ORDINARY SHAREHOLDERS' MEETING
on 28 February 2022

DRAFT RESOLUTIONS
FIRST RESOLUTION

The shareholders' meeting, after having reviewed:

- The management report on the SICAV's activity during its fiscal year ending at the end of October 2021, and on this fiscal year's accounts,
- and the Statutory Auditors' Report on the annual accounts,

approves the fiscal year's accounts and balance sheet as presented, as well as the operations conveyed in these accounts and summarised in these reports.

SECOND RESOLUTION

After reviewing the Statutory Auditor's Special Report on the agreements concerned by article L. 225-38 of the Commercial Code, the General Meeting takes note of this report and approves its conclusions.

THIRD RESOLUTION

The General Meeting decided that the distributable sums for the fiscal year ended at the end of October 2021 for the "LYXOR BEL 20 TR (DR) UCITS ETF" Sub-Fund are distributed as follows:

- As regards Net Income: the sum of -11,826.07 is fully capitalised.

On the basis of this distribution, to which are added the interim dividends paid in respect of the fiscal year, the total net dividend per share is therefore set at 0.24, accompanied, where appropriate, by a tax credit of an amount determined on the date of payment of the said interim dividends. The General Meeting acknowledges that a first interim dividend of 0.24 euros was paid on 08 July 2021 and that, consequently, all of the interim dividends already distributed represent the entire distributed income for the fiscal year ended. Dividends related to Net Income distributed in respect of the previous three fiscal years were as follows (in euros):

Closing	Net dividend	Amount eligible for the 40% reduction	Amount not eligible for the 40% reduction
31/10/2019	1.67	-	-
31/10/2020	-	-	-
30/10/2021	-	-	-

- As regards net realised capital gains: the amount of 508,910.74 euros is allocated in full to the "undistributed net capital gains or losses" account.

In accordance with regulations, the General Meeting acknowledges that no dividend related to net realised capital gains has been distributed in previous fiscal years.

FOURTH RESOLUTION

The General Meeting decided that the distributable sums for the fiscal year ended at the end of October 2021 for the "LYXOR BTP DAILY (-2X) INVERSE UCITS ETF" Sub-Fund are allocated as follows:

As regards net income, the amount of -576,549.63 euros is fully capitalised

As regards net realised capital gains, the amount of -18,366,835.02 euros is fully capitalised

In compliance with the regulations, the General Meeting acknowledges that no dividend has been distributed since its creation.

FIFTH RESOLUTION

The General Meeting acknowledges that the distributable amounts to be capitalised for the fiscal year ending at the end of October 2021 for the "TREASURY DAILY (-2X) INVERSE UCITS ETF" Sub-Fund as follows:

ACC equities:

- As regards Net Income: the sum of -45,976,96 US Dollars is fully capitalised.
- As regards net realised capital gains, the amount of 2,332,289.23 US Dollars is:
- In compliance with the regulations, the General Meeting acknowledges that no dividend has been distributed since its creation.

SIXTH RESOLUTION

The General Meeting decides to allocate the distributable amounts for the fiscal year ending at the end of October 2021 for the “LYXOR FTSE ITALIA PMI PIR 2020 (DR) UCITS ETF” Sub-Fund are allocated as follows:

As regards Net Income, the amount of 2,028,988.29 euros is:

- As regards net realised capital gains: the amount of -16,711,050.66 euros is capitalised

In compliance with the regulations, the General Meeting acknowledges that no dividend has been distributed since its creation.

SEVENTH RESOLUTION

The General Meeting decides that the distributable amounts for the fiscal year ending at the end of October 2021 for the “LYXOR GERMAN MID-CAP MDAX UCITS ETF” Sub-Fund are allocated as follows:

- As regards Net Income: the amount of 551,056.69 euros is entirely capitalised,

The General Meeting acknowledges that an interim dividend of 1.62 euros was paid on 08 July 2021 and that, as a result, all of the interim dividends already distributed represent the entire distributed income for the fiscal year ended.

