financial guarantees received by the Sub-Fund. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged. Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Compartment may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

Counterparty selection policy

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (financial futures and temporary acquisitions and disposals of securities) on behalf of the Mutual Fund. The selection of counterparties for financial contracts and financial intermediaries is performed rigorously from among the reputable counterparties and intermediaries in the market, on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes various criteria into consideration to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating;
- Quantitative criteria based on the CDS LT spread (absolute criteria, volatility and comparison with a reference group, etc.).

Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: www.lyxor.com, section "regulatory information".

Risk profile:

The shareholder's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Equity risk

An equity price can vary upwards or downwards, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

- Risk related to low diversification of the Benchmark Indicator

The Benchmark Indicator to which the investors are exposed covers a given region, sector or strategy and therefore does not necessarily allow for as broad a diversification of the assets as would be the case of an index that is exposed to several regions, sectors or strategies. The exposure to such an index with such low diversification can result in greater volatility than in more diversified markets. Nevertheless, the diversification rules resulting from the UCITS standards always apply to the Compartment's underlyings.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

If, when the Compartment (or one of its counterparties for future financial instrument ("FFI")) adjusts its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase/sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Risks arising from a lack of perfect replication

Replicating the Benchmark by investing in all components of the Benchmark can be costly or very difficult to operate. The Sub-Fund's manager may also use optimisation techniques, in particular the sampling technique, which consists in investing in a selection of representative securities (and not all securities) comprising the Benchmark, in proportions different from those of the Benchmark Index or even investing in securities other than the components of the index or financial futures. The use of these optimisation techniques may lead to an increase in the ex-post tracking error and will notably lead to different performances between the Sub-Fund and the Benchmark Indicator.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Sub-Fund's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) trading in the market(s) in the Benchmark's underlying assets is suspended, and/or
- iii) the impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or
- iv) a market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Sub-Fund is exposed in particular to counterparty risk as a result of its use of over-the-counter financial contracts ("OTC Derivatives") and/or efficient portfolio management techniques ("EPMT"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

- Risk related to the use of effective portfolio management techniques

In the event that the counterparty to the efficient portfolio management technique (hereinafter referred to as the "EPMT") processed by the Sub-Fund fails to provide the counterparty, the Sub-Fund may be exposed to a risk in the event that the value of the guarantees received by the MF is lower than the value of the assets of the MF transferred to the counterparty under the EPMT in question. This risk could materialise in particular in the event of (i) a poor valuation of the securities subject to this transaction and/or (ii) adverse market movements and/or (iii) a deterioration in the credit rating of issuers of securities received as collateral and/or (iv) illiquidity of the market on which the collateral received is admitted to listing. Unitholders should note that (i) EPMTs may be entered into with Societe Generale (entity of the same group as the Management Company) and/or (ii) that Societe Generale may be appointed as agent of the Subfund under the EPMTs.

- Risks related to the management of guarantees

• Operational risk:

The Compartment may bear risks of direct or indirect losses as a result of operational risk linked to the conclusion of any contract or errors of the various players involved in the management of collateral in securities financing transactions and/or total return swaps (TRS) and/or transactions. This risk arises only in the context of the management of guarantees for securities financing transactions and total return swaps as referred to in Regulation (EU) 2015/2365.

• Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

The Compartment may use over-the-counter forward Financial Instruments ("FFIs") or listed FFIs, in particular futures contracts and/or hedging swaps. These FFIs can result in a series of risks on the level of the contract that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Index, risk related to the tax regime, risk related to the regulations, and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI contract, which could affect the Sub-Fund's net asset value.

Investing in futures may involve a high level of risk. The amount required to trade certain FFIs is potentially much lower than the exposure obtained through these instruments, which implies a "leverage" at the level of each transaction. A relatively limited market movement would then have a proportionately very high impact, which could be favourable or unfavourable to the Fund.

The market value of forward financial instruments is highly volatile and may therefore be subject to significant fluctuations.

The Sub-Fund may use OTC futures. Over-the-counter transactions may be less liquid than transactions traded on organised markets, where trading volumes are generally higher, and their prices may be more volatile.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Index" are understood to mean the following situations:

- i) the Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) the Benchmark Indicator is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Index,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Index (other than a minor modification such as the adjustment of the underlyings of this Benchmark Index or of the respective weightings between its various components), that cannot be effectively replicated by the Sub-Fund at a reasonable cost.
- v) one or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) the Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Index undertake an unanticipated review of a corporate action ("CA"), that contradicts a prior and official announcement that had resulted in a valuation of the CA by the Sub-Fund (and/or in a valuation of the CA by the Sub-Fund's counterparty in a future financial instrument), the Sub-Fund's net asset value may be affected, notably should the actual treatment of the CA by the Sub-Fund differ from the CA's treatment in the methodology used by the Benchmark Index.

- Exchange risk linked to the Benchmark Indicator

The Compartment is exposed to an exchange risk to the extent that the underlying securities making up the Benchmark Indicator could be listed in a currency other than that of the Benchmark Indicator, or be derivatives of securities listed in a currency other than that of the Benchmark Indicator. Fluctuating exchange rates are then likely to negatively affect the Benchmark Indicator monitored by the Compartment.

- Sustainability risks

In the context of sustainability risk management, the Management Company relies on the administrator of the Benchmark Indicator, whose methodology incorporates sustainability risks as a result of investing in shares issued by companies generating a portion of their revenues in activities considered to promote the ecological transition. Such integration has a direct impact on the Benchmark Indicator's investment universe. However, there is no guarantee that sustainability risks will be fully neutralised and the occurrence of such risks could have a negative impact on the value of the assets included in the Benchmark Indicator. For more information on the Benchmark Indicator's methodology, please refer to the website: <https://www.sgindex.com>. Additional information is also available in the "Sustainability Information" section of the Prospectus.

- Risk linked to the sustainability of the investment

The Benchmark Indicator's methodology does not guarantee the sustainability of the investment made. It selects equities issued by companies with more than 40% of their turnover in the three business sectors mentioned in the "Benchmark Indicator" section below, comprising activities considered to favour the ecological transition.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

The investor who subscribes to this Compartment wishes to gain exposure to the equity market of companies whose main source of income is activities relating to the water businesses (infrastructure, products and equipment for water reprocessing, distribution and management of water hydraulic systems).

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers. The minimum recommended investment term is greater than 5 years.

U.S. Persons (as defined in the prospectus - see "COMMERCIAL INFORMATION") may not invest in the Sub-Fund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- the management and the administrative fees;
- index replication costs (for example the index rebalancing cost);
- taxation incurred in relation to the methodology used in the Benchmark;
- possible use by the manager of sampling or advanced index management techniques;

⁽²⁾ "Since the Share Class NAV is not calculated in the Index currency, the share class may be exposed to currency risk.

The calculation methodology for the Foreign Exchange rate during the period is share currency/ index currency."

⁽³⁾ "Where the Benchmark Indicator is denominated in a currency other than that of the Unit, the performance of the Benchmark Indicator is first converted into the currency of the Unit for

the sake of clarity and comparison. For this purpose, a foreign exchange transaction (at the WM Reuters 5:00 p.m. rate on the relevant day) is applied daily to the value of the Benchmark Indicator."

The tracking error realised is 0.2585%. The target tracking error over the period was 1%.

Until 26/10/21 the Fund's benchmark index was World Water Total Return Index CW, from 27/10/2021 the benchmark index is MSCI ACWI IMI Water ESG Filtered Net USD Index.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

Lyxor MSCI Water ESG Filtered (DR) UCITS ETF (compartment of the Multi Units France Sicav)

Transparency of sustainable investments in periodic reports

Pursuant to Article 11 of Regulation (EU) 2019/2088 on the publication of sustainability information in the financial services sector (the "SFDR Regulation"), the overall sustainability impact of the financial product is described using the following sustainability indicators:

Indicator	Portfolio				Parent Index			
	October 2021		October 2020		October 2021		October 2020	
	Measuremen t of the indicator	% indicator coverage	Measureme nt of the indicator	% indicator coverage	Measureme nt of the indicator	% indicator coverage	Measureme nt of the indicator	% indicator coverage
Sustainable Water	16.6%	100%	14.3%	100%	11.4%	100%		
% independent members on the Board of Directors	82.0%	100%	77.6%	100%	78.9%	79%		
Carbon intensities weighted average (Scope 1&2) tCo2e	251.1	100%	121.0	100%	382.9	100%		
% of women on the Board of Directors	33.4%	100%	31.9%	100.0%	30.9%	98%		
Human rights concerns		100%				98%		
- Compliance	100.0%				98.0%			
- Non-compliance	0.0%				0.0%			
- Watch list	0.0%				0.0%			
Controversies on human capital issues		100%				98%		
- No concerns	100.0%				100.0%			
- Minor	0.0%				0.0%			
- Moderate	0.0%				0.0%			
- Serious	0.0%				0.0%			
- Very serious	0.0%				0.0%			

Weighted carbon intensity (TCO2e / \$m in sales)

This indicator is a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Serious and Very Serious Controversies regarding Human Capital issues

This indicator measures the seriousness of controversies related to the impact of a company's activities on human rights. Factors influencing this assessment include, but are not limited to, a history of involvement in human rights legal matters, widespread or flagrant complicity in murders, physical abuse or violation of other rights, resistance to improved practices, and criticisms of NGOs and/or other third party observers.

Assessment of Human Rights Concerns

This factor indicates whether the company is in compliance with the United Nations Guiding Principles for Business and Human Rights. The possible values are Fail, Watch List, or Pass.

Percentage of women on the Board of Directors

Percentage of the company's board members who are women. For companies with a two-tier board of directors, the calculation is based solely on the members of the Supervisory Board.

Percentage of independent members on the Board of Directors

The percentage of board members who meet the independence criteria defined by MSCI. These criteria consider a paid member or employee to pay the company (or former employee regardless of seniority), a family member or any person who has a close relationship with one of the executive members as non-independent. For companies with a two-tier board of directors, the calculation is based solely on the members of the Supervisory Board.

Contribution to Environmental Solutions - Sustainable Water

This indicator aims to measure the portfolio's exposure to issuers with revenues devoted to environmental solutions. It reflects the share of the company's revenues exposed to products and services that help address the world's major environmental challenges. It is calculated as the product of the issuer's weight in the portfolio or index and that of the percentage of revenues of each issuer generated in environmental and sustainable solutions.

Sustainable water is one of the themes of "natural capital". This includes products, services, infrastructure projects and technologies that address water shortage and water quality issues by minimizing and monitoring current water demand, improving the quality and availability of water supply to improve resource management both domestic and industrial.

Transparency of environmentally sustainable investments in periodic reports

The Fund promotes environmental characteristics within the meaning of Article 6 of Regulation (EU) 2020/852 on the establishment of a framework for sustainable investments (the "Taxonomy Regulation").

The objective of the European Union Taxonomy Regulation is to identify economic activities considered environmentally sustainable ("Sustainable Activities").

The Taxonomy Regulation identifies these activities according to their contribution to six major environmental objectives: (i) climate change mitigation, (ii) climate change adaptation, (iii) sustainable use and protection of water and marine resources, (iv) transition to the circular economy (waste, prevention and recycling), (v) pollution prevention and control, and (vi) protection of healthy ecosystems.

In order to be considered to be sustainable, an economic activity must demonstrate that it contributes substantially to one or more of the six objectives, that it does not cause material harm to any of these objectives (principle known as "DNSH", "Do No Significant Harm") and that it is carried out in accordance with the minimum safeguards provided for in Article 18 of the Taxonomy Regulation. The DNSH principle applies only to investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities.

The Fund may invest partially in economic activities that contribute to the following environmental objectives: climate change mitigation and adaptation to climate change.

While the Fund may already hold investments in Sustainable Activities without being committed to compliance with a minimum investment share, the management company shall make its best efforts to ensure that this minimum share of the investments underlying the financial product made in Sustainable Activities is available as soon as reasonably possible after the entry into force of the regulatory technical standards related to the content and presentation of the information to be provided in accordance with Articles 8(4), 9(6) and 11(5) of Regulation (EU) 2019/2088 as amended by the Regulation (Regulatory Technical Standards with regard to the content and presentation of disclosures pursuant to Article 8(4), 9(6) and 11(5) of Regulation (EU) 2019/2088 as amended by the Taxonomy Regulation).

As data is available and calculation methodologies developed, the description of the extent to which the underlying investments are made in Sustainable Activities will be made available to investors. This information, as well as information relating to the proportion of enabling and transitional activities, will be included in a future version of the prospectus.

This commitment will be achieved gradually and on an ongoing basis by engaging in discussions with the index administrator to ensure that the latter integrates the requirements of the Taxonomy Regulation into the index methodology as soon as reasonably practicable. This will lead to a minimum degree of alignment of the portfolio with the Sustainable Activities that will be made available to investors at this time.

In the meantime, the degree of alignment of the portfolio with Sustainable Activities will not be available from investors.

If you have any questions, please contact the management company at the following address: client-services-ef@lyxor.com.

The management company draws investors' attention to the fact that the investments underlying the remaining portion of this financial product do not take into account the European Union's criteria for environmentally sustainable economic activities.

Lyxor MSCI Water ESG Filtered (DR) UCITS ETF (compartment of the Multi Units France Sicav)

Provision of environmental, social and governance (ESG) information - in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The Fund promotes environmental and/or social characteristics within the meaning of Article 8 of Regulation (EU) 2019/2088 (SFDR).

Environmental and/or social characteristics promoted by the Fund are met through the investment process. For further information in relation such characteristics, please refer to the prospectus of the Fund.

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

(a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

- French, German & Luxembourgish Funds (Fonds Communs de Placement - FCP) and SICAV (*)
- Securities of issuers domiciled in Europe: in order to prevent excessive costs inherent in the voting process, Lyxor participates in general meetings when the consolidated holding represents more than 0.10% of the company's capital
- Securities of issuers domiciled in the United States: Lyxor will exercise its right to vote on its largest consolidated holdings
- Securities of issuers domiciled in Japan: Lyxor will exercise its right to vote on its largest consolidated holdings

(*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership.

In terms of engagement, Lyxor has defined an engagement policy that is structured around three axes: an engagement related to general meetings, an engagement related to environmental, social and/or governance issues, and an engagement related to climate. This third axis comprises four engagement campaigns:

- The first campaign related to the Climate Action 100+ initiative, committing Lyxor to ask companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosure) recommendations.
- The second campaign related to plastics and the circular economy.
- The third campaign related to localized water management.
- The fourth campaign related to responsible cleantech.

This fund is part of the following campaigns: Climate Action 100+, Corporate Governance, ESG, General meeting, Localized Water Management

Sustainability themed investments inherently contribute to addressing social and/or environmental challenges such as climate change, eco-efficiency and health.

For equity funds: the companies are eligible if their share of sales from the sector of activity is above a certain threshold, or if they are in a dominant position on the market in question.

For ETF funds which aim to track the benchmark index, the description of the ESG approach above applies to the Benchmark Index.

The fund applies on the financial exposure an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs, depleted uranium weapons).

LYXOR also excludes companies involved in activities or sectors deemed as controversial and/or having the majority of their income from sector with important ESG risk (weapons, gambling, tobacco, nuclear, coal...).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group's Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defence policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

For ETF funds with a Sustainable Themed Investment approach :

The Lyxor ETF aims to track its benchmark Index.

The index is designed by an index provider and potentially with an advisor for ESG input data.(such as Robeco SAM, Equileap, CBI, ...)

Details of the index methodology may be found on index provider website.

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution.

The post trade control is on NAV frequency basis.

Lyxor MSCI Water ESG Filtered (DR) UCITS ETF (compartment of the Multi Units France Sicav)

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website Lyxor.com

Active Ownership - Operational set up:

In addition to the internal analysis carried out, Lyxor uses the services of ISS (Institutional Shareholder Services), as a proxy advisor.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

Engagement policy:

To carry out its engagement campaigns, Lyxor can:

organize one-on-one meetings with management, board members, investor relations, sustainable development teams or any person within the company who can provide answers to the issue;

partner with other management companies to gain greater leverage with targeted companies; (iii) join working groups or initiatives specializing in certain areas.

Description of how the results of the analysis on ESG issues are integrated in investment policies

The exclusion described above is applied to the financial exposure of the fund.

In terms of engagement, the details are presented below.

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

The Lyxor Green Bonds (DR) UCITS ETF is invested in Green bonds which are fixed income securities whose proceeds are solely dedicated to the financing of eligible green projects focused on climate mitigation or adaptation efforts.

The Lyxor world water UCITS ETF aims to reproduce the performance of the index which consists of the 20 largest companies in the fields of water utilities, water infrastructure and water treatment.

The Lyxor new energy UCITS ETF aims to track the benchmark index which reflects the 20 largest stocks operating in the world alternative energy sector in the fields of solar, wind and biomass, the better use of energy generation such as energy meters and supra-conductors, power generation in close proximity to the consumer involving micro-turbines and fuel cells.

The LYXOR ETF Gender aims to track the evolution of an index which lists the most advanced companies in terms of gender equality in management and production functions as well as in terms of remuneration, work-life balance, internal policies, transparency and accountability, among others.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint

•Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

•Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions:

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuers in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Lyxor MSCI Water ESG Filtered (DR) UCITS ETF (compartment of the Multi Units France Sicav)

For each issuer (Corporate & Government), ESG Industry sector classification is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The ESG score calculated at the portfolio level measures the capacity of the underlying issuers to manage the risks and key opportunities associated with environmental, social and governance factors. The risk scale ranges from 0 (high risk) to 10 (low risk). Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: employment, social relations, health and safety, training, compliance with ILO conventions
- Governance: Board of Directors or Supervisory Board, Audit and Internal Control, Executive Compensation

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source: The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Measures the portfolio's exposure to companies experiencing controversies relating to their compliance with international standards as a function of their degree of severity:

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: indicates that the company is not involved in any major controversies
- None: Sovereign and/or Company not covered

Red Flag 0%
Orange Flag 0%
Yellow Flag 0%
Green Flag 100%

Lyxor MSCI Water ESG Filtered (DR) UCITS ETF (compartment of the Multi Units France Sicav)

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2021

Carbon Emissions (tons CO2e/\$M invested)	Carbon Intensity (tons CO2e/\$M sales)	Weighted Average Carbon Intensity (tons CO2e/\$M sales)	Portfolio rated by weight	100%
107	301	251	Scope 1 reported (vs estimated)	94%
			Scope 2 reported (vs estimated)	76%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GreenHouse Gas Protocol (GHG Protocol) was launched in 2001 by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: direct emissions resulting from the burning of fossil fuel resources owned or controlled by the company.
- Scope 2: indirect emissions related to the purchase or production of electricity.
- Scope 3: other indirect emissions from the extended supply chain to the transport of goods and persons.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio invested in both equities and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest - total debt.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage or MWh generated from fossil fuels or the portion of the company's revenues earned from fossil fuels or the portion of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

Weight of the portfolio rated in Carbon:	
Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gaz	0%
Oil	0%

These metrics include only corporate issuers rated in Carbon.

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of : \$ 1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

Lyxor MSCI Water ESG Filtered (DR) UCITS ETF (compartment of the Multi Units France Sicav)

Stranded Assets: High Impact Fossil Fuel Reserves

	tCO2e/\$M Invested	
Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges - this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.	Thermal Coal	0.0
	Oil Sands	0.0
	Shale Oil or Shale Gas	0.0
With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.	Sum of high-impact fossil fuel reserves	0.0
	Other	0.0

These metrics include only corporate issuers rated in Carbon.

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Carbon reduction objectives
Aggressive efforts	0.3%	0.0%	14.1%
Some efforts	80.0%	89.2%	38.3%
Limited efforts/Information	10.3%	10.1%	12.5%
No effort/No evidence	9.4%	0.7%	35.1%

Low Carbon Transition Score

The Low Carbon Transition Score⁽¹⁾ uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
 - Operational Transition: risk of increase in operational costs
 - Product Transition: risk of a decrease in demand for high-carbon products and services
 - Neutral: low exposure to transition risks
 - Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low- carbon products.
- (1) Metric developed by MSCI

Low carbon transition score	6.1
Low carbon transition management Score	5.5
Operational Transition	17.7%
Product Transition	17.7%
Neutral	71.3%
Solutions	5.4%

Energy Mix of energy producers within the portfolio

A company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The issuer data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source: MSCI ESG Research

Share of issuers in terms of power generation in portfolio	13.3%
--	-------

Power generation by fuel as maximum percentage of total (rebased at 100%)				
Hydro	Liquid Fuel	Natural Gas	Nuclear	Renewables
90.1%	Thermal Coal	9.9%		

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. Those issuers are likely to benefit from a low carbon transition

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with revenue dedicated to environmental solutions of between:	
0-19.9%	51%
20-49.9%	27%
50-100%	13%

Weight of Companies Offering Clean Technology Solutions			
Alternative energy	44.9%	Energy Efficiency	20.2%
Pollution prevention	45.0%	Sustainable Water	98.1%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

These metrics include only corporate issuers rated in Carbon.					
Environmental Solutions Contribution					
Alternative energy	2.4%	Energy Efficiency	0.7%	Green Building	0.0%
Pollution Prevention	3.7%	Sustainable Water	16.6%	Sustainable Agriculture	0.0%

Lyxor MSCI Water ESG Filtered (DR) UCITS ETF (compartment of the Multi Units France Sicav)

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

% estimated EU Taxo 23.4%

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 0

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators. The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

SeaLevelRise	3%
Coldwave	26%
Flood	5%
Heatwave	7%
Hurricane	6%
Water Stress	39%
Wildfire	13%

To allow comparison with a benchmark, we have rebased to 100

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks.

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
 - Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations
- Percentage of operations with high/moderate/low risks

Sector	Geographic segment			Business segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	2.6%	55.0%	42.3%	55.4%	44.6%	
Carbon Emissions	0.4%	25.1%	74.5%	55.0%	44.0%	1.0%
Electronic Waste	0.5%	3.1%	96.4%	100.0%		
Opportunities in Green Building	0.4%	26.1%	73.5%	100.0%	0.0%	
Opp's in Renewable Energy	1.6%	88.3%	10.1%	98.5%	0.1%	1.4%
Packaging Material & Waste	4.0%	62.0%	34.1%	100.0%		
Water Stress	23.2%	75.9%	0.9%	11.9%	52.9%	35.2%
Toxic Emissions & Waste				26.8%	50.1%	23.1%

Temperature - Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

- A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,
- An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates a carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Level of alignment	2.4°C
Hedging	96.0%

<1.5°C	11.9%
1.5-2°C	21.8%
2-3°C	18.8%
>3°C	47.6%

Lyxor MSCI Water ESG Filtered (DR) UCITS ETF (compartment of the Multi Units France Sicav)

Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

Meeting overview

This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	14
Number of Voted Meetings	11
Participation rate at General Meetings	78.6%

Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
Routine/Business	96.3%	3.7%	0.0%
Directors Related	88.1%	11.9%	0.0%
Non-Salary Comp.	73.9%	21.7%	4.3%
Capitalization	94.7%	5.3%	0.0%
Antitakeover	100.0%	0.0%	0.0%
Reorg. and Mergers	50.0%	50.0%	0.0%
Miscellaneous	100.0%	0.0%	0.0%

Breakdown by country

In 2021, the Lyxor' voting scope was issuers domiciled in Europe, in United States and in Japan.

The data details the geographical distribution of the General Meetings at which the Lyxor MSCI Water ESG Filtered (DR) UCITS ETF fund participated during the financial year.

Finland	9.1%
France	9.1%
Italy	9.1%
Ireland	9.1%
United Kingdom	18.2%
Japan	36.4%
USA	9.1%

Engagement

This fund is part of the following campaigns: Climate Action 100+, Corporate Governance, ESG, General meeting, Localized Water Management

Climate Action 100+: In 2018, Lyxor joined the Climate Action 100+, an international initiative led by investors to engage systematically with important greenhouse gas emitters and other companies across the global economy that have significant opportunities to drive the clean energy transition and help achieve the goals of the Paris Agreement.

Through this initiative, Lyxor aims to obtain commitments from the Boards of Directors or Supervisory Boards and/or key executives in order to:

1. Implement a strong governance framework that clearly articulates the Board's responsibility and oversight for climate risks;
2. Take action to reduce greenhouse gas emissions across the value chain, in line with the Paris Agreement's goal of limiting global average temperature increase to well below 2°C above pre-industrial levels and to move, as far as possible, to a 1.5°C trajectory. This implies the ambition to achieve the goal of carbon neutrality (net zero emissions) by 2050;
3. Improve reporting in accordance with the final recommendations of the Taskforce on Climate-related Financial Disclosures (TCFD) and the Global Investor Coalition on Climate Change (if applicable) to enable investors to assess the robustness of corporate strategies against a range of climate scenarios, including well below 2°C, and to improve investment decision-making.

ESG: The consideration of environmental, social and/or governance issues is at the heart of Lyxor's responsible investor strategy. Lyxor therefore considers that it is the responsibility of the Board to supervise the definition of the company's non-financial and climate risks and opportunities, as well as the strategy implemented by management with regards to this risk/opportunity analysis. The objective of Lyxor on this type of engagement is to work with companies to encourage them to improve their Corporate Social Responsibility practices.

Corporate Governance: Outside the general assembly period, Lyxor promotes regular dialogue with companies on corporate governance issues such as changes in the composition of the Board and its committees, succession plans, the role and functions of the lead director, changes in the remuneration policy, etc.

Localized Water Management: Aware of the growing challenge of water management, Lyxor launched a collaborative thematic engagement campaign on water management in 2020. Most companies are aware of the importance of water management issues but do not make them a priority. The objective of this campaign is to remedy this phenomenon so that all companies can integrate these issues throughout their value chain.

The starting point for good management of water-related issues is to properly map the risks and associated impacts that fall under the direct and indirect control of companies. In addition to assessing companies' practices, the idea is to mobilize them more on this topic, in other words, to ensure that companies' approach to water risk assessment and management:

- Proactively and effectively contributes to long-term business continuity;
- Is environmentally sustainable;
- Respects the development needs of the countries concerned.

Engagement overview over the year

The table shows the number of engagement campaigns conducted by Lyxor during the year compared to the number of issuers present in the fund.

Number of companies under engagement	1
Number of engagement	2

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des marchés financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 ("AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 ("UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management compensation policy notably ensures appropriate risk management and adherence to compliance on the part of its employees.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No “carried interest” was paid during the financial year.

Lyxor's best selection and execution policy

Information on best selection and execution policies is available at: www.lyxor.com.

Transparency of securities financing operations and reuse of financial instruments SFTR regulation

(Accounting currency of the CIU)

During the financial year, the UCI did not carry out any transactions subject to the SFTR regulation, namely no repurchase transactions, securities or commodities lending/borrowing, buy-sell back or sell-buy back transactions, margin lending transactions and total return swaps (TRS).

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information, in the evolving context of the Covid-19 crisis.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded. However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities in undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Sub-Fund's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Sub-Fund's reference currency are the exchange rates published the fixing WM Reuters on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the CIS) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Sub-Fund) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Sub-Fund, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Sub-Fund has exceeded its objectives and are invoiced to the Sub-Fund;
- Transfer commissions invoiced to the Sub-Fund;
- Direct and indirect operating costs/fees related to temporary acquisitions and disposals of securities.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Sub-Fund	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	Maximum 0.60 % per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commission	Net assets	None
Direct and indirect operating costs/fees related to temporary acquisitions and disposals of securities	Amount of income generated by these operations	20% maximum for the Management Company; 15% maximum for the Agent.

(1) including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Accounting currency

The Compartment accounting is carried out in Euro.

Indication of accountancy changes declared to each of the shareholders individually

- - Occurred change:
 - Change in the name of the fund for LYXOR MSCI WATER ESG FILTERED (DR) UCITS ETF;
 - Change in benchmark indicator.
- - Future change: None.

Other changes declared to each of the shareholders individually *(Not certified by the auditor)*

- - Occurred change: None.
- - Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

The Board of Directors reserves the right to distribute all or part of the distributable amounts once or several times per year and/or to capitalise them.

Acc share class: Capitalisation of all the amounts available for distribution.

The World Water Index CW Net Total Return (Wowax) is calculated by Dow Jones Indexes, a department of Dow Jones & Company, Inc. ("Dow Jones") and compiled by the SAM group ("SAM"). "Dow Jones" and "Dow Jones Indexes" are registered trademarks of Dow Jones & Company, Inc. Wowax-based investment products are not offered, guaranteed, sold or promoted by Dow Jones Indexes or by SAM; Dow Jones Indexes and SAM in no way decide whether or not to invest in such products. Dow Jones, SAM and their respective affiliates, sources and distributors (collectively, the "Index Parties"), disclaim any liability to Societe Generale, Lyxor AM, any client or third party for any direct or indirect loss or damage resulting from (i) inaccurate or incomplete data provided by Wowax, or delays, interruptions, errors or omissions concerning said data or any related data (the "Index Data") or (ii) any decision taken or action taken by Societe Generale, Lyxor AM, any client or third party based on the Index Data. The Index Parties do not give any explicit or implicit certification to Societe Generale, Lyxor AM, any of its clients or any third party regarding Index Data, including any certification relating to the timeliness, order, accuracy, completeness, validity, marketing, quality or suitability for a particular purpose, nor any certification as to the results to be obtained by Societe Generale, Lyxor AM, any of its clients or a third party in relation to the use of Index Data. The Index Parties disclaim any liability to Societe Generale, Lyxor AM, its clients or third parties in the event of loss of operation, loss of profits or indirect, special or similar damages, regardless of whether contractual damages are due to negligence or otherwise, even if they are informed of the possibility of such damages. There may be no contractual relationship between Dow Jones or the SAM Group and any of the clients of Societe Generale or Lyxor AM for investment products based on or related to the Wowax. The Lyxor AM ETF, based on the Wowax, is not offered, guaranteed, sold or promoted by the Parties of the Index that do not give an opinion on whether or not the investment is recommendable.

2 Evolution of the net assets

	29.10.2021	30.10.2020

3.5. Receivables and Debts: breakdown by type

Details of the elements comprising the "other receivables" and "other debts" items, notably breakdown of the future foreign exchange operations by type of operation (purchase/sale).

Receivables	4,382,851.77
Future currency exchange operations:	
Future purchases of currency	-
Total traded amount of future Sales of currencies	-
Other receivables:	
Deferred settlement purchases	2,333,729.18
Coupons receivable	1,046,721.68
-	1,002,400.91
-	-
-	-
Other operations	-
Debts	5,744,155.74
Future currency exchange operations:	
Future sales of currencies	-
Total traded amount of future Purchases of currencies	-
Other debts:	
Deferred settlement purchases	2,708,926.20
Deferred settlement sales	2,333,790.00
Accrued expenses	580,076.11
Sundry Debtors and Creditors	121,363.43
-	-
Other operations	-

3.6. Shareholders' equities

Equity category issued/redeemed during the fiscal year:	Number of equities	Subscriptions		Redemptions	
		Amount	Number of equities	Amount	
Shares Acc / FR0014002CH1	378,000	2,017,384.00	-	-	
Shares Dist / FR0010527275	5,718,652	301,482,462.76	67,000	3,049,659.10	
Subscription / redemption commission by equity category:		Amount		Amount	
Shares Acc / FR0014002CH1		464,817.95		1,585.82	
Shares Dist / FR0010527275		-		-	
Retrocessions by equity category:		Amount		Amount	
Shares Acc / FR0014002CH1		-		-	
Shares Dist / FR0010527275		-		-	
Commissions acquired by the Compartment by equity category:		Amount		Amount	
Shares Acc / FR0014002CH1		464,817.95		1,585.82	
Shares Dist / FR0010527275		-		-	

3.7. Management fees

Operating and management fees (fixed fees) as % of the average net assets	%
Equity category:	
Shares Acc / FR0014002CH1	0.60
Shares Dist / FR0010527275	0.60
Performance commissions (variable fees): amount of costs for the year	Amount
Equity category:	
Shares Acc / FR0014002CH1	-
Shares Dist / FR0010527275	-
Retrocession of management fees:	
- Total amount of fees retroceded to the Compartment	-
- Breakdown by "target" CIU:	
- CIU 1	-
- CIU 2	-
- CIU 3	-
- CIU 4	-

3.8. Commitments given and received

3.8.1. Description of guarantees received by the Sub-Fund with indication of the capital guarantees	None
3.8.2. Description of the other commitments received and/or given	None

3.9. Other information

3.9.1. Current value of the financial instruments that are the subject of temporary acquisition

- Financial instruments sold under forward repurchase agreements	-
- Other temporary operations	-

3.9.2. Current value of the financial instruments comprising security deposits: Financial instruments received as guarantees and not included in the balance sheet:

- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-

Financial estimates given as guarantees and maintained in their original item:

- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-

3.9.3. Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (Sicav) and CIU managed by these entities:

- CIU securities	-
- Swaps	-

APPENDIX TO THE REPORT

intended for Swiss subscribers

This appendix makes the annual report with the FINMA requirements for the marketing in Switzerland. **It has not been certified by the accountants.**

Country of origin of the Sub-Fund

France.

Representative of the Swiss Compartment

Société Générale, Paris, Zurich Branch, has been authorised by the FINMA as the Fund's representative in Switzerland while also assuming the payment service. The prospectus, articles of association, annual and semi-annual reports of the Fund, the KIIDs as well as the list of purchases and sales made by the Fund during the fiscal year can be obtained on request and at no cost from the representative's head office in Switzerland, Société Générale, Paris, Zurich Branch, Talacker 50, PO Box 5070, 8021 Zurich.

Calculation of the Total Expense Ratio (in compliance with the recommendations of the Swiss Funds & Asset Management Association SFAMA)

Annual closure of the fund:	30-Oct	
Management commission of the UCITS:	0.60	% including tax
Average assets of the fund for the period from 31/10/2020 to 29/10/2021:	961,957,185.97

Information about

investments and

Classification

The Lyxor EURO STOXX 50 Daily sub-fund (-2x) Inverse UCITS ETF (the "Sub-Fund") is an index-based UCITS ETF.

Terms of determination and allocation of amounts available for distribution

Acc share class: Capitalisation of all the amounts available for distribution.

Management objective

The Compartment is a passively managed index-based UCITS.

The Sub-Fund's investment objective is to expose itself inversely and with daily x2 leverage to the European equity market by replicating the performance of the benchmark index EURO STOXX 50® Daily Double Short (gross dividends reinvested) (the "Benchmark Index"), while minimising the tracking error between the performance of the Sub-Fund and that of the Benchmark as much as possible.

The anticipated level of the ex-post tracking error under normal market conditions is 1%.

Benchmark indicator

The Benchmark Index is the EURO STOXX 50® Daily Double Short strategy index (gross dividends reinvested, meaning that the Benchmark Index's performance includes gross dividends detached by the equities that make up it), denominated in euros (EUR).

The Benchmark Index is a strategy index calculated and published by the supplier of international Stoxx Ltd. indices.

The Benchmark Index offers a daily inverse exposure to the upward or downward movement of the Euro Stoxx 50® Total Return index (the "Parent Index"), with leverage x2. Thus, in the event of a decline over a day of the Parent Index, the net asset value of the Sub-fund will increase twice on the same day and, in the event of a rise in the Parent Index over one day, the Sub-Fund's net asset value will decrease twice on the same day and shareholders will not benefit from the increase in the Parent Index.

The Parent Index is made up of the 50 largest stocks belonging to eurozone member countries. These securities are selected for their market capitalisation, liquidity and sector representativeness. The Parent Index strives to comply with a weighting by country and by economic sector reflecting as much as possible the economic structure of the eurozone.

The Benchmark Index's daily performance is equal to: twice the inverted daily performance of the Parent Index, cumulative interest (EONIA) received daily over 3 times the valuation of the closing price of the Benchmark Index and less the costs incurred by short selling the securities comprising the Parent Index.

It is therefore an index representative of a strategy of taking short positions with daily leverage x2 on the Parent Index.

A full description and full methodology for the construction of the Benchmark Index as well as information on the composition and respective weights of the components of the Benchmark Index are available on the website: http://www.stoxx.com/download/indices/ru-lebooks/stoxx_strategy_guide.pdf

Benchmark indicator publication

The closing price of the Benchmark Index is available on the website: www.msci.com.

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Euronext administrator of the Benchmark Index is included in the register of administrators and benchmark indices maintained by ESMA. In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmarks used which describes the measures to be implemented in the event of substantial changes to an index or the cessation of provision of that index.

Benchmark Index revision and composition

The composition of the Benchmark depends on the revision of the Parent Index. The Parent Index is revised annually in September. The exact composition and revision rules of the Benchmark Index published by MSCI are available on the website: www.msci.com / Index. The above-mentioned frequency of rebalancing has no effect on costs in the implementation of the investment strategy.

Investment strategy

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Index, the Sub-Fund will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Compartment may notably be securities that make up the Benchmark Indicator, as well as other international equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Sub-Fund's portfolio and (ii) the market value of the future exchange operation entered into by the Sub-Fund are available on the page dedicated to the Sub-Fund on the website: www.lyxoretf.com. The frequency of update and/or the update date of the aforesaid information is also specified on the same page of the website indicated above.

As part of the management of its exposure, the Compartment may be exposed up to 20 % of its assets in equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Index, in particular in the event of a public offering affecting one of the securities making up the Benchmark Index or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Index.

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets. The aforementioned equities will be chosen on the basis of criteria:

- Of eligibility, in particular:

Subordination to the main market indices or to the Benchmark Index;

o liquidity (minimum thresholds applied to average daily trading volumes and market capitalisation) o rating of the country of the issuer's registered office (requirement of a minimum threshold in S&P rating or equivalent)

- Of diversification, notably:

Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Article R214-21 of the French Monetary and Financial Code)

o geographical

o Sector

For more information on the abovementioned eligibility and diversification criteria, investors can visit the website: www.lyxoretf.com

The investment in undertaking for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Compartment. As part of these investments, the Sub-Fund may subscribe for units or shares of UCITS managed by the management company or a company to which it is linked. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of the future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Sub-fund will have recourse to index-linked swaps traded over-the-counter, exchanging the value of the equities in the Sub-Fund's assets against the value of the Benchmark Index (in compliance with the description contained in this section's paragraph 1 above). As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including future financial instruments other than index-linked swaps.

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

The counterparty of the future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Sub-Fund's portfolio, nor regarding the underlying assets of the future financial instruments. When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted. Where the Sub-Fund enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20 % of its net assets, the Compartment can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10 % of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Sub-Fund is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Sub-Fund's use of forward swap contracts traded over the counter, the Sub-Fund can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets. Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) they must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;
- (c) they must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) they must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20 % of the Sub-Fund's net asset value;
- (e) the Sub-Fund's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and
- Such financial guarantees consist of at least six different issues of which none exceeds 30% of the Sub-Fund's assets.

In compliance with the aforesaid conditions, the guarantees received by the Sub-Fund can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e)(above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged. Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Compartment may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

Counterparty selection policy

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (financial futures and temporary acquisitions and disposals of securities) on behalf of the Mutual Fund. The selection of counterparties for financial contracts and financial intermediaries is performed rigorously from among the reputable counterparties and intermediaries in the market, on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes various criteria into consideration to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating
- Quantitative criteria based on the CDS LT spread (absolute criteria, volatility and comparison with a reference group, etc.)

Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: www.lyxor.com, section "regulatory information".

Risk profile

The Sub-Fund will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

Equity risk

An equity price can vary upwards or downwards, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

Liquidity risk (primary market)

If, when the Sub-Fund (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase/sale price discrepancies, the value and/or liquidity of the Sub-Fund could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Sub-Fund's equities on a place of listing can be affected by any suspension, that could notably be due to:

- ii) Suspension or stoppage of the calculation of the Benchmark Index, and/or
- iii) Suspension of the market(s) of the underlyings used by the Benchmark Index, and/or
- iv) The impossibility for a given place of listing to obtain or calculate the Sub-Fund's indicative net asset value, and/or
- i) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

Counterparty risk

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

LYXOR EURO STOXX 50 DAILY (-2X) INVERSE UCITS ETF
(compartment of the Multi Units France Sicav)

Risks related to collateral management

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

Risk related to daily readjustment of leverage

Investors are inversely and twice exposed to fluctuations that affect the price or level of the Parent Index on a daily basis. In particular, any appreciation of the underlying market will be inversely amplified and will imply an even greater depreciation in the net asset value of the Sub-Fund. The daily readjustment of the exposure contained in the formula of the underlying double-short strategy index implies that, over a period greater than one business day, the Sub-fund's performance will not be equal to twice the inverse of the performance of the Parent Index.

For example, if the Parent Index appreciates 10% on a given business day and then depreciates by 5% on the next business day, the ETF will have depreciated in total by 12% after these two days (and before deduction of applicable fees), while the Parent Index has appreciated by 4,5% over the same period.

If the Parent Index depreciates by 5% per day for 2 consecutive business days, it will have depreciated a total of 9,75%, while the ETF will have appreciated (before deduction of applicable fees) by 21% over the same period.

Negative scenario 1	Case where the negative leverage induced is greater than 2 in a scenario of a rise in the Parent Index				
	Parent Index		strategy index		
	day i performance	day i value	day i performance	day i value	leverage induced
		100		100	
day 1	10%	110	-20%	80	x-2
day 2	-5%	104.5	10%	88	x-2
total period	4.50%		-12.00%		x-2.67

Negative scenario 2	Case where the negative leverage induced is less than 2 in a scenario of a decline in the Parent Index				
	Parent Index		strategy index		
	day i performance	day i value	day i performance	day i value	leverage induced
		100		100	
day 1	-10%	90	20%	120	x-2
day 2	6%	95.4	-12%	105.6	x-2
total period	-4.60%		5.60%		x-1.22

In addition, it is possible that over a observation period greater than one day and in the event of high volatility of the Parent Index over that period, the net asset value of the Sub-Fund may fall even though the Parent Index also posted a decline over the same period.

LYXOR EURO STOXX 50 DAILY (-2X) INVERSE UCITS ETF
(compartment of the Multi Units France Sicav)

Reverse leverage scenario:	Case where the leverage generated is positive over the period				
	Parent Index		strategy index		
	day i performance	day i value	day i performance	day i value	leverage induced
		100		100	
day 1	5%	105	-10%	90	x-2
day 2	-5%	99.75	10%	99	x-2
total period	-0.25%		-1.00%		x4

Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Index, notably should one or more of the following risks arise:

Risk related to the use of derivative instruments

In order to achieve its investment objective, the Sub-Fund uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Index. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Index, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the index" are understood to mean the following situations:

- i) The Benchmark Index is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Index is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Index,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Index (other than a minor modification such as the adjustment of the underlyings of this Benchmark Index or of the respective weightings between its various components), that cannot be effectively replicated by the Sub-Fund at a reasonable cost.
- v) One or more components of the Benchmark Index becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Index's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Index's performance.

Securities transaction risk

Should the issuer of a security underlying the Benchmark Index undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Sub-Fund (and/or in a valuation of the ST by the Sub-Fund's counterparty in a future financial instrument), the Sub-Fund's net asset value may be affected, notably should the actual treatment of the ST by the Sub-Fund differ from the ST's treatment in the methodology used by the Benchmark Index.

Sustainability risks

The Sub-Fund does not consider sustainability factors in the investment decision-making process but remains exposed to sustainability risks. The occurrence of such risks could have a negative impact on the value of the investments made by the Sub-Fund. Additional information can be found in the "Sustainability Information" section of the Prospectus.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

The investor who subscribes to this Sub-Fund wishes to gain exposure to the upside or downside with a daily leverage of 2 to the European equity market.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

As an arbitrage product, this Sub-Fund may not be suitable for investors wishing to make a medium or long-term investment. U.S. Persons (as defined in the prospectus - see "COMMERCIAL INFORMATION") may not invest in the Sub-Fund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy-92800 Puteaux.*
- *Creation date of the Multi Units France Sicav: 04 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 06 June 2018.*
- *Compartment creation date: 06 September 2018.*

business report

The fund replicates the performance of the EURO STOXX 50® Daily Double Short EUR index (Ticker: SX5T2S).

Performance trend at the closing date:

Share name	ISIN	Share currency	Performance from 28/02/19 to 31/10/19			Share performance since inception

Lyxor EURO STOXX 50 Daily (-2x) Inverse UCITS ETF - Acc	FR0010424143	EUR	-58.04% ⁽¹⁾	-57.93%		-96.73%

⁽¹⁾ "The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs (for example the index rebalancing cost);
- taxation incurred in relation to the methodology used in the Benchmark Index

The tracking error realised is 0.0694%. The target tracking error over the period was 1%. The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

Index Linked Swap's counterparty is: Morgan Stanley.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

This Fund is covered by Article 6 of Regulation (EU) 2019/2088 (the "SFDR Regulation"). It does not promote environmental and/or social characteristics and does not aim to invest sustainably

Transparency of environmentally sustainable investments in periodic reports under Regulation (EU) 2020/852

Regulation (EU) 2020/852 on the establishment of a framework for promoting sustainable investments (the "Taxonomy Regulation") sets out the criteria for determining whether an economic activity is environmentally sustainable in the European Union.

According to the Taxonomy Regulation, an activity can be considered "sustainable" if it contributes substantially to one of the 6 environmental objectives set out in the Taxonomy Regulation, including climate change mitigation and adaptation, pollution prevention and reduction, or the protection and restoration of biodiversity and ecosystems.

In addition, in order to be considered to be sustainable, this economic activity must respect the principle of "not to cause significant harm" to one of the other five objectives of the Taxonomy Regulation and must also comply with basic social criteria (alignment to OECD and UN guidelines on business and human rights).

In accordance with article 7 of the Taxonomy Regulation, the management company draws investors' attention to the fact that the underlying investments of this Fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

LYXOR EURO STOXX 50 DAILY (-2X) INVERSE UCITS ETF (compartment of the Multi Units France Sicav)

Provision of environmental, social and governance (ESG) information - in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website [Lyxor.com](https://www.lyxor.com) and is revised each

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

(a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

To the basket of assets held by the fund, the fund applies an exclusion of issuers associated with serious and repeated violations of the Principles of the United Nations Global Compact and regulatory requirements related to controversial sectors and products. This list is supplemented by a list of companies to exclude in the context of applying the Defence sector policy due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns

- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.

- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.

- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.

- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defence policy,

- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to

controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution.

The post trade control is on NAV frequency basis.

Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website [Lyxor.com](https://www.lyxor.com).

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),

- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),

- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions:

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

- In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score

- the environment performance score

- the Environmental Vulnerability index

For corporate issuers in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

LYXOR EURO STOXX 50 DAILY (-2X) INVERSE UCITS ETF (compartment of the Multi Units France Sicav)

•Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations

•Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

For each issuer (Corporate & Government), ESG Industry sector classification is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The ESG score calculated at the portfolio level measures the capacity of the underlying issuers to manage the risks and key opportunities associated with environmental, social and governance factors. The risk scale ranges from 0 (high risk) to 10 (low risk). Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: employment, social relations, health and safety, training, compliance with ILO conventions
- Governance: Board of Directors or Supervisory Board, Audit and Internal Control, Executive Compensation

Source: The Company carbon footprint data are provided by the MSCI agency. All ESG metrics are calculated on benchmark index.

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Portfolio Exposure to ESG Controversies

Measures the portfolio's exposure to companies experiencing controversies relating to their compliance with international standards as a function of their degree of severity:

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: indicates that the company is not involved in any major controversies
- None: Sovereign and/or Company not covered

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2021

Carbon Emissions (tons CO2e/\$M invested)	Carbon Intensity (tons CO2e/\$M sales)	Weighted Average Carbon Intensity (tons CO2e/\$M sales)	Portfolio rated by weight	100%
0	0	0	Scope 1 reported (vs estimated)	0%
			Scope 2 reported (vs estimated)	0%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GreenHouse Gas Protocol (GHG Protocol) was launched in 2001 by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: direct emissions resulting from the burning of fossil fuel resources owned or controlled by the company.
- Scope 2: indirect emissions related to the purchase or production of electricity.
- Scope 3: other indirect emissions from the extended supply chain to the transport of goods and persons.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio invested in both equities and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest - total debt.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage or MWh generated from fossil fuels or the portion of the company's revenues earned from fossil fuels or the portion of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon:

Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gaz	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of : \$ 1,000,000

Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

LYXOR EURO STOXX 50 DAILY (-2X) INVERSE UCITS ETF (compartment of the Multi Units France Sicav)

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges - this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Enenergy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	0.0%	0.0%	0.0%
Some efforts	0.0%	0.0%	0.0%
Limited efforts/Information	0.0%	0.0%	0.0%
No effort/No evidence	0.0%	0.0%	0.0%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

•Asset stranding: risk of holding assets which may become stranded

•Operational Transition: risk of increase in operational costs

•Product Transition: risk of a decrease in demand for high-carbon products and services

•Neutral: low exposure to transition risks

•Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low- carbon products.

Energy Mix of energy producers within the portfolio

A company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The issuer data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source: MSCI ESG Research

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. Those issuers are likely to benefit from a low carbon transition

Issuer with a revenu dedicated to environmental solutions between:

0-19.9%	0%
20-49.9%	0%
50-100%	0%

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	0.0%	Energy Efficiency	0.0%	Green Building	0.0%
Pollution Prevention	0.0%	Sustainable Water	0.0%	Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution			
Alternative Energy	0.0%	Energy Efficiency	0.0%
		Green Building	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

% estimated EU Taxo 0.0%

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	4%
Coldwave	31%
Flood	3%
Heatwave	8%
Hurricane	2%
Water Stress	42%
Wildfire	9%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks.

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
 - Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations
- Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	10.4%	70.2%	19.4%	90.1%	5.9%	4.0%
Carbon Emissions	2.4%	45.2%	52.4%	78.5%	10.8%	10.7%
Electronic Waste	3.7%	17.1%	79.2%	100.0%		
Opportunities in Green Building	3.1%	58.9%	37.9%	99.1%	0.9%	
Opp's in Renewable Energy	8.3%	80.6%	11.1%	96.5%	1.1%	2.4%
Packaging Material & Waste	13.5%	41.5%	45.0%	85.2%		14.8%
Water Stress	8.7%	84.5%	6.8%	51.6%	31.2%	17.1%
Toxic Emissions & Waste				42.8%	37.1%	20.1%

Temperature - Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

- A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,
 - An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.
- Each approach allocates a carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des marchés financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 ("AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 ("UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management compensation policy notably ensures appropriate risk management and adherence to compliance on the part of its employees.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No "carried interest" was paid during the financial year.

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information, in the evolving context of the Covid-19 crisis.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities in undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Sub-Fund's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

-The exchange rates used for the assessment of financial instruments listed in a currency other than the Sub-Fund's reference currency are the exchange rates published the fixing WM Reuters on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Sub-Fund, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Sub-Fund has exceeded its objectives and are invoiced to the Sub-Fund;
- Transfer commissions invoiced to the Sub-Fund.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	Maximum 0.60 % per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commission	Net assets	None

⁽¹⁾ including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Accounting currency

The Compartment accounting is carried out in Euro.

Indication of accountancy changes declared to each of the shareholders individually

3.5. Receivables and Debts: breakdown by type

Breakdown of items comprising "other receivables" and "other debts," in particular the breakdown of forward foreign exchange transactions by type of transaction (buy/sell).

Receivables	2,866,951.78
Future currency exchange operations:	
Future purchases of currency	-
Total traded amount of future Sales of currencies	-
Other receivables:	
Deferred settlement sales	2,380,604.69
Deferred settlement purchases	486,347.09
-	-
-	-
-	-
Other operations	-
Debts	2,902,391.29
Future currency exchange operations:	
Future sales of currencies	-
Total traded amount of future Purchases of currencies	-
Other debts:	
Deferred settlement purchases	1,889,886.89
Deferred settlement sales	490,717.81
Account payable	486,293.91
Accrued expenses	34,652.85
Sundry Debtors and Creditors	839.83
Other operations	-

3.6. Shareholders' equities

	Subscriptions		Redemptions	
	Number of equities	Amount	Number of equities	Amount
Equity category issued/redeemed during the fiscal year:	31,120,518	53,651,692.74	19,852,072	42,594,152.29
Subscription / redemption commission		14,807.15		2,567.09
Retrocessions		-		-
Fees paid to the sub-fund		14,807.15		2,567.09

3.7. Management fees

Operating and management fees (fixed fees) as % of the average net assets	0.60
Performance commissions (variable fees): amount of costs for the year	-
Retrocession of management fees:	
- Total amount of fees retroceded to the Compartment	-
- Breakdown by "target" CIU:	
- CIU 1	-
- CIU 2	-

3.8. Commitments given and received

3.8.1. Description of guarantees received by the Sub-Fund with indication of the capital guarantees	None
3.8.2. Description of the other commitments received and/or given	None

3.9. Other information

3.9.1. Current value of the financial instruments that are the subject of temporary acquisition:	
- Financial instruments sold under forward repurchase agreements	-
- Other temporary operations	-
3.9.2. Current value of the financial instruments comprising security deposits:	
Financial instruments received as guarantees and not included in the balance sheet:	
- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-
Financial estimates given as guarantees and maintained in their original item:	
- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-
3.9.3. Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (Sicav) and CIU managed by these entities:	
- CIU securities	-
- Swaps	-

3.10. Allocation of the profit and loss table *(in the Compartment's accounting currency)*

Unit distribution on net capital gains and losses (including advances)	-	-	-	-	-
Unit distribution (including advances)	-	-	-	-	-
Unit tax credit transferred to holders (natural persons) ⁽¹⁾	-	-	-	-	-
Unit capitalisation ⁽²⁾	1.89	-0.16	-2.99	2.50	7.67

⁽¹⁾ (1) In pursuant to the Fiscal Instruction of 4 March 1993 of the French Tax Department, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits between the circulating units on that date.

⁽²⁾ The unit capitalisation corresponds to the sum of profit and loss and net capital gains or losses on the number of circulating units. This calculation method is applied from 1 January 2013.

Compartment creation date: 06 September 2018.

4 Inventory as of 29.10.2021

LYXOR EURO STOXX 50 DAILY (2X) LEVERAGED UCITS ETF

Compartments / feeder	LYXOR EURO STOXX 50 DAILY (2X) LEVERAGED UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
Management Company	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy – 92987 Paris La Défense Cedex.
Depository and Custodian	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

Information about investments and

Classification:

Equities of eurozone countries.

At least 60% of the Lyxor EURO STOXX 50 Daily (2x) Leveraged UCITS ETF sub-fund (the “Sub-Fund”) is permanently exposed to one or more equity markets of one or more eurozone countries, and may include the French market.

The Compartment is an index-based fund of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution:

Acc share class: Capitalisation of all the amounts available for distribution.

Management objective:

The Compartment is a passively managed index-based UCITS.

The Sub-Fund’s objective is to gain exposure, both upwards and downwards, to the European equity market, with daily leverage of x2, by replicating the trend of the benchmark index, the EURO STOXX 50® Daily Leverage Net Total Return (gross dividends reinvested) (the “Benchmark”), while minimising as much as possible the tracking error between the performance of the Sub-Fund and the Benchmark. The anticipated level of the ex-post tracking error under normal market conditions is 1%.

Benchmark indicator

The Benchmark is the strategy index EURO STOXX 50® Daily Leverage Net Total Return (net dividends reinvested, i.e. the performance of the Benchmark includes the net dividends detached from the shares that compose it) denominated in euros.

The Benchmark is a strategy index defined by the international index provider Stoxx Ltd. It is calculated by Deutsche Borse AG.

The Benchmark is a strategy index that reflects the performance of the EURO STOXX 50® index (the “Parent Index”) with daily leverage of x2.

The Benchmark Index's daily performance is equal to double the daily performance of the Parent Index, less the borrowing costs required to obtain the 2x leverage. Thus, when the Parent Index grows by 2% on a trading day, the Benchmark Index grows 4% on the same trading day, less borrowing costs. Conversely, in the event of a 2% decline in the Parent Index on a trading day, the Benchmark Index dropped 4% on the same trading day, less borrowing costs.

The Parent Index is made up of the 50 largest stocks belonging to the eurozone member countries. These securities are selected for their market capitalisation, liquidity and sector representativeness. The Parent Index strives to maintain a weighting by country and by economic sector reflecting as much as possible the economic structure of the eurozone. An exhaustive description and the complete methodology for the construction of the Benchmark Index as well as information on the composition and relative weights of the Benchmark Index’s components are available online at: www.stoxx.com/indices

The performance tracked is that of the closing prices of the Benchmark in euro.

Benchmark Index publication

The closing price of the Benchmark is available on the website: www.msci.com.

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Benchmark's administrator STOXX Ltd is entered in the register of administrators and benchmarks maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmarks used which describes the measures to be implemented in the event of substantial changes to an index or the cessation of provision of that index.

Benchmark Index revision and composition

The Benchmark is not revised because it depends on the revision of the Parent Index. The Parent Index is revised annually in September.

The Benchmark's exact composition and revision rules published by MSCI are available on the website: www.stoxx.com/indices

The above-mentioned frequency of rebalancing has no effect on costs as part of the implementation of the investment strategy.

Interest of the leveraged strategy

The leveraged strategy is a dynamic strategy applied at the level of the Benchmark. It allows all investors to double their investment on a trading day compared to a "simple" investment in the Parent Index on that same trading day, thanks to the loan taken out to implement the strategy. In the event of a rise in the Benchmark, on a trading day the gains are 2 times greater than for a "simple" investment in the Parent Index on that same trading day. Conversely, in the case of a bear market, losses over one trading day are also doubled on the same trading day due to the multiplier effect of the leverage. The strategy's risks are therefore the subject of a multiplier effect.

Investment strategy

1. Strategy employed

The Sub-Fund will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009. In pursuit of the greatest possible correlation with the performance of the Benchmark Index, the Sub-Fund will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Sub-Fund's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Index.

The securities held as assets by the Sub-Fund may notably be securities that make up the Benchmark Index, as well as other international equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Sub-Fund's portfolio and (ii) the market value of the future exchange operation entered into by the Sub-Fund are available on the page dedicated to the Sub-Fund on the website: www.lyxoretf.com

The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

The Sub-Fund will permanently invest a minimum of 75% of its assets in companies that have their registered office in a Member State of the European Union, or in another State party to the Treaty on the European Economic Area that has entered into a tax agreement with France containing an administrative assistance clause with a view to combating fraud or tax evasion. This minimum holding level allows eligibility for the Equity Savings Plan.

As part of the management of its exposure, the Sub-Fund may be exposed up to 20 % of its assets in equities from a single issuing entity.

This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Index, in particular in the event of a public offering affecting one of the securities making up the Benchmark Index or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Index.

2. Balance sheet assets (excluding integrated derivatives)

The Subfund will be mainly invested in the stocks comprising the Benchmark Index.

The aforementioned equities will be chosen on the basis of criteria

Of eligibility, in particular:

- Subordination to the main market indices or to the Benchmark Index;
- Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation);
- Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent)..

Of diversification, notably:

- Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Article R.214-21 of the French Monetary and Financial Code);
- Geographical;
- Sectorial.

For more information on the abovementioned eligibility and diversification criteria, investors can visit the website: www.lyxoretf.com

The investment in undertakings for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Subfund. As part of these investments, the Sub-Fund may subscribe for units or shares of UCITS managed by the management company or a company to which it is linked. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law. When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of the future optimisation of the Sub-Fund's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Subfund will have recourse to index-linked swaps traded over-the-counter, exchanging the value of the Subfund's assets against the value of the Benchmark Index (in compliance with the description contained in this section's paragraph 1 above).

As part of a future optimisation of the Sub-Fund management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including future financial instruments other than index-linked swaps.

- Maximum proportion of assets under management that can be used in a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management that may be used in a Total Return Swap (TRS): up to 100% of the assets under management.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Sub-Fund's portfolio, nor regarding the underlying assets of the future financial instruments. When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Sub-Fund may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted. Where the Sub-Fund enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Sub-Fund can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Sub-Fund is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Sub-Fund's use of forward swap contracts traded over the counter, the Sub-Fund can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Sub-Fund's assets.

Any financial guarantee received by the Sub-Fund within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20 % of the Sub-Fund's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- Such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State or (iv) a public international organisation to which one or more Member States belong; and
- That this collateral comes from at least six different issues, none of which exceeds 30% of the Sub-Fund's assets.

In compliance with the aforesaid conditions, the guarantees received by the Sub-Fund can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e)(above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);

- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged.

Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an authorised institution;
- (ii) invested in high-quality State bonds;
- (iii) Used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) Invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the MF may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

Counterparty selection policy

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Sub-Fund. The selection of counterparties to financial contracts and financial intermediaries is carried out rigorously from among the reputable counterparties and intermediaries in the market on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes into consideration various criteria to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating;
- Quantitative criteria based on the CDS LT spread (absolute criteria, volatility and comparison with a reference group, etc.)

Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: www.lyxor.com, section "regulatory information".

Risk profile

The Sub-Fund will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Sub-Fund, the shareholder is primarily exposed to the following risks:

Equity risk

An equity price can vary upwards or downwards, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Index be negative over the investment period.

Liquidity risk (primary market)

If, when the Sub-Fund (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Sub-Fund could be negatively affected.

Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

Liquidity risk on a place of listing

The Sub-Fund's equity price can deviate from its indicative net asset value. The liquidity of the Sub-Fund's equities on a place of listing can be affected by any suspension, that could notably be due to:

- (i) Suspension or discontinuation of the calculation of the Benchmark, and/or;
- ii) Suspension of the market(s) of the underlyings used by the Benchmark, and/or
- (iii) The impossibility for a given place of listing to obtain or calculate the Sub-Fund's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- V) A failure of this marketplace's IT or electronic systems.

Counterparty risk

The Sub-Fund is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment 's assets per counterparty.

Risks related to collateral management

Operational risk:

The Sub-Fund may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk

The Sub-Fund may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

Risk related to daily readjustment of leverage

Investors are twice exposed to fluctuations that affect the price or level of the Parent Index on a day-to-day basis. In particular, any decline in the underlying market will be amplified and will imply an even greater depreciation in the net asset value of the Sub-Fund. Since the leverage in the Benchmark formula is reset daily the Subfund will not return twice as much as the Parent Index over a period of more than one trading day.

For example, if the Parent Index appreciates 10% on a given business day and then depreciates by 5% on the next business day, the ETF will have appreciated in total by 8 % after these two days (and before deduction of applicable fees), while the Parent Index has appreciated by 4,5% over the same period.

If the Parent Index depreciates by 5% per day for 2 consecutive business days, it will have depreciated a total of 9.75%, while the ETF has depreciated (before deduction of applicable fees) by 19% over the same period.

Unfavourable case on the upside

	Parent Index	Benchmark Index	leverage induced
performance on day 1	+ 10%	+ 20%	x2
performance on day 2	- 5%	- 10%	x2
total performance over the period	+4.5%	+8%	x1.78

LYXOR EURO STOXX 50 DAILY (2X) LEVERAGED UCITS ETF
(compartment of the Multi Units France Sicav)

Favourable case on the upside

	Parent Index	Benchmark Index	leverage induced
performance on day 1	- 5%	- 10%	x2
performance on day 2	- 5%	- 10%	x2
total performance over the period	-9.75%	-19%	x1.95

In addition, it is possible that over a observation period greater than one day and in the event of high volatility of the Parent Index over that period, the net asset value of the Sub-Fund may fall even as the Parent Index rises over the same period.

Example of reverse leverage

	Parent Index		Benchmark Index		
	performance day i	day i value	performance day i	day i value	leverage induced
day 1		100		100	x2
	20%	120	40%	140	
day 2	-20%	96	-40%	84	x2
day 3	30%	124.8	60%	134.4	x2
day 4	-20%	99.84	-40%	80.64	x2
day 5	10%	109.824	20%	96.768	x2
total period	+ 9.82%		- 3.23%		x -0.33

Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Index, notably should one or more of the following risks arise:

Risk related to the use of derivative instruments

In order to achieve its investment objective, the Sub-Fund uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Index. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Index, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Sub-Fund is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Sub-Fund's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Sub-Fund (and/or to its counterparty in the FFI), the Sub-Fund's net asset value may be affected.

Risk related to regulations

In case of change of the regulations in any country in which the Sub-Fund is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Sub-Fund's underlyings, the Sub-Fund's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

Risk related to events affecting the Benchmark Index

In case of events affecting the Benchmark Index, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Sub-Fund equities. The calculation of the Compartment's net asset value can also be affected. If the event persists, the Sub-Fund's manager will decide on measures having to be adopted, which can have an impact on the Sub-Fund's net asset value.

“Events affecting the Benchmark” are understood to mean the following situations:

- i) The Benchmark Index is considered to be incorrect or not reflective of the market's actual evolution;
- ii) The Benchmark Index is definitively discontinued by its supplier;
- iii) The supplier of the index is incapable of providing the level or value of the Benchmark;
- iv) The index provider makes a material change in the Benchmark calculation formula or method (other than a minor modification such as an adjustment to this Benchmark's underlying components or their respective weightings) that the Subfund cannot effectively replicate at a reasonable cost;
- v) One or more components of the Benchmark Index becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid;
- vi) The Benchmark Index's components are impacted by transaction fees relative to the execution, delivery versus payment or specific tax constraints, without these fees being reflected in the Benchmark Index's performance.

Securities transaction risk

Should the issuer of a security underlying the Benchmark Index undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Sub-Fund (and/or in a valuation of the ST by the Sub-Fund's counterparty in a future financial instrument), the Sub-Fund's net asset value may be affected, notably should the actual treatment of the ST by the Sub-Fund differ from the ST's treatment in the methodology used by the Benchmark Index.

- Sustainability risks

The Sub-Fund does not consider sustainability factors in the investment decision-making process but remains exposed to sustainability risks. The occurrence of such risks could have a negative impact on the value of the investments made by the Sub-Fund. Additional information can be found in the "Sustainability Information" section of the Prospectus.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

The investor who subscribes to this Subfund wishes to gain exposure to the securities market of large companies in the eurozone. The amount that it is reasonable to invest in this Sub-Fund depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment term is greater than 5 years.

“U.S. Persons” (as defined below - see “COMMERCIAL INFORMATION”) may not invest in the Sub-Fund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

business report

The fund replicates the performance of the EURO STOXX 50 Daily Lev EUR index (Ticker: SX5TL).

Performance trend at the closing date:

Share name	ISIN	Share currency	Performance for the fiscal year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor EURO STOXX 50 Daily (2x) Leveraged UCITS ETF - Acc	FR0010468983	EUR	111.67% ⁽¹⁾	110.39%	-	-11.28%

⁽¹⁾ "The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs (for example, the cost of rebalancing the index);
- taxation incurred in relation to the methodology used in the Benchmark Index"

The tracking error realised is 0.4110%. The target tracking error over the period was 1%. The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

The fund complies with the PEA eligibility constraints at all times, the details of which are available on request from the management company. Index Linked Swap's counterparty is: Société Générale.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor) None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

This Fund is covered by Article 6 of Regulation (EU) 2019/2088 (the "SFDR Regulation"). It does not promote environmental and/or social characteristics and does not aim to invest sustainably

Transparency of environmentally sustainable investments in periodic reports under Regulation (EU) 2020/852

Regulation (EU) 2020/852 on the establishment of a framework for promoting sustainable investments (the "Taxonomy Regulation") sets out the criteria for determining whether an economic activity is environmentally sustainable in the European Union.

According to the Taxonomy Regulation, an activity can be considered "sustainable" if it contributes substantially to one of the 6 environmental objectives set out in the Taxonomy Regulation, including climate change mitigation and adaptation, pollution prevention and reduction, or the protection and restoration of biodiversity and ecosystems.

In addition, in order to be considered to be sustainable, this economic activity must respect the principle of "not to cause significant harm" to one of the other five objectives of the Taxonomy Regulation and must also comply with basic social criteria (alignment to OECD and UN guidelines on business and human rights).

In accordance with article 7 of the Taxonomy Regulation, the management company draws investors' attention to the fact that the underlying investments of this Fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

LYXOR EURO STOXX 50 DAILY (2X) LEVERAGED UCITS ETF (compartment of the Multi Units France Sicav)

Provision of environmental, social and governance (ESG) information - in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website [Lyxor.com](https://www.lyxor.com) and is revised each

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

(a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

To the basket of assets held by the fund, the fund applies an exclusion of issuers associated with serious and repeated violations of the Principles of the United Nations Global Compact and regulatory requirements related to controversial sectors and products. due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis implemented on ESG criteria

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to

controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution.

The post trade control is on NAV frequency basis.

Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website [Lyxor.com](https://www.lyxor.com).

The exclusion described above is applied to the fund holdings.

2. Description of how the results of the analysis implemented on ESG criteria, in particular exposure to climate risks, are integrated into the investment policy

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

• Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

• Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

- In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuers in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the Key Issue:

LYXOR EURO STOXX 50 DAILY (2X) LEVERAGED UCITS ETF (compartment of the Multi Units France Sicav)

•Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations

Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

LYXOR EURO STOXX 50 DAILY (2X) LEVERAGED UCITS ETF (compartment of the Multi Units France Sicav)

Portfolio ESG Rating as of October 2021

Industrials	1%

For each issuer (Corporate & Government), ESG Industry sector classification is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The ESG score calculated at the portfolio level measures the capacity of the underlying issuers to manage the risks and key opportunities associated with environmental, social and governance factors. The risk scale ranges from 0 (high risk) to 10 (low risk). Issuer scores are calculated in absolute terms for each pillar and sub-theme and are comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes: For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: employment, social relations, health and safety, training, compliance with ILO conventions
- Governance: Board of Directors or Supervisory Board, Audit and Internal Control, Executive Compensation
- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source: The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Measures the portfolio's exposure to companies experiencing controversies relating to their compliance with international standards as a function of their degree of severity:

Red: Indicates that a company is involved in one or more very severe controversies;

- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;

- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;

- Green: Indicates that the company is not involved in any major controversies.

- None: Sovereign and/or Company not covered

Red Flag	2%
Orange Flag	26%
Yellow Flag	47%
Green Flag	25%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2021

Carbon Emissions (tons CO2e/\$M invested)	Carbon Intensity (tons CO2e/\$M sales)	Weighted Average Carbon Intensity tons (CO2e/\$M sales)	Portfolio rated by weight	100%
113	147	159	Scope 1 reported (vs estimated)	99%
			Scope 2 reported (vs estimated)	98%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GreenHouse Gas Protocol (GHG Protocol) was launched in 2001 by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

•Scope 1: direct emissions resulting from the burning of fossil fuel resources owned or controlled by the company.

•Scope 2: indirect emissions associated with the purchase or production of electricity.

Scope 3: all other indirect emissions, from the extended supply chain to the transport of goods and persons.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

Carbon emissions financed (tons CO2 e / \$m invested): they represent the carbon footprint of the standardised portfolio by \$m invested

Carbon intensity (tons CO2e/\$m of turnover): shows the carbon efficiency of the portfolio in terms of emissions per \$m of turnover

•Weighted Average Carbon Intensity (tons CO2e/\$m of turnover): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions standardised by turnover, and these intensities are weighted by the weight of the companies in the portfolio).

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio invested in both equities and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest - total debt.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or the portion of the company's revenue earned from fossil fuel energies or the portion of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon:

Fossil Fuel Reserves	8%
Thermal Coal	0%
Natural Gaz	8%
Oil	8%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of : \$ 1,000,000

Thermal Coal (Tons)	0
Gas (MMBOE)	0.0040
Oil (MMBOE)	0.0034

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	1,507.7
Gas	1,295.4
Total	2,803.1

LYXOR EURO STOXX 50 DAILY (2X) LEVERAGED UCITS ETF (compartment of the Multi Units France Sicav)

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges - this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	186.8
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	186.8
Other	2,616.3

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	1.9%	7.6%	12.8%
Some efforts	93.1%	89.5%	79.5%
Limited efforts/Information	0.0%	0.0%	1.8%
No effort/No evidence	5.1%	2.9%	6.0%

Low Carbon Transition Score

The Low Carbon Transition Score⁽¹⁾ uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low- carbon products.

(1) Metric developed by MSCI

Low carbon transition score	5.8
Low carbon transition management Score	6.3
Operational Transition	12.1%
Product Transition	12.1%
Neutral	70.6%
Solutions	2.7%

Energy Mix of energy producers within the portfolio

A company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The issuer data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source: MSCI ESG Research

Share of issuers in terms of power generation in portfolio	8.2%
--	------

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	20.4%	Liquid Fuel	4.3%	Natural Gas	36.6%
Nuclear	12.8%	Renewables	22.9%	Thermal Coal	3.0%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	22%
20-49.9%	7%
50-100%	0%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	16.6%	Energy Efficiency	24.6%	Green Building	1.7%
Pollution Prevention	4.5%	Sustainable Water	5.1%	Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	0.6%	Energy Efficiency	2.5%	Green Building	0.1%
Pollution Prevention	0.1%	Sustainable Water	0.1%	Sustainable Agriculture	0.0%

LYXOR EURO STOXX 50 DAILY (2X) LEVERAGED UCITS ETF (compartment of the Multi Units France Sicav)

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

% estimated EU Taxo

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	4%
Coldwave	31%
Flood	3%
Heatwave	8%
Hurricane	2%
Water Stress	42%
Wildfire	9%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks.

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	10.4%	70.2%	19.4%	90.1%	5.9%	4.0%
Carbon Emissions	2.4%	45.2%	52.4%	78.5%	10.8%	10.7%
Electronic Waste	3.7%	17.1%	79.2%	100.0%		
Opportunities in Green Building	3.1%	58.9%	37.9%	99.1%	0.9%	
Opp's in Renewable Energy	8.3%	80.6%	11.1%	96.5%	1.1%	2.4%
Packaging Material & Waste	13.5%	41.5%	45.0%	85.2%		14.8%
Water Stress	8.7%	84.5%	6.8%	51.6%	31.2%	17.1%
Toxic Emissions & Waste				42.8%	37.1%	20.1%

Temperature - Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

-A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,

-An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates a carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Level of alignment	>3°C
Hedging	97.2%
Alignment Trajectory in % Weight	
<1.5°C	22.7%
1.5-2°C	19.6%
2-3°C	16.2%
>3°C	41.5%

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des marchés financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Remuneration policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 ("AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 ("UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management compensation policy notably ensures appropriate risk management and adherence to compliance on the part of its employees.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No "carried interest" was paid during the financial year.

Lyxor's best selection and execution policy

Information on best selection and execution policies is available at: www.lyxor.com.

Transparency of securities financing operations and reuse of financial instruments SFTR regulation

(Accounting currency of the CIS)

1. General information.

1.1. Amount of securities and raw materials loaned in proportion with the total assets that can be loaned, defined as excluding the cash and cash equivalents.

Securities lending

% of assets that can be loaned	-
--------------------------------	---

1.2. Amount of the assets committed to each type of securities financing operation and total return swap, expressed in absolute value (in the currency of the collective investment undertaking) and in proportion with the assets under management of the collective investment undertaking.

	Securities lending ⁽¹⁾	Securities borrowing ⁽²⁾	Repurchase agreements ⁽³⁾	Reverse repurchase agreements ⁽⁴⁾	TRS ⁽⁵⁾
Absolute value	-	-	-	-	87,577,878.51
% of assets under management	-	-	-	-	100.00

⁽¹⁾ The amount of assets engaged in securities lending transactions corresponds to the market value of the securities lent at the balance sheet date.

⁽²⁾ The amount of assets engaged in securities borrowing transactions corresponds to the market value of the guarantees (cash or securities) delivered by the fund as part of the securities borrowing on the balance sheet date.

⁽³⁾ The amount of assets engaged in repurchase transactions corresponds to the market value of the securities repurchased on the balance sheet date.

⁽⁴⁾ The amount of assets engaged in reverse repurchase transactions corresponds to the market value of securities purchased under repurchase agreements at the balance sheet date.

⁽⁵⁾ The amount of assets committed in the TRS corresponds (i) for the TRS for which the management company has undertaken to deliver a basket of securities to the TRS counterparty, to the market value of the basket of securities committed in the TRS, increased by the market value of the TRS on the accounting date and/or (ii) for the TRS for which the management company does not deliver a basket of securities, to the value of the nominal value of the TRS on the balance sheet date.

2. Concentration data

2.1. The ten biggest issuers of guarantees for all types of securities financing operations and total return swaps (breakdown of the volumes of guarantees and raw materials received, with the names of the issuers).

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information, in the evolving context of the Covid-19 crisis.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded. However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are valued by spreading out the difference between the acquisition value and the redemption value on a straight-line basis over the residual lifespan. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS whose residual lifespan at acquisition is greater than 3 months but whose residual lifespan on the net asset value closing date is equal to or less than 3 months are valued by spreading out the difference between the last adopted current value and their redemption value on a straight-line basis over the residual lifespan. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS whose the residual lifespan on the net asset value closing date is greater than 3 months are valued at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are valued at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities in undertakings for collective investment in transferable securities operating under French law are valued at the last net asset value known on the calculation date of the Subfund's net asset value.
- Units and equities of UCITS operating under foreign law are valued at the last unit net asset value known on the calculation date of the Subfund's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are valued at their probable trading value, under the management company's responsibility.

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Sub-Fund's reference currency are the exchange rates published the fixing WM Reuters on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the CIU) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional transactions is equal to the price of the underlying security (in the currency of the subfund) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Sub-Fund).

Operation and management fees

These fees include all of the fees invoiced directly to the Sub-Fund, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transfer commission which, if relevant, may notably be collected by the custodian and management company.

For this Sub-Fund, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Sub-Fund has exceeded its objectives and are invoiced to the Sub-Fund;
- Transfer commissions invoiced to the Sub-Fund.

For more details on the fees actually invoiced to the Sub-Fund, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	maximum 0.40 % per year
Maximum indirect fees (commissions and management fees)	Net assets	None
Transactions commissions	Deducted from each transaction	None
Outperformance commission	Net assets	None

⁽¹⁾ Including all fees excluding transaction fees, performance fees and fees related to investments in UCITS.

Accounting currency

The Compartment accounting is carried out in Euro.

activity
report

SUB-FUND OF THE MULTI UNITS FRANCE SICAV

Compartments / feeder	LYXOR EURO STOXX 50 DAILY (-1X) INVERSE UCITS ETF is a sub-fund of the MULTI UNITS FRANCE SICAV.
Management Company	LYXOR INTERNATIONAL ASSET MANAGEMENT 17,cours Valmy - 92987 Paris La Défense Cedex.
Depository and Custodian	SOCIETE GENERALE 75886 Paris Cedex 18.
Auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

Information about investments and management

Classification:

The Lyxor EURO STOXX 50 Daily (-1x) Inverse UCITS ETF sub-fund (the "Sub-Fund") is an index-based UCITS ETF.

Terms of determination and allocation of amounts available for distribution:

Acc share class: Capitalisation of all the amounts available for distribution.

Management objective:

The Compartment is a passively managed index-based UCITS.

The Sub-Fund's investment objective is to expose itself to the daily rise or fall of the European equity market by replicating the change in the benchmark index EURO STOXX 50® Daily Short (gross dividends reinvested) (the "Benchmark Index"), while minimising the tracking error between the performance of the Sub-Fund and that of the Benchmark as much as possible.

The anticipated level of the ex-post tracking error under normal market conditions is 1%.

Benchmark indicator:

The Benchmark Index is the EURO STOXX 50® Daily Short strategy index (gross dividends reinvested, meaning that the Benchmark Index's performance includes gross dividends detached by the equities that make it up), denominated in euros (EUR).

The Benchmark Index is a strategy index calculated and published by the supplier of international Stoxx Ltd. indices.

The Benchmark Index offers a daily inverse exposure to the upside or downside compared to the evolution of the EURO STOXX 50® Total Return index (the "Parent Index"). Thus, in the event of a decline over a day of the Parent Index, the net asset value of the Sub-Fund will increase on the same day and, in the event of a rise in the Parent Index over one day, the Sub-Fund's net asset value will fall on the same day and shareholders will not benefit from the increase in the Parent Index.

The Parent Index is made up of the 50 largest stocks belonging to eurozone member countries. These securities are selected for their market capitalisation, liquidity and sector representativeness. The Parent Index strives to comply with a weighting by country and by economic sector reflecting as much as possible the economic structure of the eurozone.

The Benchmark Index's daily performance is equal to the inverted daily performance of the Parent Index, cumulative daily interest received on 2 times the valuation of the closing price of the Benchmark and less the costs incurred by short selling the securities comprising the EURO STOXX 50® index.

The Benchmark Index is representative of a strategy of taking short positions on the Parent Index.

A full description and full methodology for the construction of the Benchmark Index as well as information on the composition and respective weights of the components of the Benchmark Index are available on the website: www.stoxx.com/indices

The monitored performance is that of the Benchmark Index closing price.

Benchmark indicator publication

The Benchmark Index is calculated on a daily basis at closing prices using the official closing stock market prices for the constituent stocks.

The closing price of the Benchmark Index is available on the website: www.stoxx.com/indices

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Stoxx Ltd administrator of the Benchmark Index is included in the register of administrators and benchmark indices maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmarks used which describes the measures to be implemented in the event of substantial changes to an index or the cessation of provision of that index.

Benchmark indicator revision and composition

The composition of the Benchmark depends on the revision of the Parent Index. The Parent Index is revised annually in September. The above-mentioned frequency of rebalancing has no effect on costs in the implementation of the investment strategy.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Index, the Sub-Fund will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Compartment may notably be securities that make up the Benchmark Indicator, as well as other international equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Sub-Fund's portfolio and (ii) the market value of the future exchange operation entered into by the Sub-Fund are available on the page dedicated to the Sub-Fund on the website: www.lyxoretf.com The frequency of update and/or the update date of the aforesaid information is also specified on the same page of the website indicated above.

As part of the management of its exposure, the Compartment may be exposed up to 20 % of its assets in equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Index, in particular in the event of a public offering affecting one of the securities making up the Benchmark Index or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Index.

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets. The aforementioned equities will be chosen on the basis of criteria:

- Of eligibility, in particular:

- o Subordination to the main market indices or to the Benchmark Index;
- o Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation);
- o Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent).

- Of diversification, notably:

- o Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code);
- o Geographical area;
- o Sector.

For more information on the abovementioned eligibility and diversification criteria, investors can visit the website: www.lyxoretf.com

The investment in undertaking for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Compartment. As part of these investments, the Sub-Fund may subscribe for units or shares of UCITS managed by the management company or a company to which it is linked. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of the future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Sub-fund will have recourse to index-linked swaps traded over-the-counter, exchanging the value of the equities in the Sub-Fund's assets against the value of the Benchmark Index (in compliance with the description contained in this section's paragraph 1 above).

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including future financial instruments other than index-linked swaps.

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

The counterparty of the future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Sub-Fund's portfolio, nor regarding the underlying assets of the future financial instruments.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/fees and its ability to achieve its management objective may also be negatively impacted.

Where the Sub-Fund enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20 % of its net assets, the Compartment can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10 % of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Sub-Fund is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Sub-Fund's use of forward swap contracts traded over the counter, the Sub-Fund can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

(a) any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;

- (b) they must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;
- (c) they must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) they must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20 % of the Sub-Fund's net asset value;
- (e) the Sub-Fund's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and
- Such financial guarantees consist of at least six different issues of which none exceeds 30% of the Sub-Fund's assets.

In compliance with the aforesaid conditions, the guarantees received by the Sub-Fund can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e)(above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points
- (v) and (vi) below;
- (vi) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vii) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged. Guarantees received in cash shall, at the discretion of the manager, be either:

- deposited with an enabled institution;
- invested in high-quality State bonds;
- used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European collective investment schemes.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Compartment may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

Counterparty selection policy

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (financial futures and temporary acquisitions and disposals of securities) on behalf of the Mutual Fund.

The selection of counterparties for financial contracts and financial intermediaries is performed rigorously from among the reputable counterparties and intermediaries in the market, on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes various criteria into consideration to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating
- Quantitative criteria based on the CDS LT spread (absolute criteria, volatility and comparison with a reference group, etc.)

Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: www.lyxor.com, section "regulatory information".

Risk profile:

The Sub-Fund will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Equity risk

An equity price can vary upwards or downwards, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

If, when the Sub-Fund (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase/sale price discrepancies, the value and/or liquidity of the Sub-Fund could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Sub-Fund's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Index, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Index, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Sub-Fund's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

- Risks related to collateral management

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk related to daily readjustment of leverage

Investors are inversely exposed to fluctuations that affect the price or level of the Parent Index on a daily basis.

The daily readjustment contained in the formula of the underlying short strategy index implies that, over a period greater than one business day, the Sub-fund's performance will not be equal to the inverse of the performance of the Parent Index. Investors are underexposed to volatility.

For example, if the Parent Index appreciates by 10% on a given business day, then depreciated by 5% on the next business day, the ETF will have depreciated in total, after these two days (and before deduction of applicable fees) of 5.5%, while the Parent Index will have appreciated a total of 4.5%.

If the Parent Index depreciates by 5% per day for 2 consecutive business days, it will have depreciated in total 9.75%, while the ETF will have appreciated (before deduction of applicable fees) by 10.25% over the same period.

Negative scenario 1	Case where the negative leverage induced is greater than 1 in a scenario of a rise in the Parent Index				
	Parent Index		strategy index		
	day i performance	day i value	day i performance	day i value	leverage induced
		100		100	
day 1	10%	110	-10%	90	x-1
day 2	-8%	101.2	8%	97.2	x-1
total period	1.20%		-2.80%		x-2.33

Negative scenario 2	Case where the negative leverage induced is less than 1 in a scenario of a decline in the Parent Index				
	Parent Index		strategy index		
	day i performance	day i value	day i performance	day i value	leverage induced
		100		100	
day 1	-10%	90	10%	110	x-1
day 2	6%	95.4	-6%	103.4	x-1
total period	-4.60%		3.40%		x-0.74

Reverse leverage scenario: Case where the leverage generated is positive over the period					
	Parent Index		strategy index		
	day i performance	day i value	day i performance	day i value	leverage induced
		100		100	
day 1	5%	105	-5%	95	x-1
day 2	-5%	99.75	5%	99.75	x-1
total period	-0.25%		-0.25%		x1

In addition, it is possible that over a observation period greater than one day and in the event of high volatility of the Parent Index over that period, the net asset value of the Sub-Fund may fall even though the Parent Index also posted a decline over the same period.

- Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Index, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to achieve its investment objective, the Sub-Fund uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Index.

These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Index, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Index

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the index" are understood to mean the following situations:

- i) The Benchmark Index is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Index is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Index,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Index (other than a minor modification such as the adjustment of the underlyings of this Benchmark Index or of the respective weightings between its various components), that cannot be effectively replicated by the Sub-Fund at a reasonable cost.
- v) One or more components of the Benchmark Index becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Index's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Index's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Index undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Sub-Fund (and/or in a valuation of the ST by the Sub-Fund's counterparty in a future financial instrument), the Sub-Fund's net asset value may be affected, notably should the actual treatment of the ST by the Sub-Fund differ from the ST's treatment in the methodology used by the Benchmark Index.

- Sustainability risks

The Sub-Fund does not consider sustainability factors in the investment decision-making process but remains exposed to sustainability risks. The occurrence of such risks could have a negative impact on the value of the investments made by the Sub-Fund. Additional information can be found in the "Sustainability Information" section of the Prospectus.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

Investors who subscribe to this Sub-Fund wish to gain exposure to the daily rise or fall of the European equity market. The amount that it is reasonable to invest in this Compartment depends on your personal situation.

To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers. As an arbitrage product, this Sub-Fund may not be suitable for investors wishing to make a medium or long-term investment. "U.S. Persons" (as defined in the prospectus - see "COMMERCIAL INFORMATION") may not invest in the Sub-Fund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy-92800 Puteaux.*
- *Creation date of the Multi Units France Sicav: 04 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 06 June 2018.*
- *Compartment creation date: 06 September 2018.*

business report

The fund replicates the performance of the EURO STOXX 50 ® Daily Short EUR index.

(Ticker: SX5TS). Performance trend at the closing date:

Share name	ISIN	Share currency	Performance from 28/02/19 to 31/10/19			Share performance since inception
			Share	Index	Change in foreign exchange	
Lyxor EURO STOXX 50 Daily (-1x) Inverse UCITS ETF - Acc	FR0010424135	EUR	-34.62% ⁽¹⁾	34.48%	-	-74.46%

⁽¹⁾ "The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs (for example the index rebalancing cost);
- taxation incurred in relation to the methodology used in the Benchmark Index".

The tracking error realised is 0.0412%. The target tracking error over the period was 1%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

Index Linked Swap's counterparty is: Morgan Stanley.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

This Fund is covered by Article 6 of Regulation (EU) 2019/2088 (the "SFDR Regulation"). It does not promote environmental and/or social characteristics and does not aim to invest sustainably

Transparency of environmentally sustainable investments in periodic reports under Regulation (EU) 2020/852

Regulation (EU) 2020/852 on the establishment of a framework for promoting sustainable investments (the "Taxonomy Regulation") sets out the criteria for determining whether an economic activity is environmentally sustainable in the European Union.

According to the Taxonomy Regulation, an activity can be considered "sustainable" if it contributes substantially to one of the 6 environmental objectives set out in the Taxonomy Regulation, including climate change mitigation and adaptation, pollution prevention and reduction, or the protection and restoration of biodiversity and ecosystems.

In addition, in order to be considered to be sustainable, this economic activity must respect the principle of "not to cause significant harm" to one of the other five objectives of the Taxonomy Regulation and must also comply with basic social criteria (alignment to OECD and UN guidelines on business and human rights).

In accordance with article 7 of the Taxonomy Regulation, the management company draws investors' attention to the fact that the underlying investments of this Fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Provision of environmental, social and governance (ESG) information - in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website [Lyxor.com](https://www.lyxor.com) and is revised each year. Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues

To the basket of assets held by the fund, the fund applies an exclusion of issuers associated with serious and repeated violations of the Principles of the United Nations Global Compact and regulatory requirements related to controversial sectors and products. This list is supplemented by a list of companies to exclude in the context of applying the Defence sector policy due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological chemical, nuclear or radiological weapons).

b) Information used for the analysis on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website [Lyxor.com](https://www.lyxor.com).

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint
 - Measuring the GHG emissions of its investments provides investors with an indication of their Current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.
- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:
 - The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
 - Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
 - A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal , oil sands, oil and shale gas).
- With regard to carbon risk management:
 - Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).
- In regards with the portfolio's exposure to issuers offering environmental solutions:
 - Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).
- In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present:

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuers in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

LYXOR EURO STOXX 50 DAILY (-1X) INVERSE UCITS ETF (compartment of the Multi Units France Sicav)

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
 - Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations
- In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

For each issuer (Corporate & Government), ESG Industry sector classification is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The ESG score calculated at the portfolio level measures the capacity of the underlying issuers to manage the risks and key opportunities associated with environmental, social and governance factors. The risk scale ranges from 0 (high risk) to 10 (low risk). Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: employment, social relations, health and safety, training, compliance with ILO conventions

- Governance: Board of Directors or Supervisory Board, Audit and Internal Control, Executive Compensation

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment

- Governance: Financial Governance, Political Governance

Source: The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Measures the portfolio's exposure to companies experiencing controversies relating to their compliance with international standards as a function of their degree of severity:

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: indicates that the company is not involved in any major controversies
- None: Sovereign and/or Company not covered

Portfolio Carbon Footprint as of October 2021

Carbon Emissions (tons CO2e/\$M invested)	Carbon Intensity (tons CO2e/\$M sales)	Weighted Average Carbon Intensity (tons CO2e/\$M sales)	Portfolio rated (by weight)	
0	0	0	Scope 1 reported (vs estimated)	100%
			Scope 2 reported (vs estimated)	0%
			Scope 1 & 2 estimations are based on MSCI methodology	0%

Carbon Measurement methodology

The GreenHouse Gas Protocol (GHG Protocol) was launched in 2001 by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: direct emissions resulting from the burning of fossil fuel resources owned or controlled by the company.
- Scope 2: indirect emissions associated with the purchase or production of electricity.
- Scope 3: all other indirect emissions, from the extended supply chain to the transport of goods and persons.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio invested in both equities and bonds.

EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest - total debt.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or the portion of the company's revenue earned from fossil fuel energies or the portion of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

LYXOR EURO STOXX 50 DAILY (-1X) INVERSE UCITS ETF

(compartment of the Multi Units France Sicav)

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges - this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	0.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	0.0%	0.0%	0.0%
Some efforts	0.0%	0.0%	0.0%
Limited efforts/Information	0.0%	0.0%	0.0%
No effort/No evidence	0.0%	0.0%	0.0%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low- carbon products.

Low carbon transition score	0.0
Low carbon transition management Score	0.0
Operational Transition	0.0%
Product Transition	0.0%
Neutral	0.0%
Solutions	0.0%

(1) Metric developed by MSCI

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The issuer data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source: MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)					
Hydro	Liquid Fuel	Natural Gas	Nuclear	Renewables	
Carbon					8.2%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. Those issuers are likely to benefit from a low carbon transition

Issuer with a revenue dedicated to environmental solutions between:

50-100%	0%

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	0.0%	Energy Efficiency	0.0%	Green Building	0.0%
Pollution Prevention	0.0%	Sustainable Water	0.0%	Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	0.0%	Energy Efficiency	0.0%	Green Building	0.0%

LYXOR EURO STOXX 50 DAILY (-1X) INVERSE UCITS ETF (compartment of the Multi Units France Sicav)

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the "Do No Significant Harm" and "Minimum Social Safeguards criteria" of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

% estimated EU Taxo 0.0%

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	4%
Coldwave	31%
Flood	3%
Heatwave	8%
Hurricane	2%
Water Stress	42%
Wildfire	9%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.).

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure - analyses the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	10.4%	70.2%	19.4%	90.1%	5.9%	4.0%
Carbon Emissions	2.4%	45.2%	52.4%	78.5%	10.8%	10.7%
Electronic Waste	3.7%	17.1%	79.2%	100.0%		
Opportunities in Green Building	3.1%	58.9%	37.9%	99.1%	0.9%	
Opp's in Renewable Energy	8.3%	80.6%	11.1%	96.5%	1.1%	2.4%
Packaging Material & Waste	13.5%	41.5%	45.0%	85.2%		14.8%
Water Stress	8.7%	84.5%	6.8%	51.6%	31.2%	17.1%
Toxic Emissions & Waste				42.8%	37.1%	20.1%

Temperature - Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

- A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,
 - An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.
- Each approach allocates a carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des Marchés Financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 ("AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 ("UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management compensation policy notably ensures appropriate risk management and adherence to compliance on the part of its employees.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No "carried interest" was paid during the financial year.

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information, in the evolving context of the Covid-19 crisis.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded. However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities in undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Sub-Fund's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Sub-Fund's reference currency are the exchange rates published the fixing WM Reuters on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the CIU) multiplied by the number of contracts multiplied by the face value. The commitment value for conditional transactions is equal to the price of the underlying security (in the currency of the subfund) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value. The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Sub-Fund).

Operation and management fees

These fees include all of the fees invoiced directly to the Sub-Fund, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transfer commission which, if relevant, may notably be collected by the custodian and management company. For this Sub-Fund, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Sub-Fund has exceeded its objectives and are invoiced to the Sub-Fund;
- Transfer commissions invoiced to the Sub-Fund.

For more details on the fees actually invoiced to the Sub-Fund, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Sub-Fund	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	Maximum 0.40 % per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commission	Net assets	None

⁽¹⁾ including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Accounting currency

The Compartment accounting is carried out in Euro.

3.5. Receivables and Debts: breakdown by type

Details of the elements comprising the "other receivables" and "other debts" items, notably breakdown of the future foreign exchange operations by type of operation (purchase/sale).