Dividends related to Net Income distributed in respect of the previous three fiscal years were as follows (in euros):

Closing	Net dividend	Amount eligible for the 40% reduction	Amount not eligible for the 40% reduction
31/10/2018	3.41	-	-
31/10/2019	3.06	-	-
30/10/2020	1.62	-	-

- As regards net realised capital gains, the amount of 478,081.33 euros is allocated in full to the “Undistributed net capital gains or losses” account.

In accordance with regulations, the General Meeting acknowledges that no dividend related to net realised capital gains has been distributed in previous fiscal years.

EIGHTH RESOLUTION

The General Meeting decides that the distributable amounts for the fiscal year ending at the end of October 2021 for the “Lyxor HWABAO WP MSCI CHINA A (DR) UCITS ETF” Sub-Fund are allocated as follows:

ACC equities:

- As regards Net Income: the amount of 1,482,719.24 US Dollars is fully capitalised.
- As regards net realised capital gains: the amount of 1,764,040.23 euros is fully capitalised. In accordance with regulations, the General Meeting acknowledges that no dividend related to net realised capital gains has been distributed in previous fiscal years.

NINTH RESOLUTION

The General Meeting decides that the distributable amounts for the fiscal year ending at the end of October 2021 for the “LYXOR MSCI WORLD EX EMU UCITS ETF” Sub-Fund are allocated as follows:

- As regards Net Income: the amount of -313,114.75 USD Dollars is fully capitalised.
- As regards net realised capital gains, the amount of 9,834,701.00 euros is fully capitalised.

In compliance with the regulations, the General Meeting acknowledges that no dividend has been distributed since its creation.

TENTH RESOLUTION

The General Meeting decides that the distributable amounts for the fiscal year ending at the end of October 2021 for the “Lyxor DJ GLOBAL TITANS 50 UCITS ETF” Sub-Fund are allocated as follows:

DIST equities:

As regards Net Income: the amount of 1,859,484.65 euros is distributed as follows:

- Allocation of 1,445,423.73 euros to the “Retained earnings for the year” account.

- Distribution of 414,060.92 euros i.e. a unit dividend of 0.21 euros.

The Meeting sets the payment date for this dividend at 08 December 2021.

On the basis of this distribution, to which are added the interim dividends paid in respect of the fiscal year, the total net dividend per share is therefore set at 0.62 euros, accompanied, if applicable, by a tax credit of an amount determined on the date of payment of said interim dividends.

The General Meeting acknowledges that a first interim dividend of 0.36 euros was paid on 08 July 2021 and that, consequently, all of the interim dividends already distributed represent the entire distributed income for the fiscal year ended.

The dividends related to the Net Income distributed for the Dist equities for the three previous fiscal years were as follows (in euros):

Closing	Net dividend	Amount eligible for the 40% reduction	Amount not eligible for the 40% reduction

The General Meeting decides that the distributable sums for the fiscal year ended at the end of October 2021 for the “Lyxor FTSE MIB Daily (-2X) Inverse (XBEAR) UCITS ETF” Sub-Fund are allocated as follows:

- As regards Net Income, the amount of -484,285.19 euros is fully capitalised,
- As regards net realised capital gains, the amount of -56,932,006.09 euros is fully capitalised

In compliance with the regulations, the General Meeting acknowledges that no dividend has been distributed since its creation.