Receivables	11,585,687.39
Future currency exchange operations:	
Future purchases of currency	-
Total traded amount of future Sales of currencies	-
Other receivables:	
Deferred settlement sales	11,114,090.60
Deferred settlement purchases	471,596.79
-	-
-	-
-	-
Other operations	-
Debts	11,611,662.54
Future currency exchange operations:	
Future sales of currencies	-
Total traded amount of future Purchases of currencies	-
Other debts:	
Deferred settlement purchases	10,638,255.66
Deferred settlement sales	475,834.94
Account payable	471,325.93
Accrued expenses	25,124.41
Sundry Debtors and Creditors	1,121.60
Other operations	-

3.6. Shareholders' equities

	Subscriptions		Redemptions	
	Number of equities	Amount	Number of equities	Amount
Number of equities issued/redeemed during the fiscal year	4,399,228	57,154,184.84	9,281,614	121,367,944.29
Subscription / redemption commission		3,299.91		7,806.54
Retrocessions		-		
Fees paid to the sub-fund		3,299.91		7,806.54

3.7. Management fees

Operating and management fees (fixed fees) as % of the average net assets	0.40
Performance commissions (variable fees): amount of costs for the year	-
Retrocession of management fees:	
- Total amount of fees retroceded to the Compartment	-
- Breakdown by "target" CIS:	
- CIU 1	-
- CIU 2	-

3.8. Commitments given and received

3.8.1. Description of guarantees received by the sub-fund with indication of the capital guarantees.....	none
3.8.2. Description of the other commitments received and/or given.....	none

3.9. Other information

3.9.1. Current value of the financial instruments that are the subject of temporary acquisition:	
- Financial instruments sold under forward repurchase agreements -	-
- Other temporary operations-	-
3.9.2. Current value of the financial instruments comprising security deposits:	
Financial instruments received as guarantees and not included in the balance sheet:	
- equities -	-
- bonds -	-
- debt securities	-
- other financial instruments	
Financial instruments given as guarantees and maintained in their original item:	
- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-
3.9.3. Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (Sicav) and CIU managed by these entities:	
- UCI securities -	
- Swaps -

Unit distribution (including advances)	-	-	-	-	-
Unit tax credit transferred to holders (natural persons) ⁽¹⁾	-	-	-	-	-
Unit capitalisation ⁽²⁾	13.91	1.88	-14.40	5.53	-7.07

⁽¹⁾ In pursuant to the Fiscal Instruction of 4 March 1993 of the French Tax Department, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits between the circulating units on that date.

⁽²⁾ The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of outstanding units. This calculation method is applied from 1 January 2013.

Compartment creation date: 06 September 2018.

4 Inventory as of 29.10.2021

Information about investments and management

Classification

The Lyxor FTSE MIB Daily (-2x) Inverse (Xbear) UCITS ETF sub-fund (the "Sub-Fund") is an index-based UCITS of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution:

Acc share class: Capitalisation of all the amounts available for distribution.

Management objective:

The Compartment is a passively managed index-based UCITS.

The Sub-Fund's management objective is to expose itself inversely and with daily leverage x2 to the upside and downside to the Italian equity market by replicating the FTSE MIB Daily Super Short Strategy RT Gross TR (the "Benchmark Index") strategy index, regardless of its evolution, by minimising as much as possible the tracking error between the performance of the Sub-fund and that of the Benchmark.

The anticipated level of the ex-post tracking error under normal market conditions is 1%.

Benchmark indicator:

The Benchmark Index is the FTSE MIB Daily Super Short Strategy RT Gross TR strategy index (gross dividends reinvested, meaning that the performance of the Benchmark includes gross dividends detached by the equities comprising it) denominated in euros. The Benchmark Index is a strategy index defined and maintained by FTSE.

The Benchmark Index offers an inverse exposure, readjusted daily, to the upward or downward movement of the Parent index, with leverage x2. Thus, in the event of a decline on a trading day of the Parent Index, the net asset value of the Sub-Fund will increase twice on the same trading day and, in the event of a rise in the Parent Index on a trading day, the Sub-Fund's net asset value will fall twice on the same trading day and shareholders will not benefit from the increase in the Parent Index.

Taking a short position on the Parent Index involves borrowing costs that are included in the Benchmark Index calculation methodology.

Thus, the performance calculated on a trading day of the Benchmark Index is equal to twice the reverse performance of the Parent Index on that same trading day, accrued interest (EONIA) received daily over 3 times the valuation of the previous closing price of the Benchmark Index less the cost of the short position strategy compared to that trading day on 2 times the basket of the CAC 40 index.

The Parent Index is a free float-weighted index measuring the evolution of the 40 largest stocks listed on Borsa Italiana.

A full description and full methodology for the construction of the Benchmark Index as well as information on the composition and respective weights of the components of the Benchmark Index are available on the website: <http://www.ftse.com/products/indexmenu>

The monitored performance is that of the closing prices of the equities making up the index.

Benchmark Index publication

The Benchmark Index is calculated on a daily basis at closing prices using the official closing stock market prices for the constituent stocks. The Benchmark Index is also calculated in real time every day that the Benchmark Index is published.

The closing price of the Benchmark Index is available on the website: <http://www.ftse.com/products/indexmenu>. In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the administrator FTSE International Limited of the Benchmark has until 31 December 2023 to request authorisation or registration, where applicable, from the competent authority.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmarks used which describes the measures to be implemented in the event of substantial changes to an index or the cessation of provision of that index.

Benchmark Index revision and composition

The revision of the composition of the Benchmark depends on the revision of the composition of its Parent Index. The revision of the composition of the Parent Index takes place quarterly.

The leverage introduced in the Benchmark Index calculation formula is subject to daily readjustment. The consequences of daily readjustment of leverage are explained in particular in the Reference Indicator and Risk Profile sections of the prospectus.

The above-mentioned frequency of rebalancing has no effect on costs in the implementation of the investment strategy.

The exact composition and revision rules of the Benchmark Index published are available on the website: <http://www.ftse.com/products/indexmenu>

Investment strategy:

1. Strategy employed

The Sub-Fund will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009. In pursuit of the greatest possible correlation with the performance of the Benchmark Index, the Sub-Fund will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Sub-Fund's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Index.

The securities held as assets by the Sub-Fund may notably be securities that make up the Benchmark Index, as well as other international equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Sub-Fund's portfolio and (ii) the market value of the future exchange operation entered into by the Sub-Fund are available on the page dedicated to the Sub-Fund on the website: www.lyxoretf.com.

The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website. As part of the management of its exposure, the Sub-Fund may be exposed up to 20 % of its assets in equities from a single issuing entity.

This 20% limit may be increased to 35% for a single issuing entity, when this proves to be justified by exceptional market conditions, particularly when certain securities are largely dominant and/or in the event of high volatility of a financial instrument or securities linked to an economic sector represented in the Benchmark Index, in particular in the event of a public offering affecting one of the securities making up the Benchmark or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark.

2. Balance sheet assets (excluding integrated derivatives)

The Subfund will be mainly invested in the stocks comprising the Benchmark Index. The aforementioned equities will be chosen on the basis of criteria:

- eligibility criteria, in particular:

- o Subordination to the main market indices or to the Benchmark Index;
- o Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation);
- o rating of the country of the issuer's head office (requirement of a minimum threshold of S&P rating or equivalent)

- diversification criteria, in particular:

- o issuer (application of ratios applicable to the eligible assets of a UCITS, as mentioned in Art. R214-21 of the French Monetary and Financial Code)
- o Geographical area;
- o Sector.

For more information on the above eligibility and diversification criteria, investors can visit the website www.lyxoretft.com.

The investment in undertaking for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Sub-Fund. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of the future optimisation of the Sub-Fund's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Sub-Fund will have recourse to index-linked swaps traded over-the-counter, exchanging the value of the equities in the Sub-Fund's assets (or of any other financial instrument or asset held by the Sub-Fund, where appropriate) against the value of the Benchmark Index (in compliance with the description contained in this section's paragraph 1 above). As part of a future optimisation of the Sub-Fund management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including future financial instruments other than index-linked swaps.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Sub-Fund's portfolio, nor regarding the underlying assets of the future financial instruments.

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Sub-Fund may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/fees and its ability to achieve its management objective may also be negatively impacted. Where the Sub-Fund enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20 % of its net assets, the Sub-Fund can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10 % of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Sub-Fund is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Sub-Fund's use of forward swap contracts traded over the counter, the Sub-Fund can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations.

The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Sub-Fund's assets. Any financial guarantee received by the Sub-Fund within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious haircut;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20 % of the Sub-Fund's net asset value;
- (e) The Sub-Fund's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and

- such securities collateral consists of at least six different issues of securities of which no single issue exceeds 30% of the Sub-Fund's assets. In compliance with the aforesaid conditions, the guarantees received by the Sub-Fund can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e)(above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Sub-Fund's management company will apply a margin to the financial guarantees received by the Sub-Fund. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged. Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the MF may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

Counterparty selection policy

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (financial futures and temporary acquisitions and disposals of securities) on behalf of the Sub-Fund. The selection of counterparties to financial contracts and financial intermediaries is carried out rigorously from among the reputable counterparties and intermediaries in the market on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes into consideration various criteria to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating

Quantitative criteria based on the CDS LT spread (absolute criteria, volatility and comparison with a reference group, etc.)

Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: www.lyxor.com, section "regulatory information".

Risk profile

The Sub-Fund will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Sub-Fund, the shareholder is primarily exposed to the following risks:

- Equity risk

An equity price can vary upwards or downwards, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Index be negative over the investment period.

- Liquidity risk (primary market)

If, when the Sub-Fund (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Sub-Fund could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Sub-Fund's equity price can deviate from its indicative net asset value. The liquidity of the Sub-Fund's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) the calculation of the Benchmark is suspended or stopped, and/or
- ii) trading in the market(s) in the Benchmark's underlying assets is suspended, and/or
- iii) an exchange cannot obtain or calculate the Subfund's indicative net asset value, and/or
- iv) a market maker fails to comply with an exchange's rules, and/or
- v) A failure of this marketplace's IT or electronic systems.

LYXOR FTSE MIB DAILY (-2X) INVERSE (XBEAR) UCITS ETF
(compartment of the Multi Units France Sicav)

- Counterparty risk

The Sub-Fund is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

- Risks related to the management of guarantees

Operational risk:

The Sub-Fund may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365. **Legal risk:**

The Sub-Fund may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk related to daily readjustment of leverage

Investors are inversely and twice exposed to fluctuations that affect the price or level of the Parent Index on a daily basis. In particular, any appreciation of the underlying market will be inversely amplified and will imply an even greater depreciation in the net asset value of the Sub-Fund. The daily readjustment of the exposure contained in the formula of the underlying double-short strategy index implies that, over a period greater than one business day, the Sub-fund's performance will not be equal to twice the inverse of the performance of the Parent Index. For example, if the Parent Index appreciates 10% on a given business day, then depreciated by 5% on the next business day, the ETF will have appreciated in total by 12% after these two days (and before deduction of applicable fees), while the Parent Index has appreciated by 4.5% over the same period.

If the Parent Index depreciates by 5% per day for 2 consecutive business days, it will have depreciated a total of 9.75%, while the ETF will have appreciated (before deduction of applicable fees) by 21% over the same period.

Negative scenario 1	Case where the negative leverage induced is greater than 2 in a scenario of a rise in the Parent Index				
	Parent Index		strategy index		
	day i performance	day i value	day i performance	day i value	leverage induced
		100		100	
day 1	10%	110	-20%	80	x-2
day 2	-5%	104.5	10%	88	x-2
total period	4.50%		-12.00%		x-2.67

Negative scenario 2	If the negative leverage involved is less than 2 in a scenario of a decline in the Parent Index.				
	Parent Index		strategy index		
	day i performance	day i value	day i performance	day i value	leverage induced
		100		100	
day 1	-10%	90	20%	120	x-2
day 2	6%	95.4	-12%	105.6	x-2
total period	-4.60%		5.60%		x-1.22

In addition, it is possible that over a observation period greater than one day and in the event of high volatility of the Parent Index over that period, the net asset value of the Sub-Fund may fall even though the Parent Index also posted a decline over the same period.

LYXOR FTSE MIB DAILY (-2X) INVERSE (XBEAR) UCITS ETF
(compartment of the Multi Units France Sicav)

Reverse leverage scenario:	Case where the leverage generated is positive over the period				
	Parent Index		strategy index		
	day i performance	day i value	day i performance	day i value	leverage induced
		100		100	
day 1	5%	105	-10%	90	x-2
day 2	-5%	99.75	10%	99	x-2
total period	-0.25%		-1.00%		x4

- Risk that the management objective will only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Index, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to achieve its investment objective, the Sub-Fund uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Index. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Index, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Sub-Fund is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Sub-Fund's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Sub-Fund (and/or to its counterparty in the FFI), the Sub-Fund's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Sub-Fund is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to regulations applicable to the underlyings

In case of change of the regulations applicable to the Sub-Fund's underlyings, the Sub-Fund's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Index, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Sub-Fund equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Sub-Fund's manager will decide on measures having to be adopted, which can have an impact on the Sub-Fund's net asset value.

“Events affecting the Benchmark Index” are understood to mean the following situations:

- i) The Benchmark is deemed to be inaccurate or does not reflect actual market developments,
- ii) The Benchmark is permanently cancelled by the index provider,
- iii) The supplier of the index is incapable of providing the level or value of the Benchmark;
- iv) The index provider makes a material change in the Benchmark calculation formula or method (other than a minor modification such as an adjustment to this Benchmark's underlying components or their respective weightings) that the Subfund cannot effectively replicate at a reasonable cost;
- v) one or more Benchmark components become illiquid because they are no longer traded on a regulated market or because their over-the-counter trading (e.g. bonds) is disrupted;
- vi) The Benchmark components are exposed to higher transaction costs for execution or settlement/delivery, or to specific tax constraints and these costs are not reflected in the Benchmark's performance.

- Corporate action risk

Should the issuer of a security underlying the Benchmark Index undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Sub-Fund (and/or in a valuation of the ST by the Sub-Fund's counterparty in a future financial instrument), the Sub-Fund's net asset value may be affected, notably should the actual treatment of the ST by the Sub-Fund differ from the ST's treatment in the methodology used by the Benchmark Index.

- Sustainability risks

The Sub-Fund does not consider sustainability factors in the investment decision-making process but remains exposed to sustainability risks. The occurrence of such risks could have a negative impact on the value of the investments made by the Sub-Fund. Additional information can be found in the "Sustainability Information" section of the Prospectus.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

The investor who subscribes to this Sub-Fund is exposed inversely (with leverage x2) to the upward and downward evolution of the Italian equity market, or the 40 largest stocks listed on Borsa Italiana. The amount that it is reasonable to invest in this Sub-Fund depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify your investments so as to avoid an exposure only to this Sub-Fund's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers. As an arbitrage product, this Sub-Fund may not be suitable for investors wishing to make a medium or long-term investment. "U.S. Persons" (as defined in the prospectus - see "COMMERCIAL INFORMATION") may not invest in the Sub-Fund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

activity report

The fund replicates the performance of the FTSE MIB Daily Super Short Strategy RT Gross TR EUR (Ticker: FMIBI2X). **Performance trend at the closing date:**

Share name	ISIN	Share currency	Performance for the fiscal year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor FTSE MIB Daily (-2x) Inverse (Xbear) UCITS ETF - Acc	FR0010446666	EUR	-62.27% ⁽¹⁾	-61.99%		-97.32%

⁽¹⁾ "The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs (for example the index rebalancing cost);
- taxation incurred in relation to the methodology used in the Benchmark;

The tracking error realised is 0.0687%. The target tracking error over the period was 1%. The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

Index Linked Swap's counterparty is: Société Générale.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor) None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

This Fund is covered by Article 6 of Regulation (EU) 2019/2088 (the "SFDR Regulation"). It does not promote environmental and/or social characteristics and does not aim to invest sustainably

Transparency of environmentally sustainable investments in periodic reports under Regulation (EU) 2020/852

Regulation (EU) 2020/852 on the establishment of a framework for promoting sustainable investments (the "Taxonomy Regulation") sets out the criteria for determining whether an economic activity is environmentally sustainable in the European Union.

According to the Taxonomy Regulation, an activity can be considered "sustainable" if it contributes substantially to one of the 6 environmental objectives set out in the Taxonomy Regulation, including climate change mitigation and adaptation, pollution prevention and reduction, or the protection and restoration of biodiversity and ecosystems.

In addition, in order to be considered sustainable, this economic activity must respect the principle of "do no significant harm" as well as one of the other five objectives of the Taxonomy Regulation and must also comply with basic social criteria (alignment with OECD and UN guidelines on business and human rights).

In accordance with article 7 of the Taxonomy Regulation, the management company draws investors' attention to the fact that the underlying investments of this Fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Provision of environmental, social and governance (ESG) information - in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

11. Description of ESG criteria I

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organisation to integrate Environmental, Social, and Governance ("ESG") issues into its investment solutions. Lyxor's SRI Policy is available under the website [Lyxor.com](https://www.lyxor.com) and is revised each

Integration of sustainability risks by Lyxor in its investment decision-making processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

(a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

To the basket of assets held by the fund, the fund applies an exclusion of issuers associated with serious and repeated violations of the Principles of the United Nations Global Compact and regulatory requirements related to controversial sectors and products. This list is supplemented by a list of companies to be excluded due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological chemical, nuclear or radiological weapons, etc.).

b) Description of the general information used for the analysis implemented on ESG criteria

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution.

The post trade control is on NAV frequency basis.

Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the [Lyxor.com](https://www.lyxor.com) website.

The exclusion described above is applied to the fund holdings.

2. Description of how the results of the analysis implemented on ESG criteria, in particular exposure to climate risks, are integrated into the investment policy

LYXOR is gradually expanding its ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:
 - Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.
 - In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:
 - The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
 - Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
 - A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).
 - With regard to carbon risk management:
 - Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).
 - In regards with the portfolio's exposure to issuers offering environmental solutions :
 - Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).
 - In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :
- For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :
- the Germanwatch climate performance index score
 - the environment performance score
 - the Environmental Vulnerability index

For corporate issuers in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

LYXOR FTSE MIB DAILY (-2X) INVERSE (XBEAR) UCITS ETF (compartment of the Multi Units France Sicav)

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations

- Geographic Segment Risk Exposure - analyses the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund

LYXOR FTSE MIB DAILY (-2X) INVERSE (XBEAR) UCITS ETF (compartment of the Multi Units France Sicav)

Portfolio ESG Rating as of October 2021

For each issuer (Corporate & Government), ESG Industry sector classification is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The ESG score calculated at the portfolio level measures the capacity of the underlying issuers to manage the risks and key opportunities associated with environmental, social and governance factors. The risk scale ranges from 0 (high risk) to 10 (low risk). Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For companies, metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: employment, social relations, health and safety, training, compliance with ILO conventions
- Governance: Board of Directors or Supervisory Board, Audit and Internal Control, Executive Compensation

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Externalities Environementales, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source: The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Measures the portfolio's exposure to companies experiencing controversies relating to their compliance with international standards as a function of their degree of severity:

Red: Indicates that a company is involved in one or more very severe controversies;

- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;

- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;

- Green: Indicates that the company is not involved in any major controversies.

- None: Sovereign and/or Company not covered

Red Flag 2%
Orange Flag 31%
Yellow Flag 16%
Green Flag 51%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2021

Carbon Emissions (tons CO2e/\$M invested)	Carbon Intensity (tons CO2e/\$M sales)	Weighted Average Carbon Intensity tons (CO2e/\$M sales)	Portfolio rated by weight	100%
0	0	0	Scope 1 reported (vs estimated)	0%
			Scope 2 reported (vs estimated)	0%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GreenHouse Gas Protocol (GHG Protocol) was launched in 2001 by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). It sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and/or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: direct emissions resulting from the burning of fossil fuel resources owned or controlled by the company.
- Scope 2: indirect emissions associated with the purchase or production of electricity.
- Scope 3: all other indirect emissions, from the extended supply chain to the transport of goods and persons.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$m invested): they represent the carbon footprint of the standardised portfolio by \$m invested
- Carbon intensity (tons CO2e/\$m of turnover): shows the carbon efficiency of the portfolio in terms of emissions per \$m of turnover
- Weighted Average Carbon Intensity (tons CO2e/\$m of turnover): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions standardised by turnover), and these intensities are weighted by the weight of the companies in the portfolio.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalisation as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD)*. Moreover, only the use of the Enterprise Value enables the analysis of a portfolio invested in both equities and bonds.

* EVIC = Market capitalisation at fiscal year-end date + preferred stock + minority interest - total debt.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or the portion of the company's revenue earned from fossil fuel energies or the portion of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon:	
Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gas	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of : \$ 1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilised.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

LYXOR FTSE MIB DAILY (-2X) INVERSE (XBEAR) UCITS ETF (compartment of the Multi Units France Sicav)

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum of high-impact fossil fuel reserves	0.0
Other	0.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorise them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	0.0%	0.0%	0.0%
Some efforts	0.0%	0.0%	0.0%
Limited efforts/Information	0.0%	0.0%	0.0%
No effort/No evidence	0.0%	0.0%	0.0%

Low Carbon Transition Score

The Low Carbon Transition Score (1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
 - Operational Transition: risk of increase in operational costs
 - Product Transition: risk of a decrease in demand for high-carbon products and services
 - Neutral: low exposure to transition risks
 - Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low- carbon products.
- (1) Metric developed by MSCI

Low carbon transition score	0.0
Low carbon transition management Score	0.0
Operational Transition	0.0%
Product Transition	0.0%
Neutral	0.0%
Solutions	0.0%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The issuer data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source: MSCI ESG Research

Share of issuers in terms of power generation in portfolio	21.2%
--	-------

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	Liquid Fuel	Natural Gas	Nuclear	Renewables
	Thermal Coal			

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	0%
20-49.9%	0%
50-100%	0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the "Do No Significant Harm" and "Minimum Social Safeguards criteria" of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

% estimated EU Taxo 0.0%

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	3%
Coldwave	27%
Flood	2%
Heatwave	8%
Hurricane	1%
Water Stress	52%
Wildfire	7%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.).

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure – analyses the breakdown of a company's business in terms of revenues, assets or operations
 - Geographic Segment Risk Exposure – analyses the breakdown of a company's geographic segments in terms of revenues, assets or operations
- Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	6.2%	90.1%	3.7%	73.8%	18.3%	7.9%
Carbon Emissions	7.0%	72.2%	20.7%	76.5%	16.1%	7.4%
Electronic Waste	9.5%	10.7%	79.7%	99.7%		0.3%
Opportunities in Green Building	6.1%	72.8%	21.1%	100.0%	0.0%	
Opp's in Renewable Energy	7.8%	50.3%	41.9%	90.5%	5.6%	3.9%
Packaging Material & Waste	14.0%	21.2%	64.7%	96.9%		3.1%
Water Stress	11.1%	82.2%	6.8%	51.4%	42.2%	6.4%
Toxic Emissions & Waste				46.8%	26.6%	26.6%

Temperature - Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

- A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,
 - An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.
- Each approach allocates a carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Level of alignment	null
Hedging	96.4%
Alignment Trajectory in % Weight <1.5°C	18.5%
1.5-2°C	19.8%
2-3°C	11.0%
>3°C	50.6%

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des Marchés Financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 ("AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 ("UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management compensation policy notably ensures appropriate risk management and adherence to compliance on the part of its employees.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No "carried interest" was paid during the financial year.

Lyxor's best selection and execution policy

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information, in the evolving context of the Covid-19 crisis.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded. However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities in undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Sub-Fund's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Sub-Fund's reference currency are the exchange rates published the fixing WM Reuters on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the CIU) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional transactions is equal to the price of the underlying security (in the currency of the subfund) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Sub-Fund).

Operation and management fees

These fees include all of the fees invoiced directly to the Sub-Fund, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transfer commission which, if relevant, may notably be collected by the custodian and management company. For this Sub-Fund, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Sub-Fund has exceeded its objectives and are invoiced to the Sub-Fund;
- Transfer commissions invoiced to the Sub-Fund.

For more details on the fees actually invoiced to the Sub-Fund, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	Maximum 0.60 % per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commission	Net assets	None

⁽¹⁾ including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Accounting currency

The Compartment accounting is carried out in Euro.

Unit capitalisation⁽²⁾	-1.04	2.83	-1.32	2.32	-7.61

⁽¹⁾ Pursuant to the Fiscal Instruction of 4 March 1993 of the French Tax Department, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits between the shares outstanding on that date.

⁽²⁾ The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of outstanding units. This calculation method is applied from 1 January 2013.

Sub-fund creation date: 6 September 2018.

activity
report

COMPARTIMENT DE LA SICAV MULTI UNITS FRANCE

FISCAL YEAR ENDING ON: 29.10.2021

Compartments / feeder	LYXOR FTSE MIB DAILY (2X) LEVERAGED UCITS ETF is a sub-fund of the MULTI UNITS FRANCE SICAV.
Management Company	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
Depository and Custodian	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

Information about investments and management

Classification

Equities from countries in the Eurozone.

The Lyxor FTSE MIB Daily (2x) Leveraged UCITS ETF (the "Sub-Fund") is permanently exposed to at least 60% to one or more markets of equities issued in one or more euro zone countries, including possibly the French market.

The Sub-Fund is an index-based strategy UCITS of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution

The Board of Directors reserves the right to distribute all or part of the distributable amounts and/or to capitalise them once or twice a year.

Management objective

The Compartment is a passively managed index-based UCITS.

The Sub-Fund's investment objective is to gain exposure to the Italian equity market with daily leverage x2 by replicating the FTSE MIB Daily Leveraged RT Net-of-Tax (Lux) TR strategy index (the "Benchmark Index") (the "Benchmark Index") (net dividend reinvested), regardless of its evolution, by minimising as much as possible the tracking error between the performance of the Sub-fund and that of its Benchmark.

The anticipated level of the ex-post tracking error under normal market conditions is 1%.

Benchmark indicator

The Benchmark Index is the FTSE MIB Daily Leveraged RT Net-of-Tax (Lux) TR strategy index (net dividends reinvested, meaning that the Benchmark Index's performance includes net dividends detached by its constituent shares) denominated in euros (EUR).

The Benchmark Index is a strategy index defined and maintained by FTSE and Borsa Italiana Spa.

The Benchmark Index is a strategy index that reflects the performance of the FTSE MIB Net Total Return Index (the "Parent Index") with daily leverage x2. The Benchmark Index's daily performance is equal to double the daily performance of the Parent Index, less the borrowing costs required to obtain the 2x leverage. Thus, when the Parent Index grows by 2% on a trading day, the Benchmark Index grows 4% on the same trading day, less borrowing costs. Conversely, in the event of a 2% decline in the Parent Index on a trading day, the Benchmark Index dropped 4% on the same trading day, less borrowing costs.

The Parent Index is a free float-weighted index measuring the evolution of the 40 largest stocks listed on Borsa Italiana.

A full description and full methodology for the construction of the Benchmark Index as well as information on the composition and respective weights of the components of the Benchmark Index are available on the website: <http://www.ftse.com/products/indexmenu>.

The methodology for calculating the FTSE MIB Net Total Return Index is published at <http://www.ftse.com/products/indexmenu>.

The monitored performance is that of the closing prices of the equities making up the index.

Benchmark Index publication

The Benchmark Index is calculated on a daily basis at closing prices using the official closing stock market prices for the constituent stocks.

The Benchmark Index is also calculated in real time every day that the Benchmark Index is published. The closing price of the Benchmark Index is available on the website: www.msci.com. <http://www.ftse.com/products/indexmenu>. In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the administrator FTSE International Limited of the Benchmark has until 31 December 2023 to request authorisation or registration, where applicable, from the competent authority.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmarks used which describes the measures to be implemented in the event of substantial changes to an index or the cessation of provision of that index.

Benchmark Index revision and composition

The revision of the composition of the Benchmark depends on the revision of the composition of its Parent Index. The revision of the composition of the Parent Index takes place quarterly.

The leverage introduced in the Benchmark Index calculation formula is subject to daily readjustment. The consequences of daily readjustment of leverage are explained in particular in the Reference Indicator and Risk Profile sections of the prospectus. The exact composition and revision of the composition of the Parent Index and, incidentally, the Benchmark Index published by Euronext are available on the website: <http://www.ftse.com/products/indexmenu>. The above-mentioned frequency of rebalancing has no effect on costs in the implementation of the investment strategy.

Interest in the Leverage Strategy

The "Leverage" strategy (with daily leverage) is a dynamic strategy applied at the Benchmark level. It allows all investors to double their investment on a daily basis compared to a "simple" investment in the Parent Index, thanks to the loan taken out to achieve the strategy. In the event of an increase in the Benchmark Index, the one-day gains are 2 times greater than for a "simple" investment in the Parent Index. Conversely, in the case of a bear market, losses are also doubled daily due to the multiplier effect of leverage. The strategy's risks are thus subject to a daily multiplier effect.

Investment strategy

1. Strategy employed

The Sub-Fund will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009. In pursuit of the greatest possible correlation with the performance of the Benchmark Index, the Sub-Fund will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Sub-Fund's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Index.

The securities held as assets by the Sub-Fund may notably be securities that make up the Benchmark Index, as well as other international equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Sub-Fund's portfolio and (ii) the market value of the future exchange operation entered into by the Sub-Fund are available on the page dedicated to the Sub-Fund on the website: www.lyxoretf.com.

The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website. As part of the management of its exposure, the Sub-Fund may be exposed up to 20 % of its assets in equities from a single issuing entity.

This 20% limit may be increased to 35% for a single issuing entity, when this proves to be justified by exceptional market conditions, particularly when certain securities are largely dominant and/or in the event of high volatility of a financial instrument or securities linked to an economic sector represented in the Benchmark Index, in particular in the event of a public offering affecting one of the securities making up the Benchmark Index or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Index.

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets. The aforementioned equities will be chosen on the basis of criteria:

Of eligibility, in particular:

- Subordination to the main market indices or to the Benchmark Index;
- Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation);
- Rating of the country of the issuer's head office (requirement of a minimum threshold S&P's rating or equivalent).

Of diversification, notably:

- Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the French Monetary and Financial Code);
- Geographical area;
- Sector.

The basket of equities held may be adjusted daily such that its value will generally be at least 100% of the net assets. Where applicable, the objective of this adjustment will be that the market value of the forward swap described above is less than or equal to zero, which will lead to neutralising the counterparty risk arising from the swap. For more information on the abovementioned eligibility and diversification criteria, investors can visit the website: www.lyxoretf.com

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of these investments, the Sub-Fund may subscribe for units or shares of UCITS managed by the management company or a company to which it is linked.

As part of the future optimisation of the Sub-Fund's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Sub-Fund will have recourse to index-linked swaps traded over-the-counter, exchanging the value of the equities in the Sub-Fund's assets (or of any other financial instrument or asset held by the Sub-Fund, where appropriate) against the value of the Benchmark Index (in compliance with the description contained in this section's paragraph 1 above). As part of a future optimisation of the Sub-Fund management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including future financial instruments other than index-linked swaps.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Sub-Fund's portfolio, nor regarding the underlying assets of the future financial instruments.

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Sub-Fund may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/fees and its ability to achieve its management objective may also be negatively impacted. Where the Sub-Fund enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20 % of its net assets, the Sub-Fund can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10 % of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Sub-Fund is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Sub-Fund's use of forward swap contracts traded over the counter, the Sub-Fund can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Sub-Fund's assets. Any financial guarantee received by the Sub-Fund within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20 % of the Sub-Fund's net asset value;
- (e) The Sub-Fund's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and

- Such financial guarantees consist of at least six different issues of which none exceeds 30% of the Sub-Fund's assets. In compliance with the aforesaid conditions, the guarantees received by the Sub-Fund can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e)(above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Sub-Fund's management company will apply a margin to the financial guarantees received by the Sub-Fund. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged.

Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the MF may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

Counterparty selection policy

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (financial futures and temporary acquisitions and disposals of securities) on behalf of the Sub-Fund. The selection of counterparties to financial contracts and financial intermediaries is carried out rigorously from among the reputable counterparties and intermediaries in the market on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes into consideration various criteria to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating

Quantitative criteria based on the CDS LT spread (absolute criteria, volatility and comparison with a reference group, etc.)

Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: www.lyxor.com, section "regulatory information".

Risk profile

The Sub-Fund will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Sub-Fund, the shareholder is primarily exposed to the following risks:

Equity risk

An equity price can vary upwards or downwards, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Index be negative over the investment period.

Liquidity risk (primary market)

If, when the Sub-Fund (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Sub-Fund could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

Liquidity risk on a place of listing

The Sub-Fund's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Index, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Index, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Sub-Fund's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

Counterparty risk

The Sub-Fund is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

Risks related to collateral management

Operational risk:

The Sub-Fund may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Sub-Fund may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

Risk related to daily readjustment of leverage

Investors are twice exposed to fluctuations that affect the price or level of the Parent Index on a day-to-day basis. In particular, any decline in the underlying market will be amplified and will imply an even greater depreciation in the net asset value of the Sub-Fund. The daily readjustment contained in the formula of the underlying "levered" strategy index implies that, over a period greater than one business day, the performance of the Sub-Fund will not be equal to double the performance of the Parent Index. For example, if the Parent Index appreciates 10% on a given business day, then depreciated by 5% on the next business day, the ETF will have appreciated in total by 8% after these two days (and before deduction of applicable fees), while the Parent Index has appreciated by 4.5% over the same period. If the Parent Index depreciates by 5% per day for 2 consecutive business days, it will have depreciated a total of 9.75%, while the ETF will have depreciated (before deduction of applicable fees) by 19% over the same period. deduction of applicable fees) of 19% over the same period.

Negative scenario 1	Case where the leverage induced is greater than 2 in a scenario of a decline in the Parent Index				
	Parent Index		strategy index		
	day i performance	day i value	day i performance	day i value	leverage induced
		100		100	
day 1	10%	110	20%	120	x2
day 2	-11%	97.9	-22%	93.6	x2
total period	-2.10%		-6.40%		x3.05

LYXOR FTSE MIB DAILY (2X) LEVERAGED UCITS ETF
(compartment of the Multi Units France Sicav)

Negative scenario 2	Case where the leverage induced is less than 2 in a scenario of a rise in the Parent Index				
	Parent Index		strategy index		
	day i performance	day i value	day i performance	day i value	leverage induced
		100		100	
day 1	-5%	95	-10%	90	x2
day 2	6%	100.7	12%	100.8	x2
total period	0.70%		0.80%		x1.14

In addition, it is possible that over a observation period greater than one day and in the event of high volatility of the Parent Index over that period, the net asset value of the Sub-Fund may fall even as the Parent Index rises over the same period.

Reverse induced leverage scenario:	Case where the leverage generated is negative over the period				
	Parent Index		strategy index		
	day i performance	day i value	day i performance	day i value	leverage induced
		100		100	
day 1	20%	120	40%	140	x2
day 2	-16%	100.8	-32%	95.2	x2
total period	0.80%		-4.80%		x-6

Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Index, notably should one or more of the following risks arise:

Risk related to the use of derivative instruments

In order to achieve its investment objective, the Sub-Fund uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Index. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Index, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Sub-Fund is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Sub-Fund's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Sub-Fund (and/or to its counterparty in the FFI), the Sub-Fund's net asset value may be affected.

Risk related to regulations

In case of change of the regulations in any country in which the Sub-Fund is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Sub-Fund's underlyings, the Sub-Fund's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

Risk related to events affecting the Benchmark Index

In case of events affecting the Benchmark Index, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Sub-Fund equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Sub-Fund's manager will decide on measures having to be adopted, which can have an impact on the Sub-Fund's net asset value.

"Events affecting the Benchmark Index" are understood to mean the following situations:

- i) The Benchmark Index is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Index is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Index,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Index (other than a minor modification such as the adjustment of the underlyings of this Benchmark Index or of the respective weightings between its various components), that cannot be effectively replicated by the Sub-Fund at a reasonable cost.
- v) One or more components of the Benchmark Index becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Index's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Index's performance.

Securities transaction risk

Should the issuer of a security underlying the Benchmark Index undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Sub-Fund (and/or in a valuation of the ST by the Sub-Fund's counterparty in a future financial instrument), the Sub-Fund's net asset value may be affected, notably should the actual treatment of the ST by the Sub-Fund differ from the ST's treatment in the methodology used by the Benchmark Index.

Sustainability risks

The Sub-Fund does not consider sustainability factors in the investment decision-making process but remains exposed to sustainability risks. The occurrence of such risks could have a negative impact on the value of the investments made by the Sub-Fund. Additional information can be found in the "Sustainability Information" section of the Prospectus.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

The investor who subscribes to this Sub-Fund wishes to gain exposure to the upward and downward evolution of the 40 largest stocks listed on Borsa Italiana.

The amount that it is reasonable to invest in this Sub-Fund depends on your personal situation.

To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify your investments so as to avoid an exposure only to this Sub-Fund's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers. The minimum recommended investment term is greater than 5 years.

"U.S. Persons" (as defined in the prospectus - see "COMMERCIAL INFORMATION") may not invest in the Sub-Fund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Sub-Fund's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy-92800 Puteaux.*
- *Creation date of the Multi Units France Sicav: 04 March 2002.*
- *Sub-Fund approval date by the AMF (French Financial Regulatory Authority): 06 June 2018.*
- *Compartment creation date: 06 September 2018.*

activity report

The fund replicates the performance of the FTSE MIB Daily Leveraged RT Net-of-Tax (Lux) TR EUR index (Ticker: IMFBL2X).

Performance trend at the closing date:

Share name	ISIN	Share currency	Performance for the fiscal year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor FTSE MIB Daily (2x) Leveraged UCITS ETF - Dist	FR0010446658	EUR	128.16% ⁽¹⁾	128.34%		-54.10%

⁽¹⁾ "The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs (for example the index rebalancing cost);
- taxation incurred in relation to the methodology used in the Benchmark"

The tracking error realised is 0.2521%. The target tracking error over the period was 1%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

Index Linked Swap's counterparty is: Société Générale.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor) None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

This Fund is covered by Article 6 of Regulation (EU) 2019/2088 (the "SFDR Regulation"). It does not promote environmental and/or social characteristics and does not aim to invest sustainably

Transparency of environmentally sustainable investments in periodic reports under Regulation (EU) 2020/852

Regulation (EU) 2020/852 on the establishment of a framework for promoting sustainable investments (the "Taxonomy Regulation") sets out the criteria for determining whether an economic activity is environmentally sustainable in the European Union.

According to the Taxonomy Regulation, an activity can be considered "sustainable" if it contributes substantially to one of the 6 environmental objectives set out in the Taxonomy Regulation, including climate change mitigation and adaptation, pollution prevention and reduction, or the protection and restoration of biodiversity and ecosystems.

In addition, in order to be considered sustainable, this economic activity must respect the principle of "do no significant harm" as well as one of the other five objectives of the Taxonomy Regulation and must also comply with basic social criteria (alignment with OECD and UN guidelines on business and human rights).

In accordance with article 7 of the Taxonomy Regulation, the management company draws investors' attention to the fact that the underlying investments of this Fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Provision of environmental, social and governance (ESG) information - in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organisation to integrate Environmental, Social, and Governance ("ESG") issues into its investment solutions. Lyxor's SRI Policy is available under the website [Lyxor.com](https://www.lyxor.com) and is revised each

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

(a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

To the basket of assets held by the fund, the fund applies an exclusion of issuers associated with serious and repeated violations of the Principles of the United Nations Global Compact and regulatory requirements related to controversial sectors and products. This list is supplemented by a list of companies to be excluded due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological chemical, nuclear or radiological weapons, etc.).

b) Description of the general information used for the analysis implemented on ESG criteria

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to

controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the [Lyxor.com](https://www.lyxor.com) website.

The exclusion described above is applied to the fund holdings.

2. Description of how the results of the analysis implemented on ESG criteria, in particular exposure to climate risks, are integrated into the investment policy

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:
 - Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.
- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:
 - The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to the investor's investment in the portfolio (/ \$M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
 - A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).
- With regard to carbon risk management:
 - Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, and carbon reduction targets).
- In regards with the portfolio's exposure to issuers offering environmental solutions :
 - Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).
- In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuers in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the Key Issue:

LYXOR FTSE MIB DAILY (2X) LEVERAGED UCITS ETF (compartment of the Multi Units France Sicav)

•Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations

•Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund

Average (A, BBB, BB)	52%
Industrials	0%

For each issuer (Corporate & Government), ESG Industry sector classification is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The ESG score calculated at the portfolio level measures the capacity of the underlying issuers to manage the risks and key opportunities associated with environmental, social and governance factors. The risk scale ranges from 0 (high risk) to 10 (low risk). Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For companies, metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: employment, social relations, health and safety, training, compliance with ILO conventions
- Governance: Board of Directors or Supervisory Board, Audit and Internal Control, Executive Compensation

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Externalities Environementales, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source: The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Measures the portfolio's exposure to companies experiencing controversies relating to their compliance with international standards as a function of their degree of severity:

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag	2%
Orange Flag	31%
Yellow Flag	16%
Green Flag	51%

LYXOR FTSE MIB DAILY (2X) LEVERAGED UCITS ETF (compartment of the Multi Units France Sicav)

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2021

Carbon Emissions (tons CO2e/\$M invested)	Carbon Intensity (tons CO2e/\$M sales)	Weighted Average Carbon Intensity tons (CO2e/\$M sales)	Portfolio rated by weight	100%
204	190	214	Scope 1 reported (vs estimated)	100%
			Scope 2 reported (vs estimated)	100%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GreenHouse Gas Protocol (GHG Protocol) was launched in 2001 by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). It sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: direct emissions resulting from the burning of fossil fuel resources owned or controlled by the company.
- Scope 2: indirect emissions associated with the purchase or production of electricity.
- Scope 3: all other indirect emissions, from the extended supply chain to the transport of goods and persons.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2e / \$m invested): they represent the carbon footprint of the standardised portfolio by \$m invested
- Carbon intensity (tons CO2e/\$m of turnover): shows the carbon efficiency of the portfolio in terms of emissions per \$m of turnover
- Weighted Average Carbon Intensity (tons CO2e/\$m of turnover): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions standardised by turnover), and these intensities are weighted by the weight of the companies in the portfolio.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalisation as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover, only the use of the Enterprise Value enables the analysis of a portfolio invested in both equities and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest - total debt.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or the portion of the company's revenue earned from fossil fuel energies or the portion of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilised.

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon:	
Fossil Fuel Reserves	20%
Thermal Coal	0%

LYXOR FTSE MIB DAILY (2X) LEVERAGED UCITS ETF (compartment of the Multi Units France Sicav)

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorise them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	0.0%	0.0%	9.4%
Some efforts	92.0%	98.8%	62.6%
Limited efforts/Information	4.3%	1.2%	16.1%
No effort/No evidence	1.7%	0.0%	11.8%

Low Carbon Transition Score

The Low Carbon Transition Score (1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low- carbon products.

(1) Metric developed by MSCI

Low carbon transition score	5.5
Low carbon transition management Score	5.4
Operational Transition	13.9%
Product Transition	13.9%
Neutral	55.7%
Solutions	2.1%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The issuer data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source: MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)			
Hydro	26.1%	Liquid Fuel	7.9%
Nuclear	10.2%	Renewables	17.9%
		Natural Gas	32.8%
		Thermal Coal	5.2%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	48%
20-49.9%	1%
50-100%	0%

Weight of Companies Offering Clean Technology Solutions			
Alternative Energy	23.9%	Energy Efficiency	39.8%
Pollution Prevention	7.7%	Sustainable Water	3.5%
		Green Building	0.0%
		Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution			
Alternative Energy	1.4%	Energy Efficiency	1.6%
Pollution Prevention	0.1%	Sustainable Water	0.1%
		Green Building	0.0%
		Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the "Do No Significant Harm" and "Minimum Social Safeguards criteria" of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

% estimated EU Taxo

2.6%

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	3%
Coldwave	27%
Flood	2%
Heatwave	8%
Hurricane	1%
Water Stress	52%
Wildfire	7%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.).

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure - analyses the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	6.2%	90.1%	3.7%	73.8%	18.3%	7.9%
Carbon Emissions	7.0%	72.2%	20.7%	76.5%	16.1%	7.4%
Electronic Waste	9.5%	10.7%	79.7%	99.7%		0.3%
Opportunities in Green Building	6.1%	72.8%	21.1%	100.0%	0.0%	
Opp's in Renewable Energy	7.8%	50.3%	41.9%	90.5%	5.6%	3.9%

Water Stress	11.1%	82.2%	6.8%	51.4%	42.2%	6.4%
Toxic Emissions & Waste				46.8%	26.6%	26.6%

Temperature - Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

-A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,

-An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates a carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Level of alignment	>3°C
Hedging	96.4%

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des Marchés Financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 ("AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 ("UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management compensation policy notably ensures appropriate risk management and adherence to compliance on the part of its employees.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No "carried interest" was paid during the financial year.

Lyxor's best selection and execution policy

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information, in the evolving context of the Covid-19 crisis.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded. However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities in undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Sub-Fund's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Sub-Fund's reference currency are the exchange rates published the fixing WM Reuters on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the CIU) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the CIU) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Sub-Fund).

Operation and management fees

These fees include all of the fees invoiced directly to the Sub-Fund, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transfer commission which, if relevant, may notably be collected by the custodian and management company. For this Sub-Fund, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Sub-Fund has exceeded its objectives and are invoiced to the Sub-Fund;
- Transfer commissions invoiced to the Sub-Fund.

For more details on the fees actually invoiced to the Sub-Fund, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	Maximum 0.60 % per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commission	Net assets	None

⁽¹⁾ including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Accounting currency

The Compartment accounting is carried out in Euro.

Indication of accountancy changes declared to each of the shareholders individually

- Occurred change: None.
- Future change: None.

Other changes declared to each of the shareholders individually *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

The Board of Directors reserves the right to distribute all or part of the distributable amounts and/or to capitalise them once or twice a year.

report

SUB-FUND OF THE MULTI UNITS FRANCE SICAV

FISCAL YEAR ENDING ON: 29.10.2021

Compartments / feeder	LYXOR FTSE MIB DAILY (-1X) INVERSE (BEAR) UCITS ETF is a sub-fund of the MULTI UNITS FRANCE SICAV.
Management Company	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy – 92987 Paris La Défense Cedex.
Depository and Custodian	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Auditors	PRICEWATERHOUSECOOPERS AUDIT 63, rue Villiers - 92208 Neuilly-sur-Seine

Information about investments and management

Classification

The Lyxor FTSE MIB Daily (-2x) Inverse (Xbear) UCITS ETF sub-fund (the "Sub-Fund") is an index-based UCITS of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution

Acc share class: accumulation of all distributable amounts.

Management objective

The Compartment is a passively managed index-based UCITS.

The Sub-Fund's investment objective is to gain inverse exposure to the Italian equity market by replicating the FTSE MIB Daily Short Strategy RT Gross TR strategy index (the "Benchmark Index") (net dividends reinvested), regardless of its evolution, by minimising as much as possible the tracking error between the performance of the Sub-Fund and that of its Benchmark.

The anticipated level of the ex-post tracking error under normal market conditions is 1%.

Benchmark indicator

The Benchmark Index is the FTSE MIB Daily Short Strategy RT Gross TR strategy index (gross dividends reinvested, meaning that the performance of the Benchmark includes gross dividends detached by the equities comprising it) denominated in euros (the "Benchmark Index").

The Benchmark Index is a strategy index defined and maintained by FTSE and Borsa Italiana Spa.

The Benchmark Index offers an inverse exposure, readjusted daily, to the upward or downward movement of the Parent index. Thus, in the event of a decline of the Parent Index, the net asset value of the Sub-Fund will increase on the same day and, in the event of a rise in the Parent Index, the Sub-Fund's net asset value will fall on the same day and shareholders will not benefit from the increase in the Parent Index.

Taking a short position on the Parent Index involves borrowing costs that are included in the Benchmark Index calculation methodology.

Thus, the performance calculated on a trading day of the Benchmark Index is equal to the reverse performance of the Parent Index on that same trading day, accrued interest (EONIA) received daily over 2 times the valuation of the previous closing price of the Benchmark Index less the cost of the short position strategy compared to that trading day on the basket of the FTSE MIB index.

The Parent Index is a free float-weighted index measuring the evolution of the 40 largest stocks listed on Borsa Italiana.

A full description and full methodology for the construction of the Benchmark Index as well as information on the composition and respective weights of the components of the Benchmark Index are available on the website: <http://www.ftse.com/products/indexmenu>.

The monitored performance is that of the Benchmark Index closing prices in Euros.

Benchmark Index publication

The Benchmark Index is calculated on a daily basis at closing prices using the official closing stock market prices for the constituent stocks. The Benchmark Index is also calculated in real time every day that the Benchmark Index is published.

The closing price of the Benchmark Index is available on the website: <http://www.ftse.com/products/indexmenu>. In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, FTSE International Limited, the administrator of the FTSE MIB Daily Short Strategy RT Gross TR index, is included in the register of administrators and benchmark indices maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, SGP has a procedure for monitoring the benchmarks used which describes the measures to be implemented in the event of substantial changes to an index or the cessation of provision of that index.

Benchmark Index revision and composition

The revision of the composition of the Benchmark depends on the revision of the composition of its Parent Index.

The revision of the composition of the Parent Index takes place quarterly.

The leverage introduced in the Benchmark Index calculation formula is subject to daily readjustment. The consequences of daily readjustment of leverage are explained in particular in the Reference Indicator and Risk Profile sections of the prospectus.

The exact composition and revision of the composition of the Benchmark Index published by Euronext are available online at <http://www.ftse.com/products/indexmenu>. The above-mentioned frequency of rebalancing has no effect on costs in the implementation of the Investment Strategy.