TWENTY-EIGHTH RESOLUTION

The General Meeting decides that the distributable sums for the fiscal year ended at the end of October 2021 for the “Lyxor FTSE MIB Daily (2X) Leveraged UCITS ETF” Sub-Fund are allocated as follows:

As regards Net Income: the amount of -534,933.25 euros is distributed as follows:

- As regards Net Income, the amount of 145,950.15 euros is allocated to the “Retained earnings for the year” account.
- As regards net realised capital gains: the amount of -680,883.40 euros is fully capitalised

Dividends related to Net Income distributed in respect of the previous three fiscal years were as follows (in euros):

Closing	Net dividend	Amount eligible for the 40% reduction	Amount not eligible for the 40% reduction
29/09/2018	0.53	-	-
31/10/2019	0.57	-	-
30/10/2020	-	-	-

As regards net realised capital gains, the amount of 94,310,559.26 euros is distributed as follows:

- Allocated to the "undistributed net capital gains and losses" account, up to 89,714,799.65 euros,
- • Distributed up to: 4,595,759.61 euros, i.e. a net dividend per share of 0.31 euros.

Dividends related to Net Capital Gains and Losses distributed in respect of the previous three fiscal years were as follows (in euros):

Closing	Net dividend	Amount eligible for the 40% reduction	Amount not eligible for the 40% reduction
29/09/2018	-	-	-
31/10/2019	-	-	-
30/10/2020	0.18	-	-

TWENTY-NINTH RESOLUTION

The General Meeting decides that the distributable sums for the fiscal year ended at the end of October 2021 for the "Lyxor FTSE MIB Daily (-1X) Inverse (BEAR) UCITS ETF" Sub-Fund are allocated as follows:

- As regards Net Income: the amount of -409,719.65 euros is fully capitalised.
- As regards net realised capital gains: the amount of 19,415,689.31 euros is fully capitalised

In compliance with the regulations, the General Meeting acknowledges that no dividend has been distributed since its creation.

THIRTIETH RESOLUTION

The General Meeting decides that the distributable sums for the fiscal year ended at the end of October 2021 for the "LYXOR BUND DAILY (-2X) ETF" Sub-Fund are allocated as follows:

- As regards Net Income, the amount of -632,021.92 euros is fully capitalised,
- As regards net realised capital gains, the amount of 31,095,838.83 euros is fully capitalised

In compliance with the regulations, the General Meeting acknowledges that no dividend has been distributed since its creation.

THIRTY-FIRST RESOLUTION

The General Meeting decides that the distributable sums for the fiscal year ended at the end of October 2021 for the "Lyxor FTSE MIB UCITS ETF" Sub-Fund are allocated as follows:

As regards Net Income, the amount of 31,646,945.20 euros is distributed as follows:

ACC equities

- the amount of 56,238.13 euros is capitalised.

DIST equities

- Distributed up to 9,648,986.49 euros, i.e. a unit dividend of 0.33 euros.

The Meeting sets the payment date for this dividend at 08 December 2021.

- The amount of 21,941,720.58 euros is allocated to the "Retained Earnings for the year" account.

On the basis of this distribution, to which are added the interim dividends paid in respect of the fiscal year, the total net dividend per share is therefore set at 0.54 euros, accompanied, where appropriate, by a tax credit of an amount determined on the date of payment of the said interim dividends.

The General Meeting acknowledges that a first interim dividend of 0.21 euros was paid on 07 July 2021 and that, consequently, all of the interim dividends already distributed represent the entire distributed income for the fiscal year ended.

Dividends related to Net Income distributed in respect of the previous three fiscal years were as follows (in euros):

Closing	Net dividend	Amount eligible for the 40% reduction	Amount not eligible for the 40% reduction
31/10/2018	0.66	-	-
31/10/2019	0.87	-	-
30/10/2020	0.33	-	-

As regards net realised capital gains, the amount of 193,489,521.05 euros is distributed as follows: ACC equities

- the amount of -2,471,178.97 euros is capitalised

DIST equities

- the amount of 195,960,700.02 euros is allocated to the “undistributed net capital gains or losses” account,

In accordance with regulations, the General Meeting acknowledges that no dividend related to net realised capital gains has been distributed in previous fiscal years.