Investment strategy

1. Strategy employed

The Sub-Fund will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009. In pursuit of the greatest possible correlation with the performance of the Benchmark Index, the Sub-Fund will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Sub-Fund's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Index. The securities held as assets by the Sub-Fund may notably be securities that make up the Benchmark Index, as well as other international equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Sub-Fund's portfolio and (ii) the market value of the future exchange operation entered into by the Sub-Fund are available on the page dedicated to the Sub-Fund on the website: www.lyxoretf.com. The frequency of update and/or the update date of the aforesaid information is also specified on the same page of the website indicated above.

As part of the management of its exposure, the Sub-Fund may be exposed up to 20 % of its assets in equities from a single issuing entity.

This 20% limit may be increased to 35% for a single issuing entity, when this proves to be justified by exceptional market conditions, particularly when certain securities are largely dominant and/or in the event of high volatility of a financial instrument or securities linked to an economic sector represented in the Benchmark Index, in particular in the event of a public offering affecting one of the securities making up the Benchmark or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark.

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets. The aforementioned equities will be chosen on the basis of criteria:

Of eligibility, in particular:

- Subordination to the main market indices or to the Benchmark Index;
- Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation);
- Rating of the country of the issuer's head office (requirement of a minimum threshold S&P's rating or equivalent).

Of diversification, notably:

- Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the French Monetary and Financial Code);
- Geographical;
- Sectoral.

For more information on the abovementioned eligibility and diversification criteria, investors can visit the website: www.lyxoretf.com

The investment in undertaking for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Sub-Fund. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of these investments, the Sub-Fund may subscribe for units or shares of UCITS managed by the management company or a company to which it is linked.

As part of the future optimisation of the Sub-Fund's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Sub-Fund will have recourse to index-linked swaps traded over-the-counter, exchanging the value of the equities in the Sub-Fund's assets (or of any other financial instrument or asset held by the Sub-Fund, where appropriate) against the value of the Benchmark Index (in compliance with the description contained in this section's paragraph 1 above). As part of a future optimisation of the Sub-Fund management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including future financial instruments other than index-linked swaps.

The counterparty of the aforesaid forward financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Subfund's portfolio, nor regarding the underlying assets of the forward financial instruments.

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Sub-Fund may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/fees and its ability to achieve its management objective may also be negatively impacted. Where the Sub-Fund enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20 % of its net assets, the Sub-Fund can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10 % of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Sub-Fund is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Sub-Fund's use of forward swap contracts traded over the counter, the Sub-Fund can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Sub-Fund's assets. Any financial guarantee received by the Sub-Fund within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability.

The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious haircut;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20 % of the Sub-Fund's net asset value;
- (e) The Sub-Fund's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and
- Such financial guarantees consist of at least six different issues of which none exceeds 30% of the Sub-Fund's assets.

In compliance with the aforesaid conditions, the guarantees received by the Sub-Fund can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e)(above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Sub-Fund's management company will apply a margin to the financial guarantees received by the Sub-Fund. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged. Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money mutual funds,
as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the MF may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

Counterparty selection policy

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (financial futures and temporary acquisitions and disposals of securities) on behalf of the Sub-Fund. The selection of counterparties to financial contracts and financial intermediaries is carried out rigorously from among the reputable counterparties and intermediaries in the market on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes into consideration various criteria to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating

Quantitative criteria based on the CDS LT spread (absolute criteria, volatility and comparison with a reference group, etc.) Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: www.lyxor.com, section "regulatory information".

Risk profile

The Sub-Fund will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Sub-Fund, the shareholder is primarily exposed to the following risks:

Equity risk

An equity price can vary upwards or downwards, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Index be negative over the investment period.

Liquidity risk (primary market)

If, when the Sub-Fund (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Sub-Fund could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

Liquidity risk on a place of listing

The Sub-Fund's equity price can deviate from its indicative net asset value. The liquidity of the Sub-Fund's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) the calculation of the Benchmark is suspended or stopped, and/or
- ii) trading in the market(s) in the Benchmark's underlying assets is suspended, and/or
- iii) an exchange cannot obtain or calculate the Subfund's indicative net asset value, and/or
- iv) a market maker fails to comply with an exchange's rules, and/or
- v) A failure of this marketplace's IT or electronic systems.

Counterparty risk

The Sub-Fund is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

Risks related to collateral management

Operational risk:

The Sub-Fund may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Sub-Fund may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

Risk related to daily readjustment of leverage

Investors are inversely exposed to fluctuations that affect the price or level of the Parent Index on a daily basis. The daily readjustment contained in the formula of the underlying short strategy index implies that, over a period greater than one business day, the Sub-Fund's performance will not be equal to the inverse of the performance of the Parent Index. For example, if the Parent Index appreciates by 10% on a given business day, then depreciates by 5% on the next business day, the ETF will have depreciated in total, after these two days (and before deduction of applicable fees) by 5.5%, while the Parent Index will have appreciated a total of 4.5%. If the Parent Index depreciates by 5% per day for 2 consecutive business days, it will have depreciated in total 9.75%, while the ETF will have appreciated (before deduction of applicable fees) by 10.25% over the same period.

Negative scenario 1	Case where the negative leverage induced is greater than 1 in a scenario of a rise in the Parent Index				
	Parent Index		strategy index		
	day i performance	day i value	day i performance	day i value	leverage induced
		100		100	
day 1	10%	110	-10%	90	x-1
day 2	-8%	101.2	8%	97.2	x-1
total period	1.20%		-2.80%		x-2.33

Negative scenario 2	If the negative leverage involved is less than 1 in a scenario of a decline in the Parent Index.				
	Parent Index		strategy index		
	day i performance	day i value	day i performance	day i value	leverage induced
		100		100	
day 1	-10%	90	10%	110	x-1
day 2	6%	95.4	-6%	103.4	x-1
total period	-4.60%		3.40%		x-0.74

In addition, it is possible that over a observation period greater than one day and in the event of high volatility of the Parent Index over that period, the net asset value of the Sub-Fund may fall even though the Parent Index also posted a decline over the same period.

LYXOR FTSE MIB DAILY (-1X) INVERSE (BEAR) UCITS ETF
(compartment of the Multi Units France Sicav)

Reverse induced leverage scenario:	Case where the leverage generated is positive over the period				
	Parent Index		strategy index		
	day i performance	day i value	day i performance	day i value	leverage induced
		100		100	
day 1	5%	105	-5%	95	x-1
day 2	-5%	99.75	5%	99.75	x-1
total period	-0.25%		-0.25%		x1

Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Index, notably should one or more of the following risks arise:

Risk related to the use of derivative instruments

In order to achieve its investment objective, the Sub-Fund uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Index. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Index, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Sub-Fund is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Sub-Fund's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Sub-Fund (and/or to its counterparty in the FFI), the Sub-Fund's net asset value may be affected.

Risk related to regulations

In case of change of the regulations in any country in which the Sub-Fund is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Sub-Fund's underlyings, the Sub-Fund's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

Risk related to events affecting the Benchmark Index

In case of events affecting the Benchmark Index, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Sub-Fund equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Sub-Fund's manager will decide on measures having to be adopted, which can have an impact on the Sub-Fund's net asset value.

“Events affecting the Benchmark Index” are understood to mean the following situations:

- i) The Benchmark is deemed to be inaccurate or does not reflect actual market developments,
- ii) The Benchmark is permanently cancelled by the index provider,
- iii) The supplier of the index is incapable of providing the level or value of the Benchmark;
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Index (other than a minor modification such as the adjustment of the underlyings of this Benchmark Index or of the respective weightings between its various components), that cannot be effectively replicated by the Subfund at a reasonable cost.
- v) One or more Benchmark components become illiquid because they are no longer traded on a regulated market or because their over-the-counter trading (e.g. bonds) is disrupted;
- vi) The Benchmark Index's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Index's performance.

Securities transaction risk

Should the issuer of a security underlying the Benchmark Index undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Sub-Fund (and/or in a valuation of the ST by the Sub-Fund's counterparty in a future financial instrument), the Sub-Fund's net asset value may be affected, notably should the actual treatment of the ST by the Sub-Fund differ from the ST's treatment in the methodology used by the Benchmark Index.

Sustainability risks

The Sub-Fund does not consider sustainability factors in the investment decision-making process but remains exposed to sustainability risks. The occurrence of such risks could have a negative impact on the value of the investments made by the Sub-Fund. Additional information can be found in the "Sustainability Information" section of the Prospectus.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

The investor who subscribes to this Sub-Fund is exposed inversely to the upward and downward evolution of the Italian equity market, or the 40 largest stocks listed on Borsa Italiana.

The amount that it is reasonable to invest in this Sub-Fund depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify your investments so as to avoid an exposure only to this Sub-Fund's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

As an arbitrage product, this Sub-Fund may not be suitable for investors wishing to make a medium or long-term investment. "U.S. Persons" (as defined in the prospectus - see "COMMERCIAL INFORMATION") may not invest in the Sub-Fund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Sub-Fund's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy-92800 Puteaux.*
- *Creation date of the Multi Units France Sicav: 04 March 2002.*
- *Sub-Fund approval date by the AMF (French Financial Regulatory Authority): 06 June 2018.*
- *Compartment creation date: 06 September 2018.*

activity report

The fund replicates the performance of the FTSE MIB Daily Super Short Strategy RT Gross TR EUR (Ticker: FMIBI2X).

Performance trend at the closing date:

Share name	ISIN	Share currency	Performance for the fiscal year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor FTSE MIB Daily (-1x) Inverse (Bear) UCITS ETF - Acc	FR0010446146	EUR	-38.10% ⁽¹⁾	-37.65%		-75.41%

⁽¹⁾ "The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs (for example the index rebalancing cost);
- taxation incurred in relation to the methodology used in the Benchmark"

The tracking error realised is 0.0309%. The target tracking error over the period was 1%. The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

Index Linked Swap's counterparty is: Société Générale.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor) None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

This Fund is covered by Article 6 of Regulation (EU) 2019/2088 (the "SFDR Regulation"). It does not promote environmental and/or social characteristics and does not aim to invest sustainably

Transparency of environmentally sustainable investments in periodic reports under Regulation (EU) 2020/852

Regulation (EU) 2020/852 on the establishment of a framework for promoting sustainable investments (the "Taxonomy Regulation") sets out the criteria for determining whether an economic activity is environmentally sustainable in the European Union.

According to the Taxonomy Regulation, an activity can be considered "sustainable" if it contributes substantially to one of the 6 environmental objectives set out in the Taxonomy Regulation, including climate change mitigation and adaptation, pollution prevention and reduction, or the protection and restoration of biodiversity and ecosystems.

In addition, in order to be considered sustainable, this economic activity must respect the principle of "do no significant harm" as well as one of the other five objectives of the Taxonomy Regulation and must also comply with basic social criteria (alignment with OECD and UN guidelines on business and human rights).

In accordance with article 7 of the Taxonomy Regulation, the management company draws investors' attention to the fact that the underlying investments of this Fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Provision of environmental, social and governance (ESG) information - in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organisation to integrate Environmental, Social, and Governance ("ESG") issues into its investment solutions. Lyxor's SRI Policy is available under the website [Lyxor.com](https://www.lyxor.com) and is revised each

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

(a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

To the basket of assets held by the fund, the fund applies an exclusion of issuers associated with serious and repeated violations of the Principles of the United Nations Global Compact and regulatory requirements related to controversial sectors and products. This list is supplemented by a list of companies to be excluded due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological chemical, nuclear or radiological weapons, etc.).

b) Description of the general information used for the analysis implemented on ESG criteria

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy). • Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to

controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution.

The post trade control is on NAV frequency basis.

Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the [Lyxor.com](https://www.lyxor.com) website.

The exclusion described above is applied to the fund holdings.

2. Description of how the results of the analysis implemented on ESG criteria, in particular exposure to climate risks, are integrated into the investment policy

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

• Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested), • Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

• Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

• Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

- Regarding the physical risk, and more specifically biodiversity and land use, Lyxor has chosen to present:

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuers in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the Key Issue:

LYXOR FTSE MIB DAILY (-1X) INVERSE (BEAR) UCITS ETF (compartment of the Multi Units France Sicav)

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations

- Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund

LYXOR FTSE MIB DAILY (-1X) INVERSE (BEAR) UCITS ETF (compartment of the Multi Units France Sicav)

Portfolio ESG Rating as of October 2021

ESG score	Environment	Social	Governance	Portfolio rated	100%

For each issuer (Corporate & Government), ESG Industry sector classification is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The ESG score calculated at the portfolio level measures the capacity of the underlying issuers to manage the risks and key opportunities associated with environmental, social and governance factors. The risk scale ranges from 0 (high risk) to 10 (low risk). Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For companies, metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: employment, employer-employee relations, health and safety, training, compliance with ILO conventions
- Governance: board of directors or supervisory board, audit and internal control, executive pay

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Externalities Environnementales, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source: The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Measures the portfolio's exposure to companies experiencing controversies relating to their compliance with international standards as a function of their degree of severity:

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag	2%
Orange Flag	31%
Yellow Flag	16%
Green Flag	51%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2021

Carbon Emissions (tons CO2e/\$M invested)	Carbon Intensity (tons CO2e/\$M sales)	Weighted Average Carbon Intensity tons (CO2e/\$M sales)	Portfolio rated by weight	100%
0	0	0	Scope 1 reported (vs estimated)	0%
			Scope 2 reported (vs estimated)	0%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GreenHouse Gas Protocol (GHG Protocol) was launched in 2001 by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). It sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: direct emissions resulting from the burning of fossil fuel resources owned or controlled by the company.
- Scope 2: indirect emissions associated with the purchase or production of electricity.
- Scope 3: all other indirect emissions, from the extended supply chain to the transport of goods and persons.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2e / \$m invested): they represent the carbon footprint of the standardised portfolio by \$m invested
- Carbon intensity (tons CO2e/\$m of turnover): shows the carbon efficiency of the portfolio in terms of emissions per \$m of turnover
- Weighted Average Carbon Intensity (tons CO2e/\$m of turnover): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions standardised by turnover), and these intensities are weighted by the weight of the companies in the portfolio.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD)*. Moreover, only the use of the Enterprise Value enables the analysis of a portfolio invested in both equities and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest - total debt.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or the portion of the company's revenue earned from fossil fuel energies or the portion of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon:	
Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gas	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of : \$ 1,000,000

Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilised.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

LYXOR FTSE MIB DAILY (-1X) INVERSE (BEAR) UCITS ETF (compartment of the Multi Units France Sicav)

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum of high-impact fossil fuel reserves	0.0
Other	0.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorise them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	0.0%	0.0%	0.0%
Some efforts	0.0%	0.0%	0.0%
Limited efforts/Information	0.0%	0.0%	0.0%
No effort/No evidence	0.0%	0.0%	0.0%

Low Carbon Transition Score

The Low Carbon Transition Score (1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

•Asset stranding: risk of holding assets which may become stranded

•Operational Transition: risk of increase in operational costs

•Product Transition: risk of a decrease in demand for high-carbon products and services

•Neutral: low exposure to transition risks

•Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low- carbon products.

(1) Metric developed by MSCI

Low carbon transition score	0.0
Low carbon transition management Score	0.0
Operational Transition	0.0%
Product Transition	0.0%
Neutral	0.0%
Solutions	0.0%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The issuer data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source: MSCI ESG Research

Share of issuers in terms of power generation in portfolio 21.2%

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	Liquid Fuel	Natural Gas	Nuclear	Renewables
	Thermal Coal			

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	0%
20-49.9%	0%
50-100%	0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the "Do No Significant Harm" and "Minimum Social Safeguards criteria" of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

% estimated EU Taxo 0.0%

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	3%
Coldwave	27%
Flood	2%
Heatwave	8%
Hurricane	1%
Water Stress	52%
Wildfire	7%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.).

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure - analyses the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	6.2%	90.1%	3.7%	73.8%	18.3%	7.9%
Carbon Emissions	7.0%	72.2%	20.7%	76.5%	16.1%	7.4%
Electronic Waste	9.5%	10.7%	79.7%	99.7%		0.3%
Opportunities in Green Building	6.1%	72.8%	21.1%	100.0%	0.0%	
Opp's in Renewable Energy	7.8%	50.3%	41.9%	90.5%	5.6%	3.9%
Packaging Material & Waste	14.0%	21.2%	64.7%	96.9%		3.1%
Water Stress	11.1%	82.2%	6.8%	51.4%	42.2%	6.4%
Toxic Emissions & Waste				46.8%	26.6%	26.6%

Temperature - Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

- A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,
- An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates a carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Level of alignment	null
Hedging	96.4%

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des Marchés Financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 ("AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 ("UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management compensation policy notably ensures appropriate risk management and adherence to compliance on the part of its employees.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No "carried interest" was paid during the financial year.

Lyxor's best selection and execution policy

Transparency of securities financing operations and reuse of financial instruments SFTR regulation

(Accounting currency of the CIS)

1. General information.

1.1. Amount of securities and raw materials loaned in proportion with the total assets that can be loaned, defined as excluding the cash and cash equivalents.

Securities lending

% of assets that can be loaned	-
--------------------------------	---

1.2. Amount of the assets committed to each type of securities financing operation and total return swap, expressed in absolute value (in the currency of the collective investment undertaking) and in proportion with the assets under management of the collective investment undertaking.

	Securities lending ⁽¹⁾	Securities borrowing ⁽²⁾	Repo operations ⁽³⁾	Reverse repo operations ⁽⁴⁾	TRS ⁽⁵⁾
Absolute value	-	-	-	-	58,851,257.46
% of assets under management	-	-	-	-	100.00

⁽¹⁾ The amount of assets engaged in securities lending transactions corresponds to the market value of the securities lent at the balance sheet date.

⁽²⁾ The amount of assets engaged in securities borrowing transactions corresponds to the market value of the guarantees (cash or securities) delivered by the fund as part of the securities borrowing on the balance sheet date.

⁽³⁾ The amount of assets engaged in repurchase transactions corresponds to the market value of the securities repurchased on the balance sheet date.

⁽⁴⁾ The amount of assets engaged in reverse repurchase transactions corresponds to the market value of securities purchased under repurchase agreements at the balance sheet date.

⁽⁵⁾ The amount of assets committed in the TRS corresponds (i) for the TRS for which the management company has undertaken to deliver a basket of securities to the TRS counterparty, to the market value of the basket of securities committed in the TRS, increased by the market value of the TRS on the accounting date and/or (ii) for the TRS for which the management company does not deliver a basket of securities, to the value of the nominal value of the TRS on the balance sheet date.

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information, in the evolving context of the Covid-19 crisis.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded. However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities in undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Sub-Fund's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

- - The exchange rates used for the assessment of financial instruments listed in a currency other than the Sub-Fund's reference currency are the exchange rates published the fixing WM Reuters on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the CIU) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional transactions is equal to the price of the underlying security (in the currency of the subfund) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Sub-Fund).

Operation and management fees

These fees include all of the fees invoiced directly to the Sub-Fund, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transfer commission which, if relevant, may notably be collected by the custodian and management company.

For this Sub-Fund, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Sub-Fund has exceeded its objectives and are invoiced to the Sub-Fund;
- Transfer commissions invoiced to the Sub-Fund.

For more details on the fees actually invoiced to the Sub-Fund, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	Maximum 0.60 % per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commission	Net assets	None

⁽¹⁾ including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS or investment funds.

Accounting currency

The Compartment accounting is carried out in Euro.

Temporary financial securities operations	49,053,131.44	2,125,140.72	-	-
Debts	-	-	-	-
Financial accounts	-	-	-	-
Off-balance sheet				
Hedging	-	-	-	-
Other operations	-	-	-	-

3.5. Receivables and Debts: breakdown by type

Details of the elements comprising the "other receivables" and "other debts" items, notably breakdown of the future foreign exchange operations by type of operation (purchase/sale).

Receivables	
Future currency exchange operations:	
Future purchases of currency	-
Total traded amount of future Sales of currencies	-
Other receivables:	
-	-
-	-
-	-
-	-
-	-
Other operations	-
Debts	23,440.11
Future currency exchange operations:	
Future sales of currencies	-
Total traded amount of future Purchases of currencies	-
Other debts:	
Accrued expenses	23,440.11
-	-
-	-
-	-
-	-
Other operations	-

3.6. Shareholders' equities

	Subscriptions		Redemptions	
	Number of equities	Amount	Number of equities	Amount
Number of equities issued/redeemed during the fiscal year	9,264,901	105,102,174.14	9,090,738	106,867,477.11
Subscription / redemption commission		-		-
Retrocessions		-		-
Fees paid to the sub-fund		-		-

3.7. Management fees

Operating and management fees (fixed fees) as % of the average net assets	0.60
Performance commissions (variable fees): amount of costs for the year	-
Retrocession of management fees:	
- Total amount of fees retroceded to the Compartment	-
- Breakdown by "target" CIS:	
- CIU 1	-
- CIU 2	-

3.8. Commitments given and received

3.8.1. Description of guarantees received by the sub-fund with indication of the capital guaranteesnone
3.8.2. Description of the other commitments received and/or givennone

3.9. Other information

3.9.1. Current value of the financial instruments that are the subject of temporary acquisition:	
- Financial instruments sold under forward repurchase agreements	-
- Other temporary operations	-
3.9.2. Current value of the financial instruments comprising security deposits:	
Financial instruments received as guarantees and not included in the balance sheet:	
- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-
Financial instruments given as guarantees and maintained in their original item:	
- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-
3.9.3. Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (Sicav) and CIU managed by these entities:	
- CIS securities	-
- Swaps	58,874,694.72

3.10. Allocation of the profit and loss table *(in the Sub-Fund's accounting currency)*

Advances paid during the fiscal year

Date	Overall amount	Unit amount	Total tax credits	Unit tax credits
-	-	-	-	-

(compartment of the Multi Units France Sicav)

3.12. Table of the profit and loss and other characteristic elements of the Compartment during the last 5 fiscal years

Currency

EUR	29.10.2021	30.10.2020	31.10.2019	31.10.2018	29.09.2017
Net assets	58,851,257.46	92,310,297.26	113,995,204.93	76,442,669.36	55,902,601.52
Number of outstanding equities	5,983,644	5,809,481	7,727,057	3,989,547	3,195,532
Net asset value	9.8353	15.8895	14.7527	19.1607	17.4939
Unit distribution on net capital gains and losses	-	-	-	-	-
(including advances)					
Unit distribution (including advances)	-	-	-	-	-
Unit tax credit transferred to holders (natural persons) ⁽¹⁾	-	-	-	-	-
Capitalisation unit ⁽²⁾	3.17	12.39	-3.41	1.38	9.37

⁽¹⁾ In pursuant to the Fiscal Instruction of 4 March 1993 of the French Tax Department, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits between the circulating units on that date.

⁽²⁾ The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of outstanding units. This calculation method is applied from 1 January 2013.

Compartment creation date: 06 September 2018.

4 Inventory as of 29.10.2021

Auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

Information on investments and management

Classification

The Lyxor Bund Daily (-2x) Inverse UCITS ETF sub-fund (the “Sub-Fund”) is an index-based strategy UCITS ETF type fund.

Terms of determination and allocation of amounts available for distribution

Acc share class: Capitalisation of all the amounts available for distribution.

Management objective

The Compartment is a passively managed index-based UCITS.

The Sub-Fund’s investment objective is to expose itself inversely, both upwards and downwards and with daily amplifying leverage of 2, to the daily performance of the German government bond market with residual maturities of between 8.5 and 10.5 years by replicating the evolution of the Solactive Bund Daily Index (-2x) Inverse Index (the “Benchmark Index”), denominated in euros (EUR), while minimising the tracking error between the performance of the Sub-Fund and the Benchmark as much as possible.

The anticipated level of the ex-post tracking error under normal market conditions is 0.50%.

Benchmark indicator

The Benchmark Index is a strategy index established by Solactive AG, using a proprietary methodology. The Benchmark Index is calculated and maintained by Solactive AG.

The Benchmark Index offers an inverse exposure, both upwards and downwards, to changes in the German government bond market with residual maturities of between 8.5 and 10.5 years, whose Euro-Bund futures contracts are a representative indicator, with daily x2 leverage. Thus, in the event of a decline in Euro-Bund futures on a trading day, the net asset value of the Sub-Fund should increase twice on that same trading day and, in the event of a rise in Euro-Bund futures, the Sub-Fund’s net asset value should fall twice on that same trading day and the shareholders will not benefit from the increase in Euro-Bund futures.

Euro-Bund futures are a representative indicator of the German government bond market with residual maturities of between 8.5 and 10.5 years, listed on Eurex, and whose methodology is available at: www.eurexchange.com. The Benchmark Index’s daily performance is equal to the inverse of twice the daily performance of Euro-Bund futures, accrued interest (at the reference rate) received daily on the valuation of the fixing on the day before the Benchmark Index.

It is therefore an index representative of a short position strategy with leverage amplifying 2 Euro-Bund futures with a daily adjustment. An additional adjustment may be made during the session if the Benchmark falls by more than 40% on a trading day (i.e. if the increase in Euro-Bund futures, in absolute value, during the day is greater than 20%).

The monitored performance is that of the Benchmark Index closing prices in Euros.

As the Benchmark Index calculation methodology is not based on a direct investment in German government bonds

but on an indirect investment via futures contracts, the performance of the Sub-Fund will be impacted by the cost of rollover of the above-mentioned futures on a quarterly basis. This phenomenon may negatively and gradually impact the difference between the performance of the Sub-fund and the gross performance of the short positions in the underlyings of the aforementioned futures, in particular in the case of a long-term investment in the shares of the Sub-Fund.

A full description and full methodology for the construction of the Benchmark Index as well as information on the composition and respective weights of the components of the Benchmark Index are available on the website: <https://www.solactive.com>

Benchmark indicator revision and composition

The revision of the Benchmark Index takes place daily.

The adjustment frequency mentioned above may have an impact in terms of the cost(s) borne by the Sub-Fund and may therefore affect the performance of the Sub-Fund.

Benchmark indicator publication

The Benchmark Index is calculated daily based on the official closing fixing of the Euro-Bund futures of 5:15 pm.

The fixing of the Benchmark Index is available on the website: <https://www.solactive.com>

In accordance with the provisions of Article 34 of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Solactive AG administrator of the Benchmark Index Solactive Bund Daily (-2x) Inverse Index is included in the register of administrators and benchmark indices maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmarks used which describes the measures to be implemented in the event of substantial changes to an index or the cessation of provision of that index.

Investment strategy

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Index, the Sub-Fund will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Sub-Fund's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Sub-Fund may notably be securities that make up the Benchmark Index, as well as other financial securities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralised.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Sub-Fund's portfolio and (ii) the market value of the future exchange operation entered into by the Sub-Fund are available on the page dedicated to the Sub-Fund on the website: www.lyxoretf.com

The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

As part of the management of its exposure, the Sub-Fund may be exposed up to 20% of its assets in debt issued by a non-member state of the OECD. This limit of 20% may be raised to 35% for a single bond, where this proves to be justified by exceptional market conditions, particularly when certain securities are largely dominant and/or in the event of high volatility of a debt issue, or in the event of a political and/or economic event having or may have an impact on the appreciation of the debt of an issuing State and/or affecting the financial rating of an issuing State or any other event likely to affect the liquidity of a financial security included in the Benchmark.

Notwithstanding the assumptions referred to in paragraph above, securities issued by the same issuing State may represent up to 35% of the assets and 100% of the assets if the Sub-Fund holds at least 6 debt issues, none of which exceeds 30% of the assets. The aforementioned securities must be financial instruments issued or guaranteed by an OECD member state, the local authorities of a Member State of the European Union or party to the EEA agreement.

In this case, the manager intends to use mainly the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Sub-Fund may hold, in compliance with the ratios contained in the regulation, eurozone securities (from all economic sectors, listed on all markets), including within the small cap markets.

The aforementioned financial securities will be bonds selected on the basis of criteria

Of eligibility, in particular:

- Senior debt;
- Fixed maturity;
- Maximum residual maturity;
- Minimum issue size;
- Minimum threshold for S&P rating or equivalent.

Of diversification, notably:

- Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the French Monetary and Financial Code);
- Geographical area;
- Sector.

For more information on the abovementioned eligibility and diversification criteria, investors can visit the website: www.lyxoretf.com

The investment in undertaking for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Sub-Fund. As part of these investments, the Sub-Fund may subscribe for units or shares of UCITS managed by the management company or a company to which it is linked. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law. When the Sub-Fund receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Sub-Fund, given that they are received by the Sub-Fund in full ownership.

As part of the future optimisation of the Sub-Fund's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Sub-Fund will have recourse to index-linked swaps traded over-the-counter, exchanging the value of the financial securities in the Sub-Fund's assets (or of any other financial instrument or asset held by the Sub-Fund, where appropriate) against the value of the Benchmark Index (in compliance with the description contained in this section's paragraph 1 above).

As part of a future optimisation of the Sub-Fund management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including future financial instruments other than index-linked swaps.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Sub-Fund's portfolio, nor regarding the underlying assets of the future financial instruments.

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of assets under management.

When Societe Generale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Societe Generale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Sub-Fund may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Sub-Fund may suffer losses and/or incur costs/fees and its ability to achieve its management objective may also be negatively impacted. Where the Sub-Fund enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Sub-Fund can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Sub-Fund is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Sub-Fund's use of temporary purchases and sales of securities, the Sub-Fund can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Sub-Fund is totally neutralised.

Any financial guarantee received by the Sub-Fund will be provided to the Sub-Fund in full ownership and listed in the Sub-Fund's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Sub-Fund's assets. In the event of default by the counterparty, the Sub-Fund may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt towards the Sub-Fund as part of the guaranteed transaction. Any financial guarantee received by the Sub-Fund within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20 % of the Sub-Fund's net asset value;
- (e) The Sub-Fund's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Sub-Fund may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- Such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and
- Such financial guarantees consist of at least six different issues of which none exceeds 30% of the Sub-Fund's assets.

In compliance with the aforesaid conditions, the guarantees received by the Sub-Fund can include: (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;

- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e)(above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged.

Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Sub-Fund may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Sub-Fund is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

Counterparty selection policy

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Sub-Fund. The selection of counterparties for financial contracts and financial intermediaries is performed rigorously from among the reputable counterparties and intermediaries in the market, on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes various criteria into consideration to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating
- Quantitative criteria based on the CDS LT spread (absolute criteria, volatility and comparison with a reference group, etc.) Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information about this policy and on the relative importance of the execution criteria for each asset class, please visit our website: www.lyxor.com, regulatory information section.

Risk profile

The shareholder's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

Interest rate risk

The price of a bond may be affected by unexpected changes in interest rates, which may affect yield curves. The bonds included in the Benchmark Index are therefore exposed to such interest rate fluctuations. In general, the price of a bond rises when interest rates fall, and the price falls when interest rates rise.

Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

Liquidity risk (primary market)

If, when the Sub-Fund (or one of its counterparties for future financial instruments ("FFIs")) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase/sale price discrepancies, the value and/or liquidity of the Sub-Fund could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Sub-Fund's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Index, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Index, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

Counterparty risk

The Sub-Fund is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or effective portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Sub-Fund may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realisation of this risk may result in losses for the Sub-Fund and have an impact on the ability of the Sub-Fund to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Sub-Fund's assets per counterparty.

Risks related to collateral management

Operational risk:

The Sub-Fund may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk

The Sub-Fund may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

Risk of daily re-adjustment of leverage (double short)

Investors are inversely and twice exposed to fluctuations that affect the price or level of Bund futures underlying the Benchmark Index on a daily basis. In particular, any appreciation of the underlying market will be inversely amplified and will imply an even greater depreciation in the net asset value of the Sub-Fund. The daily readjustment of the exposure contained in the underlying double-short Benchmark formula implies that, over a period greater than one business day, the Sub-Fund's performance will not be equal to twice the opposite of the performance of the Bund futures underlying the Benchmark. Investors are underexposed to volatility.

For example, if the Bund futures underlying the Benchmark Index increase by 10% on a given business day and then depreciate by 5% on the next business day, the ETF will have depreciated by a total of 12% after these two days (and before deduction of applicable fees), while the Bund futures underlying the Benchmark Index will have appreciated by 4.5% over the same period.

If the Bund futures underlying the Benchmark Index depreciate by 10% per given business day, then increase by 6% on the next business day, the ETF appreciates a total of 5.60% after these two days (and before deduction of applicable fees), while the Bund futures underlying the Benchmark Index depreciate by 4.60% over the same period.

In the event that the Bund futures underlying the Benchmark Index increase by 5% per given business day, then depreciate by 5% on the next business day, the ETF depreciates by a total of 1% after these two days (and before deduction of applicable fees), and the Bund futures underlying the Benchmark Index will have depreciated as well but by 0.25% over the same period.

LYXOR BUND DAILY (-2X) INVERSE UCITS ETF
(compartment of the Multi Units France Sicav)

Negative scenario 1

If the negative leverage generated is greater than 2 in a scenario of a rise in the Benchmark's underlying asset.

	Benchmark Index underlying		strategy index		
	day i performance	day i value	day i performance	day i value	leverage induced
		100		100	
day 1	10%	110	-20%	80	x-2
day 2	-5%	104.5	10%	88	x-2
total period	4.50%		-12.00%		x-2.67

Negative scenario 2

If the negative leverage involved is less than 2 in a scenario of a decline in the Benchmark's underlying asset.

	Benchmark Index underlying		strategy index		
	day i performance	day i value	day i performance	day i value	leverage induced
		100		100	
day 1	-10%	90	20%	120	x-2
day 2	6%	95.4	-12%	105.6	x-2
total period	-4.60%		5.60%		x-1.22

In addition, it is possible that over a observation period greater than one day and in the event of high volatility of the Benchmark Index's underlyings over this period, the net asset value of the Sub-Fund may fall even though the underlyings of the Benchmark also posted a decline over the same period.

Reverse leverage scenario

If the leverage generated is positive over the period.

	Benchmark Index underlying		strategy index		
	day i performance	day i value	day i performance	day i value	leverage induced
		100		100	
day 1	5%	105	-10%	90	x-2
day 2	-5%	99.75	10%	99	x-2
total period	-0.25%		-1.00%		x4

Futures rollover risk

As the Benchmark Index is composed of futures contracts on German government bonds (Bund), maintaining exposure requires a quarterly rollover of futures positions: the rollover of futures consists of transferring a position in futures with a similar maturity (in any case before the expiry of the futures contracts) on futures with a longer maturity.

The investor is exposed to a risk of loss or gain when the futures rolls. In some market conditions, this could result in a systematic loss during the quarterly Rolls and thus negatively and gradually impact the difference between the performance of the Sub-Fund and the gross performance of the short positions in the underlyings of the used futures, in particular in the case of a long-term investment in the shares of the Sub-Fund.

Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

Risk related to the use of derivative instruments

In order to achieve its investment objective, the Sub-Fund uses FFIs traded over-the-counter, which can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Sub-Fund's net asset value.

Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Sub-Fund is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Sub-Fund's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Sub-Fund's underlyings can affect the Sub-Fund's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Sub-Fund (and/or to its counterparty in the FFI), the Sub-Fund's net asset value may be affected.

Risk related to regulations

In case of change of the regulations in any country in which the Sub-Fund is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Sub-Fund's underlyings, the Sub-Fund's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Sub-Fund equities. The calculation of the Sub-Fund's net asset value can also be affected.

If the event persists, the Sub-Fund's manager will decide on measures having to be adopted, which can have an impact on the Sub-Fund's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Index is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Index is definitively discontinued by its supplier,
- iii) The index supplier is unable to provide the level or value of said Benchmark;
- iv) The index provider makes a material change in the Benchmark calculation formula or method (other than a minor modification such as an adjustment to this Benchmark's underlying components or their respective weightings) that the Sub-Fund cannot effectively replicate at a reasonable cost;
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a corporate action ("CA"), that contradicts a prior and official announcement that had resulted in a valuation of the CA by the Sub-Fund (and/or in a valuation of the CA by the Sub-Fund's counterparty in a future financial instrument), the Sub-Fund's net asset value may be affected, notably should the actual treatment of the CA by the Sub-Fund differ from the CA's treatment in the methodology used by the Benchmark Indicator.

Sustainability risks

The Sub-Fund does not consider sustainability factors in the investment decision-making process but remains exposed to sustainability risks. The occurrence of such risks could have a negative impact on the value of the investments made by the Sub-Fund. Additional information can be found in the "Sustainability Information" section of the Prospectus.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

Investors who subscribe to this Sub-Fund wish to gain exposure, both upwards and downwards, and with daily leverage amplifying 2, to the performance of the German government bond market with residual maturities of between 8.5 and 10.5 years.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Sub-Fund's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

As an arbitrage product, this Sub-Fund may not be suitable for investors wishing to make a medium or long-term investment.

"U.S. Persons" (as defined below - see "COMMERCIAL INFORMATION") may not invest in the Sub-Fund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

activity report

The fund replicates the performance of the Solactive Bund Daily index (-2x) Inverse Index EUR (Ticker:SODI2BUN).

Performance trend at the closing date:

Share name	ISIN	Share currency	Performance from 28/02/19 to 31/10/19			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor Bund Daily (-2x) Inverse UCITS ETF - Acc	FR0010869578	EUR	5.97% ⁽¹⁾	6.41%		-72.15%

⁽¹⁾ "The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs (for example the index rebalancing cost);
- taxation incurred in relation to the methodology used in the Benchmark Index»

The tracking error realised is 0.0168%. The target tracking error over the period was 0.5%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

Index Linked Swap's counterparty is: Société Générale.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor) None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the UCI that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

This Fund is covered by Article 6 of Regulation (EU) 2019/2088 (the "SFDR Regulation"). It does not promote environmental and/or social characteristics and does not aim to invest sustainably

Transparency of environmentally sustainable investments in periodic reports under Regulation (EU) 2020/852

Regulation (EU) 2020/852 on the establishment of a framework for promoting sustainable investments (the "Taxonomy Regulation") sets out the criteria for determining whether an economic activity is environmentally sustainable in the European Union.

According to the Taxonomy Regulation, an activity can be considered "sustainable" if it contributes substantially to one of the 6 environmental objectives set out in the Taxonomy Regulation, including climate change mitigation and adaptation, pollution prevention and reduction, or the protection and restoration of biodiversity and ecosystems.

In addition, in order to be considered to be sustainable, this economic activity must respect the principle of "not to cause significant harm" to one of the other five objectives of the Taxonomy Regulation and must also comply with basic social criteria (alignment to OECD and UN guidelines on business and human rights).

In accordance with article 7 of the Taxonomy Regulation, the management company draws investors' attention to the fact that the underlying investments of this Fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Provision of environmental, social and governance (ESG) information - in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website [Lyxor.com](https://www.lyxor.com) and is revised each

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

(a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

To the basket of assets held by the fund, the fund applies an exclusion of issuers associated with serious and repeated violations of the Principles of the United Nations Global Compact and regulatory requirements related to controversial sectors and products. This list is supplemented by a list of companies to be excluded due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological chemical, nuclear or radiological weapons, etc.).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy). • Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website [Lyxor.com](https://www.lyxor.com). The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

LYXOR extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

Measuring the GHG emissions of its investments is seen as a first step. This will give investors an indication of their financed issues.

After carefully analysing the available indicators and data in order to take into account and measure the transition risks that climate change poses to issuers, LYXOR will not report on these issues at this stage. We will work with our external suppliers to enhance our expertise to report and reflect the transition risk in the years to come.

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des marchés financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter "AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter "UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the French Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual remuneration review campaign that was carried out during the course of the year, on the basis of the perimeter of the staff as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable remuneration are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable remuneration deferred from a previous financial year. No "carried interest" was paid during the financial year.

Lyxor's best selection and execution policy

Information on best selection and execution policies is available at: www.lyxor.com.

Transparency of securities financing operations and reuse of financial instruments SFTR regulation

(Accounting currency of the CIU)

1. General information.

1.1. Amount of securities and raw materials loaned in proportion with the total assets that can be loaned, defined as excluding the cash and cash equivalents.

Securities lending	
% of assets that can be loaned	-

1.2. Amount of the assets committed to each type of securities financing operation and total return swap, expressed in absolute value (in the currency of the collective investment undertaking) and in proportion with the assets under management of the collective investment undertaking.

	Securities lending ⁽¹⁾	Securities borrowing ⁽²⁾	Repo operations ⁽³⁾	Reverse repo operations ⁽⁴⁾	TRS ⁽⁵⁾
Absolute value	-	-	-	-	327,538,293.42
% of assets under management	-	-	-	-	100.00

⁽¹⁾ The amount of assets engaged in securities lending transactions corresponds to the market value of the securities lent at the balance sheet date.

⁽²⁾ The amount of assets engaged in securities borrowing transactions corresponds to the market value of the guarantees (cash or securities) delivered by the fund as part of the securities borrowing on the balance sheet date.

⁽³⁾ The amount of assets engaged in repurchase transactions corresponds to the market value of the securities repurchased on the balance sheet date.

⁽⁴⁾ The amount of assets engaged in reverse repurchase transactions corresponds to the market value of securities purchased under repurchase agreements at the balance sheet date.

⁽⁵⁾ The amount of assets committed in the TRS corresponds (i) for the TRS for which the management company has undertaken to deliver a basket of securities to the TRS counterparty, to the market value of the basket of securities committed in the TRS, increased by the market value of the TRS on the accounting date and/or (ii) for the TRS for which the management company does not deliver a basket of securities, to the value of the nominal value of the TRS on the balance sheet date.

2. Concentration data

2.1. The ten biggest issuers of guarantees for all types of securities financing operations and total return swaps (breakdown of the volumes of guarantees and raw materials received, with the names of the issuers).

1	Name	-
	Amount	-

2.2. The ten main counterparties for each type of securities financing operation and total return swap separately (name of the counterparty and gross volume of operations in progress).

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information in the evolving context of the Covid-19 crisis.

Assessment rules

The Sub-Fund's assets are valued according to the applicable laws and regulations, and more particularly the rules defined in Regulation No. 2014-01 of the French regulatory accounting committee (CRC) dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded. However, in the absence of significant transactions on a regulated market, the following financial instruments are valued using the following specific methods: - Negotiable debt securities ("NDS") with a residual maturity upon acquisition that of 3 months or less are assessed with a straight-line extension over the residual maturity of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;

- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- Negotiable debt securities with a residual maturity of more than 3 months at the net asset value date are measured at the present value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- Futures traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable trading value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities in undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Sub-Fund's net asset value.
- Units and shares of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Sub-Fund's reference currency are the exchange rates published the fixing WM Reuters on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under "Financial instruments" according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under "Other temporary operations".

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Sub-Fund).

Operation and management fees

These fees include all of the fees invoiced directly to the Sub-Fund, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Sub-Fund, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Sub-Fund has exceeded its objectives and are invoiced to the Sub-Fund;
- Transfer commissions invoiced to the Sub-Fund.

For more details on the fees actually charged to the Sub-Fund, refer to the Statistics section of the Key Investor Information Document (KIID).

Fees invoiced to the Sub-Fund	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	maximum 0.20 % per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commission	Net assets	None

⁽¹⁾ including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Accounting currency

The Compartment accounting is carried out in Euro.

Indication of accountancy changes declared to each of the shareholders individually

Hedging	-	-	-	-	-
Other operations	-	-	-	-	-

3.4. Breakdown by listing or assessment currency of the asset, liability and off-balance sheet items

This breakdown is given for the main listing or assessment currencies, with the exception of the currency for the keeping of the accounts.

By main currency	-	-	-	Other currencies
Assets				
Deposits	-	-	-	-
Equities and similar securities	-	-	-	-
Bonds and similar securities	-	-	-	-
Debt securities	-	-	-	-
CIU	-	-	-	-
Temporary financial securities operations	-	-	-	-
Receivables	-	-	-	-
Financial accounts	-	-	-	-
Other assets	-	-	-	-
Liabilities				
Sale operations on financial instruments	-	-	-	-
Temporary financial securities operations	-	-	-	-
Debts	-	-	-	-
Financial accounts	-	-	-	-
Off-balance sheet				
Hedging	-	-	-	-
Other operations	-	-	-	-

3.5. Receivables and Debts: breakdown by type

Details of the elements comprising the "other receivables" and "other debts" items, notably breakdown of the future foreign exchange operations by type of operation (purchase/sale).

Receivables	32,589,676.80
Future currency exchange operations:	
Future purchases of currency	-
Total traded amount of future Sales of currencies	-
Other receivables:	
Amounts receivable	24,236,287.18
Deferred settlement sales	8,353,389.62
-	-
-	-
-	-
Other operations	-
Debts	27,639,791.01
Future currency exchange operations:	
Future sales of currencies	-
Total traded amount of future Purchases of currencies	-
Other debts:	
Deferred payment purchases	22,127,833.14
Account payable	5,459,474.29
Accrued expenses	52,483.58
-	-
-	-
Other operations	-

3.6. Shareholders' equities

	Subscriptions		Redemptions	
	Number of equities	Amount	Number of equities	Amount
Number of equities issued/redeemed during the fiscal year	13,889,000	381,404,950.40	12,190,299	330,019,677.81
Subscription / redemption commission		-		-
Retrocessions		-		-
Fees paid to the sub-fund		-		-

3.7. Management fees

Operating and management fees (fixed fees) as % of the average net assets	0.20
Performance commissions (variable fees): amount of costs for the year	-
Retrocession of management fees:	
- Total amount of fees retroceded to the Compartment	-
- Breakdown by "target" CIU:	
- CIU 1	-
- CIU 2	-

3.8. Commitments given and received

3.8.1. Description of guarantees received by the Sub-Fund with indication of the capital guarantees.....	none
3.8.2. Description of the other commitments received and/or given	none

3.9. Other information

3.9.1. Current value of the financial instruments that are the subject of temporary acquisition:	
- Financial instruments sold under forward repurchase agreements	-
- Other temporary operations	-
3.9.2. Current value of the financial instruments comprising security deposits:	
Financial instruments received as guarantees and not included in the balance sheet:	
- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-
Financial estimates given as guarantees and maintained in their original item:	
- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-
3.9.3. Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (Sicav) and CIU managed by these entities:	
- CIU securities	-
- Swaps	1,829,339.95

3.10. Allocation of the profit and loss table *(in the Compartment's accounting currency)*

Advances paid during the fiscal year

Date	Overall amount	Unit amount	Total tax credits	Unit tax credits
-	-	-	-	-
-	-	-	-	-
-	-	-	-	-
-	-	-	-	-
Total advances	-	-	-	-

	29.10.2021	30.10.2020
	EUR	EUR
Allocation of the profit and loss		
Sums still to be allocated		
Carried forward	-	-
Profit and loss	-632,021.92	-549,872.94
Total	-632,021.92	-549,872.94
Allocation		
Distribution	-	-
Carried forward for the fiscal year	-	-
Capitalisation	-632,021.92	-549,872.94
Total	-632,021.92	-549,872.94
Information relative to the equities and resulting in a distribution right		
Number of equities	-	-
Unit distribution	-	-
Tax credits linked to the allocation of the profit and loss	-	-

3.11. Allocation table of the amounts available for distribution related to the net capital gains and losses

(in the Compartment's accounting currency)

Advances on net capital gains and losses paid for the fiscal year

Date	Overall amount	Unit amount
-	-	-
-	-	-
-	-	-
-	-	-
Total advances	-	-

	29.10.2021	30.10.2020
Allocation of the net capital gains and losses	EUR	EUR
Sums still to be allocated		
Non-distributed prior net capital gains and losses	-	-
Net capital gains and losses of the fiscal year	31,095,838.83	-23,881,936.73
Advances paid on net capital gains and losses of the fiscal year	-	-
Total	31,095,838.83	-23,881,936.73
Allocation		
Distribution	-	-
Non-distributed net capital gains and losses	-	-
Capitalisation	31,095,838.83	-23,881,936.73
Total	31,095,838.83	-23,881,936.73
Information relative to the equities and resulting in a distribution right		
Number of equities	-	-
Unit distribution	-	-

3.12. Table of the profit and loss and other characteristic elements of the Sub-Fund during the last 5 financial years

Currency EUR	29.10.2021	30.10.2020	31.10.2019	31.10.2018	31.08.2018
Net assets	327,538,293.42	264,428,154.57	559,305,303.52	897,805,489.25	1,041,735,398.90
Number of outstanding equities	11,759,105	10,060,404	19,743,904	26,603,904	30,973,904
Net asset value	27.854	26.284	28.3279	33.7471	33.6326
Unit distribution on net capital gains and losses (including advances)	-	-	-	-	-
Unit distribution (including advances)	-	-	-	-	-
Unit tax credit transferred to holders (natural persons) ⁽¹⁾	-	-	-	-	-
Capitalisation unit ⁽²⁾	2.59	-2.42	-4.98	0.33	-1.99

⁽¹⁾ In pursuant to the Fiscal Instruction of 4 March 1993 of the French Tax Department, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits between the circulating units on that date.

⁽²⁾ The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of outstanding units. This calculation method is applied from 1 January 2013.

Compartment creation date: 06 September 2018

4 Inventory at 29.10.2021

report

SUB-FUND OF THE MULTI UNITS FRANCE SICAV

FISCAL YEAR ENDING ON: 29.10.2021

Compartments / feeder	LYXOR FTSE MIB (DR) UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
Management Company	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy – 92987 Paris La Défense Cedex.
Depository and Custodian	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

Information on investments and management

Classification:

Equities from countries in the European Union.

At all times, the Lyxor FTSE MIB UCITS ETF Sub-Fund (“Sub-Fund”) has at least 60% exposure in one or more markets for equities issued in one or more eurozone countries, possibly including the French market. The Compartment is an index-based fund of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution:

Dist share class: the Board of Directors reserves the right to distribute, one or more times per year, all or part of the result and/or to accumulate it.

Acc share class: Capitalisation of all the amounts available for distribution.

Management objective:

The Compartment is a passively managed index-based UCITS.

The investment objective of this Sub-Fund is to track the upward and downward performance of the FTSE MIB™ Net Total Return index (net dividends reinvested) (“Benchmark”), listed in euros, while minimising the tracking error between the Sub-Fund’s performance and the Benchmark’s performance as much as possible.

The anticipated level of the ex-post tracking error under normal market conditions is 0.50%.

Benchmark indicator:

The Benchmark measures the performance of 40 shares listed on the organised and managed market of the Italian stock exchange and aims to track the sectoral breakdown of the Italian domestic market.

The Benchmark Indicator is a “Net Total Return” index, which means that the Benchmark Indicator’s performance includes the net dividends paid by its underlying equities.

The composition of the Benchmark is determined on the basis of three criteria: free float, liquidity, and representativeness of the main market sectors according to the ICB (Industry Classification Standard).

An exhaustive description and the complete methodology for the construction of the Benchmark as well as information on the composition and relative weights of the Benchmark’s components are available on the website: <http://www.ftse.com>

The monitored performance is that of the Benchmark Indicator closing prices.

Benchmark indicator publication

The Benchmark’s closing price is available on the the FTSE website: <http://www.ftse.com>.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the administrator FTSE International Limited of the Benchmark has until 31 December 2023 to request authorisation or registration, where applicable, from the competent authority.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmarks used which describes the measures to be implemented in the event of substantial changes to an index or the cessation of provision of that index.

Benchmark indicator revision and composition

The revision of the Reference Indicator takes place quarterly.

The exact composition and rules for revision of the Benchmark published by MSCI are available on the website: <http://www.ftse.com>

The above-mentioned frequency of rebalancing has no effect on costs as part of the implementation of the investment strategy.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Index, the Sub-Fund will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Sub-Fund's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Sub-Fund may notably be securities that make up the Benchmark, as well as other European equities, from all economic sectors, listed on all markets, including the small-cap markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralised.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Sub-Fund's portfolio and (ii) the market value of the future exchange operation entered into by the Sub-Fund are available on the page dedicated to the Sub-Fund on the website: www.lyxoretf.com

The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

The Sub-Fund will permanently invest a minimum of 75% of its assets in companies that have their registered office in a Member State of the European Union, or in another State party to the Treaty on the European Economic Area that has entered into a tax agreement with France containing an administrative assistance clause with a view to combating fraud or tax evasion. This minimum holding level allows eligibility for the Equity Savings Plan.

As part of the management of its exposure, the Sub-Fund may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

In this case, the manager intends to use mainly the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Sub-Fund may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets.

The aforementioned equities will be chosen on the basis of criteria:

Of eligibility, in particular:

- o inclusion in the main market indices or the Benchmark
- o liquidity (must exceed a minimum daily trading volume and market capitalisation)
- o rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent).

Of diversification, notably:

- o issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. Art. R214-21 of the French Monetary and Financial Code);
- o geographical
- o sector

For more information on the abovementioned eligibility and diversification criteria, investors can visit the website www.lyxoretf.com

The investment in undertaking for collective investment in transferable securities (“UCITS”) that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Sub-Fund. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

When the Sub-Fund receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Sub-Fund, given that they are received by the Sub-Fund in full ownership.

As part of these investments, the Sub-Fund may subscribe for units or shares of UCITS managed by the management company or a company to which it is linked.

As part of the future optimisation of the Sub-Fund's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Sub-Fund will have recourse to index-linked swaps traded over-the-counter, exchanging the value of the equities in the Sub-Fund's assets (or of any other financial instrument or asset held by the Sub-Fund, where appropriate) against the value of the Benchmark Indicator (in compliance with the description contained in this section's paragraph 1 above).

As part of a future optimisation of the Sub-Fund management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including future financial instruments other than index-linked swaps.

The counterparty of the aforesaid future financial instruments (the “Counterparty”) will have no discretionary power regarding the composition of the Sub-Fund's portfolio, nor regarding the underlying assets of the future financial instruments.

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of assets under management.

When Societe Generale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Societe Generale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Sub-Fund may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Sub-Fund may suffer losses and/or incur costs/fees and its ability to achieve its management objective may also be negatively impacted.

When the Sub-Fund enters into two or more TRS with one or more counterparties above risks mentioned above apply to the portion of assets that are committed under the swap that is prematurely terminated and/or to which the counterparty has defaulted.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Sub-Fund can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10 % of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Sub-Fund is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Sub-Fund's use of forward swap contracts traded over the counter, the Sub-Fund can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Sub-Fund is totally neutralised.

Any financial guarantee received by the Sub-Fund will be provided to the Sub-Fund in full ownership and listed in the Sub-Fund's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Sub-Fund's assets. In the event of default by the counterparty, the Sub-Fund may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt towards the Sub-Fund as part of the guaranteed transaction.

Any financial guarantee received by the Sub-Fund within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20 % of the Sub-Fund's net asset value;
- (e) The Sub-Fund's Management Company must be able to enforce this collateral in full and at any time without having to consult with the counterparty or obtain its approval.

Notwithstanding the condition specified in (d) above, the Sub-Fund may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and
- such securities collateral consists of at least six different issues of securities of which no single issue exceeds 30% of the Sub-Fund's assets.

In compliance with the aforesaid conditions, the guarantees received by the Sub-Fund can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e)(above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Shares or units of UCITS that invest mainly in the bonds and/or equities indicated in (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Sub-Fund's management company will apply a margin to the financial guarantees received by the Sub-Fund. The applied margins will notably depend on the following criteria:

- Nature of the asset received as collateral;
- Maturity of the asset received as collateral (if applicable);
- Rating of the issuer of the asset received as collateral (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged.

Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Sub-Fund may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Sub-Fund is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

COUNTERPARTY SELECTION POLICY

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Sub-Fund. The selection of counterparties for financial contracts and financial intermediaries is performed rigorously from among the reputable counterparties and intermediaries in the market, on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes various criteria into consideration to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating

Quantitative criteria based on the CDS LT spread (absolute criteria, volatility and comparison with a reference group, etc.)

Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information about this policy and on the relative importance of the execution criteria for each asset class, please visit our website: www.lyxor.com, regulatory information section.

Risk profile:

The shareholder's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Equity risk

An equity price can vary upwards or downwards, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

If, when the Sub-Fund (or one of its counterparties for future financial instruments ("FFIs")) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase/sale price discrepancies, the value and/or liquidity of the Sub-Fund could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Sub-Fund's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) trading in the market(s) in the Benchmark's underlying assets is suspended, and/or
- iii) an exchange cannot obtain or calculate the Sub-Fund's indicative net asset value, and/or
- iv) a market maker fails to comply with an exchange's rules, and/or
- v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Sub-Fund is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or effective portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Sub-Fund may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event.

In particular, the realisation of this risk may result in losses for the Sub-Fund and have an impact on the ability of the Sub-Fund to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Sub-Fund's assets per counterparty.

- Risks related to the management of guarantees

Operational risk:

The Sub-Fund may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Sub-Fund may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to achieve its investment objective, the Sub-Fund uses FFIs traded over-the-counter, which can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Index, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Sub-Fund's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Sub-Fund is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Sub-Fund's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Sub-Fund's underlyings can affect the Sub-Fund's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Sub-Fund (and/or to its counterparty in the FFI), the Sub-Fund's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Sub-Fund is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to regulations applicable to the underlyings

In case of change of the regulations applicable to the Sub-Fund's underlyings, the Sub-Fund's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Sub-Fund equities. The calculation of the Sub-Fund's net asset value can also be affected. If the event persists, the Sub-Fund's manager will decide on measures having to be adopted, which can have an impact on the Sub-Fund's net asset value.

"Events affecting the Benchmark Index" are understood to mean the following situations:

- i) The Benchmark Index is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Index is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Index (other than a minor modification such as the adjustment of the underlyings of this Benchmark Index or of the respective weightings between its various components), that cannot be effectively replicated by the Sub-Fund at a reasonable cost.
- v) One or more components of the Benchmark Index becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Index's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Index's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a corporate action (“CA”), that contradicts a prior and official announcement that had resulted in a valuation of the CA by the Sub-Fund (and/or in a valuation of the CA by the Sub-Fund’s counterparty in a future financial instrument), the Sub-Fund’s net asset value may be affected, notably should the actual treatment of the CA by the Sub-Fund differ from the CA’s treatment in the methodology used by the Benchmark Indicator.

- Sustainability risks

The Sub-Fund does not consider sustainability factors in the investment decision-making process but remains exposed to sustainability risks. The occurrence of such risks could have a negative impact on the value of the investments made by the Sub-Fund. Additional information can be found in the “Sustainability Information” section of the Prospectus.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

Investors subscribing to this Sub-Fund are seeking exposure to Italian equity markets.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one’s investments so as to avoid an exposure only to this Sub-Fund’s risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment term is greater than 3 years.

U.S. Persons (as defined in the “COMMERCIAL INFORMATION” prospectus) may not invest in the Sub-Fund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Sub-Fund’s complete prospectus and the latest annual and periodic documents are sent within one week of the bearer’s written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy-92800 Puteaux.*
- *Creation date of the Multi Units France Sicav: 04 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 06 June 2018.*
- *Compartment creation date: 20 September 2018.*

activity report

The fund tracks the performance of the FTSE MIB Net TR EUR index (Ticker: CACR).

Performance trend at the closing date:

Share name	ISIN	Share currency	Performance from 28/02/19 to 31/10/19			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor FTSE MIB (DR) UCITS ETF - Dist	FR0010010827	EUR	53.53% ⁽¹⁾	53.12%		74.08%
Lyxor FTSE MIB (DR) UCITS ETF - Acc	FR0014002H76	EUR	11.13% ⁽¹⁾	10.77%		11.13%

⁽¹⁾ "The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- The index replication cost (such as the index rebalancing cost);
- taxation incurred in relation to the methodology used in the Benchmark;
- whether the manager uses sampling or advanced indexing techniques"

The tracking error realised is 0.3173%. The target tracking error over the period was 0.5%.

The fund complies with the PEA eligibility constraints at all times, the details of which are available on request from the management company. During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction.

Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the UCI that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

This Fund is covered by Article 6 of Regulation (EU) 2019/2088 (the "SFDR Regulation"). It does not promote environmental and/or social characteristics and does not aim to invest sustainably

Transparency of environmentally sustainable investments in periodic reports under Regulation (EU) 2020/852

Regulation (EU) 2020/852 on the establishment of a framework for promoting sustainable investments (the "Taxonomy Regulation") sets out the criteria for determining whether an economic activity is environmentally sustainable in the European Union.

According to the Taxonomy Regulation, an activity can be considered "sustainable" if it contributes substantially to one of the 6 environmental objectives set out in the Taxonomy Regulation, including climate change mitigation and adaptation, pollution prevention and reduction, or the protection and restoration of biodiversity and ecosystems.

In addition, in order to be considered to be sustainable, this economic activity must respect the principle of "not to cause significant harm" to one of the other five objectives of the Taxonomy Regulation and must also comply with basic social criteria (alignment to OECD and UN guidelines on business and human rights).

In accordance with article 7 of the Taxonomy Regulation, the management company draws investors' attention to the fact that the underlying investments of this Fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Provision of environmental, social and governance (ESG) information - in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

(a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

- French, German & Luxembourgish Funds (Fonds Communs de Placement - FCP) and SICAV (*)
 - Securities of issuers domiciled in Europe: in order to prevent excessive costs inherent in the voting process, Lyxor participates in general meetings when the consolidated holding represents more than 0.10% of the company's capital
 - Securities of issuers domiciled in the United States: Lyxor will exercise its right to vote on its largest consolidated holdings
 - Securities of issuers domiciled in Japan: Lyxor will exercise its right to vote on its largest consolidated holdings
- (*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership.

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (in connection with Lyxor's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group's Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defence policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website Lyxor.com

Active Ownership - Operational set up:

In addition to the internal analysis carried out, Lyxor uses the services of ISS (Institutional Shareholder Services), as a proxy advisor.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

2. Description of integration of climate risks and the contribution to the energy transition

LYXOR is gradually expanding its ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

• Measuring the GHG emissions of its investments provides investors with an indication of their financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

LYXOR FTSE MIB (DR) UCITS ETF (compartment of the Multi Units France Sicav)

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environments solutions that contribute to the Sustainable Development Goals (SDGs).

- In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuers in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure – analyses the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyses the breakdown of a company's geographic segments in terms of revenues, assets, or operations

- In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

LYXOR FTSE MIB (DR) UCITS ETF

For each issuer (Corporate & Government), ESG Industry sector classification is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The ESG score calculated at the portfolio level measures the capacity of the underlying issuers to manage the risks and key opportunities associated with environmental, social and governance factors. The risk scale ranges from 0 (high risk) to 10 (low risk). Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: employment, social relations, health and safety, training, compliance with ILO conventions
- Governance: Board of Directors or Supervisory Board, Audit and Internal Control, Executive Compensation

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source: The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Measures the portfolio's exposure to companies experiencing controversies relating to their compliance with international standards as a function of their degree of severity:

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: indicates that the company is not involved in any major controversies
- None: Sovereign and/or Company not covered

Red Flag 2%
Orange Flag 31%
Yellow Flag 16%
Green Flag 51%

Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GreenHouse Gas Protocol (GHG Protocol) was launched in 2001 by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: direct emissions resulting from the burning of fossil fuel resources owned or controlled by the company.
- Scope 2: indirect emissions associated with the purchase or production of electricity.
- Scope 3: all other indirect emissions, from the extended supply chain to the transport of goods and persons.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$m invested): they represent the carbon footprint of the standardised portfolio by \$m invested
- Carbon intensity (tons CO2e/\$m of turnover): shows the carbon efficiency of the portfolio in terms of emissions per \$m of turnover
- Weighted Average Carbon Intensity (tons CO2e/\$m of turnover): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions standardised by turnover), and these intensities are weighted by the weight of the companies in the portfolio.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio invested in both equities and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt. All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or the portion of the company's revenue earned from fossil fuel energies or the portion of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon:	
Fossil Fuel Reserves	20%
Thermal Coal	0%
Natural Gas	20%
Oil	20%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of : \$ 1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0032
Oil (MMBOE)	0.0033

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	1,387.2
Gas	1,023.3
Total	2,410.5

These metrics include only corporate issuers rated in Carbon.

LYXOR FTSE MIB (DR) UCITS ETF

(compartment of the Multi Units France Sicav)

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges - this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	2410.5

These metrics include only corporate issuers rated in Carbon.

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Enenergy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	0.0%	0.0%	9.4%
Some efforts	92.0%	98.8%	62.6%
Limited efforts/Information	4.3%	1.2%	16.1%
No effort/No evidence	1.7%	0.0%	11.8%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs

Low carbon transition score	5.5
Low carbon transition management Score	5.4

- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks

Operational Transition	13.9%
Product Transition	13.9%
Neutral	55.7%
Solutions	2.1%

(1) Metric developed by MSCI

Energy Mix of energy producers within the portfolio

A company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The issuer data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source: MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	26.1%	Liquid Fuel	7.9%	Natural Gas	32.8%
Nuclear	10.2%	Renewables	17.9%	Thermal Coal	5.2%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. Those issuers are likely to benefit from a low carbon transition

Issuer with a revenue dedicated to environmental solutions between:

0-19.9%	48%
20-49.9%	1%
50-100%	0%

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	23.9%	Energy Efficiency	39.8%	Green Building	0.0%
Pollution Prevention	7.7%	Sustainable Water	3.5%	Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	1.4%	Energy Efficiency	1.6%	Green Building	0.0%
Pollution Prevention	0.1%	Sustainable Water	0.1%	Sustainable Agriculture	0.0%

LYXOR FTSE MIB (DR) UCITS ETF

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

% estimated EU Taxo

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	3%
Coldwave	27%
Flood	2%
Heatwave	8%
Hurricane	1%
Water Stress	52%
Wildfire	7%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.).

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure – analyses the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyses the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	6.2%	90.1%	3.7%	73.8%	18.3%	7.9%
Carbon Emissions	7.0%	72.2%	20.7%	76.5%	16.1%	7.4%
Electronic Waste	9.5%	10.7%	79.7%	99.7%		0.3%
Opportunities in Green Building	6.1%	72.8%	21.1%	100.0%	0.0%	
Opp's in Renewable Energy	7.8%	50.3%	41.9%	90.5%	5.6%	3.9%
Packaging Material & Waste	14.0%	21.2%	64.7%	96.9%		3.1%
Water Stress	11.1%	82.2%	6.8%	51.4%	42.2%	6.4%
Toxic Emissions & Waste				46.8%	26.6%	26.6%

Temperature - Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

- A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,
- An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates a carbon budget from global to company level over a chosen time horizon.

Level of alignment	>3°C
Hedging	96.4%
Alignment Trajectory in % Weight	
<1.5°C	18.5%
1.5-2°C	19.8%
2-3°C	11.0%
>3°C	50.6%

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des marchés financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 ("AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 ("UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management compensation policy notably ensures appropriate risk management and adherence to compliance on the part of its employees.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

LYXOR FTSE MIB (DR) UCITS ETF
(compartment of the Multi Units France Sicav)

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No “carried interest” was paid during the financial year.

Lyxor's best selection and execution policy

Information on best selection and execution policies is available at: www.lyxor.com.

Transparency of securities financing operations and reuse of financial instruments SFTR regulation

(Accounting currency of the CIU)

During the financial year, the UCI did not carry out any transactions subject to the SFTR regulation, namely no repurchase transactions, securities or commodities lending/borrowing, buy-sell back or sell-buy back transactions, margin lending transactions and total return swaps (TRS).

Effective portfolio management techniques and derivative financial instruments

a) Exposure obtained through effective portfolio management techniques and derivative financial instruments

• Exposure obtained through effective management technique:	-
- Securities lending:	-
- Securities borrowing:	-
- Reverse repurchase agreements:	-
- Repurchase agreements:	-
• Underlying exposure achieved through derivative financial instruments:	1,337,350.00
- Forward exchange contracts:	-

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information, in the evolving context of the Covid-19 crisis.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded. However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;

- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities in undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Sub-Fund's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.

Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

- The exchange rates used for the valuation of financial instruments listed in a currency other than the Sub-Fund's reference currency are the exchange rates published the WM Reuters fixing on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the CIS) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Sub-Fund) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company. For this Sub-Fund, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are invoiced to the Compartment;
- Transfer commissions invoiced to the Sub-Fund.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Sub-Fund	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	maximum 0.35 % per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commission	Net assets	None

⁽¹⁾ including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Accounting currency

The Compartment accounting is carried out in Euro.

activity
report

SUB-FUND OF THE MULTI UNITS FRANCE SICAV

FISCAL YEAR ENDING ON: 29.10.2021

Compartments / feeder	LYXOR IBEX 35 (DR) UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
Management Company	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy – 92987 Paris La Défense Cedex.
Depository and Custodian	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

Information on investments and management

Classification:

Equities from countries in the European Union.

At all times, the Lyxor IBEX 35 (DR) UCITS ETF subfund (“Subfund”) has at least 60% exposure in one or more markets for equities issued in one or more eurozone countries, possibly including the French market.

The Compartment is an index-based fund of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution:

Dist share class: the Board of Directors reserves the right to distribute, one or more times a year, all or part of the amounts available for distribution and/or accumulate them.

Acc share class: accumulation of all distributable amounts.

Management objective:

The Compartment is a passively managed index-based UCITS.

The investment objective of this Subfund is to track the upward and downward performance of the IBEX 35 Net Return index (net dividends reinvested) (“Benchmark”), listed in euros and main Spanish stock market index, while minimising the tracking error between the Subfund’s performance and the Benchmark’s performance as much as possible.

The anticipated level of the ex-post tracking error under normal market conditions is 0.20%.

Benchmark indicator:

The Benchmark is an equity index calculated and published by Sociedad de Bolsas.

The Benchmark is composed of 35 Spanish stocks selected on the basis of their liquidity.

The Benchmark is a “Net Return” index, which means that the Benchmark’s performance includes the net dividends paid by its underlying equities.

A full description and the full methodology for the construction of the Benchmark as well as information on the composition and respective weights of the components of the Benchmark are available on the website: <http://www.bolsamadrid.es>

The monitored performance is that of the Benchmark Indicator closing prices. **Benchmark**

indicator publication

The Benchmark Indicator is calculated on a daily basis at closing prices using the official closing stock market prices for the constituent stocks.

The Benchmark Indicator is also calculated in real time every day that the Benchmark Indicator is published.

The Benchmark is available in real time via Reuters and Bloomberg.

The closing price of the Benchmark is available on the website: <http://www.bolsamadrid.es>

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Sociedad de Bolsas administrator of the Benchmark is included in the register of administrators and benchmarks maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmarks used, describing the measures to be implemented in the event of substantial changes to an index or if that index ceases to be provided.

Benchmark indicator revision and composition

The Benchmark is rebalanced quarterly.

The exact composition of the Benchmark and the rules for rebalancing it, published by Sociedad de Bolsas, are available on the website: <http://www.bolsamadrid.es>

The above-mentioned frequency of rebalancing has no effect on costs in the implementation of the investment strategy.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark, the Subfund will use a direct replication method, which means that the Subfund will invest in a basket of assets made up of the equities comprising the Benchmark and/or financial instruments representative of all or part of the equities comprising the Benchmark.

In addition, the sub-fund may use forward financial instruments ("FFIs"). Futures in which the sub-fund is likely to invest include contracts such as index futures, futures on all or part of the Benchmark Index components, and hedging swaps entered into to minimise the Sub-Fund's tracking error.

When pursuant to its investment strategy (e.g. use of futures) the Sub-Fund is required to hold cash, the manager in the best interest of the unitholders may use deposits with credit institutions, and/or invest cash in balance sheet assets and/or off-balance sheet assets (as described below). The Subfund may use efficient portfolio management techniques in accordance with the provisions of Article R214-18 of the French Monetary and Financial Code and, in particular, temporary disposals of securities.

In order to allow investors to benefit from transparency on the direct replication method used (full replication of the Benchmark) and its consequences in terms of assets held by the Subfund, information on the updated composition of the basket of balance sheet assets held in the Subfund's portfolio is available on the page dedicated to the Subfund available on the website www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

As part of the management of its exposure, the Compartment may be exposed up to 20 % of its assets in equities from a single issuing entity. This 20% limit may be increased to 35% for a single issuing entity when this is shown to be justified by exceptional market conditions, in particular when certain securities are largely dominant and/or in the event of strong volatility affecting a financial instrument or securities linked to an economic sector represented in the Benchmark. This could be the case, for example, in the event of a public offering affecting any of the securities that make up the Benchmark or in the event of a significant restriction of liquidity affecting one or more financial instruments in the Benchmark. The Subfund will at all times invest at least 75% of its assets in companies having their registered office in a Member State of the European Union or in another country that is a member of the European Economic Area and has signed a tax convention with France that includes an administrative assistance clause for the purpose of fighting tax fraud and evasion. This minimum investment requirement qualifies the Subfund for French "PEA" equity savings plans.

In this case, the manager intends to use mainly the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Sub-Fund will mainly be invested in the securities described below:

• Equities

The Compartment may hold international equities in accordance with regulatory ratios. The Sub-Fund will be mainly invested in the shares comprising the Benchmark Index.

• Holding shares or units of other UCIs or investment funds

The Sub-Fund may invest up to 10% of its assets in units or shares of the following CIS or investment funds:

- French or foreign UCITS compliant with Directive 2009/65/EC – For the purposes of these investments, the Subfund may subscribe for units or shares in UCITS managed by the Management Company or a related company.

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership. **3. Off-balance sheet assets (derivative instruments)**

The Sub-Fund may invest in the following FFIs:

- Eligible markets:
 - regulated
 - organised
 - over-the-counter
- Risks in which the Sub-Fund wishes to trade:
 - equity
- Types of operations, all transactions being limited to achieving the management objective:
 - hedging
 - exposure
- Type of instruments used:
 - futures: on equities and indices
 - forward exchange contracts
- Strategy for using derivatives to achieve the investment objective:
 - overall hedging of the portfolio or of certain risks, securities, etc. – up to 100% of net assets
 - to achieve synthetic exposure to assets or risks – up to 100% of assets

The counterparties of OTC derivatives processed by the Sub-Fund will be selected in accordance with the Management Company's best execution policies (including the execution matrix by asset type mentioned in the Appendix). The above-mentioned policy can be accessed at the following address: <https://www.lyxor.com/politique-de-meilleure-execution-liam-janvier-2020-fr>

The counterparty to the financial futures instruments will not have discretionary power over the composition of the Sub-Fund's investment portfolio, nor over the underlying assets of the financial futures instruments within the limits and under the conditions provided for by the regulations.

Situations of conflict of interest may arise between the Management Company and Société Générale when Société Générale acts as a counterparty to FFIs. These situations are governed by the Management Company's conflict of interest management policy.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20 % of its net assets, the Compartment can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10 % of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

The Subfund may use various techniques to manage its portfolio efficiently in compliance with Article R214-18 of the French Monetary and Financial Code, including the temporary sale of securities.

Maximum proportion of assets under management that may be covered by securities financing contracts: up to 25% of the Sub-Fund's assets.

- Expected proportion of assets under management that can be financed by securities transactions: 0% of the Subfund's assets

In this context, the Management Company has appointed Societe Generale as an intermediary (hereinafter the "Agent"). In the event of recourse to an Agent, it may be authorised (i) to carry out, on behalf of the Sub-Fund, securities lending transactions, governed by GMSLA (Global Master Securities Lending Agreements) and/or any other internationally recognised framework agreements, and (ii) to invest, on behalf of the MF, the cash received as collateral for these securities lending transactions, in accordance with and within the limits defined by the securities lending agreement, the rules of this prospectus and the regulations in force.

As a reminder, the Management Company is an entity of the Societe Generale Group and is therefore linked to the Agent.

Where Société Générale S.A. is appointed as Agent, it is not authorised to act as a counterparty in securities lending transactions.

In the event of the recourse to such temporary sales:

- all income arising from these transactions, net of direct and indirect operational costs/fees, will be returned to the Sub-Fund;
- the above operational costs/fees related to efficient portfolio management techniques will be those incurred by the Management Company, the Agent (if applicable) and/or the other intermediaries involved in these transactions in connection with their services;
- the direct or indirect operating costs/fees will be calculated as a percentage of the gross income generated by the Subfund. Information on operational, direct and indirect fees/costs and the identity of the entities to which these fees/costs are paid will be mentioned in the Sub-Fund's annual report.
- income from the lending of securities will be paid to the Subfund after deduction of any direct and indirect operating costs/fees that may be borne by the Agent and the Management Company. To the extent that these fees/costs, direct and indirect, do not increase the operating costs of the Sub-Fund, they have been excluded from current expenses.

The Compartment's annual report will include, where applicable, the following details:

- the exposure generated through effective portfolio management techniques;
- the identity of the counterparty(ies) to these effective portfolio management techniques;
- the type and amount of guarantees received by the Sub-Fund in order to reduce counterparty risk; and
- the income generated by efficient portfolio management techniques over the relevant period, and any associated direct and indirect operating costs/fees.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of temporary purchases and sales of securities, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depository. As such, the received financial guarantees will be listed amongst the Compartment's assets. In the event of default by the counterparty, the Compartment may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt towards the Compartment as part of the guaranteed transaction.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20 % of the Sub-Fund's net asset value;
- (e) The Sub-Fund's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and
- such securities collateral consists of at least six different issues of securities of which no single issue exceeds 30% of the Subfund's assets.

In compliance with the aforesaid conditions, the guarantees received by the Sub-Fund can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e)(above) have been fully met;

- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Shares or units of UCITS that invest mainly in the bonds and/or equities indicated in (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as collateral;
- Maturity of the asset received as collateral (if applicable);
- Rating of the issuer of the asset received as collateral (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged.

Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Compartment may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

Counterparty selection policy

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (financial futures and temporary acquisitions and disposals of securities) on behalf of the Mutual Fund. The selection of counterparties for financial contracts and financial intermediaries is performed rigorously from among the reputable counterparties and intermediaries in the market, on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes various criteria into consideration to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating

Quantitative criteria based on the CDS LT spread (absolute criteria, volatility and comparison with a reference group, etc.)

Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: www.lyxor.com, section "regulatory information".

Risk profile:

The Subfund will mainly invest in the Benchmark financial instruments selected by the Management Company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Equity risk

An equity price can vary upwards or downwards, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. Equity markets are more volatile than fixed-income markets,

where, under stable macroeconomic conditions, income over a given period can be estimated with reasonable accuracy.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

If, when the Compartment (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Sub-Fund's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) trading in the market(s) in the Benchmark's underlying assets is suspended, and/or
- iii) an exchange cannot obtain or calculate the Subfund's indicative net asset value, and/or
- iv) a market maker fails to comply with an exchange's rules, and/or
- v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs").

It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

- Risk related to the use of effective portfolio management techniques

In the event that the counterparty to the efficient portfolio management technique (hereinafter referred to as the "EPMT") processed by the Sub-Fund fails to provide the counterparty, the Sub-Fund may be exposed to a risk in the event that the value of the guarantees received by the MF is lower than the value of the assets of the MF transferred to the counterparty under the EPMT in question. This risk could materialise in particular in the event of (i) a poor valuation of the securities subject to this transaction and/or (ii) adverse market movements and/or (iii) a deterioration in the credit rating of issuers of securities received as collateral and/or (iv) illiquidity of the market on which the collateral received is admitted to listing. Unitholders should note that (i) EPMTs may be entered into with Societe Generale (entity of the same group as the Management Company) and/or (ii) that Societe Generale may be appointed as agent of the Subfund under the EPMTs.

- Risks related to the management of guarantees

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected. If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Index is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Index is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Index (other than a minor modification such as the adjustment of the underlyings of this Benchmark Index or of the respective weightings between its various components), that cannot be effectively replicated by the Sub-Fund at a reasonable cost.
- v) One or more Benchmark components become illiquid because they are no longer traded on a regulated market or because their over-the-counter trading (e.g. bonds) is disrupted;
- vi) The Benchmark Index's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Index's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

- Risk related to the use of derivative instruments

The Compartment may use over-the-counter forward Financial Instruments ("FFIs") or listed FFIs, in particular futures contracts and/or hedging swaps. These FFIs can result in a series of risks on the level of the contract that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Index, risk related to the tax regime, risk related to the regulations, and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI contract, which could affect the Sub-Fund's net asset value.

Investing in futures may involve a high level of risk. The amount required to trade certain FFIs is potentially much lower than the exposure obtained through these instruments, which implies a "leverage" at the level of each transaction. A relatively limited market movement would then have a proportionately very high impact, which could be favourable or unfavourable to the Fund.

The market value of forward financial instruments is highly volatile and may therefore be subject to significant fluctuations.

The Sub-Fund may use OTC futures. Over-the-counter transactions may be less liquid than transactions traded on organised markets, where trading volumes are generally higher, and their prices may be more volatile.

- Sustainability risks

The Sub-Fund does not consider sustainability factors in the investment decision-making process but remains exposed to sustainability risks. The occurrence of such risks could have a negative impact on the value of the investments made by the Sub-Fund. Additional information can be found in the "Sustainability Information" section of the Prospectus.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

Investors subscribing to this Subfund are seeking exposure to Spanish equity markets.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers. The minimum recommended investment term is greater than 5 years.

“U.S. Persons” (as defined in the prospectus - see “COMMERCIAL INFORMATION”) may not invest in the Sub-Fund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy-92800 Puteaux.*
- *Creation date of the Multi Units France Sicav: 04 March 2002.*
- *Sub-Fund approval date by the AMF (Financial Markets Authority): 06 June 2018.*

Activity report

The fund replicates the performance of the IBEX 35 Net Return EUR index (Ticker:IBEXNR).

Performance trend at the closing date:

Share name	ISIN	Share currency	Performance from 28/02/19 to 31/10/19			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor IBEX 35 (DR) UCITS ETF - Dist	FR0010251744	EUR	43.87% ⁽¹⁾	43.71%	-	32.52%
Lyxor IBEX 35 (DR) UCITS ETF - Acc	FR0012205672	EUR	43.87% ⁽¹⁾	43.71%	-	-0.50%

⁽¹⁾ "The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs (for example the index rebalancing cost);
- taxation incurred in relation to the methodology used in the Benchmark;
- whether the manager uses sampling or advanced indexing techniques"

The tracking error realised is 0.1653%. The target tracking error over the period was 0.2%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams. This difference is considered insignificant.

The fund complies with the PEA eligibility constraints at all times, the details of which are available on request from the management company. During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor) None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

This Fund is covered by Article 6 of Regulation (EU) 2019/2088 (the "SFDR Regulation"). It does not promote environmental and/or social characteristics and does not aim to invest sustainably

Transparency of environmentally sustainable investments in periodic reports under Regulation (EU) 2020/852

Regulation (EU) 2020/852 on the establishment of a framework for promoting sustainable investments (the "Taxonomy Regulation") sets out the criteria for determining whether an economic activity is environmentally sustainable in the European Union.

According to the Taxonomy Regulation, an activity can be considered "sustainable" if it contributes substantially to one of the 6 environmental objectives set out in the Taxonomy Regulation, including climate change mitigation and adaptation, pollution prevention and reduction, or the protection and restoration of biodiversity and ecosystems.

In addition, in order to be considered to be sustainable, this economic activity must respect the principle of "not to cause significant harm" to one of the other five objectives of the Taxonomy Regulation and must also comply with basic social criteria (alignment to OECD and UN guidelines on business and human rights).

In accordance with article 7 of the Taxonomy Regulation, the management company draws investors' attention to the fact that the underlying investments of this Fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Provision of environmental, social and governance (ESG) information - in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

(a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

- French, German & Luxembourgish Funds (Fonds Communs de Placement - FCP) and SICAV (*)
- Securities of issuers domiciled in Europe: in order to prevent excessive costs inherent in the voting process, Lyxor participates in general meetings when the consolidated holding represents more than 0.10% of the company's capital
- Securities of issuers domiciled in the United States: Lyxor will exercise its voting rights on its largest consolidated holdings
- Equity securities of issuers domiciled in Japan: Lyxor will exercise its right to vote on its largest consolidated holdings

(*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership.

In terms of engagement, Lyxor has defined an engagement policy that is structured around three axes: an engagement related to general meetings, an engagement related to environmental, social and/or governance issues, and an engagement related to climate. This third axis comprises four engagement campaigns:

- The first campaign related to the Climate Action 100+ initiative, committing Lyxor to ask companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosure) recommendations.
- The second campaign related to plastics and the circular economy.
- The third campaign related to localised water management.
- The fourth campaign related to responsible cleantech.

This fund is part of the following campaigns: Corporate Governance, ESG, General meeting, Responsible Cleantech

b) Information used for the analysis implemented on ESG criteria

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (in connection with Lyxor's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns.
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website Lyxor.com

Active Ownership - Operational set up:

In addition to the internal analysis carried out, Lyxor uses the services of ISS (Institutional Shareholder Services), as a proxy advisor.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

Engagement policy:

To carry out its engagement campaigns, Lyxor can:

- organize one-on-one meetings with management, board members, investor relations, sustainable development teams or any person within the company who can provide answers to the issue;
- partner with other management companies to gain greater leverage with targeted companies;
- (iii) join working groups or initiatives specializing in certain areas.

Description of how the results of the analysis on ESG issues are integrated in investment policies

In terms of engagement, the details are presented below.

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

LYXOR IBEX 35 (DR) UCITS ETF

(compartment of the Multi Units France Sicav)

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e /\$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environments solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuers in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure – analyses the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyses the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

For each issuer (Corporate & Government), ESG Industry sector classification is provided by MSCI ESG Ratings.
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The ESG score calculated at the portfolio level measures the capacity of the underlying issuers to manage the risks and key opportunities associated with environmental, social and governance factors. The risk scale ranges from 0 (high risk) to 10 (low risk). Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%. The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: employment, social relations, health and safety, training, compliance with ILO conventions
- Governance: Board of Directors or Supervisory Board, Audit and Internal Control, Executive Compensation

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source: The Company carbon footprint data are provided by the MSCI agency. All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Measures the portfolio's exposure to companies experiencing controversies relating to their compliance with international standards as a function of their degree of severity:

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: indicates that the company is not involved in any major controversies
- None: Sovereign and/or Company not covered

Red Flag	0%
Orange Flag	36%
Yellow Flag	33%
Green Flag	29%

			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GreenHouse Gas Protocol (GHG Protocol) was launched in 2001 by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: direct emissions resulting from the burning of fossil fuel resources owned or controlled by the company.
- Scope 2: indirect emissions associated with the purchase or production of electricity.
- Scope 3: all other indirect emissions, from the extended supply chain to the transport of goods and persons.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2e / \$m invested): they represent the carbon footprint of the standardised portfolio by \$m invested
- Carbon intensity (tons CO2e/\$m of turnover): shows the carbon efficiency of the portfolio in terms of emissions per \$m of turnover
- Weighted Average Carbon Intensity (tons CO2e/\$m of turnover): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions standardised by turnover), and these intensities are weighted by the weight of the companies in the portfolio.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

- Methodology change*

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio invested in both equities and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest - total debt.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or the portion of the company's revenue earned from fossil fuel energies or the portion of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon:	
Fossil Fuel Reserves	6%
Thermal Coal	0%
Natural Gas	4%
Oil	3%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of : \$ 1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0013
Oil (MMBOE)	0.0006

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	178.6
Thermal Coal	0.0
Oil	242.7
Gas	410.3
Total	831.7

LYXOR IBEX 35 (DR) UCITS ETF

(compartment of the Multi Units France Sicav)

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges - this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	831.7

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Enenergy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	15.2%	0.0%	4.3%
Some efforts	78.3%	99.6%	84.8%
Limited efforts/Information	3.7%	0.0%	8.2%
No effort/No evidence	0.9%	0.0%	2.6%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

Asset stranding: risk of holding assets which may become stranded

•Operational Transition: risk of increase in operational costs

•Product Transition: risk of a decrease in demand for high-carbon products and services •Neutral: low exposure to transition risks

•Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low- carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.1
Low carbon transition management Score	6.2
Operational Transition	4.5%
Product Transition	4.5%
Neutral	70.0%
Solutions	5.2%

Energy Mix of energy producers within the portfolio

A company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The issuer data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source: MSCI ESG Research

Share of issuers in terms of power generation in portfolio	21.8%
--	-------

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	13.6%	Liquid Fuel	0.0%	Natural Gas	38.2%
Nuclear	17.5%	Renewables	30.2%	Thermal Coal	0.5%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. Those issuers are likely to benefit from a low carbon transition

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenu dedicated to environmental solutions between:	
0-19.9%	28%
20-49.9%	5%
50-100%	3%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	30.5%	Energy Efficiency	37.7%	Green Building	4.4%
Pollution Prevention	4.1%	Sustainable Water	8.1%	Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	4.4%	Energy Efficiency	1.3%	Green Building	1.3%
Pollution Prevention	0.0%	Sustainable Water	0.6%	Sustainable Agriculture	0.0%

LYXOR IBEX 35 (DR) UCITS ETF

(compartment of the Multi Units France Sicav)

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

% estimated EU Taxo

7.7%

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	1%
Coldwave	27%
Flood	5%
Heatwave	9%
Hurricane	2%
Water Stress	50%
Wildfire	6%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.).

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

•Business Segment Risk Exposure – analyses the breakdown of a company's business in terms of revenues, assets, or operations

•Geographic Segment Risk Exposure – analyses the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	0.7%	85.4%	13.9%	78.2%	18.6%	3.2%
Carbon Emissions	3.0%	66.0%	31.0%	82.8%	13.0%	4.1%
Electronic Waste	3.4%	17.0%	79.6%	100.0%		
Opportunities in Green Building	8.4%	63.9%	27.7%	98.6%	0.0%	1.3%
Opp's in Renewable Energy	10.3%	84.6%	5.1%	84.0%	6.2%	9.8%
Packaging Material & Waste	20.3%	21.6%	58.1%	99.1%		0.9%
Water Stress	15.2%	42.3%	42.5%	72.4%	18.3%	9.2%
Toxic Emissions & Waste				64.9%	26.3%	8.7%

Temperature - Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

-A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,

-An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates a carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Level of alignment	>3°C
Hedging	98.7%

Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

Meeting overview

This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	39
Number of Voted Meetings	20
Participation rate at General Meetings	51.3%

Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution I	For	Against	Abstention
Board of Directors	92.9%	7.1%	0.0%
Routine/Business	99.3%	0.7%	0.0%
Non-Salary Comp.	95.1%	4.9%	0.0%
Miscellaneous	100.0%	0.0%	0.0%
Other/Misc	100.0%	0.0%	0.0%
Capitalization	100.0%	0.0%	0.0%
Reorg. and Mergers	100.0%	0.0%	0.0%
Antitakeover	100.0%	0.0%	0.0%

Breakdown by country

In 2021, Lyxor's voting scope was issuers domiciled in Europe, in United States and in Japan.

The data details the geographical distribution of the General Meetings at which the Lyxor IBEX 35 (DR) UCITS ETF fund participated during the financial year.

Spain	95.0%
Luxembourg	5.0%

Engagement

This fund is part of the following campaigns: Corporate Governance, ESG, General meeting, Responsible Cleantech

ESG: The consideration of environmental, social and/or governance issues is at the heart of Lyxor's responsible investor strategy. Lyxor therefore considers that it is the responsibility of the Board to supervise the definition of the company's non-financial and climate risks and opportunities, as well as the strategy implemented by management with regards to this risk/opportunity analysis. The objective of Lyxor on this type of engagement is to work with companies to encourage them to improve their Corporate Social Responsibility practices.

Corporate Governance: Outside the general meeting period, Lyxor promotes regular dialogue with companies on corporate governance issues such as changes in the composition of the Board and its committees, succession plans, the role and functions of the lead director, changes in the remuneration policy, etc.

Responsible Cleantech: Lyxor initiated in 2020 a thematic campaign on clean and responsible technologies. The objective of this engagement campaign is to implement a holistic approach to assess and manage ESG risks associated with the development of this type of technology. In addition to assessing companies' practices, this campaign aims to identify potential points of vigilance and improvement and work together in the search for sustainable solutions.

More specifically, this thematic commitment aims to:

- Apply a life-cycle approach to clean technology products;
- Catalyze more sustainable production of some of the most popular cleantech solutions;
- Explore ways to more effectively address environmental and social risks in production and supply chain.

Engagement overview over the year

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des marchés financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 ("AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 ("UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management compensation policy notably ensures appropriate risk management and adherence to compliance on the part of its employees.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No "carried interest" was paid during the financial year.

Lyxor's best selection and execution policy

Information on best selection and execution policies is available at: www.lyxor.com.

Transparency of securities financing operations and reuse of financial instruments SFTR regulation

(Accounting currency of the CIU)

During the financial year, the UCI did not carry out any transactions subject to the SFTR regulation, namely no repurchase transactions, securities or commodities lending/borrowing, buy-sell back or sell-buy back transactions, margin lending transactions and total return swaps (TRS).

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information, in the evolving context of the Covid-19 crisis.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings. The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;

- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities in undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Sub-Fund's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.

Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

- The exchange rates used for the valuation of financial instruments listed in a currency other than the Sub-Fund's reference currency are the exchange rates published the WM Reuters fixing on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the CIS) multiplied by the number of contracts multiplied by the face value. The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Sub-Fund) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value. The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company. For this Sub-Fund, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Performance fees: these commissions reward the management company when the Subfund has exceeded its objectives and are invoiced to the Subfund;
- transfer commissions invoiced to the Sub-Fund;
- direct and indirect operating costs/fees related to temporary purchases and sales of securities.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	Maximum 0.30 % per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commission	Net assets	None
Direct and indirect operating costs/fees related to temporary acquisitions and disposals of securities	Amount of income generated by these operations	Maximum 20% for the Management Company; maximum 15% for the Agent

⁽¹⁾ including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Accounting currency

The Compartment accounting is carried out in Euro.

Indication of accountancy changes declared to each of the shareholders individually

- Occurred change: None.
- Future change: None.

Other changes declared to each of the shareholders individually *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Dist share class: the Board of Directors reserves the right to distribute, one or more times a year, all or part of the amounts available for distribution and/or accumulate them.

Acc share class: accumulation of all distributable amounts.

activity
report

SUB-FUND OF THE MULTI UNITS FRANCE SICAV

FISCAL YEAR ENDING ON: 29.10.2021

Compartments / feeder	LYXOR MSCI EUROPE (DR) UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
Management Company	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy – 92987 Paris La Défense Cedex.
Depository and Custodian	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

Information on investments and management

Classification:

International equities.

At all times, the Lyxor MSCI Europe (DR) UCITS ETF subfund (“Subfund”) has at least 60% exposure in foreign equity markets or in equity markets of several countries, possibly including the French market. The Compartment is an index-based fund of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution:

Acc share classes: accumulation of all distributable amounts.

Management objective:

The Compartment is a passively managed index-based UCITS.

The investment objective of this Sub-Fund is to track the upward and downward performance of the MSCI Europe Net Total Return Index (net dividends reinvested) (“Benchmark”), listed in euros (EUR) and representative of large and mid-caps of European developed countries while minimising the tracking error between the Sub-Fund’s performance and the Benchmark’s performance as much as possible.

The anticipated level of the ex-post tracking error under normal market conditions is 0.50%.

Benchmark indicator:

The benchmark is the MSCI Europe Net Total Return index, net dividends reinvested, which means that the Benchmark’s performance includes the net dividends paid by its underlying equities, listed in EUR.

The Benchmark is an equity index, weighted by the free float-adjusted market capitalisation calculated and published by the supplier of international indices MSCI.

The Benchmark retains the fundamental characteristics of the MSCI indices, namely:

- a) universe of securities included in the Benchmark;
- b) adjustment of the securities included in the Benchmark on the basis of the free float;
- c) sector classification according to the GICS (Global Industry Classification Standard).

The Benchmark Indicator is an index representative of large and mid-caps of European developed markets. The Benchmark includes only securities from European countries and aims to include 85% of the free float-adjusted market capitalisation of each country present in the index and of each group of European industries.

By targeting 85% of each country and each industry group, the Benchmark comprises 85% of the market capitalisation of the European markets while also reflecting the economic diversity of these markets.

The MSCI methodology and its calculation method entail a variable number of component companies of the Benchmark. An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator’s components are available on the website: <http://www.msci.com>

The monitored performance is that of the Benchmark Index closing price.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark, the Subfund will achieve its investment objective via a direct tracking method, which means that the Subfund will invest in a basket of assets made up of the equities comprising the Benchmark and/or financial instruments representative of all or part of the equities comprising the Benchmark.

In addition, the sub-fund may use forward financial instruments ("FFIs"). Futures in which the sub-fund is likely to invest include contracts such as index futures, futures on all or part of the Benchmark Index components, and hedging swaps entered into to minimise the Sub-Fund's tracking error.

When pursuant to its investment strategy (e.g. use of futures) the Sub-Fund is required to hold cash, the manager in the best interest of the unitholders may use deposits with credit institutions, and or invest cash in balance sheet assets and/or off-balance sheet assets (as described below).