THIRTY-SECOND RESOLUTION

The General Meeting decides that the distributable amounts for the fiscal year ended at the end of October 2021 for the

“Lyxor IBEX 35 (DR) UCITS ETF” Sub-Fund are allocated as follows:

As regards Net Income, the amount of 18,853,084.99 euros is distributed as follows:

ACC equities: the amount of 5,464.56 euros is fully capitalised,

DIST shares: the amount of 18,847,620.43 euros.

- Distributed up to 2,811,023.10 euros, i.e. a unit dividend of 0.90 euros.

The Meeting sets the payment date for this dividend at 08 December 2021.

- The sum of 16,036,597.33 euros is allocated to the "Retained Earnings for the year" account.

On the basis of this distribution, to which is added the interim dividend paid in respect of the fiscal year, the total net dividend per share is therefore set at 1.58 euros, accompanied, where appropriate, by a tax credit of an amount determined on the date of payment of the said interim dividends. The General Meeting acknowledges that an interim dividend of 2.48 euros was paid on 07 July 2021 and that, as a result, all of the interim dividends already distributed represent the entire distributed income for the fiscal year ended. Dividends related to Net Income distributed in respect of the previous three fiscal years were as follows (in euros):

Closing	Net dividend	Amount eligible for the 40% reduction	Amount not eligible for the 40% reduction
31/10/2018	3.21	-	-
31/10/2019	3.56	-	-
30/10/2020	1.92	-	-

As regards net capital gains for the fiscal year, the amount of -20,596,036.43 euros is allocated as follows:

ACC equities: the amount of -7,182.60 euros is fully capitalised.

DIST equities: the amount of -20,588,853.83 euros is fully capitalised.

In accordance with regulations, the General Meeting acknowledges that no dividend related to net realised capital gains has been distributed in previous fiscal years.

THIRTY-THIRD RESOLUTION

The General Meeting finds that the Net Income was 25,532,700.88 euros for the fiscal year ended October 2021 for the “Lyxor MSCI Europe (DR) UCITS ETF” Sub-Fund.

It decides to allocate the distributable amounts as follows:

As regards Net Income: the amount of 29,777,598.85 euros is distributed as follows:

- ACC equities: None

- DIST equities: the amount of 29,777,598.85 euros is fully capitalised.

The dividends related to the Net Income distributed for the Dist equities for the three previous fiscal years were as follows (in euros):

Closing	Net dividend	Amount eligible for the 40% reduction	Amount not eligible for the 40% reduction
31/10/2018	4.22	-	-
31/10/2019	4.49	-	-
30/10/2020	2.21	-	-

As regards net realised capital gains: the amount of 76,859,438.90 euros is distributed as follows:

- ACC equities: the amount of -0.24 euros is fully capitalised
- DIST equities: the amount of 76,859,439.14 euros is fully capitalised

In accordance with regulations, the General Meeting acknowledges that no dividend related to net realised capital gains has been distributed in previous fiscal years.

THIRTY-FOURTH RESOLUTION

The General Meeting decides that the distributable sums for the fiscal year ended at the end of October 2021 for the “LYXOR MSCI USA ESG (DR) UCITS ETF” Sub-Fund are allocated as follows: As regards Net Income: the amount of 23,734,313.64 euros is distributed as follows:

- ACC EQUITIES: the amount of 3,872,259.44 euros is fully capitalised,
- DIST EQUITIES: the amount of 19,862,054.20 euros is distributed as follows:
 - Allocated up to 16,651,710.35 euros to the “Retained earnings for the year” account,
 - Distributed up to 3,210,343.85 euros, i.e. a unit dividend of 1.85 euro,

The Meeting sets the payment date for this dividend at 08 December 2021.

On the basis of this distribution, to which are added the interim dividends paid in respect of the fiscal year, the total net dividend per share is therefore set at 3.71 euros, accompanied, where appropriate, by a tax credit of an amount determined on the date of payment of the said interim dividends.

The General Meeting acknowledges that a first interim dividend of 2.06 euros was paid on 07 July 2021 and that, consequently, all of the interim dividends already distributed represent the entire distributed income for the fiscal year ended. The dividends related to the net income distributed for the DIST equities for the three previous fiscal years were as follows (in euros):

Closing	Net dividend	Amount eligible for the 40% reduction	Amount not eligible for the 40% reduction
30/10/2018	2.00	-	-
31/10/2019	4.93	-	-
30/10/2020	3.94	-	-

As regards net realised capital gains: the amount of 208,191,521.70 euros is allocated as follows:

ACC equities:

The sum of 18,723,771.22 euros is fully capitalised.

DIST equities:

The amount of 189,467,750.48 euros is allocated to the “Undistributed net capital gains and losses” account

In accordance with regulations, the General Meeting acknowledges that no dividend related to net realised capital gains has been distributed in previous fiscal years.

THIRTY-FIFTH RESOLUTION

The General Meeting decides that the distributable amounts for the fiscal year ended at the end of October 2021 for the

“Lyxor MSCI World UCITS ETF” Sub-Fund are allocated as follows:

As regards Net Income: the amount of 243,700,897.30 euros is distributed as follows:

- ACC EQUITIES: the amount of 303,889.38 euros is fully capitalised,
- MONTHLY HEDGED TO EUR - ACC EQUITIES: the amount of 4,356 537.44 euros is fully capitalised
- DIST EQUITIES: the amount of 175,690,210.96 euros is allocated as follows:
 - Allocated up to 154,383,312.13 euros to the “Retained earnings for the year” account,
 - Distributed up to 21,306,898.83 euros, i.e. a unit dividend of 1.47 euro,

The Meeting sets the payment date for this dividend at 08 December 2021.

On the basis of this distribution, to which are added the interim dividends paid in respect of the fiscal year, the total net dividend per share is therefore set at 3.71 euros, accompanied, where appropriate, by a tax credit of an amount determined on the date of payment of the said interim dividends.

FORTY-FIRST RESOLUTION

The General Meeting decides that the distributable sums for the fiscal year ended at the end of October 2021 for the “LYXOR MSCI GREECE UCITS ETF” Sub-Fund are allocated as follows:

As regards net income, the amount of 10,188,568.36 euros is allocated as follows:

- the amount of 3,194,173.73 euros is allocated to the "Retained earnings for the year" account,
- the amount of 6,994,394.63 euros is fully capitalised.

The dividends related to the net income distributed for the DIST (JPY) equities for the previous three fiscal years were as follows (in EUR):

Closing	Net dividend	Amount eligible for the 40% reduction	Amount not eligible for the 40% reduction
31/10/2018	0.02	-	-
31/10/2019	0.02	-	-
30/10/2020	0.01	-	-

As regards net realised capital gains, the amount of 36,766,158.19 euros is allocated to the “Undistributed net capital gains or losses” account.

FORTY-SECOND RESOLUTION

The General Meeting decides that the distributable sums for the fiscal year ended at the end of October 2021 for the “Lyxor MSCI INDIA UCITS ETF” Sub-Fund are allocated as follows:

As regards Net Income: the amount of 9,232,710.69 euros is distributed as follows:

- C equities (EUR): the amount of 7,671,729.69 euros is fully capitalised

- C equities (USD): the amount of 1,560,981.00 euros is fully capitalised

As regards net realised capital gains, the amount of 107,982,716.63 euros is allocated as follows:

- C equities: the amount of 75,491,073.77 euros is fully capitalised

- C equities (USD): the amount of 32,491,642.86 euros is fully capitalised,

In accordance with regulations, the General Meeting acknowledges that no dividend related to net realised capital gains has been distributed in previous fiscal years.