As part of the optimisation of the Benchmark's direct replication method, the Sub-Fund, represented by its delegated financial manager, may decide to use a so-called "sampling" technique consisting of investing in a selection of representative securities comprising the Benchmark, with the aim of limiting the costs associated with investing in the different components of the Benchmark. A sampling replication strategy could notably lead the Sub-Fund to invest in a selection of representative securities (and not all securities) comprising the Benchmark, in proportions different from those of the Benchmark Index or even to invest in securities other than the Benchmark Index components.

In order to allow investors to benefit from transparency on the direct tracking method used (full tracking of the Benchmark or sampling to limit replication costs) and its consequences in terms of assets held by the Subfund, information on the updated composition of the basket of balance sheet assets held in the Subfund's portfolio is available on the page dedicated to the Subfund available on the website www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

As part of the management of its exposure, the Compartment may be exposed up to 20 % of its assets in equities from a single issuing entity. This 20% limit can be increased to 35 % for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

In this case, the manager intends to use mainly the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Sub-Fund will mainly be invested in the securities described below:

- Equities

The Compartment may hold international equities in accordance with regulatory ratios. The Sub-Fund will be mainly invested in the shares comprising the Benchmark Index.

- Holding shares or units of other UCIs or investment funds

The Sub-Fund may invest up to 10% of its assets in units or shares of the following CIS or investment funds:

- French or foreign UCITS compliant with Directive 2009/65/EC – For the purposes of these investments, the Subfund may subscribe for units or shares in UCITS managed by the Management Company or a related company.

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

3. Off-balance sheet assets (derivative instruments)

The Sub-Fund may invest in the following FFIs:

- Eligible markets:

- regulated
- organised
- over-the-counter

• Risks in which the Sub-Fund wishes to trade:

- equity

• Types of operations, all transactions being limited to achieving the management objective:

- hedging

- exposure

• Type of instruments used:

- futures: on equities and indices

- forward exchange contracts

• Strategy for using derivatives to achieve the investment objective:

- overall hedging of the portfolio or of certain risks, securities, etc. – up to 100% of net assets

- to achieve synthetic exposure to assets or risks – up to 100% of assets

The counterparties of OTC derivatives processed by the Sub-Fund will be selected in accordance with the Management Company's best execution policies (including the execution matrix by asset type mentioned in the Appendix). The above-mentioned policy can be accessed at the following address: <https://www.lyxor.com/politique-de-meilleure-execution-liam-janvier-2020-fr>

The counterparty to futures will have no discretionary power over the composition of the Subfund's portfolio or over the underlying assets of futures within the limit and conditions provided for by the regulations.

Situations of conflict of interest may arise between the Management Company and Société Générale when Société Générale acts as a counterparty to FFIs. These situations are governed by the Management Company's conflict of interest management policy.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20 % of its net assets, the Compartment can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10 % of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

The Subfund may use efficient portfolio management techniques in accordance with the provisions of Article R214-18 of the French Monetary and Financial Code and in particular:

• Type of transactions used:

- lending and borrowing of securities within the meaning of the French Monetary and Financial Code,

• Types of operations, all transactions being limited to achieving the management objective:

- Optimisation of the Sub-Fund's revenues,

- Maximum proportion of assets under management that may be covered by securities financing contracts: up to 25% of the Sub-Fund's assets.

- Expected proportion of assets under management that can be financed by securities transactions: 0% of the Sub-Fund's assets.

In this context, the Management Company has appointed Societe Generale as an intermediary (hereinafter the "Agent"). In the event of recourse to an Agent, it may be authorised (i) to carry out, on behalf of the Sub-Fund, securities lending transactions, governed by GMSLA (Global Master Securities Lending Agreements) and/or any other internationally recognised framework agreements, and (ii) to invest, on behalf of the MF, the cash received as collateral for these securities lending transactions, in accordance with and within the limits defined by the securities lending agreement, the rules of this prospectus and the regulations in force.

As a reminder, the Management Company is an entity of the Societe Generale Group and is therefore linked to the Agent.

Where Société Générale S.A. is appointed as Agent, it is not authorised to act as a counterparty to securities lending transactions. If such temporary sales are used:

- all income arising from these transactions, net of direct and indirect operational costs/fees, will be returned to the Sub-Fund;

- the above operational costs/fees related to efficient portfolio management techniques will be those incurred by the Management Company, the Agent (if applicable) and/or the other intermediaries involved in these transactions in connection with their services;

- the direct or indirect operating costs/fees will be calculated as a percentage of the gross income generated by the Subfund. Information on direct and indirect operational costs/fees and the identity of the entities to which

these costs/fees shall be paid will be mentioned in the annual report of the Sub-Fund; and

- income from the lending of securities will be paid to the Subfund after deduction of any direct and indirect operating costs/fees that may be borne by the Agent and the Management Company. To the extent that these fees/costs, direct and indirect, do not increase the operating costs of the Sub-Fund, they have been excluded from current expenses.

The Compartment's annual report will include, where applicable, the following details:

- the exposure generated through effective portfolio management techniques;
- the identity of the counterparty(ies) to these effective portfolio management techniques;
- the type and amount of guarantees received by the Sub-Fund in order to reduce counterparty risk; and
- the income generated by efficient portfolio management techniques over the relevant period, and any associated direct and indirect operating costs/fees.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of temporary purchases and sales of securities, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depository. As such, the received financial guarantees will be listed amongst the Compartment's assets. In the event of default by the counterparty, the Compartment may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt towards the Compartment as part of the guaranteed transaction. Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20 % of the Sub-Fund's net asset value;
- (e) The Sub-Fund's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and
- such securities collateral consists of at least six different issues of securities of which no single issue exceeds 30% of the Subfund's assets.

In compliance with the aforesaid conditions, the guarantees received by the Sub-Fund can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e)(above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) shares or units of UCITS that invest mainly in the bonds and/or equities indicated in (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) shares admitted or traded on a regulated market in an EU Member State, on a stock exchange in a Member State of

the OECD or on a stock exchange of another country provided that conditions (a) to (e) above are fully complied with and that these shares are included in a first-rate index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as collateral;
- Maturity of the asset received as collateral (if applicable);
- Rating of the issuer of the asset received as collateral (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged. Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money market funds as defined in the guidelines on a common definition of European money market funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Compartment may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

Counterparty selection policy

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (financial futures and temporary acquisitions and disposals of securities) on behalf of the Mutual Fund. The selection of counterparties for financial contracts and financial intermediaries is performed rigorously from among the reputable counterparties and intermediaries in the market, on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes various criteria into consideration to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating

Quantitative criteria based on the CDS LT spread (absolute criteria, volatility and comparison with a reference group, etc.)

Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: www.lyxor.com, section "regulatory information".

Risk profile:

The Sub-Fund will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Equity risk

An equity price can vary upwards or downwards, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

If, when the Compartment (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Sub-Fund's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) trading in the market(s) in the Benchmark's underlying assets is suspended, and/or
- iii) an exchange cannot obtain or calculate the Subfund's indicative net asset value, and/or
- iv) a market maker fails to comply with an exchange's rules, and/or
- v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

- Risks arising from a lack of perfect replication

Replicating the Benchmark by investing in all components of the Benchmark can be costly or very difficult to operate. The Sub-Fund's manager may also use optimisation techniques, in particular the sampling technique, which consists in investing in a selection of representative securities (and not all securities) comprising the Benchmark, in proportions different from those of the Benchmark Index or even investing in securities other than the components of the index or financial futures. The use of these optimisation techniques may lead to an increase in the ex-post tracking error and will notably lead to different performances between the Sub-Fund and the Benchmark Index.

- Risk related to the use of effective portfolio management techniques

In the event that the counterparty to the efficient portfolio management technique (hereinafter referred to as the "EPMT") processed by the Sub-Fund fails to provide the counterparty, the Sub-Fund may be exposed to a risk in the event that the value of the guarantees received by the MF is lower than the value of the assets of the MF transferred to the counterparty under the EPMT in question. This risk could materialise in particular in the event of (i) a poor valuation of the securities subject to this transaction and/or (ii) adverse market movements and/or (iii) a deterioration in the credit rating of issuers of securities received as collateral and/or (iv) illiquidity of the market on which the collateral received is admitted to listing. Unitholders should note that (i) EPMTs may be entered into with Societe Generale (entity of the same group as the Management Company) and/or (ii) that Societe Generale may be appointed as agent of the Subfund under the EPMTs.

- Risks related to the management of guarantees Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

-Risk related to using derivatives

The Compartment may use over-the-counter forward Financial Instruments ("FFIs") or listed FFIs, in particular futures contracts and/or hedging swaps. These FFIs can result in a series of risks, given the level of

risks on the level of the contract that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Index, risk related to the tax regime, risk related to the regulations, and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI contract, which could affect the Sub-Fund's net asset value.

Investing in futures may involve a high level of risk. The amount required to trade certain FFIs is potentially much lower than the exposure obtained through these instruments, which implies a "leverage" at the level of each transaction. A relatively limited market movement would then have a proportionately very high impact, which could be favourable or unfavourable to the Fund.

The market value of forward financial instruments is highly volatile and may therefore be subject to significant fluctuations.

The Sub-Fund may use OTC futures. Over-the-counter transactions may be less liquid than transactions traded on organised markets, where trading volumes are generally higher, and their prices may be more volatile.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Index" are understood to mean the following situations:

- i) The Benchmark Index is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Index is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Index (other than a minor modification such as the adjustment of the underlyings of this Benchmark Index or of the respective weightings between its various components), that cannot be effectively replicated by the Sub-Fund at a reasonable cost.
- v) One or more components of the Benchmark Index becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Index's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Index's performance.

- Securities transaction risk

An unforeseen change, by the issuer of a security that is a component of the Benchmark, in a planned corporate action that is in contradiction with a previous official announcement on which the Sub-Fund based its valuation of the corporate action (and/or on which the Sub-Fund's counterparty to a derivative or transaction based its valuation of the corporate action) can adversely affect the Sub-Fund's net asset value, particularly if the Sub-Fund's treatment of the corporate action differs from that of the Benchmark.

- Currency risk associated with the Benchmark

The Compartment is exposed to an exchange risk to the extent that the underlying securities making up the Benchmark Indicator could be listed in a currency other than that of the Benchmark Indicator, or be derivatives of securities listed in a currency other than that of the Benchmark Indicator. Fluctuating exchange rates are then likely to negatively affect the Benchmark Indicator monitored by the Compartment.

- Sustainability risks

The Sub-Fund does not consider sustainability factors in the investment decision-making process but remains exposed to sustainability risks. The occurrence of such risks could have a negative impact on the value of the investments made by the Sub-Fund. Additional information can be found in the "Sustainability Information" section of the Prospectus.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

Investors subscribing to this Subfund are seeking exposure to European equity markets.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers. The minimum recommended investment term is greater than 5 years.

"U.S. Persons" (as defined below - see "COMMERCIAL INFORMATION") may not invest in the Sub-Fund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy-92800 Puteaux.*
- *Creation date of the Multi Units France Sicav: 04 March 2002.*
- *Date the Sub-Fund was authorised by the AMF (French Financial Markets Authority): 06 June 2018.*
- *Creation date of the Sub-Fund: 20 September 2018.*

Activity report

The fund tracks the performance of the MSCI Europe Net Return EUR Index EUR (Ticker: M7EU).

Performance trend at the closing date:

Share name	ISIN	Share curren cy	Performance from 28/02/19 to 31/10/19			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor MSCI Europe (DR) UCITS ETF - Acc	FR0010261198	EUR	41.92%™	41.86%	-	121.32%

⁽¹⁾ "The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs (for example the index rebalancing cost);
- taxation incurred in relation to the methodology used in the Benchmark;
- whether the manager uses sampling or advanced indexing techniques"

The tracking error realised is 0.0891%. The target tracking error over the period was 0.5%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor) None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

This Fund is covered by Article 6 of Regulation (EU) 2019/2088 (the "SFDR Regulation"). It does not promote environmental and/or social characteristics and does not aim to invest sustainably

Transparency of environmentally sustainable investments in periodic reports under Regulation (EU) 2020/852

Regulation (EU) 2020/852 on the establishment of a framework for promoting sustainable investments (the "Taxonomy Regulation") sets out the criteria for determining whether an economic activity is environmentally sustainable in the European Union.

According to the Taxonomy Regulation, an activity can be considered "sustainable" if it contributes substantially to one of the 6 environmental objectives set out in the Taxonomy Regulation, including climate change mitigation and adaptation, pollution prevention and reduction, or the protection and restoration of biodiversity and ecosystems.

In addition, in order to be considered to be sustainable, this economic activity must respect the principle of "not to cause significant harm" to one of the other five objectives of the Taxonomy Regulation and must also comply with basic social criteria (alignment to OECD and UN guidelines on business and human rights).

In accordance with article 7 of the Taxonomy Regulation, the management company draws investors' attention to the fact that the underlying investments of this Fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Provision of environmental, social and governance (ESG) information - in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website [Lyxor.com](https://www.lyxor.com/en/policies-and-regulatory-notice) and is revised each Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

(a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

- French, German & Luxembourgish Funds (Fonds Communs de Placement - FCP) and SICAV (*)
- Securities of issuers domiciled in Europe: in order to prevent excessive costs inherent in the voting process, Lyxor participates in general meetings when the consolidated holding represents more than 0.10% of the company's capital
- Securities of issuers domiciled in the United States: Lyxor will exercise its voting rights on its largest consolidated holdings
- Equity securities of issuers domiciled in Japan: Lyxor will exercise its right to vote on its largest consolidated holdings

(*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership.

In terms of engagement, Lyxor has defined an engagement policy that is structured around three axes: an engagement related to general meetings, an engagement related to environmental, social and/or governance issues, and an engagement related to climate. This third axis comprises four engagement campaigns:

- The first campaign related to the Climate Action 100+ initiative, committing Lyxor to ask companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosure) recommendations.
- The second campaign related to plastics and the circular economy.
- The third campaign related to localised water management.
- The fourth campaign related to responsible cleantech.

This fund is part of the following campaigns: Climate Action 100+, Corporate Governance, ESG, General meeting, Plastic & Circular Economy, Responsible Cleantech

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (in connection with Lyxor's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns.
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group's Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defence policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website [Lyxor.com](https://www.lyxor.com)

Active Ownership - Operational set up:

In addition to the internal analysis carried out, Lyxor uses the services of ISS (Institutional Shareholder Services), as a proxy advisor.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

Engagement policy:

To carry out its engagement campaigns, Lyxor can:

organize one-on-one meetings with management, board members, investor relations, sustainable development teams or any person within the company who can provide answers to the issue; partner with other management companies to gain greater leverage with targeted companies; (iii) join working groups or initiatives specializing in certain areas.

Description of how the results of the analysis on ESG issues are integrated in investment policies

In terms of engagement, the details are presented below.

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website [Lyxor.com](https://www.lyxor.com).

LYXOR MSCI EUROPE (DR) UCITS ETF

(compartment of the Multi Units France Sicav)

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e /\$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environments solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuers in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure – analyses the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyses the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

For each issuer (Corporate & Government), ESG Industry sector classification is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The ESG score calculated at the portfolio level measures the capacity of the underlying issuers to manage the risks and key opportunities associated with environmental, social and governance factors. The risk scale ranges from 0 (high risk) to 10 (low risk). Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: employment, social relations, health and safety, training, compliance with ILO conventions
- Governance: Board of Directors or Supervisory Board, Audit and Internal Control, Executive Compensation

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source: The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Measures the portfolio's exposure to companies experiencing controversies relating to their compliance with international standards as a function of their degree of severity:

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: indicates that the company is not involved in any major controversies
- None: Sovereign and/or Company not covered

Red Flag 3%
Orange Flag 29%
Yellow Flag 28%

Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GreenHouse Gas Protocol (GHG Protocol) was launched in 2001 by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: direct emissions resulting from the burning of fossil fuel resources owned or controlled by the company.
 - Scope 2: indirect emissions associated with the purchase or production of electricity.
 - Scope 3: all other indirect emissions, from the extended supply chain to the transport of goods and persons.
- The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$m invested): they represent the carbon footprint of the standardised portfolio by \$m invested
- Carbon intensity (tons CO2e/\$m of turnover): shows the carbon efficiency of the portfolio in terms of emissions per \$m of turnover
- Weighted Average Carbon Intensity (tons CO2e/\$m of turnover): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions standardised by turnover), and these intensities are weighted by the weight of the companies in the portfolio.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

• Methodology change*

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio invested in both equities and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt. All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or the portion of the company's revenue earned from fossil fuel energies or the portion of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon:	
Fossil Fuel Reserves	8%
Thermal Coal	2%
Natural Gaz	7%
Oil	7%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of : \$ 1,000,000	
Thermal Coal (Tons)	133
Gas (MMBOE)	0.0015
Oil (MMBOE)	0.0016

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	363.4
Thermal Coal	242.6
Oil	678.0
Gas	473.2
Total	1,757.2

LYXOR MSCI EUROPE (DR) UCITS ETF (compartment of the Multi Units France Sicav)

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges - this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Thermal Coal	242.6
Oil Sands	62.5
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	305.1
Other	1,452.1

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Enenergy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	6.9%	6.6%	6.8%
Some efforts	87.9%	90.3%	79.1%
Limited efforts/Information	1.2%	1.7%	6.0%
No effort/No evidence	3.4%	1.3%	8.1%

Low Carbon Transition Score

The Low Carbon Transition Score⁽¹⁾ uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

•Asset stranding: risk of holding assets which may become stranded

•Operational Transition: risk of increase in operational costs

•Product Transition: risk of a decrease in demand for high-carbon products and services •Neutral: low exposure to transition risks

•Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low- carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.0
Low carbon transition management Score	6.3
Operational Transition	9.4%
Product Transition	9.4%
Neutral	74.5%
Solutions	4.0%

Energy Mix of energy producers within the portfolio

A company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The issuer data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source: MSCI ESG Research

Share of issuers in terms of power generation in portfolio	6.8%
--	------

Power generation by fuel as maximum percentage of total (rebased at 100%)					
Hydro	16.3%	Liquid Fuel	1.3%	Natural Gas	38.6%
Nuclear	15.9%	Renewables	18.0%	Thermal Coal	10.0%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. Those issuers are likely to benefit from a low carbon transition

Issuer with a revenue dedicated to environmental solutions between:

0-19.9%	22%
20-49.9%	5%
50-100%	2%

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	15.4%	Energy Efficiency	21.4%	Green Building	1.9%
Pollution Prevention	6.6%	Sustainable Water	6.3%	Sustainable Agriculture	0.5%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	1.5%	Energy Efficiency	1.7%	Green Building	0.4%
Pollution Prevention	0.3%	Sustainable Water	0.2%	Sustainable Agriculture	0.1%

LYXOR MSCI EUROPE (DR) UCITS ETF (compartment of the Multi Units France Sicav)

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	3%
Coldwave	31%
Flood	4%
Heatwave	8%
Hurricane	2%
Water Stress	43%
Wildfire	9%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.).

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure – analyses the breakdown of a company's business in terms of revenues, assets, or operations

- Geographic Segment Risk Exposure – analyses the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	9.0%	73.3%	17.7%	84.4%	9.2%	6.4%
Carbon Emissions	1.5%	44.7%	53.8%	77.0%	16.5%	6.4%
Electronic Waste	3.5%	12.9%	83.7%	98.7%	0.2%	1.2%
Opportunities in Green Building	2.5%	50.4%	47.1%	98.6%	1.0%	0.3%
Opp's in Renewable Energy	6.5%	82.6%	10.9%	97.2%	1.1%	1.7%
Packaging Material & Waste	13.5%	42.2%	44.3%	76.4%		23.6%
Water Stress	18.9%	76.2%	4.9%	45.9%	36.3%	17.8%
Toxic Emissions & Waste				41.5%	42.7%	15.9%

Temperature - Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

- A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,

- An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates a carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Level of alignment	2.6°C
Hedging	95.3%

Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since 1 January.

Meeting overview

This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	367
Number of Voted Meetings	163
Participation rate at General Meetings	44.4%

Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
Reorg. and Mergers	93.3%	6.7%	0.0%
Antitakeover	60.0%	40.0%	0.0%
Routine/Business	95.1%	4.6%	0.3%
Capitalization	91.5%	8.3%	0.2%
Board of Directors	87.4%	12.6%	0.0%
Non-Salary Comp.	89.9%	8.4%	1.7%
Shareholders Proposals	40.0%	50.0%	10.0%
Miscellaneous	90.9%	0.0%	9.1%
Other/Misc	100.0%	0.0%	0.0%

Breakdown by country

In 2021, Lyxor's voting scope was issuers domiciled in Europe, in United States and in Japan.

The data details the geographical distribution of the General Meetings at which the Lyxor MSCI Europe (DR) UCITS ETF fund participated during the financial year.

France	23.3%
Ireland	4.3%
Germany	29.4%

Finland	2.5%
Spain	8.0%
Luxembourg	1.8%
Italy	5.5%
Belgium	5.5%
United Kingdom	7.4%

LYXOR MSCI EUROPE (DR) UCITS ETF (compartment of the Multi Units France Sicav)

Engagement

This fund is part of the following campaigns: Climate Action 100+, Corporate Governance, ESG, General meeting, Plastic & Circular Economy, Responsible Cleantech

Climate Action 100+: In 2018, Lyxor joined the Climate Action 100+, an international initiative led by investors to engage systemically with important greenhouse gas emitters and other companies across the global economy that have significant opportunities to drive the clean energy transition and help achieve the goals of the Paris Agreement.

Through this initiative, Lyxor aims to obtain commitments from the Boards of Directors or Supervisory Boards and/or key executives in order to:

1. Implement a strong governance framework that clearly articulates the Board's responsibility and oversight for climate risks;
2. Take action to reduce greenhouse gas emissions across the value chain, in line with the Paris Agreement's goal of limiting global average temperature increase to well below 2°C above pre-industrial levels and to move, as far as possible, to a 1.5°C trajectory. This implies the ambition to achieve the goal of carbon neutrality (net zero emissions) by 2050;
3. Improve reporting in accordance with the final recommendations of the Taskforce on Climate-related Financial Disclosures (TCFD) and the Global Investor Coalition on Climate Change (if applicable) to enable investors to assess the robustness of corporate strategies against a range of climate scenarios, including well below 2°C, and to improve investment decision-making.

ESG: The consideration of environmental, social and/or governance issues is at the heart of Lyxor's responsible investor strategy. Lyxor therefore considers that it is the responsibility of the Board to supervise the definition of the company's non-financial and climate risks and opportunities, as well as the strategy implemented by management with regards to this risk/opportunity analysis. The objective of Lyxor on this type of engagement is to work with companies to encourage them to improve their Corporate Social Responsibility practices.

Corporate Governance: Outside the general meeting period, Lyxor promotes regular dialogue with companies on corporate governance issues such as changes in the composition of the Board and its committees, succession plans, the role and functions of the lead director, changes in the remuneration policy, etc.

Plastic & Circular Economy: Lyxor joined a collaborative engagement campaign on the theme of plastic and the circular economy. The objective is to understand with key players what the stakes of plastic are and how to integrate the associated risks throughout the value chain.

Throughout this initial three-year engagement campaign, Lyxor and the various stakeholders are addressing key issues, such as life-cycle analysis, which is crucial in establishing a circular economy, or the quality of recycled materials and the confidence in the material, one of the main challenges to increase the use of recycled plastics. In addition to assessing the commitment of companies, Lyxor explores practical issues regarding the establishment of a circular economy and exchanges on best market practices in order to find sustainable and accessible solutions for all stakeholders.

Responsible Cleantech: Lyxor initiated in 2020 a thematic campaign on clean and responsible technologies. The objective of this engagement campaign is to implement a holistic approach to assess and manage ESG risks associated with the development of this type of technology. In addition to assessing companies' practices, this campaign aims to identify potential points of vigilance and improvement and work together in the search for sustainable solutions.

More specifically, this thematic commitment aims to:

- Apply a life-cycle approach to clean technology products;
- Catalyze more sustainable production of some of the most popular cleantech solutions;
- Explore ways to more effectively address environmental and social risks in production and supply chain.

Localized Water Management: Aware of the growing challenge of water management, Lyxor launched a collaborative thematic engagement campaign on water management in 2020. Most companies are aware of the importance of water management issues but do not make them a priority. The objective of this campaign is to remedy this phenomenon so that all companies can integrate these issues throughout their value chain.

The starting point for good management of water-related issues is to properly map the risks and associated impacts that fall under the direct and indirect control of companies. In addition to assessing companies' practices, the idea is to mobilize them more on this topic, in other words, to ensure that companies' approach to water risk assessment and management:

- Proactively and effectively contributes to long-term business continuity;
- Is environmentally sustainable;
- Respects the development needs of the countries concerned.

Engagement overview over the year

The table shows the number of engagement campaigns conducted by Lyxor during the year compared to the number of issuers present in the fund.

Number of companies under engagement	65
Number of engagement	102
Number of companies under engagement / Number of companies in the fund	17%

Breakdown by country

The data present the geographical breakdown of the issuers concerned by an engagement campaign over the financial year by the fund.

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des marchés financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (“AIFM Directive”) and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (“UCITS V Directive”), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management compensation policy notably ensures appropriate risk management and adherence to compliance on the part of its employees.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No “carried interest” was paid during the financial year.

Lyxor's best selection and execution policy

Information on best selection and execution policies is available at: www.lyxor.com.

Transparency of securities financing operations and reuse of financial instruments SFTR regulation

(Accounting currency of the CIU)

During the financial year, the UCI did not carry out any transactions subject to the SFTR regulation, namely no repurchase transactions, securities or commodities lending/borrowing, buy-sell back or sell-buy back transactions, margin lending transactions and total return swaps (TRS).

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information, in the evolving context of the Covid-19 crisis.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;

- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Shares and units of undertakings for collective investment in transferable securities under French law are valued at the last net asset value known on the calculation date of the Sub-Fund's net asset value.
- Shares and units of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

- The exchange rates used for the valuation of financial instruments denominated in Renminbi (RMB) is the WM Reuters fixing of 5:00 pm (CET) published by Thomson Reuters on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the CIU) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the CIU) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Sub-Fund).

Operation and management fees

These fees include all of the fees invoiced directly to the Sub-Fund, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and any turnover commissions that may notably be collected by the depository and delegate investment manager.

For this Sub-Fund, the following operating expenses and management fees are also charged (see summary table below):

- Performance fees: these commissions reward the management company when the Sub-Fund has exceeded its objectives and are invoiced to the Sub-Fund;
- Transfer fees invoiced to the Sub-Fund.
- Direct and indirect operating costs/fees related to temporary purchases and sales of securities.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	Maximum 0.25 % per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commission	Net assets	None
Direct and indirect operating costs/fees related to temporary acquisitions and disposals of securities	Amount of income generated by these operations	Maximum 20% for the Management Company; maximum 15% for the Agent

⁽¹⁾ including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Accounting currency

The Sub-Fund accounting is carried out in Euro.

Indication of accountancy changes declared to each of the shareholders individually

- Occurred change: None.
- Future change: None.

Other changes declared to each of the shareholders individually *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Acc share classes: accumulation of all distributable amounts.

Lyxor MSCI Europe (DR) UCITS ETF ("Fund") is in no way sponsored, endorsed, sold or promoted by MSCI Inc. ("MSCI"), by any MSCI subsidiary, or by any of the entities involved in the preparation of the MSCI indices. The MSCI indices are the exclusive property of MSCI and the MSCI indices are trademarks belonging to MSCI or its subsidiaries and have been the subject of a licence granted, for certain requirements, to Lyxor Asset Management. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the preparation or calculation of the MSCI indices makes any declaration or issues any express or implicit guarantee relative to holders of the Fund's equities or more generally to the public, with regard to the appropriateness of a transaction involving mutual fund equities in general or the Fund's equities in particular, or regarding the ability of any MSCI index to replicate the performance of the overall equity market. MSCI or its subsidiaries are the owners of certain names,

registered trademarks and of the MSCI indices that are determined, composed and calculated by MSCI without discussion with Lyxor International Asset Management or the Fund. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the preparation of the MSCI indices is required to take into account the needs of Lyxor International Asset Management or of the holders of the Fund's equities when determining, composing or calculating the MSCI indices. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the preparation of the MSCI indices makes any decision regarding the launch date, the price, the quantity of the Fund's equities, or even the determination and calculation of the formula used to establish the Fund's net asset value. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the preparation of the MSCI indices assumes any liability or obligation with regard to the Fund's administration, management or marketing.

THOUGH MSCI OBTAINS INFORMATION FOR INTEGRATION OR USE IN THE CALCULATION OF THE INDICES FROM SOURCES THAT MSCI CONSIDERS TO BE RELIABLE, NEITHER MSCI NOR ANY OTHER PARTY INVOLVED IN THE CREATION OR CALCULATION OF THE MSCI INDICES GUARANTEES THE EXACTNESS AND/OR EXHAUSTIVE NATURE OF THE INDICES OR OF ANY INCLUDED DATA. NEITHER MSCI NOR ANY OTHER PARTY INVOLVED IN THE CREATION OF A CALCULATION FOR THE MSCI INDICES GIVES ANY EXPRESS OR IMPLICIT GUARANTEE AS TO THE RESULTS THAT MAY BE OBTAINED BY THE HOLDER OF A MSCI LICENCE, THE CUSTOMERS OF THE SAID LICENSEE AS WELL AS THE COUNTERPARTIES, HOLDERS OF UNITS IN THE FUND OR ANY OTHER PERSON OR ENTITY, BASED ON THE USE OF THE INDICES OR OF ANY DATA INCLUDED WITH REGARD TO THE RIGHTS GRANTED BY LICENCE OR FOR ANY OTHER USE. NEITHER MSCI NOR ANY OTHER PARTY GIVES EXPRESS OR IMPLICIT GUARANTEES AND MSCI REJECTS ALL GUARANTEES REGARDING THE COMMERCIAL VALUE OR ADEQUACY FOR A SPECIFIC USAGE OF THE INDICES OR INCLUDED DATA. NOTWITHSTANDING THE ABOVE, UNDER NO CIRCUMSTANCES MAY THE LIABILITY OF MSCI OR OF ANY OTHER PARTY BE SOUGHT WITH REGARD TO ANY DAMAGES, WHETHER DIRECT, INDIRECT OR OTHER (INCLUDING THE LOSS OF EARNINGS), EVEN IN CASE OF KNOWLEDGE OF THE POSSIBILITY OF SUCH DAMAGES.

APPENDIX TO THE REPORT intended for Swiss subscribers

This appendix makes the annual report with the FINMA requirements for the marketing in Switzerland. **It has not been certified by the accountants.**

Country of origin of the Sub-Fund

France.

Representative of the Swiss Compartment

Société Générale, Paris, Zurich Branch, has been authorised by the FINMA as the Fund's representative in Switzerland while also assuming the payment service. The prospectus, articles of association, annual and semi-annual reports of the Fund, the KIIDs as well as the list of purchases and sales made by the Fund during the fiscal year can be obtained on request and at no cost from the representative's head office in Switzerland, Société Générale, Paris, Zurich Branch, Talacker 50, PO Box 5070, 8021 Zurich.

Calculation of the Total Expense Ratio (in compliance with the recommendations of the Swiss Funds & Asset Management Association SFAMA)

Annual closing of the collective investment: 31-Oct

Management commission of the UCITS fund: 0.25 % including tax

Average assets of the fund for the period
from 31/10/2020 to 29/10/2021:

1,079,403,500.18

Excerpt from the profit and loss statement

LYXOR MSCI GREECE UCITS ETF
(compartment of the Multi Units France Sicav) - Fiscal year ending on 29/10/2021

Performance of the Compartment

The details of the performance of the Compartment's units calculated in compliance with the principles of the Swiss Fund Association are given below:

	Annual performance from 30/10/2020 to 29/10/2021	Annual performance from 31/10/2019 to 30/10/2020	Annual performance from 31/10/2018 to 31/10/2019
LYXOR MSCI EUROPE UCITS ETF			
'Dist' share		-13.10%	+12.76%
'Acc' share	+41.92%	-18.85%	
MSCI Europe Net Return EUR (EUR)			
'Dist' share		-13.13%	+12.63%
'Acc' share	+41.86%	-18.88%	

Past performances are no indicator of future performances. The performances indicated here do not take into account the impact of possible subscription and redemption commissions and costs of Sub-Fund units.

activity
report

SUB-FUND OF THE MULTI UNITS FRANCE SICAV

FISCAL YEAR ENDING ON: 29.10.2021

Compartments / feeder	LYXOR MSCI USA ESG (DR) UCITS ETF is a Sub-Fund of the MULTI UNITS FRANCE Sicav
Management Company	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy – 92987 Paris La Défense Cedex.
Depository and Custodian	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

Information on the investments and management

Classification:

International equities.

At least 60% of the Lyxor MSCI USA ESG (DR) UCITS ETF Sub-Fund (the “Sub-Fund”) is permanently exposed in a foreign equity market or in equity markets of several countries, possibly including the French market.

The Compartment is an index-based fund of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution:

Dist share class: The Board of Directors reserves the right to distribute, one or more times per year, all or part of the result and/or to accumulate it.

Acc and Monthly Hedged to EUR – Acc share classes: Capitalisation of all the amounts available for distribution.

Management objective:

The Compartment is a passively managed index-based UCITS.

The management objective of this Sub-Fund is to replicate the upward or downward evolution of the MSCI USA ESG Broad Select Net Total Return Index (the “Benchmark Index”), listed in US Dollars (USD), while minimising as much as possible, the tracking error between the Sub-Fund’s performances and those of the Benchmark Index.

The Compartment promotes environmental and/or social characteristics within the meaning of Article 8 of the SFDR.

The maximum anticipated level of the ex-post tracking error under normal market conditions is 0.50%.

Benchmark indicator

The Benchmark Index is the MSCI USA ESG Broad Select Net Total Return index, (net dividends reinvested, which means that the Benchmark Index’s performance includes the net dividends paid by its underlying equities).

The Benchmark is an equity index calculated and published by the supplier of international indices MSCI. Its characteristics are as follows:

- An Investment Universe identical to that of the MSCI USA Index (the “Parent Index”), including big-cap and mid-cap stocks that aim to represent 85% of the float-adjusted capitalisation of each group of industries in the U.S. market.
- Negative ESG screening is performed within the Investment Universe as defined in the methodology to exclude:
 - Companies exposed to controversial activities such as controversial weapons, nuclear weapons, tobacco, thermal coal or oil sands extraction. The exposure criteria differ for each of these activities as defined by MSCI in the methodology.Companies with severe ESG controversy (according to the MSCI ESG Controversies rating).

- The index selects and weights companies in the eligible universe using an optimisation approach.

The objective of this optimisation process is to maximise exposure to companies with higher ESG scores while maintaining a risk/return profile close to that of the parent index. The MSCI ESG scoring methodology uses a rules-based methodology designed to measure a

company's resilience to material long-term ESG risks in its sector. It is based on key ESG – non-financial – metrics that focus on the intersection between a company's core business and sector-specific issues that can create significant risks and opportunities for the company. The main ESG issues are weighted according to the impact and time horizon of the risk or opportunity. Key ESG issues include, but are not limited to, water scarcity, carbon emissions, employee management or company ethics.

d) Optimisation constraints are applied to each rebalancing of the Benchmark Index, such as:

- A target ex-ante tracking error relative to the Parent Index
- A 30% reduction in carbon intensity relative to the Parent Index
- A minimum and maximum weighting for each index company compared to the Parent Index
- A limit weighting deviation from the sector/country breakdown of the Parent Index.
- A maximum turnover rate for each rebalancing of the Benchmark Index.

The Sub-Fund therefore follows a significant non-financial approach that improves the average of a non-financial metric by at least 20% compared to the initial investment universe. The limitations of the non-financial approach are mentioned in the "Main Risks" section below. Extra-financial data covers more than 90% of eligible equities in the Parent Index.

The environmental and/or social characteristics promoted by the Compartment are implemented by the MSCI ESG rating methodology (as described above).

For more information on the general and specific environmental, social and governance (ESG) objectives targeted by the Compartment, please refer to the Compartment's Transparency Code available at <https://www.lyxoretf.com/>. The Index is a net total return index. A net total return index measures the performance of the index constituents on the basis that any dividends or distributions are included in the index returns after withholding tax. The method of constructing the Index (including the rules governing how it is re-weighted and how its composition is updated) can be found on the MSCI website at: www.msci.com

Benchmark revision and composition:

The Benchmark Index is revised quarterly in February, May, August and November to coincide with quarterly revisions of the Parent Index on the same dates. The changes are implemented at the end of February, May, August and November.

The Investment Universe and the Eligible Universe are updated during the quarterly review of the Benchmark Index.

The exact composition and revision rules of the Benchmark Indicator are available on the MSCI website: www.msci.com

The above-mentioned frequency of rebalancing has no effect on costs in the implementation of the investment strategy.

Benchmark Index publication:

The Benchmark Index is published in real time on MSCI's website: <https://www.msci.com/>.

The closing price of the Benchmark Index is available on the MSCI's website: www.msci.com.

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the administrator of the Benchmark Index is included in the register of administrators and benchmark indices maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a benchmark monitoring procedure.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark, the Subfund will be exposed to the Benchmark via a direct tracking method, which means that the Subfund will invest mainly in a basket of assets made up of the equities comprising the Benchmark and/or financial instruments representative of all or part of the equities comprising the Benchmark.

In addition, the sub-fund may use forward financial instruments ("FFIs"). Futures in which the sub-fund is likely to invest include contracts such as index futures, futures on all or part of the Benchmark Index components, and hedging swaps entered into to minimise the Sub-Fund's tracking error.

When pursuant to its investment strategy (e.g. use of futures) the Sub-Fund is required to hold cash, the manager in the best interest of the unitholders may use deposits with credit institutions, and or invest cash in balance sheet assets and/or off-balance sheet assets (as described below).

In order to optimise the direct tracking method with respect to the Benchmark, the Sub-Fund, represented by the Management Company, may decide to use a "sampling" technique consisting in investing in a selection of representative securities composing the Benchmark in order to limit the costs associated with investment in the various components of the Benchmark. A sampling replication strategy could notably lead the Sub-Fund to invest in a selection of representative securities (and not all securities) comprising the Benchmark, in proportions different from those of the Benchmark Index or even to invest in securities other than the Benchmark Index components.

In order to allow investors to benefit from transparency on the direct tracking method used (full tracking of the Benchmark or sampling to limit replication costs) and its consequences in terms of assets held by the Subfund, information on the updated composition of the basket of balance sheet assets held in the Subfund's portfolio is available on the page dedicated to the Subfund available on the website www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also

indicated on the same page of the aforesaid website. Up to 20% of the Sub-Fund's assets may be invested in shares of the same issuing entity. This 20% limit can be increased to 35 % for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator. In this case, the manager intends to use mainly the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Sub-Fund will mainly be invested in the securities described below:

- Equities

The Sub-Fund will be mainly invested in the shares comprising the Benchmark Index.

- Ownership of shares or units of other CIS or investment funds

The Sub-Fund may invest up to 10% of its assets in units or shares of the following CIS or investment funds:

- French or foreign UCITS compliant with Directive 2009/65/EC - For the purposes of these investments, the Sub-Fund may subscribe for units or shares in UCITS managed by the Management Company or a related company.

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

3. Off-balance sheet assets (derivative instruments)

The Sub-Fund may invest in the following FFIs:

- Nature of the intervention markets:

- regulated
- organised
- over-the-counter

- Risks in which the Compartment wishes to trade:

- equity

- Types of transactions, all transactions must be limited to achieving the management objective:

- hedging
- exposure

- Type of instruments used:

- futures: on equities and indices
- forward exchange contracts

- Strategy for using derivatives to achieve the investment objective:

- overall hedging of the portfolio or of certain risks, securities, etc. – up to 100% of net assets
- to achieve synthetic exposure to assets or risks – up to 100% of assets

The counterparties of OTC derivatives processed by the Sub-Fund will be selected in accordance with the Management Company's best execution policies (including the execution matrix by asset type mentioned in the Appendix). The above-mentioned policy can be accessed at the following address: <https://www.lyxor.com/politique-de-meilleure-execution-liam-janvier-2020-fr>.

The counterparty to the financial futures instruments will not have discretionary power over the composition of the Sub-Fund's investment portfolio, nor over the underlying assets of the financial futures instruments within the limits and under the conditions provided for by the regulations.

Situations of conflict of interest may arise between the Management Company and Société Générale when Société Générale acts as a counterparty to FFIs. These situations are governed by the Management Company's conflict of interest management policy.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Sub-Fund is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Sub-Fund's use of forward swap contracts traded over the counter, the Sub-Fund can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets. In the event of default by the counterparty, the Compartment may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt towards the Compartment as part of the guaranteed transaction. Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Sub-Fund's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- Such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State or (iv) a public international organisation to which one or more Member States belong; and
- Such securities collateral consists of at least six different issues of securities of which no single issue exceeds 30% of the Sub-Fund's assets.

In compliance with the aforesaid conditions, the guarantees received by the Sub-Fund can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e)(above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points

(v) and (vi) below;

- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Sub-Fund's management company will apply a margin to the financial guarantees received by the Sub-Fund. The applied margins will notably depend on the following criteria:

- Nature of the asset received as collateral;
- Maturity of the asset received as collateral (if applicable);
- Rating of the issuer of the asset received as collateral (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged. Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Sub-Fund may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

Counterparty selection policy

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Compartment. The selection of counterparties for financial contracts and financial intermediaries is performed rigorously from among the reputable counterparties and intermediaries in the market, on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes various criteria into consideration to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating

Quantitative criteria based on the CDS LT spread (absolute criteria, volatility and comparison with a reference group, etc.)

Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: www.lyxor.com, section "regulatory information".

Risk profile:

The shareholder's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

Equity risk

An equity price can vary upwards or downwards, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

Liquidity risk (primary market)

If, when the Compartment (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Index, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Index, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

Risk related to the use of derivative instruments

The Compartment may use over-the-counter forward Financial Instruments ("FFIs") or listed FFIs, in particular futures contracts and/or hedging swaps. These FFIs can result in a series of risks on the level of the contract that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Index, risk related to the tax regime, risk related to the regulations, and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI contract, which could affect the Sub-Fund's net asset value.

Investing in futures may involve a high level of risk. The amount required to trade certain FFIs is potentially much lower than the exposure obtained through these instruments, which implies a "leverage" at the level of each transaction. A relatively limited market movement would then have a proportionately very high impact, which could be favourable or unfavourable to the Fund. The market value of forward financial instruments is highly volatile and may therefore be subject to significant fluctuations.

The Sub-Fund may use OTC futures. Over-the-counter transactions may be less liquid than transactions traded on organised markets, where trading volumes are generally higher, and their prices may be more volatile.

Counterparty risk

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty. **Risks related to the absence of perfect replication**

Replicating the Benchmark by investing in all components of the Benchmark can be costly or very difficult to operate. The Sub-Fund's manager may also use optimisation techniques, in particular the sampling technique, which consists in investing in a selection of representative securities (and not all securities) comprising the Benchmark, in proportions different from those of the Benchmark Index or even investing in securities other than the components of the index or financial futures. The use of these optimisation techniques may lead to an increase in the ex-post tracking error and will notably lead to different performances between the Sub-Fund and the Benchmark Indicator.

Risk related to the use of effective portfolio management techniques

In the event that the counterparty to the efficient portfolio management technique (hereinafter referred to as the "EPMT") processed by the Sub-Fund fails to provide the counterparty, the Sub-Fund may be exposed to a risk in the event that the value of the guarantees received by the Sub-Fund is lower than the value of the assets of the Sub-Fund transferred to the counterparty under the EPMT

in question. This risk could materialise in particular in the event of (i) a poor valuation of the securities subject to this transaction and/or (ii) adverse market movements and/or (iii) a deterioration in the credit rating of issuers of securities received as collateral and/or (iv) illiquidity of the market on which the collateral received is admitted to listing. Unitholders should note that (i) EPMTs may be entered into with Société Générale (entity of the same group as the Management Company) and/or (ii) that Société Générale may be appointed as agent of the Subfund under the EPMTs.

Risks related to collateral management

Operational risk:

The Sub-Fund may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk

The Sub-Fund may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Index, notably should one or more of the following risks arise:

Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Sub-Fund is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Sub-Fund's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Sub-Fund (and/or to its counterparty in the FFI), the Sub-Fund's net asset value may be affected.

Risk related to regulations

In case of change of the regulations in any country in which the Sub-Fund is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Sub-Fund's underlyings, the Sub-Fund's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

Risk related to events affecting the Benchmark Index

In case of events affecting the Benchmark Index, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Sub-Fund equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Sub-Fund's manager will decide on measures having to be adopted, which can have an impact on the Sub-Fund's net asset value.

"Events affecting the Benchmark Index" are understood to mean the following situations:

- i) The Benchmark Index is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Index is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Index,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Index (other than a minor modification such as the adjustment of the underlyings of this Benchmark Index or of the respective weightings between its various components), that cannot be effectively replicated by the Subfund at a reasonable cost.
- v) One or more components of the Benchmark Index becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Index's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Index's performance.

Securities transaction risk

In the event of an unexpected revision by the issuer of a security underlying the Benchmark Index of a corporate action, and said revision in contrary to a prior and official announcement that led to a valuation of the corporate action by the Subfund (and/or

a valuation of the corporate action by the counterparty of the Subfund in a forward financial instrument) the net asset value of the Sub-fund may be affected, in particular in the event that the actual treatment of the corporate action by the Subfund differs from the treatment of the corporate action in the Benchmark Index methodology.

Exchange risk linked to the Benchmark Index

The Subfund is exposed to an exchange risk to the extent that the underlying securities making up the Benchmark Index could be listed in a currency other than that of the Benchmark Index, or be derivatives of securities listed in a currency other than that of the Benchmark Index. Fluctuating exchange rates are then likely to negatively affect the Benchmark Index monitored by the Subfund.

Exchange risk linked to the “Dist” and “Acc” share classes

The above-mentioned share classes are exposed to an exchange risk to the extent that they are listed in a currency other than that of the Benchmark Index. Consequently, the net asset value of the aforesaid share classes can decline despite an increase of the value of the Benchmark Index, as a result of exchange rate fluctuations.

Risk related to currency hedging specific to the “Monthly Hedged to EUR – Acc” share class

In order to hedge the EUR currency risk of the “Monthly Hedged to EUR – Acc” share class against the currency of each of the securities comprising the Benchmark Index, the Subfund uses a hedging strategy to reduce the impact of the change between the currency of each of the securities making up the Benchmark Index and the currency of said share class. However, this hedging remains imperfect due to its monthly adjustment frequency and the instruments used; the Subfund may therefore be subject to downward market movements.

Sustainability risks

In the context of sustainability risk management, the Management Company relies on the administrator, the Benchmark Index, whose methodology incorporates sustainability risks as a result of investing in shares issued by companies generating a portion of their revenues in activities considered to promote the ecological transition. Such integration has a direct impact on the Benchmark’s investment universe. However, there is no guarantee that sustainability risks will be fully neutralised and the occurrence of such risks could have a negative impact on the value of the assets included in the Benchmark Index. For more information on the Benchmark Index’s methodology, please refer to the website: <https://www.msci.com>. Additional information is also available in the "Sustainability Information" section of the Prospectus.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

The Subfund is aimed at subscribers who wish to gain exposure to the US equity market.

The amount that it is reasonable to invest in this Sub-Fund depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment term is greater than 5 years.

“U.S. Persons” (as defined below - see “COMMERCIAL INFORMATION”) may not invest in the Sub-Fund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

activity report

The fund replicates the performance of the MSCI USA ESG Broad Select Net USD Index USD (Ticker: MXUSEBSL).

Performance trend at the closing date:

Share name	ISIN	Share currency	Performance for the fiscal year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor MSCI USA ESG (DR) UCITS ETF - Dist	FR0010296061	EUR	44.09% ⁽¹⁾	43.81% ⁽³⁾	-0.65% ⁽²⁾	382.98%
Lyxor MSCI USA ESG (DR) UCITS ETF - Acc	\FR0011363423	EUR	44.09% ⁽¹⁾	43.81% ⁽³⁾	-0.65% ⁽²⁾	310.28%

⁽¹⁾ "The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs (for example, the cost of rebalancing the index);
- the taxation of the fund in relation to the methodology used within the Benchmark Indicator;
- possible use by the manager of sampling or advanced index management techniques".

⁽²⁾ "As the unit is not valued in the currency of the index, the change in its net asset value is subject to foreign exchange risk over the financial year.