FORTY-THIRD RESOLUTION

The General Meeting decides that the distributable sums for the fiscal year ended at the end of October 2021 for the “Lyxor NEW ENERGY (DR) UCITS ETF” Sub-Fund are allocated as follows:

As regards Net Income, the amount of 13,530,760.87 euros is distributed as follows:

- ACC EQUITIES: the amount of 3,157.74 euros is fully capitalised,
- DIST EQUITIES: the amount of 13,527,603.13 euros is allocated to the “Retained earnings for the year” account up to the amount of 13,465,992.01 euros and the amount of 61,611.12 euros is capitalised.

The General Meeting acknowledges that an interim dividend of 0.13 euros was paid on 07 July 2021 and that, consequently, all of the interim dividends already distributed represent the entire distributed income for the fiscal year ended.

The dividends related to the net income distributed for the three previous fiscal years were as follows (in euros):

Closing	Net dividend	Amount eligible for the 40% reduction	Amount not eligible for the 40% reduction
28/06/2019	0.32	-	-
31/10/2019	-	-	-
30/10/2020	0.29	-	-

As regards net realised capital gains, the amount of 320,093,389.95 euros is distributed as follows:

- ACC EQUITIES: the amount of 6,506.80 euros is fully capitalised,
- DIST EQUITIES: the amount of 320,086,883.15 euros is allocated in to the “Undistributed net capital gains or losses” account.

FORTY-FOURTH RESOLUTION

The General Meeting decides to allocate the distributable amounts for the fiscal year ending at the end of October 2021 for the “PLANET MONDE” Sub-Fund as follows:

- As regards Net Income: the amount of -312,524.93 euros is entirely capitalised,
- As regards net realised capital gains: the amount of 268,516.48 euros is fully capitalised.

In compliance with the regulations, the General Meeting acknowledges that no dividend has been distributed since its creation.

FORTY-FIFTH RESOLUTION

The General Meeting decides that the distributable sums for the fiscal year ended at the end of October 2021 for the “LYXOR GREEN BOND INDICIEL” Sub-Fund are allocated as follows:

- As regards Net Income: the amount of -450.09 euros is entirely capitalised,
- As regards net realised capital gains: the amount of -97.99 euros is fully capitalised.

In compliance with the regulations, the General Meeting acknowledges that no dividend has been distributed in previous fiscal years, as this is the first closing.

FORTY-SIXTH RESOLUTION

The General Meeting decides to ratify the provisional appointment of Mr Matthieu GUIGNARD as director of the SICAV to fill the office vacated by Mr Arnaud LLINAS, who has resigned, for the remainder of Mr LLINAS’ term of office until the Ordinary General Meeting called to approve the financial statements for the year ending October 2022.

FORTY-SEVENTH RESOLUTION

The General Meeting decides to ratify the provisional appointment of Mr Luc CAYTAN as director of the SICAV to fill the office vacated by LYXOR ASSET MANAGEMENT, which resigned, for the remainder of the latter’s term of office until the Ordinary General Meeting called to approve the financial statements for the year ending October 2022.

FORTY-EIGHTH RESOLUTION

The General Meeting decides to ratify the provisional appointment of Mr Christine GENTIL as director of the SICAV to fill the office vacated by SOCIETE GENERALE, which resigned, for the remainder of the latter's term of office until the Ordinary General Meeting called to approve the financial statements for the year ending October 2022.

FORTY-NINTH RESOLUTION

The General Meeting sets the amount of compensation to be allocated to the directors at €15,000 gross, for the year ended October 2022.

FIFTIETH RESOLUTION

The General Meeting grants full powers to the bearer of a copy or extract of the various documents submitted to this meeting and of the minutes thereof to make all filings required by law.