The calculation methodology for the Foreign Exchange rate during the period is share currency/index currency".

⁽³⁾ "Where the Benchmark Index is denominated in a currency other than the currency of the Unit, the performance of the Benchmark Index is first converted into the currency of the Unit for the sake of clarity and comparison. For this purpose, a foreign exchange transaction (at the WM Reuters 5:00 p.m. rate on the relevant day) is applied daily to the value of the Benchmark Index".

The tracking error realised is 0.0134%. The target tracking error over the period was 0.5%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

Until 06/10/21 the Fund's benchmark index was MSCI Daily TR Net, from 07/10/2021 the benchmark index is MSCI USA ESG Broad Select Net USD Index.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

LYXOR MSCI USA ESG (DR) UCITS ETF (compartment of the Multi Units France Sicav)

Transparency of sustainable investments in periodic reports

Pursuant to Article 11 of Regulation (EU) 2019/2088 on the publication of sustainability information in the financial services sector (the "SFDR Regulation"), the overall sustainability impact of the financial product is described using the following sustainability indicators:

Indicator	Portfolio				Parent Index			
	October2021 Measurem ent of the indicator	% coverage of the Indicator	October2020 Measurem ent of the indicator	% coverage of the Indicator	October2021 Measurem ent of the indicator	% coverage of the Indicator	October2020 Measurem ent of the indicator	% coverage of the Indicator
% independent members on Board of Directors	82.5%	100%	81.9%	100%	81.7%	82%	81.9%	82%
Carbon intensities weighted average (Scope 1&2) tCo2e	93.9	100%	147.6	100%	125.2	100%	147.6	100%
% of women on the Board of Directors	32.8%	100%	30.8%	99.8%	32.4%	100%	30.8%	100%
Human rights concerns		100%				100%		
- Compliance	84.9%				82.7%			
- Non-compliance	0.0%				0.2%			
- Watch list	15.1%				17.0%			
Controversies on human capital issues		100%				100%		
- No concerns	90.0%				89.0%			
- Minor	2.5%				2.6%			
- Moderate	7.2%				7.6%			
- Serious	0.3%				0.7%			
- Very serious	0.0%				0.1%			
Transition score	6.3	100%	6.2	100%	6.2	100%	6.2	100%

Weighted Average Carbon Intensity (tCO2e/\$m in turnover)

This metric measures the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions standardised by turnover), and these intensities are weighted by the weight of the companies in the portfolio.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Low Carbon Transition score

This metric aims to identify potential leaders and laggards by measuring companies holistically in terms of their exposure and managing the risks and opportunities associated with the low-carbon transition

Serious and Very Serious Controversies regarding Human Capital issues

This metric measures the seriousness of controversies related to the impact of a company's activities on human rights. Factors influencing this assessment include, but are not limited to, a history of participation in human rights legal matters, widespread or flagrant complicity in murders, physical abuse or violation of other rights, resistance to improved practices, and criticisms of NGOs and/or other third party observers.

Assessment of human rights concerns

This factor indicates whether the company is in compliance with the United Nations Guiding Principles for Business and Human Rights The possible values are Fail, Watch List, or Pass.

Percentage of women on the Board of Directors

Percentage of the company's board members who are women. For companies with a two-tier board of directors, the calculation is based solely on the members of the Supervisory Board.

Percentage of independent members on Board

The percentage of board members who meet the independence criteria defined by MSCI. These criteria consider a member paid or employed by the company (or former employee regardless of seniority), a family member or any person who has a close relationship with one of the executive officers as non-independent. For companies with a two-tier board of directors, the calculation is based solely on the members of the Supervisory Board.

Transparency of environmentally sustainable investments in periodic reports

The Fund promotes environmental characteristics within the meaning of Article 6 of Regulation (EU) 2020/852 on the establishment of a framework to facilitate sustainable investment (the "Taxonomy Regulation").

The objective of the European Union Taxonomy Regulation is to identify economic activities considered environmentally sustainable ("Sustainable Activities").

The Taxonomy Regulation identifies these activities according to their contribution to six major environmental objectives: (i) climate change mitigation, (ii) climate change adaptation, (iii) sustainable use and protection of water and marine resources, (iv) transition to the circular economy (waste, prevention and recycling), (v) pollution prevention and control, and (vi) protection of healthy ecosystems.

In order to be considered to be sustainable, an economic activity must demonstrate that it contributes substantially to one or more of the six objectives, that it does not cause significant harm to any of these objectives (principle known as "DNSH", meaning "Do No Significant Harm") and that it is carried out in accordance with the minimum safeguards provided for in Article 18 of the Taxonomy Regulation. The DNSH principle applies only to investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities.

The Fund may invest partially in economic activities that contribute to the following environmental objectives: climate change mitigation and adaptation to climate change.

While the Fund may already hold investments in Sustainable Activities without being committed to compliance with a minimum investment share, the management company shall make its best efforts to ensure that this minimum share of the investments underlying the financial product made in Sustainable Activities is available as soon as reasonably possible after the entry into force of the regulatory technical standards related to the content and presentation of the information to be provided in accordance with Articles 8(4), 9(6) and 11(5) of Regulation (EU) 2019/2088 as amended by the Regulation (Regulatory Technical Standards with regard to the content and presentation of disclosures pursuant to Article 8(4), 9(6) and 11(5) of Regulation (EU) 2019/2088 as amended by the Taxonomy Regulation).

As data is available and calculation methodologies developed, the description of the extent to which the underlying investments are made in Sustainable Activities will be made available to investors. This information, as well as information relating to the proportion of enabling and transitional activities, will be included in a future version of the prospectus.

This commitment will be achieved gradually and on an ongoing basis by engaging in discussions with the index administrator to ensure that the index administrator integrates the requirements of the Taxonomy Regulation into the index methodology as soon as reasonably practicable. This will lead to a minimum degree of alignment of the portfolio with the Sustainable Activities that will be made available to investors at this time.

In the meantime, the degree of alignment of the portfolio with Sustainable Activities will not be available from investors.

If you have any questions, please contact the management company at the following address: client-services-etf@lyxor.com.

The management company draws investors' attention to the fact that the investments underlying the remaining portion of this financial product do not take into account the European Union's criteria for environmentally sustainable economic activities.

LYXOR MSCI USA ESG (DR) UCITS ETF (compartment of the Multi Units France Sicav)

Provision of environmental, social and governance (ESG) information - in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organisation to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website [Lyxor.com](https://www.lyxor.com) and is revised each

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The Fund promotes environmental and/or social characteristics within the meaning of Article 8 of Regulation (EU) 2019/2088 (SFDR).

Environmental and/or social characteristics promoted by the Fund are met through the investment process. For further information in relation such characteristics, please refer to the prospectus of the Fund.

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

(a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

- French, German & Luxembourgish Funds (Fonds Communs de Placement - FCP) and SICAV (*)

- Securities of issuers domiciled in Europe: in order to prevent excessive costs inherent in the voting process, Lyxor participates in general meetings when the consolidated holding represents more than 0.10% of the company's capital

- Securities of issuers domiciled in the United States: Lyxor will exercise its right to vote on its largest consolidated holdings

- Securities of issuers domiciled in Japan: Lyxor will exercise its right to vote on its largest consolidated holdings

(*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership.

In terms of engagement, Lyxor has defined an engagement policy that is structured around three axes: an engagement related to general meetings, an engagement related to environmental, social and/or governance issues, and an engagement related to climate. This third axis comprises four engagement campaigns:

- The first campaign related to the Climate Action 100+ initiative, committing Lyxor to ask companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosure) recommendations.

- The second campaign related to plastics and the circular economy.

- The third campaign related to localized water management.

- The fourth campaign related to responsible cleantech.

This fund is part of the following campaigns: ESG

The fund applies an ESG selection, which is an SRI strategy based on the selection of issuers with best ESG practices.

ESG selection can take several forms: best-in-class (selection of the best issuers in each sector of activity) or best-in-universe (selection of the best issuers regardless of their sector of activity, which leads to excluding risky sectors and favouring those with ESG solutions).

The fund applies on the financial exposure an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defence Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs, depleted uranium weapons).

LYXOR also excludes companies involved in activities or sectors deemed as controversial and/or having the majority of their income from sector with important ESG risk (weapons, gambling, tobacco, nuclear, coal, etc.).

b) Description of the general information used for the analysis implemented on ESG criteria

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (in connection with Lyxor's voting policy).

- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns

- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.

- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.

- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.

- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,

- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to

controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

The fund/benchmark index (for an ETF) offers exposure to a dynamic allocation among the securities listed in the eligible universe, the highest rated on different European markets. Each component of the fund/index is selected from an investment universe classified as "sustainable" and "socially responsible".

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution.

The post trade control is on NAV frequency basis.

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website [Lyxor.com](https://www.lyxor.com)

LYXOR MSCI USA ESG (DR) UCITS ETF (compartment of the Multi Units France Sicav)

Active Ownership - Operational set up:

In addition to the internal analysis carried out, Lyxor uses the services of ISS (Institutional Shareholder Services), as a proxy advisor.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

Engagement policy:

To carry out its engagement campaigns, Lyxor can:

- (i) organize one-on-one meetings with management, board members, investor relations, sustainable development teams or any person within the company who can provide answers to the issue;
- (ii) partner with other management companies to gain greater leverage with targeted companies; (iii) join working groups or initiatives specialising in certain areas.

Description of how the results of the analysis on ESG issues are integrated in investment policies

The exclusion described above is applied to the financial exposure of the fund. In terms of engagement, the details are presented below.

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

The fund/index offers exposure to a dynamic allocation among the securities listed with the highest ESG rating. Each component of the fund/index is selected from an investment universe classified as "sustainable" and "socially responsible".

Each component of the benchmark index is selected on the basis of CSR and sustainable development criteria.

2. Description of how the results of the analysis implemented on ESG criteria, in particular exposure to climate risks, are integrated into the investment policy

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuers in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations

Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

For each issuer (Corporate & Government), the ESG Industry sector classification is provided by MSCI ESG Ratings.
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The ESG score calculated at the portfolio level measures the capacity of the underlying issuers to manage the risks and key opportunities associated with environmental, social and governance factors. The risk scale ranges from 0 (high risk) to 10 (low risk). Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: employment, employer-employee relations, health and safety, training, compliance with ILO conventions
- Governance: board of directors or supervisory board, audit and internal control, executive pay

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source: The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Measures the portfolio's exposure to companies experiencing controversies relating to their compliance with international standards as a function of their degree of severity:

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag	0%
Orange Flag	34%
Yellow Flag	25%
Green Flag	41%

LYXOR MSCI USA ESG (DR) UCITS ETF (compartment of the Multi Units France Sicav)

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2021

Carbon Emissions (tons CO2e/\$M invested)	Carbon Intensity (tons CO2e/\$M sales)	Weighted Average Carbon Intensity tons (CO2e/\$M sales)	Portfolio rated (by weight)	
23	98	94	Scope 1 reported (vs estimated)	100%
			Scope 2 reported (vs estimated)	94%
			Scope 2 reported (vs estimated)	88%
			Scope 1 & 2 estimations are based on the MSCI methodology	

Carbon Measurement methodology

The GreenHouse Gas Protocol (GHG Protocol) was launched in 2001 by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: direct emissions resulting from the burning of fossil fuel resources owned or controlled by the company.
- Scope 2: indirect emissions associated with the purchase or production of electricity.
- Scope 3: all other indirect emissions, from the extended supply chain to the transport of goods and persons.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue).The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio invested in both equities and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest - total debt.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or the portion of the company's revenue earned from fossil fuel energies or the portion of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon:

Fossil Fuel Reserves	3%
Thermal Coal	1%
Natural Gas	2%
Oil	2%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of : \$ 1,000,000

Thermal Coal (Tons)	0
Gas (MMBOE)	0.0003
Oil (MMBOE)	0.0005

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.2
Oil	225.3
Gas	87.7
Total	327.1

LYXOR MSCI USA ESG (DR) UCITS ETF (compartment of the Multi Units France Sicav)

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges - this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	0.2
Oil Sands	18.2
Shale Oil or Shale Gas	69.7
Sum High Impact Reserves	88.0
Other	239.1

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	7.1%	5.3%	3.9%

Low Carbon Transition Score

The Low Carbon Transition Score (1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
 - Operational Transition: risk of increase in operational costs
 - Product Transition: risk of a decrease in demand for high-carbon products and services
 - Neutral: low exposure to transition risks
 - Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low- carbon products.
- (1) Metric developed by MSCI

Low carbon transition score	6.3
Low carbon transition management Score	5.5
Operational Transition	3.7%
Product Transition	3.7%
Neutral	78.7%
Solutions	11.0%

Energy Mix of energy producers within the portfolio

A company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The issuer data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source: MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	0.3%	Liquid Fuel	0.8%	Natural Gas	40.1%
Nuclear	39.7%	Renewables	15.7%	Thermal Coal	3.4%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

Issuer with a revenue dedicated to environmental solutions between:

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

0-19.9%	20%
20-49.9%	12%
50-100%	2%

These metrics include only corporate issuers rated in Carbon.

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	8.1%	Energy Efficiency	34.0%	Green Building	1.6%
Pollution Prevention	3.7%	Sustainable Water	4.2%	Sustainable Agriculture	0.4%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	0.5%	Energy Efficiency	5.7%	Green Building	0.2%
Pollution Prevention	0.1%	Sustainable Water	0.2%	Sustainable Agriculture	0.1%

LYXOR MSCI USA ESG (DR) UCITS ETF (compartment of the Multi Units France Sicav)

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	2%
Coldwave	23%
Flood	2%
Heatwave	7%
Hurricane	5%
Water Stress	45%
Wildfire	17%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.).

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	0.5%	33.2%	66.3%	90.3%	7.4%	2.4%
Carbon Emissions	0.6%	27.1%	72.3%	80.8%	16.6%	2.5%
Electronic Waste	0.9%	7.6%	91.5%	92.4%	1.3%	6.2%
Opportunities in Green Building	0.6%	38.6%	60.8%	98.6%	0.7%	0.7%
Opp's in Renewable Energy	1.9%	93.7%	4.4%	98.2%	0.7%	1.2%
Packaging Material & Waste	6.5%	82.5%	11.0%	89.6%		10.4%
Water Stress	4.7%	93.2%	2.1%	67.2%	26.3%	6.5%
Toxic Emissions & Waste				61.9%	31.2%	6.9%

Temperature - Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C). LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

-A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,

-An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates a carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Level of alignment	2.7°C
Hedging	97.4%
Alignment Trajectory in % Weight	
<1.5°C	33.4%
1.5-2°C	18.8%
2-3°C	11.6%

LYXOR MSCI USA ESG (DR) UCITS ETF (compartment of the Multi Units France Sicav)

Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since 1 January.

Meeting overview

This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of General Meetings	4
Number of General Meetings voted	0
Participation rate at General Meetings	0.0%

Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
------------	-----	---------	------------

Breakdown by country

In 2021, Lyxor's voting scope was issuers domiciled in Europe, in United States and in Japan.

The data details the geographical distribution of the General Meetings at which the Lyxor Lyxor MSCI USA ESG (DR) UCITS ETF fund participated during the financial year.

Engagement

This fund is part of the following campaigns: ESG

ESG: The consideration of environmental, social and/or governance issues is at the heart of Lyxor's responsible investor strategy. Lyxor therefore considers that it is the responsibility of the Board to supervise the definition of the company's non-financial and climate risks and opportunities, as well as the strategy implemented by management with regards to this risk/opportunity analysis. The objective of Lyxor on this type of engagement is to work with companies to encourage them to improve their Corporate Social Responsibility (CSR) practices.

Engagement overview over the year

The table shows the number of engagement campaigns conducted by Lyxor during the year compared to the number of issuers present in the fund.

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des marchés financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (“AIFM Directive”) and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (“UCITS V Directive”), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management compensation policy notably ensures appropriate risk management and adherence to compliance on the part of its employees.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No “carried interest” was paid during the financial year.

Lyxor's best selection and execution policy

Information on best selection and execution policies is available at: www.lyxor.com.

Transparency of securities financing operations and reuse of financial instruments SFTR regulation

(Accounting currency of the CIS)

During the financial year, the UCI did not carry out any transactions subject to the SFTR regulation, namely no repurchase transactions, securities or commodities lending/borrowing, buy-sell back or sell-buy back transactions, margin lending transactions and total return swaps (TRS).

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information, in the evolving context of the Covid-19 crisis.

Assessment rules

Accounting Regulation No. 2014-01 of 14 January 2014 relating to the chart of accounts for undertakings for collective investment with variable capital.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded. However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities (“NDS”) having a residual life upon acquisition that is less than or equal to 3 months are valued by spreading out the difference between the acquisition value and the redemption value on a straight-line basis over the residual lifespan. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS whose residual lifespan at acquisition is greater than 3 months but whose residual lifespan on the net asset value closing date is equal to or less than 3 months are valued by spreading out the difference between the last adopted current value and their redemption value on a straight-line basis over the residual lifespan. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS whose the residual lifespan on the net asset value closing date is greater than 3 months are valued at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument’s counterparty. The management company independently carries out a verification of this valuation.
- Deposits are valued at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company’s responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities in undertakings for collective investment in transferable securities operating under French law are valued at the last net asset value known on the calculation date of the Subfund’s net asset value.
- Units and equities of UCITS operating under foreign law are valued at the last unit net asset value known on the calculation date of the Subfund’s net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are valued at their probable trading value, under the management company’s responsibility.
- - The exchange rates used for the assessment of financial instruments listed in a currency other than the Sub-Fund's reference currency are the exchange rates published the fixing WM Reuters on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the CIU) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional transactions is equal to the price of the underlying security (in the currency of the subfund) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Sub-Fund).

Operation and management fees

These fees include all of the fees invoiced directly to the Sub-Fund, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transfer commission which, if relevant, may notably be collected by the custodian and management company.

For this Sub-Fund, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Sub-Fund has exceeded its objectives and are invoiced to the Sub-Fund;
- Transfer commissions invoiced to the Sub-Fund.

For more details on the fees actually invoiced to the Sub-Fund, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	maximum 0.25 % per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commission	Net assets	None

⁽¹⁾ including all fees excluding transaction fees, performance fees and fees related to investments in UCITS or investment funds.

LYXOR MSCI USA UCITS ETF (the “Fund”) is in no way sponsored, endorsed, sold or promoted by MSCI Inc. (“MSCI”), or by any MSCI subsidiary, or by any of the entities involved in the preparation of the MSCI indices. The MSCI indices are the exclusive property of MSCI and the MSCI indices are trademarks belonging to MSCI or its subsidiaries and have been the subject of a licence granted, for certain requirements, to Lyxor Asset Management. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the preparation or calculation of the MSCI indices makes any declaration or issues any express or implicit guarantee relative to holders of the Fund’s units or more generally to the public, with regard to the appropriateness of a transaction involving UCITS shares in general or the Subfund’s shares in particular, or regarding the ability of any MSCI index to replicate the performance of the overall equity market. MSCI or its subsidiaries are the owners of certain names, registered trademarks and of the MSCI indices that are determined, composed and calculated by MSCI without discussion with Lyxor International Asset Management or the Fund. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the preparation of the MSCI indices is required to take into account the needs of Lyxor International Asset Management or of the holders of the Subfund’s shares when determining, composing or calculating the MSCI indices. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the preparation of the MSCI indices makes any decision regarding the launch date, the price, the quantity of the Subfund’s shares, or even the determination and calculation of the formula used to establish the Fund’s net asset value. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the preparation of the MSCI indices assumes any liability or obligation with regard to the Fund’s administration, management or marketing.

THOUGH MSCI OBTAINS INFORMATION FOR INTEGRATION OR USE IN THE CALCULATION OF THE INDICES FROM SOURCES THAT MSCI CONSIDERS TO BE RELIABLE, NEITHER MSCI NOR ANY OTHER PARTY INVOLVED IN THE CREATION OR CALCULATION OF THE MSCI INDICES GUARANTEES THE EXACTNESS AND/OR EXHAUSTIVE NATURE OF THE INDICES OR OF ANY INCLUDED DATA. NEITHER MSCI NOR ANY OTHER PARTY INVOLVED IN THE CREATION OF A CALCULATION FOR THE MSCI INDICES GIVES ANY EXPRESS OR IMPLICIT GUARANTEE AS TO THE RESULTS THAT MAY BE OBTAINED BY THE HOLDER OF A MSCI LICENCE, THE CUSTOMERS OF THE SAID LICENSEE AS WELL AS THE COUNTERPARTIES, HOLDERS OF UNITS IN THE FUND OR ANY OTHER PERSON OR ENTITY, BASED ON THE USE OF THE INDICES OR OF ANY DATA INCLUDED WITH REGARD TO THE RIGHTS GRANTED BY LICENCE OR FOR ANY OTHER USE. NEITHER MSCI NOR ANY OTHER PARTY GIVES EXPRESS OR IMPLICIT GUARANTEES AND MSCI REJECTS ALL GUARANTEES REGARDING THE COMMERCIAL VALUE OR ADEQUACY FOR A SPECIFIC USAGE OF THE INDICES OR INCLUDED DATA. NOTWITHSTANDING THE ABOVE, UNDER NO CIRCUMSTANCES MAY THE LIABILITY OF MSCI OR OF ANY OTHER PARTY BE SOUGHT WITH REGARD TO ANY DAMAGES, WHETHER DIRECT, INDIRECT OR OTHER (INCLUDING THE LOSS OF EARNINGS), EVEN IN CASE OF KNOWLEDGE OF THE POSSIBILITY OF SUCH DAMAGES.

2 Evolution of the net assets

	29.10.2021	30.10.2020
Currency	EUR	EUR
Net assets at the start of the fiscal year	811,509,899.98	1,004,126,575.95
Subscriptions (including subscription commission acquired by the Compartment)	202,048,947.35	319,835,301.93
Redemptions (after deduction of redemption commission acquired by the Sub-Fund)	-451,078,725.21	-538,600,597.93
Capital gains generated on deposits and financial instruments	376,530,504.18	296,894,106.16
Capital losses generated on deposits and financial instruments	-148,744,731.52	-202,544,927.43
Capital gains generated on financial contracts	3,175,601,708.86	1,183,500,105.21
Capital losses generated on financial contracts	-3,176,469,524.50	-1,218,887,711.44

Financial accounts	-	215.26	7.86	4.20
Off-balance sheet				
Hedging	-	-	-	-
Other operations	-	-	-	-

3.5. Receivables and Debts: breakdown by type

Details of the elements comprising the “other receivables” and “other debts” items, notably breakdown of the future foreign exchange operations by type of operation (purchase/sale).

Receivables	980,352.92
Future currency exchange operations:	
Future purchases of currency	-
Total traded amount of future Sales of currencies	-
Other receivables:	
Coupons receivable	434,445.04
Guarantee deposits (paid)	427,306.11
Deferred settlement sales	118,601.77
-	-
-	-
Other operations	-
Debts	256,528.70
Future currency exchange operations:	
Future sales of currencies	-
Total traded amount of future Purchases of currencies	-
Other debts:	
Deferred settlement purchases	130,425.46
Accrued expenses	81,502.40
Sundry Debtors and Creditors	44,600.84
-	-
-	-
Other operations	-

3.6. Shareholders' equities

Equity category issued/redeemed during the fiscal year:	Number of equities	Subscriptions		Redemptions	
		Amount	Number of equities	Amount	
D-USD Shares/FR0010372193	-	-	-	-	
Acc Shares/FR0011363423	337,101	122,462,674.88	106,167	35,018,351.51	
Dist Shares/FR0010296061	248,813	79,550,090.46	1,275,218	416,138,646.46	
Subscription / redemption commission by equity category:		Amount		Amount	
D-USD Shares/FR0010372193		37,376.45		79,878.54	
Acc Shares/FR0011363423		-		-	
Dist Shares/FR0010296061		-		-	
Retrocessions by equity category:		Amount		Amount	
D-USD Shares/FR0010372193		-		-	
Acc Shares/FR0011363423		-		-	
Dist Shares/FR0010296061		-		-	
Commissions acquired by the Sub-Fund by equity category:		Amount		Amount	
D-USD Shares/FR0010372193		37,376.45		79,878.54	
Acc Shares/FR0011363423		-		-	
Dist Shares/FR0010296061		-		-	

3.7. Management fees

Operating and management fees (fixed fees) as % of the average net assets	%
Equity category:	
D-USD Shares/FR0010372193	-
Acc Shares/FR0011363423	0.23
Dist Shares/FR0010296061	0.24
Performance commissions (variable fees): amount of costs for the year	Amount
Equity category:	
D-USD Shares/FR0010372193	-
Acc Shares/FR0011363423	-
Dist Shares/FR0010296061	-
Retrocession of management fees:	
- Total amount of fees retroceded to the Compartment	-
- Breakdown by "target" CIS:	
- CIU 1	-
- CIU 2	-
- CIU 3	-
- CIU 4	-

3.8. Commitments given and received

- 3.8.1. Description of guarantees received by the sub-fund with indication of the capital guaranteesnone
- 3.8.2. Description of the other commitments received and/or given.....none

3.9. Other information

3.9.1. Current value of the financial instruments that are the subject of temporary acquisition:

- Financial instruments sold under forward repurchase agreements	-
- Other temporary operations	-

3.9.2. Current value of the financial instruments comprising security deposits:

Financial instruments received as guarantees and not included in the balance sheet:

- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-

Financial instruments given as guarantees and maintained in their original item:

- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-

3.9.3. Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (Sicav) and CIU managed by these entities:

- CIS securities	-
- Swaps	-

LYXOR MSCI WORLD UCITS ETF

annual
report

SUB-FUND OF THE MULTI UNITS FRANCE SICAV

FISCAL YEAR ENDING ON: 29.10.2021

Compartments / feeder	LYXOR MSCI WORLD UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
Management Company	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy – 92987 Paris La Défense Cedex.
Depository and Custodian	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

Information on the investments and management

Classification:

International equities.

At least 60 % of the Lyxor MSCI World UCITS ETF subfund (the “Subfund”) is permanently exposed in a foreign equity market or in equity markets of several countries, possibly including the French market.

The Sub-Fund is an index-based strategy UCITS of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution:

“Dist”, “Monthly Hedged to EUR – Dist” and “Monthly Hedged to USD – Dist” share classes: the Board of Directors reserves the right to distribute, on one or more occasions during the year, all or part of the distributable amounts and/or to capitalise them.

Share class I – EUR: Capitalisation of all the amounts available for distribution.

Management objective:

The Compartment is a passively managed index-based UCITS.

The management objective of this Subfund is to replicate the upward or downward evolution of the MSCI World Net Total Return index (net dividends reinvested) (the “Benchmark Index”), listed in US Dollars (USD), while insofar as possible minimising the tracking error between the Subfund’s performances and those of the Benchmark Index. The anticipated level of the ex-post tracking error under normal market conditions is 0.50%.

Benchmark indicator:

The Benchmark Index is an equity index calculated and published by MSCI, a supplier of international indices.

It measures the overall performance of developed markets. As at 31 January 2018, the MSCI World Index consisted of 1,649 stocks listed on the markets of 23 developed countries: Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Israel, Hong Kong, Ireland, Italy, Japan, Netherlands, New Zealand, Norway, Portugal, United Kingdom, Singapore, Spain, Sweden, Switzerland, United States.

The Benchmark Index is based on the MSCI indices representing each of these 23 developed countries.

The Benchmark Index is a “Net Total Return” index, which means that the Benchmark Index’s performance includes the net dividends paid by its underlying equities.

The weight of each security in the Benchmark Index is adjusted according to its market capitalisation, based on the free float. Consequently, the number of securities included in the basket making up the Benchmark may change over time.

The MSCI methodology and its calculation method entail the Benchmark Index being made up of a variable number of companies. An exhaustive description and the complete methodology for the construction of the Benchmark Index as well as information on the composition and relative weights of the Benchmark Index’s components are available online at: www.msci.com.

The monitored performance is that of the Benchmark Index closing prices.

The Benchmark Index is an index weighted by market capitalisation.

Benchmark Index publication

The official MSCI indices are calculated on a daily basis at closing prices using the official closing stock market prices for the constituent stocks. The Benchmark Index is also calculated in real time each trading day.

The closing price of the Benchmark Index is available on MSCI's website at www.msci.com.

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the MSCI Limited administrator of the Benchmark Index MSCI World Net Total Return is included in the register of administrators and benchmark indices maintained by the ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmarks used which describes the measures to be implemented in the event of substantial changes to an index or the cessation of provision of that index.

Benchmark Index revision and composition

The revision of the Benchmark Index's composition takes place quarterly.

The exact composition and revision of the composition of the Benchmark Index published by MSCI are available online at www.msci.com. The above-mentioned frequency of rebalancing has no effect on costs in the implementation of the Investment Strategy.

Investment strategy:

1. Strategy employed

The Sub-Fund will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Index, the Sub-Fund will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Sub-Fund's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Index.

The securities held as assets by the Sub-Fund may notably be securities that make up the Benchmark Index, as well as other international equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Sub-Fund's portfolio and (ii) the market value of the future exchange operation entered into by the Sub-Fund are available on the page dedicated to the Sub-Fund on the website: www.lyxoretf.com. The frequency of update and/or the update date of the aforesaid information is also specified on the same page of the website indicated above.

As part of the management of its exposure, the Sub-Fund may be exposed up to 20 % of its assets in equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Index, in particular in the event of a public offering affecting one of the securities making up the Benchmark Index or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Index.

In this case, the manager intends to use mainly the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets. The aforementioned equities will be chosen on the basis of criteria:

- eligibility criteria, in particular:

- o Subordination to the main market indices or to the Benchmark Index;
- o Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation);
- o rating of the country of the issuer's head office (requirement of a minimum threshold of S&P rating or equivalent)

- diversification criteria, in particular:

- o issuer (application of ratios applicable to the eligible assets of a UCITS, as mentioned in Art. R214-21 of the French Monetary and Financial Code)

- o Geographical area;
- o Sector.

For more information on the abovementioned eligibility and diversification criteria, investors can visit the website: www.lyxoretf.com

The investment in undertakings for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Subfund. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of the future optimisation of the Sub-Fund's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Subfund will have recourse to index-linked swaps traded over-the-counter, exchanging the value of the Subfund's assets against the value of the Benchmark Index (in compliance with the description contained in this section's paragraph 1 above). As part of a future optimisation of the Sub-Fund management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including future financial instruments other than index-linked swaps.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Sub-Fund's portfolio, nor regarding the underlying assets of the future financial instruments.

Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.

Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Sub-Fund may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/fees and its ability to achieve its management objective may also be negatively impacted. Where the Sub-Fund enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20 % of its net assets, the Sub-Fund can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10 % of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Sub-Fund is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Sub-Fund's use of forward swap contracts traded over the counter, the Sub-Fund can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Sub-Fund's assets. In the event of default by the counterparty, the Subfund may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt towards the Subfund as part of the guaranteed transaction.

Any financial guarantee received by the Sub-Fund within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) The collateral must be sufficiently diversified in terms of country, market, and issuer, with exposure to any single issuer not exceeding 20% of the Subfund's net asset value.
- (e) The Sub-Fund's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and
- Such financial guarantees consist of at least six different issues of which none exceeds 30% of the Subfund's assets.

In compliance with the aforesaid conditions, the guarantees received by the Sub-Fund can include:

- (i) liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) bonds issued or guaranteed by an OECD Member State by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e)(above) have been fully met;
- (iii) shares or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) shares or units issued by UCITS investing primarily in bonds/equities as indicated in points
- (v) and (vi) below;
- (v) bonds issued or guaranteed by first-class issuers offering suitable liquidity;
- (vii) equities admitted to trading or traded on a regulated of an EU Member State, on a stock exchange of an OECD Member State, or on a stock exchange of another country provided that conditions (a) to (e) above are fully complied with and that these equities are components of a major index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged. Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality government bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the MF may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

Counterparty selection policy

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (financial futures and temporary acquisitions and disposals of securities) on behalf of the Sub-Fund. The selection of counterparties to financial contracts and financial intermediaries is carried out rigorously from among the reputable counterparties and intermediaries in the market on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes into consideration various criteria to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating

Quantitative criteria based on the CDS LT spread (absolute criteria, volatility and comparison with a reference group, etc.)

Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: www.lyxor.com, section "regulatory information".

Risk profile:

The Sub-Fund will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Sub-Fund, the shareholder is primarily exposed to the following risks:

- Equity risk

An equity price can vary upwards or downwards, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Index be negative over the investment period.

- Liquidity risk (primary market)

If, when the Subfund (or one of its counterparties for forward financial instruments, or "FFIs") adjusts its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase/sale price discrepancies, the value and/or liquidity of the Subfund could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Sub-Fund's equity price can deviate from its indicative net asset value. The liquidity of the Sub-Fund's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) the calculation of the Benchmark is suspended or stopped, and/or
- ii) trading in the market(s) in the Benchmark's underlying assets is suspended, and/or
- iii) an exchange cannot obtain or calculate the Subfund's indicative net asset value, and/or
- iv) a market maker fails to comply with an exchange's rules, and/or
- v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Sub-Fund is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event.

In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

- Risks related to the management of guarantees

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to achieve its investment objective, the Compartment uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Index, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Index" are understood to mean the following situations:

- i) The Benchmark Index is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Index is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Index (other than a minor modification such as the adjustment of the underlyings of this Benchmark Index or of the respective weightings between its various components), that cannot be effectively replicated by the Sub-Fund at a reasonable cost.
- v) One or more components of the Benchmark Index becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Index's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Index's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

- Currency risk associated with the Benchmark

The Compartment is exposed to an exchange risk to the extent that the underlying securities making up the Benchmark Indicator could be listed in a currency other than that of the Benchmark Indicator, or be derivatives of securities listed in a currency other than that of the Benchmark Indicator. Fluctuating exchange rates are then likely to negatively affect the Benchmark Indicator monitored by the Compartment.

- Exchange risk linked to the Dist share classes

The abovementioned classes of equities are exposed to an exchange risk to the extent that they are listed in a currency other than that of the Benchmark Indicator. Consequently, the net asset value of the aforesaid equity classes can decline despite an increase of the value of the Benchmark Indicator, as a result of exchange rate fluctuations.

- Risk related to currency hedging risk specific to the "I – EUR", "Monthly Hedged to EUR – Acc" and "Monthly Hedged to USD – Dist" share classes

In order to hedge against the currency risk of the Euro (or US dollar) against the currency of each of the securities comprising the "I – EUR" or "Monthly Hedged to EUR – Dist" (or Monthly Hedged to USD – Dist) share classes, the Sub-Fund uses a hedging strategy that reduces the impact of the change between the currency of each of the securities comprising the Benchmark Index and the currency of that share class. However, this hedging remains imperfect due to its monthly adjustment frequency and the instruments used; the Sub-Fund may therefore be subject to downward market movements impacting the net asset value of the share class. In addition, the cost of implementing the currency hedge will negatively impact the net asset value of the "I – EUR", "Monthly Hedged to EUR – Dist" and "Monthly Hedged to USD – Dist" shares.

- Sustainability risks

The Sub-Fund does not incorporate sustainability factors in the investment decision process, but is exposed to risks. The occurrence of such risks could have a negative impact on the value of the investments made by the Sub-Fund. Additional information is available in the "Sustainability Information" section of the Prospectus.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

Investors subscribing to this Sub-Fund are seeking exposure to international equity markets.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment term is greater than 5 years.

"U.S. Persons" (as defined in the prospectus - see "COMMERCIAL INFORMATION") may not invest in the Sub-Fund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

⁽¹⁾ "The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- The index replication cost (such as the index rebalancing cost);
- Taxation incurred in relation to the methodology used in the Benchmark"

⁽²⁾ "Since the Share Class NAV is not calculated in the Index currency, the share class may be exposed to currency risk.

The calculation methodology for the Foreign Exchange rate during the period is share currency/ index currency."

⁽³⁾ "Where the Benchmark Index is denominated in a currency other than the currency of the Unit, the performance of the Benchmark Index is first converted into the currency of the Unit for the sake of clarity and comparison. For this purpose, a foreign exchange transaction (at the WM Reuters 5:00 p.m. rate on the relevant day) is applied daily to the value of the Benchmark Indicator."

⁽⁴⁾ "The appropriate comparison element is the hedged version of the Benchmark Index".

The tracking error realised is 0.0085%. The target tracking error over the period was 0.5%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

Index Linked Swap's counterparty is: Société Générale, Morgan Stanley.

The classes below were launched on 02 June 2021.

Lyxor MSCI World UCITS ETF - Acc / FR0014003IY1

Lyxor MSCI World UCITS ETF - Monthly Hedged to EUR - Acc / FR0014003N93

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission *(not audited by the auditor)*

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

This Fund is covered by Article 6 of Regulation (EU) 2019/2088 (the "SFDR Regulation"). It does not promote environmental and/or social characteristics and does not aim to invest sustainably

Transparency of environmentally sustainable investments in periodic reports under Regulation (EU) 2020/852

Regulation (EU) 2020/852 on the establishment of a framework for promoting sustainable investments (the "Taxonomy Regulation") sets out the criteria for determining whether an economic activity is environmentally sustainable in the European Union.

According to the Taxonomy Regulation, an activity can be considered "sustainable" if it contributes substantially to one of the 6 environmental objectives set out in the Taxonomy Regulation, including climate change mitigation and adaptation, pollution prevention and reduction, or the protection and restoration of biodiversity and ecosystems.

In addition, in order to be considered to be sustainable, this economic activity must respect the principle of "not to cause significant harm" to one of the other five objectives of the Taxonomy Regulation and must also comply with basic social criteria (alignment to OECD and UN guidelines on business and human rights).

In accordance with article 7 of the Taxonomy Regulation, the management company draws investors' attention to the fact that the underlying investments of this Fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Provision of environmental, social and governance (ESG) information - in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website [Lyxor.com](https://www.lyxor.com) and is revised each

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

(a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

To the basket of assets held by the fund, the fund applies an exclusion of issuers associated with serious and repeated violations of the Principles of the United Nations Global Compact and regulatory requirements related to controversial sectors and products. This list is supplemented by a list of companies to be excluded due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological chemical, nuclear or radiological weapons, etc.).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (in connection with Lyxor's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution.

The post trade control is on NAV frequency basis.

Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website [Lyxor.com](https://www.lyxor.com).

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:
 - Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.
- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:
 - The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
 - Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
 - A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).
- With regard to carbon risk management:
 - Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).
- In regards with the portfolio's exposure to issuers offering environmental solutions :
 - Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).
- In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :
 - For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :
 - the Germanwatch climate performance index score
 - the environment performance score
 - the Environmental Vulnerability index

For corporate issuers in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

LYXOR MSCI WORLD UCITS ETF (compartment of the Multi Units France Sicav)

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations

- Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

LYXOR MSCI WORLD UCITS ETF (compartment of the Multi Units France Sicav)

For each issuer (Corporate & Government), ESG Industry sector classification is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The ESG score calculated at the portfolio level measures the capacity of the underlying issuers to manage the risks and key opportunities associated with environmental, social and governance factors. The risk scale ranges from 0 (high risk) to 10 (low risk). Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: employment, social relations, health and safety, training, compliance with ILO conventions
- Governance: Board of Directors or Supervisory Board, Audit and Internal Control, Executive Compensation

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source: The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Measures the portfolio's exposure to companies experiencing controversies relating to their compliance with international standards as a function of their degree of severity:

Red: Indicates that a company is involved in one or more very severe controversies;

- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;

- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;

- Green: indicates that the company is not involved in any major controversies

- None: Sovereign and/or Companies not covered

Red Flag	1%
Orange Flag	32%
Yellow Flag	25%
Green Flag	41%

Portfolio Carbon Footprint as of October 2021

Carbon Emissions (tons CO2e/\$M invested)	Carbon Intensity (tons CO2e/\$M sales)	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	
45	149	131	Scope 1 reported (vs estimated)	100%
			Scope 2 reported (vs estimated)	95%
			Scope 1 & 2 estimations are based on MSCI methodology	87%

Carbon Measurement methodology

The GreenHouse Gas Protocol (GHG Protocol) was launched in 2001 by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: direct emissions resulting from the burning of fossil fuel resources owned or controlled by the company.
- Scope 2: indirect emissions associated with the purchase or production of electricity.
- Scope 3: all other indirect emissions, from the extended supply chain to the transport of goods and persons.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

*Methodology change"

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD)*. Moreover only the use of the Enterprise Value enables the analysis of a portfolio invested in both equities and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest - total debt.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or the portion of the company's revenue earned from fossil fuel energies or the portion of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon:	
Fossil Fuel Reserves	6%
Thermal Coal	2%
Natural Gaz	4%
Oil	4%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of : \$ 1,000,000	
Thermal Coal (Tons)	55
Gas (MMBOE)	0.0007
Oil (MMBOE)	0.0011

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	160.2
Thermal Coal	99.6
Oil	524.2
Gas	192.5
Total	1,020.0

LYXOR MSCI WORLD UCITS ETF (compartment of the Multi Units France Sicav)

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges - this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

1CO2e/\$M Invested	
Thermal Coal	99.6
Oil Sands	190.4
Shale Oil or Shale Gas	100.2
Sum High Impact Reserves	390.3
Other	629.7

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Enenergy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	6.1%	5.0%	4.6%
Some efforts	79.7%	88.6%	70.7%
Limited efforts/Information	4.6%	2.4%	3.6%
No effort/No evidence	9.4%	3.9%	21.1%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

•Asset stranding: risk of holding assets which may become stranded

•Operational Transition: risk of increase in operational costs

•Product Transition: risk of a decrease in demand for high-carbon products and services

•Neutral: low exposure to transition risks

•Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low- carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.1
Low carbon transition management Score	5.5
Operational Transition	5.6%
Product Transition	5.6%
Neutral	77.6%
Solutions	8.0%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

Share of issuers in terms of power generation in portfolio	4.7%
--	------

The issuer data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source: MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	7.4%	Liquid Fuel	0.6%	Natural Gas	37.7%
Nuclear	22.0%	Renewables	12.6%	Thermal Coal	19.6%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. Those issuers are likely to benefit from a low carbon transition

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenu dedicated to environmental solutions between:	
0-19.9%	22%
20-49.9%	8%
50-100%	2%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	11.4%	Energy Efficiency	30.3%	Green Building	2.5 %
Pollution Prevention	5.2 %	Sustainable Water	4.6%	Sustainable Agriculture	0.3%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	0.7%	Energy Efficiency	4.2%	Green Building	0.4%
Pollution Prevention	0.2%	Sustainable Water	0.1%	Sustainable Agriculture	0.1%

LYXOR MSCI WORLD UCITS ETF (compartment of the Multi Units France Sicav)

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	2%
Coldwave	24%
Flood	2%
Heatwave	7%
Hurricane	5%
Water Stress	44%
Wildfire	16%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.).

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key Issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	2.4%	46.2%	51.5%	88.5%	7.5%	4.0%
Carbon Emissions	0.8%	29.3%	69.9%	79.5%	16.6%	3.9%
Electronic Waste	1.8%	7.5%	90.7%	94.6%	0.6%	4.7%
Opportunities in Green Building	1.5%	38.2%	60.3%	98.1%	1.2%	0.7%
Opp's in Renewable Energy	3.0%	87.4%	9.6%	98.0%	0.7%	1.3%
Packaging Material & Waste	8.7%	71.7%	19.6%	87.3%		12.7%
Water Stress	8.9%	88.3%	2.8%	61.3%	29.6%	9.1%
Toxic Emissions & Waste				56.6%	32.5%	11.0%

Temperature - Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

- A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,
 - An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.
- Each approach allocates a carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Level of alignment	>3°C
Hedging	96.6%

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des marchés financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 ("AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 ("UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management compensation policy notably ensures appropriate risk management and adherence to compliance on the part of its employees.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the French Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No "carried interest" was paid during the financial year.

(Accounting currency of the CIU)

1. General information.

1.1. Amount of securities and raw materials loaned in proportion with the total assets that can be loaned, defined as excluding the cash and cash equivalents.

Securities lending	
% of assets that can be loaned	-

1.2. Amount of the assets committed to each type of securities financing operation and total return swap, expressed in absolute value (in the currency of the collective investment undertaking) and in proportion with the assets under management of the collective investment undertaking.

	Securities lending ⁽¹⁾	Securities borrowing ⁽²⁾	Repo operations ⁽³⁾	Reverse repo operations ⁽⁴⁾	TRS ⁽⁵⁾
Absolute value	-	-	-	-	2,820,494,021.31
% of assets under management	-	-	-	-	51.23
Absolute value	-	-	-	-	2,685,513,411.75
% of assets under management	-	-	-	-	48.78

⁽¹⁾ The amount of assets engaged in securities lending transactions corresponds to the market value of the securities lent at the balance sheet date.

⁽²⁾ The amount of assets engaged in securities borrowing transactions corresponds to the market value of the guarantees (cash or securities) delivered by the fund as part of the securities borrowing on the balance sheet date.

⁽³⁾ The amount of assets engaged in repurchase transactions corresponds to the market value of the securities repurchased on the balance sheet date.

⁽⁴⁾ The amount of assets engaged in reverse repurchase transactions corresponds to the market value of securities purchased under repurchase agreements at the balance sheet date.

⁽⁵⁾ The amount of assets committed in the TRS corresponds (i) for the TRS for which the management company has undertaken to deliver a basket of securities to the TRS counterparty, to the market value of the basket of securities committed in the TRS, increased by the market value of the TRS on the accounting date and/or (ii) for the TRS for which the management company does not deliver a basket of securities, to the value of the nominal value of the TRS on the balance sheet date.

2. Concentration data

2.1. The ten biggest issuers of guarantees for all types of securities financing operations and total return swaps (breakdown of the volumes of guarantees and raw materials received, with the names of the issuers).

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information, in the evolving context of the Covid-19 crisis.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;

- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Shares and units of undertakings for collective investment in transferable securities under French law are valued at the last net asset value known on the calculation date of the Sub-Fund's net asset value.
- Shares and units of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Sub-Fund's reference currency are the exchange rates published the fixing WM Reuters on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the CIU) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the CIU) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Sub-Fund).

Operation and management fees

These fees include all of the fees invoiced directly to the Sub-Fund, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and any turnover commissions that may notably be collected by the depository and delegate investment manager.

For this Sub-Fund, the following operating expenses and management fees are also charged (see summary table below):

- Performance fees: these commissions reward the management company when the Sub-Fund has exceeded its objectives and are invoiced to the Sub-Fund;
- Transfer fees invoiced to the Sub-Fund.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	Maximum 0.30 % per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commission	Net assets	None

⁽¹⁾ including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Accounting currency

The Compartment accounting is carried out in Euro.

SUB-FUND OF THE MULTI UNITS FRANCE SICAV

FISCAL YEAR ENDING ON:
29.10.2021

Compartments / feeder	LYXOR MSCI EMERGING MARKETS UCITS ETF is a subfund of the MULTI UNITS FRANCE SICAV.
Management Company	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
Depository and Custodian	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

Information on the investments and management

Classification:

International equities.

At least 60% of the Lyxor MSCI Emerging Markets UCITS ETF subfund (the “Subfund”) is permanently exposed in a foreign equity market or in equity markets of several countries, possibly including the French market.

The Compartment is an index-based fund of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution:

Capitalisation of all the amounts available for distribution.

Management objective:

The Compartment is a passively managed index-based UCITS.

The management objective of this Subfund is to replicate the upward or downward evolution of the MSCI Emerging Markets Net Total Return index (net dividends reinvested) (the “Benchmark Index”), listed in US Dollars (USD), while insofar as possible minimising the tracking error between the Subfund’s performances and those of the Benchmark Index.

The anticipated level of the ex-post tracking error under normal market conditions is 1%.

Benchmark indicator:

The Benchmark Index is an equity index calculated and published by MSCI, a supplier of international indices.

The Benchmark Index consists exclusively of securities from emerging markets and retains the fundamental characteristics of the MSCI indices, namely: adjustment of the market capitalisation of the securities in the index on the basis of the float and sector classification according to the Global Industry Classification Standard (GICS) classification.

The Benchmark Index provides exposure to the equity markets of 24 emerging markets (i.e., as of 31 January 2018, to the following emerging markets: Brazil, Chile, China, Colombia, Czech Republic, Egypt, Greece, Hungary, India, Indonesia, Malaysia, Mexico, Pakistan, Peru, Philippines, Poland, Qatar, Russia, South Africa, Taiwan, South Korea, Thailand, Turkey, United Arab Emirates).

The objective of the Benchmark Index is to represent 85% of the capitalisation that is adjusted on the basis of the float for each group of industries in the emerging markets.

By targeting 85% of the representativeness of each industry group, the Benchmark Index comprises 85% of the market capitalisation of the emerging markets, while also reflecting the market’s economic diversity.

The Benchmark Index is a “Net Total Return” index, which means that the Benchmark Index’s performance includes the net dividends paid by its underlying equities.

The MSCI methodology and its calculation method entail the Benchmark Index being made up of a variable number of companies. An exhaustive description and the complete methodology for the construction of the Benchmark Index as well as information on the composition and relative weights of the Benchmark Index’s components are available online at: www.msci.com

The monitored performance is that of the Benchmark Index closing prices.

Benchmark Index publication

The Benchmark Index is calculated on a daily basis at closing prices using the official closing stock market prices for the constituent stocks.

The Benchmark Index is also calculated in real time every day that the Benchmark Index is published.

The closing price of the Benchmark Index is available on MSCI's website at www.msci.com.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the administrator of the Benchmark Index has until 31 December 2023 to request authorisation or registration, where applicable, from the competent authority.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmark indices used, describing the measures to be implemented in the event of substantial changes to an index or termination of supply of that index.

Benchmark Index revision and composition

The revision of the Benchmark Index takes place quarterly.

The exact composition and revision rules of the Benchmark Index published by MSCI are available online at www.msci.com

The above-mentioned frequency of rebalancing has no effect on costs as part of the implementation of the investment strategy.

Investment strategy:

1. Strategy employed

The Sub-Fund will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Index, the Sub-Fund will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Sub-Fund's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Index.

The securities held as assets by the Sub-Fund may notably be securities that make up the Benchmark Index, as well as other international equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Sub-Fund's portfolio and (ii) the market value of the future exchange operation entered into by the Sub-Fund are available on the page dedicated to the Sub-Fund on the website: www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

As part of the management of its exposure, the Sub-Fund may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Index, in particular in the event of a public offering affecting one of the securities making up the Benchmark Index or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Index.

In this case, the manager intends to use mainly the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets.

The aforementioned equities will be chosen on the basis of criteria:

Of eligibility, in particular:

- Subordination to the main market indices or to the Benchmark Index;
- Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation);

- Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent)..

Of diversification, notably:

- Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Article R.214-21 of the French Monetary and Financial Code);
- Geographical;
- Sectorial.

For more information on the abovementioned eligibility and diversification criteria, investors can visit the website: www.lyxoretf.com

The investment in undertakings for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Subfund. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership. As part of these investments, the Sub-Fund may subscribe for units or shares of UCITS managed by the management company or a company to which it is linked.

As part of the future optimisation of the Sub-Fund's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Subfund will have recourse to index-linked swaps traded over-the-counter, exchanging the value of the equities in the Subfund's assets (or of any other financial instrument or asset held by the Subfund, where appropriate) against the value of the Benchmark Index (in compliance with the description contained in this section's paragraph 1 above).

As part of a future optimisation of the Sub-Fund management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including future financial instruments other than index-linked swaps.

The counterparty of the aforesaid forward financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Subfund's portfolio, nor regarding the underlying assets of the forward financial instruments.

Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.

Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Sub-Fund may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/fees and its ability to achieve its management objective may also be negatively impacted. Where the Sub-Fund enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Sub-Fund can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Subfund is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Subfund's use of temporary purchases and sales of securities, the Subfund can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Sub-Fund's assets. In the event of default by the counterparty, the Subfund may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt towards the Subfund as part of the guaranteed transaction. Any financial guarantee received by the Sub-Fund within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Sub-Fund's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- Such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State or (iv) a public international organisation to which one or more Member States belong; and
- Such financial guarantees consist of at least six different issues of which none exceeds 30% of the Subfund's assets.

In compliance with the aforesaid conditions, the guarantees received by the Subfund can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged.

Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an authorised institution;
- (ii) invested in high-quality State bonds;

- (iii) Used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) Invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees. In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the MF may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

Counterparty selection policy

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Sub-Fund. The selection of counterparties to financial contracts and financial intermediaries is carried out rigorously from among the reputable counterparties and intermediaries in the market on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes into consideration various criteria to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating;
- Quantitative criteria based on the CDS LT spread (absolute criteria, volatility and comparison with a reference group, etc.)

Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: www.lyxor.com, section "regulatory information".

Risk profile:

The shareholder's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Sub-Fund, the shareholder is primarily exposed to the following risks: **Equity**

risk

An equity price can vary upwards or downwards, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

Risk related to low diversification of the Benchmark Index

The Benchmark Index to which the investors are exposed covers a given region, sector or strategy and therefore does not necessarily allow for as broad a diversification of the assets as would be the case of an index that is exposed to several regions, sectors or strategies. The exposure to such an index with such low diversification can result in greater volatility than in more diversified markets. Nevertheless, the diversification rules resulting from the UCITS standards always apply to the Subfund's underlyings.

Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Index be negative over the investment period.

Liquidity risk (primary market)

If, when the Subfund (or one of its counterparties for forward financial instruments, or "FFIs") adjusts its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase/sale price discrepancies, the value and/or liquidity of the Subfund could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

Liquidity risk on a place of listing

The Sub-Fund's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Index, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Index, and/or

- iii) The impossibility for a given place of listing to obtain or calculate the Subfund's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

Counterparty risk

The Sub-Fund is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

Risks related to collateral management

Operational risk:

The Sub-Fund may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365. Legal risk
The Sub-Fund may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

Risk related to the exposure to Emerging markets

The Subfund's exposure to emerging markets results in a greater risk of loss that would exist in the event of investments carried out within traditional developed markets. In particular, the operating and supervision rules in an emerging market may differ from the standards applicable to developed markets. The exposure to emerging markets notably results in: increased volatility of the markets, lower transaction volumes, the risk of economic and/or political instability, an unstable or uncertain fiscal and/or regulatory regime, risks of closing of the markets, government restrictions on foreign investments and interruption or restriction of the convertibility or transferability of any of the currencies comprising the Benchmark Index.

Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Index, notably should one or more of the following risks arise:

Risk related to the use of derivative instruments

In order to achieve its investment objective, the Subfund uses FFIs traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Index. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Index, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Sub-Fund is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Sub-Fund's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Sub-Fund (and/or to its counterparty in the FFI), the Sub-Fund's net asset value may be affected.

Risk related to regulations

In case of change of the regulations in any country in which the Sub-Fund is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Sub-Fund's underlyings, the Sub-Fund's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

Risk related to events affecting the Benchmark Index

In case of events affecting the Benchmark Index, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Sub-Fund equities. The calculation of the Compartment's net asset value can also be affected. If the event persists, the Sub-Fund's manager will decide on measures having to be adopted, which can have an impact on the Sub-Fund's net asset value.

"Events affecting the Benchmark Index" are understood to mean the following situations:

- i) The Benchmark Index is considered to be incorrect or not reflective of the market's actual evolution;
- ii) The Benchmark Index is definitively discontinued by its supplier;
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Index;
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Index (other than a minor modification such as the adjustment of the underlyings of this Benchmark Index or of the respective weightings between its various components), that cannot be effectively replicated by the Subfund at a reasonable cost;
- v) One or more components of the Benchmark Index becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid;
- vi) The Benchmark Index's components are impacted by transaction fees relative to the execution, delivery versus payment or specific tax constraints, without these fees being reflected in the Benchmark Index's performance.

Securities transaction risk

Should the issuer of a security underlying the Benchmark Index undertake an unanticipated review of a corporate action that contradicts a prior and official announcement that had resulted in a valuation of the corporate by the Subfund (and/or in a valuation of the corporate action by the Subfund's counterparty in a forward financial instrument), the Subfund's net asset value may be affected, notably should the actual treatment of the corporate action by the Subfund differ from the corporate action's treatment in the methodology used by the Benchmark Index.

Exchange risk linked to the Benchmark Index

The Subfund is exposed to an exchange risk to the extent that the underlying securities making up the Benchmark Index could be listed in a currency other than that of the Benchmark Index, or be derivatives of securities listed in a currency other than that of the Benchmark Index. Fluctuating exchange rates are then likely to negatively affect the Benchmark Index monitored by the Subfund.

Exchange risk linked to the "Acc" and "I - EUR" share classes

The above-mentioned share classes are exposed to an exchange risk to the extent that they are listed in a currency other than that of the Benchmark Index.

Consequently, the net asset value of the aforesaid share classes can decline despite an increase of the value of the Benchmark Index, as a result of exchange rate fluctuations.

Sustainability risks

The Sub-Fund does not consider sustainability factors in the investment decision-making process but remains exposed to sustainability risks. The occurrence of such risks could have a negative impact on the value of the investments made by the Sub-Fund. Additional information is available in the "Sustainability Information" section of the Prospectus.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

The Subfund is aimed at subscribers who wish to gain exposure to the emerging equities markets.

The amount that it is reasonable to invest in this Sub-Fund depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Subfund's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers. The minimum recommended investment term is greater than 5 years.

“U.S. Persons” (as defined below – see “COMMERCIAL INFORMATION”) may not invest in the Subfund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Subfund’s complete prospectus and the latest annual and periodic documents are sent within one week of the bearer’s written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy-92800 Puteaux.*
- *Creation date of the Multi Units France Sicav: 04 March 2002.*
- *Sub-Fund approval date by the AMF (French Financial Regulatory Authority): 06 June 2018.*
- *Compartment creation date: 06 September 2018.*

Activityreport

The fund replicates the performance of the MSCI Daily TR Net Emerging Markets USD Index (Ticker: NDUEEGF).

Performance trend at the closing date:

Share name	ISIN	Share currency	Performance for the fiscal year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor MSCI Emerging Markets UCITS ETF - Acc EUR	FR0010429068	EUR	17.12% ⁽¹⁾	17.73% ⁽³⁾	-0.65% ⁽²⁾	88.11%
Lyxor MSCI Emerging Markets UCITS ETF - Acc USD	FR0010435297		16.36% ⁽¹⁾	16.96%	-	49.37%
Lyxor MSCI Emerging Markets UCITS ETF -	FR0013465796	EUR	17.12% ⁽¹⁾	17.73% ⁽³⁾	-0.65% ⁽²⁾	11.57%

⁽¹⁾ “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs (for example, the cost of rebalancing the index);
- taxation incurred in relation to the methodology used in the Benchmark Index”

⁽²⁾ -“Since the unit value is not calculated in the Index currency, it net asset value may be exposed to currency risk over the financial year. The calculation methodology for the Foreign Exchange rate during the period is share currency/index currency”.

⁽³⁾ “Where the Benchmark Index is denominated in a currency other than the currency of the Unit, the performance of the Benchmark Index is first converted into the currency of the Unit for the sake of clarity and comparison. For this purpose, a foreign exchange transaction (at the WM Reuters 5:00 p.m. rate on the relevant day) is applied daily to the value of the Benchmark Index”.

The tracking error realised is 0.0332%. The target tracking error over the period was 1%. The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

Index Linked Swap's counterparty is: Société Générale.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

This Fund is covered by Article 6 of Regulation (EU) 2019/2088 (the "SFDR Regulation"). It does not promote environmental and/or social characteristics and does not aim to invest sustainably

Transparency of environmentally sustainable investments in periodic reports under Regulation (EU) 2020/852

Regulation (EU) 2020/852 on the establishment of a framework for promoting sustainable investments (the "Taxonomy Regulation") sets out the criteria for determining whether an economic activity is environmentally sustainable in the European Union.

According to the Taxonomy Regulation, an activity can be considered "sustainable" if it contributes substantially to one of the 6 environmental objectives set out in the Taxonomy Regulation, including climate change mitigation and adaptation, pollution prevention and reduction, or the protection and restoration of biodiversity and ecosystems.

In addition, in order to be considered to be sustainable, this economic activity must respect the "Do No Significant Harm" (DNSH) with respect to one of the other five objectives of the Taxonomy Regulation and must also comply with basic social criteria (alignment to OECD and UN Guidelines on Business and Human Rights).

In accordance with article 7 of the Taxonomy Regulation, the management company draws investors' attention to the fact that the underlying investments of this Fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Provision of environmental, social and governance (ESG) information - in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website [Lyxor.com](https://www.lyxor.com) and is revised each

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

(a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

To the basket of assets held by the fund, the fund applies an exclusion of issuers associated with serious and repeated violations of the Principles of the United Nations Global Compact and regulatory requirements related to controversial sectors and products, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis implemented on ESG criteria

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
 - Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
 - Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
 - Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
 - Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
 - In the global context of the Societe Generale Group's Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defence policy,
 - In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,
- Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution.

The post trade control is on NAV frequency basis.

Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website [Lyxor.com](https://www.lyxor.com).

The exclusion described above is applied to the fund holdings.

2. Description of how the results of the analysis implemented on ESG criteria, in particular exposure to climate risks, are integrated into the investment policy

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:
 - Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.
 - In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:
 - The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
 - Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
 - A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).
 - With regard to carbon risk management:
 - Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).
 - In regards with the portfolio's exposure to issuers offering environmental solutions :
 - Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).
 - In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :
- For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :
- the Germanwatch climate performance index score
 - the environment performance score
 - the Environmental Vulnerability index

For corporate issuers in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

LYXOR MSCI EMERGING MARKETS UCITS ETF (compartment of the Multi Units France Sicav)

•Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations

Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

For each issuer (Corporate & Government), ESG Industry sector classification is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The ESG score calculated at the portfolio level measures the capacity of the underlying issuers to manage the risks and key opportunities associated with environmental, social and governance factors. The risk scale ranges from 0 (high risk) to 10 (low risk). Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: employment, employer-employee relations, health and safety, training, compliance with ILO conventions
- Governance: board of directors or supervisory board, audit and internal control, executive pay

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Externalities Environementales, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source: The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Measures the portfolio's exposure to companies experiencing controversies relating to their compliance with international standards as a function of their degree of severity:

Red: Indicates that a company is involved in one or more very severe controversies;

- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;

- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;

- Green: Indicates that the company is not involved in any major controversies.

- None: Sovereign and/or Companies not covered

Red Flag	2%
Orange Flag	11%
Yellow Flag	23%
Green Flag	63%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2021

Carbon Emissions (tons CO2e/\$M invested)	Carbon Intensity (tons CO2e/\$M sales)	Weighted Average Carbon Intensity tons (CO2e/\$M sales)	Portfolio rated by weight	100%
139	403	322	Scope 1 reported (vs estimated)	77%
			Scope 2 reported (vs estimated)	82%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GreenHouse Gas Protocol (GHG Protocol) was launched in 2001 by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: direct emissions resulting from the burning of fossil fuel resources owned or controlled by the company.
- Scope 2: indirect emissions related to the purchase or production of electricity.
- Scope 3: all other indirect emissions, from the extended supply chain to the transport of goods and persons.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

Carbon emissions financed (tons CO2 e / \$m invested): they represent the carbon footprint of the standardised portfolio by \$m invested

Carbon intensity (tons CO2e/\$m of turnover): shows the carbon efficiency of the portfolio in terms of emissions per \$m of turnover

•Weighted Average Carbon Intensity (tons CO2e/\$m of turnover): a measure the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions standardised by turnover), and these intensities are weighted according to the companies' weight in the portfolio.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio invested in both equities and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest - total debt.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or the portion of the company's revenue earned from fossil fuel energies or the portion of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon:	
Fossil Fuel Reserves	10%
Thermal Coal	3%
Natural Gaz	7%
Oil	7%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	651.4
Thermal Coal	1,903.6
Oil	1,479.9
Gas	2,402.8
Total	6,445.5

LYXOR MSCI EMERGING MARKETS UCITS ETF

(compartment of the Multi Units France Sicav)

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges - this is the case with oil sands, which have been targeted as being particularly climate-unfriendly. With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	1,903.6
Oil Sands	47.3
Shale Oil or Shale Gas	10.3
Sum High Impact Reserves	1,961.2
Other	4,484.4

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	1.3%	1.5%	3.3%
Some efforts	64.9%	85.3%	41.8%
Limited efforts/Information	12.6%	4.9%	3.7%
No effort/No evidence	21.1%	7.9%	51.2%

Low Carbon Transition Score

The Low Carbon Transition Score (1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low- carbon products.

(1) Metric developed by MSCI

Low carbon transition score	5.9
Low carbon transition management Score	3.9
Operational Transition	12.3%
Product Transition	12.3%
Neutral	73.3%
Solutions	4.2%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The issuer data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source: MSCI ESG Research

Share of issuers in terms of power generation in portfolio	5.6%
--	------

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	14.0%	Liquid Fuel	1.4%	Natural Gas	32.5%
Nuclear	6.0%	Renewables	6.6%	Thermal Coal	39.5%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	32%
20-49.9%	3%
50-100%	3%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	9.6%	Energy Efficiency	36.0%	Green Building	1.8%
Pollution Prevention	3.6%	Sustainable Water	2.3%	Sustainable Agriculture	0.6%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	0.8%	Energy Efficiency	3.6%	Green Building	0.1%
Pollution Prevention	0.1%	Sustainable Water	0.1%	Sustainable Agriculture	0.1%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	3%
Coldwave	21%
Flood	2%
Heatwave	9%
Hurricane	10%
Water Stress	46%
Wildfire	10%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks.

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

Business Segment Risk Exposure – analyses the breakdown of a company's business in terms of revenues, assets, or operations

Geographic Segment Risk Exposure – analyses the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	1.4%	50.1%	48.5%	80.2%	13.5%	6.3%
Carbon Emissions	9.1%	85.3%	5.7%	69.0%	22.5%	8.5%
Electronic Waste	10.6%	30.7%	58.6%	94.1%	1.2%	4.7%
Opportunities in Green Building	9.0%	80.5%	10.5%	98.1%	1.6%	0.3%
Opp's in Renewable Energy	15.8%	37.5%	46.7%	98.4%	0.4%	1.1%
Packaging Material & Waste	66.2%	18.5%	15.3%	90.9%	0.0%	9.1%
Water Stress	12.0%	60.7%	27.2%	54.0%	33.9%	12.1%
Toxic Emissions & Waste				52.2%	29.5%	18.3%

Temperature - Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

-A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,

-An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates a carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des marchés financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 ("AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 ("UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management compensation policy notably ensures appropriate risk management and adherence to compliance on the part of its employees.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No "carried interest" was paid during the financial year.

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information, in the evolving context of the Covid-19 crisis.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded. However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are valued by spreading out the difference between the acquisition value and the redemption value on a straight-line basis over the residual lifespan. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS whose residual lifespan at acquisition is greater than 3 months but whose residual lifespan on the net asset value closing date is equal to or less than 3 months are valued by spreading out the difference between the last adopted current value and their redemption value on a straight-line basis over the residual lifespan. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS whose the residual lifespan on the net asset value closing date is greater than 3 months are valued at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are valued at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities in undertakings for collective investment in transferable securities operating under French law are valued at the last net asset value known on the calculation date of the Subfund's net asset value.
- Units and equities of UCITS operating under foreign law are valued at the last unit net asset value known on the calculation date of the Subfund's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are valued at their probable trading value, under the management company's responsibility.

- The exchange rates used for the valuation of financial instruments listed in a currency other than the Subfund's reference currency are the exchange rates published the fixing WM Reuters on the same day of the Subfund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the CIU) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional transactions is equal to the price of the underlying security (in the currency of the subfund) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Sub-Fund).

Operation and management fees

These fees include all of the fees invoiced directly to the Sub-Fund, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transfer commission which, if relevant, may notably be collected by the custodian and management company.

For this Sub-Fund, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Sub-Fund has exceeded its objectives and are invoiced to the Sub-Fund;
- Transfer commissions invoiced to the Sub-Fund;

For more details on the fees actually invoiced to the Sub-Fund, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	maximum 0.55% per year
Max. indirect fees (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commission	Net assets	None

⁽¹⁾ including all fees excluding transaction fees, performance fees and fees related to investments in UCITS or investment funds.

Accounting currency

The Compartment accounting is carried out in Euro.

Indication of accountancy changes declared to each of the shareholders individually

- Occurred change: None.

Unit distribution (including advances)*	-	-	-	-	-
Unit tax credit transferred to holders (natural persons) ⁽¹⁾	-	-	-	-	-
Unit capitalisation*	-17.78	-103.59	-	-	-

* The amounts of the unit distribution, the unit capitalisation and the tax credits are indicated in the accounting currency of the Sub-Fund. The unit capitalisation corresponds to the sum of profit and loss and net capital gains or losses on the number of circulating units. This calculation method is applied from 1 January 2013.

⁽¹⁾ In pursuant to the Fiscal Instruction of 4 March 1993 of the French Tax Department, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits between the circulating units on that date.

**Annual
report**
SUB-FUND OF THE MULTI UNITS FRANCE SICAV

FISCAL YEAR ENDING ON: 29.10.2021

Compartments / feeder	LYXOR JAPAN (TOPIX) (DR) UCITS ETF is a Sub-Fund of the MULTI UNITS FRANCE Sicav.
Management Company	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy – 92987 Paris La Défense Cedex.
Depository and Custodian	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

Information on the investments and management

Classification:

International equities.

At least 60% of the Lyxor Japan (Topix) (DR) UCITS ETF sub-fund (the “Sub-Fund”) is permanently exposed to a foreign equity market or to equity markets of several countries, including possibly the French market. The Compartment is an index-based fund of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution:

Share classes Dist (EUR), Dist (JPY), Share class Daily Hedged to EUR - Dist: the Board of Directors reserves the right to distribute all or part of the distributable amounts and/or to capitalise them one or more times a year.

Share Class Daily Hedged to EUR - Acc: accumulation of all distributable amounts.

Management objective:

The Compartment is a passively managed index-based UCITS.

The Sub-Fund’s investment objective is to replicate, both upwards and downwards, the performance of the TOPIX® Gross Total Return Index (gross dividends reinvested) (the “Benchmark Indicator”), denominated in Japanese Yen (JPY), by minimising the Tracking Error between the performance of the Sub-Fund and that of its Benchmark Indicator as much as possible. The anticipated level of the ex-post tracking error under normal market conditions is 0.50%.

Benchmark indicator:

The Benchmark Indicator is an equity index calculated and published by the Tokyo Stock Exchange.

The Tokyo Stock Exchange, the main organised stock exchange in Japan, is divided into two Sections:

- the first section includes the largest listed companies in terms of market capitalisation.
- the second section is dedicated to small caps or newly listed companies.

The Benchmark Indicator is made up of all Japanese equities listed on the First Section of the Tokyo Stock Exchange.

The weight of each share in the Benchmark is weighted by the market capitalisation of the security.

The Benchmark Indicator is therefore particularly representative of the Japanese economy, as it consists of a significant number of the largest caps on the market.

The Benchmark Indicator is a “Gross Total Return” index, meaning that the Benchmark Indicator’s performance includes gross dividends paid by its underlying equities.

A full description and full methodology for the construction of the Benchmark Indicator as well as information on the composition and respective weights of the components of the Benchmark Indicator are available on the website: <http://www.jpx.co.jp/english/>

The performance tracked is that of the closing prices of the Benchmark Indicator in JPY.

Benchmark Index publication

The performance tracked is that of the closing prices of the Benchmark Indicator.

The closing price of the Benchmark Indicator is available on the website: <http://www.jpx.co.jp/english/>

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the administrator of the Benchmark Indicator is included in the register of administrators and benchmark indices maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmarks used which describes the measures to be implemented in the event of substantial changes to an index or disappearance of that index.

Benchmark Index revision and composition

The Benchmark Indicator will be revised each time a given Japanese equity enters or exits the Tokyo Stock Exchange's first listing section. The Benchmark Indicator will therefore not be reviewed on a regular basis.

The exact composition and revision of the composition of the Benchmark Indicator published by the Tokyo Stock Exchange are available on the website:

<http://www.jpx.co.jp/english/>

The above-mentioned frequency of rebalancing has no effect on costs as part of the implementation of the investment strategy.

Investment strategy:

1. Strategy employed

The Sub-Fund will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In order to seek the highest possible correlation with the performance of the Benchmark Indicator, the Sub-Fund will use a direct replication method, which means that the Sub-Fund will invest in a basket of assets made up of the securities comprising the Benchmark Indicator and/or financial instruments representative of all or part of the securities comprising the Benchmark Indicator.

In addition, the sub-fund may use forward financial instruments ("FFIs"). FFIs in which the sub-fund is likely to invest include contracts such as index futures, futures on all or part of the Benchmark Index constituents, and hedging swaps entered into to minimise the Subfund's tracking error.

When pursuant to its investment strategy (e.g. use of futures), the Sub-Fund is required to hold cash, the manager in the best interest of the unitholders may use deposits with credit institutions and/or invest cash in balance sheet assets and/or off-balance sheet assets (as described below).

To optimise the method of direct replication of the Benchmark Indicator, the Sub-Fund, represented by the Management Company, may decide to use a so-called "sampling" technique consisting of investing in a selection of representative securities comprising the Benchmark Indicator, with the aim of limiting the costs associated with investing in the different components of the Benchmark Indicator. A replication-by-sampling strategy could notably lead the Subfund to invest in a representative selection (rather than all) of securities comprising the Benchmark, in proportions different from those of the Benchmark Index or even to invest in securities other than the Benchmark Index constituents.

In order to allow investors to benefit from transparency with respect to the direct replication method used (full replication of the Benchmark Indicator) and its consequences in terms of assets held by the Sub-Fund, information on the updated composition of the basket of balance sheet assets held in the Sub-Fund's portfolio is available on the page dedicated to the Sub-Fund available on the website www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website. The website www.lyxoretf.com offers a page dedicated to the Sub-Fund, which in particular allows investors to benefit from transparency on the direct replication method used (full replication of the Benchmark Indicator or sampling to limit replication costs). The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

As part of the management of its exposure, the Sub-Fund may be exposed up to 20 % of its assets in equities from a single issuing entity. This limit of 20% may be raised to 35% for a single issuing entity, where this proves to be justified by exceptional market conditions, particularly when certain securities are largely dominant and/or in the event of high volatility of a financial instrument or securities linked to an economic sector represented in the Benchmark Indicator, particularly in the event of a public offer affecting one of the securities comprising the Benchmark Indicator or in the event of a significant liquidity restriction affecting one or more financial instruments included in the Benchmark Indicator.

In this case, the manager intends to use mainly the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Sub-Fund will mainly be invested in the securities described below:

• Equities

The Compartment may hold international equities in accordance with regulatory ratios.

The Subfund will be mainly invested in the stocks comprising the Benchmark Index.

• Holding shares or units of other UCIs or investment funds

The Subfund may invest up to 10% of its assets in units or shares of the following UCIs or investment funds:

- French or foreign UCITS compliant with Directive 2009/65/EC – For the purposes of these investments, the Subfund may subscribe for units or shares in UCITS managed by the Management Company or a company to which it is linked.

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

3. Off-balance sheet assets (derivative instruments)

The Sub-Fund may invest in the following FFIs:

• Nature of the trading markets:

- regulated
- organised
- over-the-counter

• Risks in which the Sub-Fund wishes to trade:

- equity

• Nature of transactions, all transactions being limited to the achievement of the management objective:

- hedging
- exposure

• Type of instruments used:

- futures: on equities and indices
- forward exchange contracts

• Strategy for using derivatives to achieve the investment objective:

- general hedging of the portfolio, certain risks, securities, etc. - up to 100% of the assets
- recreation of synthetic exposure to assets and risks - up to 100% of assets

The counterparties of OTC derivatives processed by the Sub-Fund will be selected in accordance with the Management Company's best execution policies (including the execution matrix by asset type mentioned in the Appendix). The above-mentioned policy can be accessed at the following address: <https://www.lyxor.com/politique-demeilleure-execution-liam-janvier-2020-fr>

The counterparty of the financial futures will have no discretionary power regarding the composition of the Subfund's portfolio, nor regarding the underlying assets of the financial futures within the limit and under the conditions set out by the regulations.

Situations of conflict of interest may arise between the Management Company and Société Générale when Société Générale acts as a counterparty the FFIs. These situations are governed by the Management Company's conflict of interest management policy.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20 % of its net assets, the Sub-Fund can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10 % of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

The Sub-Fund may use effective portfolio management techniques in accordance with the provisions of Article R214-18 of the French Monetary and Financial Code and in particular temporary sales of financial securities.

- Maximum proportion of assets under management that may be concerned by securities financing contracts: up to 25% of the Sub-Fund's assets.

- Expected proportion of assets under management that can be concerned by securities financing contracts: 0% of the Subfund's assets

In this context, the Management Company has appointed Societe Generale as an intermediary (hereinafter the "Agent"). If temporary sales are used, the Agent may be authorised (i) to carry out, on behalf of the Sub-Fund, securities lending transactions governed by GMSLAs (Global Master Securities Lending Agreements) and/or any other internationally recognised framework agreements, and (ii) to invest, on behalf of the Sub-Fund, the cash received as collateral for these securities lending transactions, in accordance with and within the limits defined by the securities lending agreement, the rules of this prospectus and the regulations in force.

As a reminder, the Management Company is an entity of the Societe Generale Group and is therefore linked to the Agent.

Where Société Générale S.A. is appointed as Agent, it is not authorised to act as a counterparty in securities lending transactions. If temporary sales are used:

- all income arising from these transactions, net of direct and indirect operational costs/fees, will be returned to the Sub-Fund;
- the above-mentioned operational fees/costs related to effective portfolio management techniques are those incurred by the Sub-Fund's management company, the Agent (if applicable) and/or the other intermediaries involved in these operations in connection with their services;
- the direct or indirect operating fees/costs will be calculated as a percentage of the gross income generated by the Sub-Fund. Information on direct and indirect operational fees/costs and the identity of the entities to which these fees/costs are paid will be mentioned in the Sub-Fund's annual report; and
- the income generated by securities lending transactions (less direct and indirect operating costs incurred by the Agent and, where applicable, by the Management Company) should be paid to the relevant Sub-Fund. To the extent that these direct and indirect fees/costs do not increase the operating costs of the Sub-Fund, they have been excluded from current expenses.

The Compartment's annual report will include, where applicable, the following details:

- the exposure generated through effective portfolio management techniques;
- the identity of the counterparty(ies) to these effective portfolio management techniques;
- the type and amount of guarantees received by the Sub-Fund in order to reduce counterparty risk; and
- income from effective portfolio management techniques for the whole period concerned, as well as direct and indirect operational costs and expenses incurred.

8. Financial guarantees

In all cases in which the Subfund is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Subfund's use of temporary purchases and sales of securities, the Subfund can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depository. As such, the received financial guarantees will be listed amongst the Sub-Fund's assets. In the event of default by the counterparty, the Subfund may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt towards the Subfund as part of the guaranteed transaction. Any financial guarantee received by the Sub-Fund within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious haircut;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20 % of the Sub-Fund's net asset value;
- (e) the Sub-Fund's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and
- Such financial guarantees consist of at least six different issues of which none exceeds 30% of the Subfund's assets.

In compliance with the aforesaid conditions, the guarantees received by the Sub-Fund can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e)(above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged.

Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the MF may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

COUNTERPARTY SELECTION POLICY

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Sub-Fund. The selection of counterparties to financial contracts and financial intermediaries is carried out rigorously from among the reputable counterparties and intermediaries in the market on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes into consideration various criteria to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating
- Quantitative criteria based on the CDS LT spread (absolute criteria, volatility and comparison with a reference group, etc.) Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: www.lyxor.com, section "regulatory information".

Risk profile:

The Sub-Fund will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Sub-Fund, the shareholder is primarily exposed to the following risks:

- Equity risk

An equity price can vary upwards or downwards, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Index be negative over the investment period.

- Liquidity risk (primary market)

If, when the Subfund (or one of its counterparties for forward financial instruments, or "FFIs") adjusts its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase/sale price discrepancies, the value and/or liquidity of the Subfund could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Risks related to the absence of perfect replication

Replicating the Benchmark Index by investing in all constituents of said Benchmark Index can be costly or very difficult to operate. The Subfund's manager may also use optimisation techniques, in particular the sampling technique, which consists in investing in a selection of representative securities (and not all securities) comprising the Benchmark Index, in proportions different from those of the Benchmark Index or even investing in securities other than the constituents of the index or financial futures. The use of these optimisation techniques may lead to an increase in the ex-post tracking error and will notably lead to a performance gap between the Subfund and the Benchmark Index.

- Liquidity risk on a place of listing

The Sub-Fund's equity price can deviate from its indicative net asset value. The liquidity of the Sub-Fund's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Index, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Index, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Subfund's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Sub-Fund is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

- Risk related to the use of effective portfolio management techniques

In the event that the counterparty to the efficient portfolio management technique (hereinafter referred to as the "EPMT") processed by the Subfund fails to provide the counterparty, the Subfund may be exposed to a risk in the event that the value of the guarantees received by the Subfund is lower than the value of the assets of the Subfund transferred to the counterparty under the EPMT in question.

This risk could materialise in particular in the event of (i) a poor valuation of the securities subject to this transaction and/or (ii) adverse market movements and/or (iii) a deterioration in the credit rating of issuers of securities received as collateral and/or (iv) illiquidity of the market on which the collateral received is admitted to listing. Unitholders should note that (i) EPMTs may be entered into with Société Générale (entity of the same group as the Management Company) and/or (ii) that Société Générale may be appointed as agent of the Subfund under the EPMTs.

- Risks related to the management of guarantees

Operational risk:

The Sub-Fund may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Sub-Fund may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk related to the use of derivative instruments

The Compartment may use over-the-counter forward Financial Instruments ("FFIs") or listed FFIs, in particular futures contracts and/or hedging swaps. These FFIs can result in a series of risks on the level of the contract that include, but are not limited to: counterparty risk, event affecting the hedging, event affecting the Benchmark Index, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI contract, which could affect the Subfund's net asset value.

Investing in FFIs may involve a high level of risk. The amount required to trade certain FFIs is potentially much lower than the exposure obtained through these instruments, which entails a leverage effect at the level of each transaction. A relatively limited market movement would then have a proportionately very high impact, which could be favourable or unfavourable to the Subfund.

The market value of forward financial instruments is highly volatile and may therefore be subject to significant fluctuations.

The Sub-Fund may use OTC futures. Over-the-counter transactions may be less liquid than transactions traded on organised markets, where trading volumes are generally higher, and their prices may be more volatile.

- Risk that the management objective will only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Index, notably should one or more of the following risks arise:

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Sub-Fund is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Sub-Fund's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Sub-Fund (and/or to its counterparty in the FFI), the Sub-Fund's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Sub-Fund is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to regulations applicable to the underlyings

In case of change of the regulations applicable to the Sub-Fund's underlyings, the Sub-Fund's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Index, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Sub-Fund equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Sub-Fund's manager will decide on measures having to be adopted, which can have an impact on the Sub-Fund's net asset value.

"Events affecting the Benchmark Index" are understood to mean the following situations:

- i) the Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) the Benchmark Indicator is definitively discontinued by its supplier,

- iii) the supplier of the index is incapable of providing the level or value of said Benchmark Indicator,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Index (other than a minor modification such as the adjustment of the underlyings of this Benchmark Index or of the respective weightings between its various components), that cannot be effectively replicated by the Subfund at a reasonable cost.
- v) one or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) the Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

- Corporate action risk

Should the issuer of a security underlying the Benchmark Index undertake an unanticipated review of a corporate action that contradicts a prior and official announcement that had resulted in a valuation of the corporate by the Subfund (and/or in a valuation of the corporate action by the Subfund's counterparty in a forward financial instrument), the Subfund's net asset value may be affected, notably should the actual treatment of the corporate action by the Subfund differ from the corporate action's treatment in the methodology used by the Benchmark Index.

- Foreign exchange risk related to the Dist share class

The above-mentioned share class is exposed to an exchange risk to the extent that it is listed in a currency other than that of the Benchmark Index. Consequently, the net asset value of the aforesaid share class can decline despite an increase of the value of the Benchmark Index, as a result of exchange rate fluctuations.

- Currency hedging risk

In order to hedge the EUR/JPY currency risk on the Daily Hedged to EUR - Dist and Daily Hedged to EUR - Acc share classes, the Sub-Fund uses a hedging strategy to reduce the impact of the change between the Benchmark Indicator's currency and the currency of the relevant share class. Due to the daily implementation of this hedge as well as its imperfection, the Sub-Fund may be subject to costs or downward market movements impacting the net asset value of the unit.

- Sustainability risks

The Sub-Fund does not consider sustainability factors in the investment decision-making process but remains exposed to sustainability risks. The occurrence of such risks could have a negative impact on the value of the investments made by the Sub-Fund. Additional information can be found in the "Sustainability Information" section of the Prospectus.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

Investors who subscribes to this Sub-Fund wish to gain exposure to the Japanese equity market and more specifically to the performance of the most important Japanese stocks.

The amount that it is reasonable to invest in this Sub-Fund depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment term is greater than 5 years.

"U.S. Persons" (as defined in the prospectus - see "COMMERCIAL INFORMATION") may not invest in the Sub-Fund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Sub-Fund's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy-92800 Puteaux.
- Creation date of the Multi Units France Sicav: 04 March 2002.
- Sub-Fund approval date by the AMF (French Financial Regulatory Authority): 06 June 2018.
- Compartment creation date: 20 September 2018.

activity report

The fund replicates the performance of the Topix Total Return Index JPY (Ticker: TPXDDVD).

Performance trend at the closing date:

Share name	ISIN	Share currency	Performance for the fiscal year			Share performance since inception
			Share	Index	Change in foreign exchange	
Lyxor Japan (TOPIX) (DR) UCITS ETF - Dist EUR	FR0010245514	EUR	18.47% ⁽¹⁾	19.40% ⁽³⁾	8.36% ⁽²⁾	70.55%
Lyxor Japan (TOPIX) (DR) UCITS ETF - Dist JPY	FR0010377028	JPY	28.36% ⁽¹⁾	29.38%		47.64%
Lyxor Japan (TOPIX) (DR) UCITS ETF - Daily Hedged to EUR - Dist	FR0011475078	EUR	27.19% ⁽¹⁾	28.35% ⁽⁴⁾		77.26%

⁽¹⁾ "The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs (for example the index rebalancing cost);
- the taxation of the fund in relation to the methodology used within the Benchmark Indicator;
- possible use by the manager of sampling or advanced index management techniques".

⁽²⁾ "As the unit is not valued in the currency of the index, the change in its net asset value is subject to foreign exchange risk over the financial year.

The calculation methodology for the Foreign Exchange rate during the period is share currency/index currency".

⁽³⁾ "Where the Benchmark Index is denominated in a currency other than the currency of the Unit, the performance of the Benchmark Index is first converted into the currency of the Unit for the sake of clarity and comparison. For this purpose, a foreign exchange transaction (at the WM Reuters 5:00 p.m. rate on the relevant day) is applied daily to the value of the Benchmark Index".

⁽⁴⁾ "The appropriate comparison element is the hedged version of the Benchmark Index".

The tracking error realised is 0.1862%. The target tracking error over the period was 0.5%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

LYXOR JAPAN (TOPIX) (DR) UCITS ETF (compartment of the Multi Units France Sicav)

This Fund is covered by Article 6 of Regulation (EU) 2019/2088 (the "SFDR Regulation"). It does not promote environmental and/or social characteristics and does not aim to invest sustainably

Transparency of environmentally sustainable investments in periodic reports under Regulation (EU) 2020/852

Regulation (EU) 2020/852 on the establishment of a framework for promoting sustainable investments (the "Taxonomy Regulation") sets out the criteria for determining whether an economic activity is environmentally sustainable in the European Union.

According to the Taxonomy Regulation, an activity can be considered "sustainable" if it contributes substantially to one of the 6 environmental objectives set out in the Taxonomy Regulation, including climate change mitigation and adaptation, pollution prevention and reduction, or the protection and restoration of biodiversity and ecosystems.

In addition, in order to be considered to be sustainable, this economic activity must respect the principle of "not to cause significant harm" to one of the other five objectives of the Taxonomy Regulation and must also comply with basic social criteria (alignment to OECD and UN guidelines on business and human rights).

In accordance with article 7 of the Taxonomy Regulation, the management company draws investors' attention to the fact that the underlying investments of this Fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Provision of environmental, social and governance (ESG) information - in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website [www.lyxor.com](https://www.lyxor.com/en/policies-and-regulatory-notice) and is revised each

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

(a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

- French, German & Luxembourgish Funds (Fonds Communs de Placement - FCP) and SICAV (*)
- Securities of issuers domiciled in Europe: in order to prevent excessive costs inherent in the voting process, Lyxor participates in general meetings when the consolidated holding represents more than 0.10% of the company's capital
- Securities of issuers domiciled in the United States: Lyxor will exercise its right to vote on its largest consolidated holdings
- Securities of issuers domiciled in Japan: Lyxor will exercise its right to vote on its largest consolidated holdings

(*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership.

b) Description of the general information used for the analysis implemented on ESG criteria

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group's Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defence policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products.

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website [Lyxor.com](https://www.lyxor.com)

Active Ownership - Operational set up:

In addition to the internal analysis carried out, Lyxor uses the services of ISS (Institutional Shareholder Services), as a proxy advisor.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website [Lyxor.com](https://www.lyxor.com).

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

2. Description of how the results of the analysis implemented on ESG criteria, in particular exposure to climate risks, are integrated into the investment policy

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

LYXOR JAPAN (TOPIX) (DR) UCITS ETF (compartment of the Multi Units France Sicav)

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score

- the environment performance score

- the Environmental Vulnerability index

For corporate issuers in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations

- Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

LYXOR JAPAN (TOPIX) (DR) UCITS ETF (compartment of the Multi Units France Sicav)

ESG rating of the portfolio as of October 2021

ESG score	Environment	Social	Governance	Portfolio rated	100%

Utilities		0.2%	0.2%	0.3%	0.3%	0.1%	0.1%				

For each issuer (Corporate & Government), ESG Industry sector classification is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The ESG score calculated at the portfolio level measures the capacity of the underlying issuers to manage the risks and key opportunities associated with environmental, social and governance factors. The risk scale ranges from 0 (high risk) to 10 (low risk). Issuer ratings are calculated in absolute terms for each pillar and sub-theme and are comparable regardless of sector. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: employment, social relations, health and safety, training, compliance with ILO conventions
- Governance: Board of Directors or Supervisory Board, Audit and Internal Control, Executive Compensation

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source: The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Measures the portfolio's exposure to companies experiencing controversies relating to their compliance with international standards as a function of their degree of severity:

Red: Indicates that a company is involved in one or more very severe controversies;

- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;

- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;

- Green: Indicates that the company is not involved in any major controversies.

- None: Sovereign and/or Company not covered

Red Flag	0%
Orange Flag	6%
Yellow Flag	21%
Green Flag	70%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2021

Carbon Emissions (tons CO2e/\$M invested)	Carbon Intensity (tons CO2e/\$M sales)	Weighted Average Carbon Intensity tons (CO2e/\$M sales)	Portfolio rated by weight	97%
70	111	90	Scope 1 reported (vs estimated)	83%
			Scope 2 reported (vs estimated)	72%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GreenHouse Gas Protocol (GHG Protocol) was launched in 2001 by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: direct emissions resulting from the burning of fossil fuel resources owned or controlled by the company.
- Scope 2: indirect emissions related to the purchase or production of electricity.

- Scope 3: all other indirect emissions, from the extended supply chain to the transport of goods and persons.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio.

The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio invested in both equities and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest - total debt.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or the portion of the company's revenue earned from fossil fuel energies or the portion of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon:	
Fossil Fuel Reserves	9%
Thermal Coal	8%
Natural Gaz	4%
Oil	3%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of : \$ 1,000,000	
Thermal Coal (Tons)	38
Gas (MMBOE)	0.0003
Oil (MMBOE)	0.0003

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	383.1
Thermal Coal	69.9
Oil	135.7
Gas	76.2
Total	670.3

LYXOR JAPAN (TOPIX) (DR) UCITS ETF (compartment of the Multi Units France Sicav)

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges - this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	69.9
Oil Sands	3.9
Shale Oil or Shale Gas	7.0
Sum High Impact Reserves	80.8
Other	589.5

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Carbon reduction objectives
Aggressive efforts	1.0%	0.2%	3.2%
Some efforts	78.4%	90.4%	76.4%
Limited efforts/Information	4.8%	9.4%	2.3%
No effort/No evidence	15.8%	0.0%	18.1%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low- carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.1
Low carbon transition management Score	5.3
Operational Transition	8.4%
Product Transition	8.4%
Neutral	75.4%
Solutions	4.3%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

Share of issuers in terms of power generation in portfolio	6.9%
--	------

The issuer data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source: MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)			
Hydro	9.3%	Liquid Fuel	1.6%
Nuclear	7.7%	Renewables	1.7%
		Natural Gas	51.6%
		Thermal Coal	28.1%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	34%
20-49.9%	7%
50-100%	1%

Weight of Companies Offering Clean Technology Solutions			
Alternative Energy	26.6%	Energy Efficiency	40.3%
Pollution Prevention	11.3%	Sustainable Water	10.6%
		Green Building	7.6%
		Sustainable Agriculture	0.7%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution			
Alternative Energy	0.4%	Energy Efficiency	3.1%
Pollution Prevention	0.4%	Sustainable Water	0.2%
		Green Building	0.5%
		Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

SeaLevelRise	3%
Coldwave	19%
Flood	2%
Heatwave	8%
Hurricane	16%
Water Stress	41%
Wildfire	11%

To allow comparison with a benchmark, we have rebased to 100

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks.

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	1.0%	89.4%	9.6%	90.7%	7.7%	1.5%
Carbon Emissions	0.2%	22.8%	77.0%	80.2%	15.0%	4.8%
Electronic Waste	0.8%	2.0%	97.2%	92.9%	2.2%	4.8%
Opportunities in Green Building	0.3%	29.8%	69.9%	95.8%	3.5%	0.7%
Opp's in Renewable Energy	1.4%	35.6%	63.0%	99.2%	0.2%	0.6%
Packaging Material & Waste	6.9%	28.3%	64.8%	84.2%		15.8%
Water Stress	1.4%	97.8%	0.8%	46.7%	43.7%	9.5%
Toxic Emissions & Waste				40.9%	43.4%	15.6%

Temperature - Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

- A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,
 - An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.
- Each approach allocates a carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Level of alignment	2.6°C
Hedging	97.3%

LYXOR JAPAN (TOPIX) (DR) UCITS ETF (compartment of the Multi Units France Sicav)

Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since 1 January.

Meeting overview

This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of General Meetings	40
Number of General Meetings voted	0
Participation rate at General Meetings	0.0%

Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
------------	-----	---------	------------

Breakdown by country

In 2021, Lyxor's voting scope was issuers domiciled in Europe, in United States and in Japan.

The data details the geographical distribution of the General Meetings in which Lyxor Japan (TOPIX) (DR) UCITS ETF participated during the financial year.

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des marchés financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 ("AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 ("UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management compensation policy notably ensures appropriate risk management and adherence to compliance on the part of its employees.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No “carried interest” was paid during the financial year.

Lyxor's best selection and execution policy

Information on best selection and execution policies is available at: www.lyxor.com.

Transparency of securities financing operations and reuse of financial instruments SFTR regulation

(Accounting currency of the CIS)

During the financial year, the UCI did not carry out any transactions subject to the SFTR regulation, namely no repurchase transactions, securities or commodities lending/borrowing, buy-sell back or sell-buy back transactions, margin lending transactions and total return swaps (TRS).

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information, in the evolving context of the Covid-19 crisis.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded. However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

Negotiable debt securities (“NDS”) having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;

- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities in undertakings for collective investment in transferable securities operating under French law are valued at the last net asset value known on the calculation date of the Subfund's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.
- The exchange rates used for the assessment of financial instruments listed in a currency other than the Sub-Fund's reference currency are the exchange rates published the fixing WM Reuters on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the CIU) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the CIU) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Sub-Fund).

Operation and management fees

These fees include all of the fees invoiced directly to the Sub-Fund, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transfer commission which, if relevant, may notably be collected by the custodian and management company.

For this Sub-Fund, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Performance fees: these commissions reward the management company when the Subfund has exceeded its objectives and are invoiced to the Subfund;
- transfer commissions invoiced to the Sub-Fund;
- direct and indirect operating costs/fees related to temporary acquisitions and disposals of securities.

For more details on the fees actually invoiced to the Sub-Fund, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Sub-Fund	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	Maximum 0.45 % per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commission	Net assets	None
Direct and indirect operating costs/fees related to temporary acquisitions and disposals of securities	Amount of income generated by these operations	20% maximum for the Management Company; 15% maximum for the Agent

⁽¹⁾ including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Accounting currency

The Sub-Fund's accounts are kept in euros.