Statutory auditor's special report

**STATUTORY AUDITOR'S REPORT
ON THE ANNUAL FINANCIAL STATEMENTS
For the year ended 29 October 2021**

SICAV MULTI UNITS FRANCE
UCITS ESTABLISHED IN THE FORM OF A VARIABLE CAPITAL INVESTMENT COMPANY WITH
SUB-FUNDS

Governed by the French Monetary and Financial Code (Code monétaire et financier)

Management Company
LYXOR INTERNATIONAL ASSET MANAGEMENT
17, cours Valmy
92800 PUTEAUX

Opinion

In compliance with the assignment entrusted to us by the management company, we conducted an audit of the accompanying financial statements of MULTI UNITS FRANCE Mutual Fund (SICAV), a UCITS established in the form of a variable capital investment company with sub-funds, for the year ended 29 October 2021.

In our opinion, the financial statements give a true and fair view of the financial position and assets and liabilities of the UCITS established in the form of a variable capital investment company with sub-funds at the end of the financial year and of the results of its transactions for the year then ended, in accordance with the accounting rules and principles applicable in France.

Basis of our opinion

Audit standards

We conducted our audit in accordance with professional standards applicable in France. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion. Our responsibilities under these standards are described in the section "*Statutory Auditor's responsibilities for the audit of the financial statements*" in this report.

Independence

We conducted our audit engagement in accordance with the applicable rules on independence provided for by the French commercial code and by the auditors' professional code of ethics, from 31/10/2020 and up to the date of this report, and in particular we did not provide any non-audit services prohibited under Article 5, paragraph 1 of Regulation (EU) No. 537/2014.

MULTI UNITS FRANCE SICAV

Key audit matters

The global crisis linked to the COVID-19 pandemic creates special conditions for the preparation and audit of the accounts for this financial year. This crisis and the exceptional measures taken in the context of the state of health emergency have multiple consequences for the mutual funds, their investments and the valuation of the corresponding assets and liabilities. Some of these measures, such as travel restrictions and teleworking, also had an impact on the operational management of the mutual funds and on the procedures for performing audits.

It is in this complex and changing context that, in accordance with the provisions of Articles L. 823-9 and R. 823-7 of the French Commercial Code relating to the justification of our assessments, we bring to your attention the key points of the audit relating to the risks of material misstatement which, in our professional judgement, were the most significant for the audit of the annual financial statements for the year, as well as the responses that we made to these risks.

These assessments were made as part of our audit of the financial statements, taken as a whole, and therefore contributed to the opinion we formed which is expressed above. We do not provide an opinion on individual items in the financial statements.

<i>Key audit matters</i>	<i>Audit response to cover these risks</i>
<p>The main risks of this SICAV relate to the financial instruments in its portfolio.</p> <p>Any error in valuing or recording these financial instruments could lead to a misstatement in the calculation of the SICAV's net asset value and in the financial statements.</p> <p>We therefore focused our work on the valuation and existence of the financial instruments in the portfolio.</p> <p>Valuation of financial instruments traded on a regulated or equivalent market</p> <p>Valuation of the SICAV's financial instruments traded on a regulated or equivalent market is not complex as it is based primarily on listed prices provided by independent sources.</p> <p>However, the related amounts are significant and could lead to a material misstatement.</p> <p>The value of the financial instruments traded on a regulated or equivalent market is recorded in the balance sheet and presented in the detailed portfolio provided in the notes to the financial statements. The valuation rules for these financial instruments are disclosed in the "Significant accounting policies" note to the financial statements.</p>	<p>We compared the year-end valuation of the SICAV's financial instruments traded on a regulated or equivalent market with observable prices obtained from market databases.</p>

*PricewaterhouseCoopers Audit, 63, rue de Villiers 92208 Neuilly-sur-Seine Cedex; France.

MULTI UNITS FRANCE SICAV

<i>Key audit matters</i>	<i>Audit response to cover these risks</i>
<p>Valuation of financial contracts traded over the counter</p> <p>As part of its investment strategy, the SICAV uses over-the-counter swaps. The valuation of these swaps is not observable on a regulated or equivalent market. The valuation of over-the-counter swaps is therefore a key audit matter.</p> <p>The value of the swap is recorded under the line item "financial contracts" in the balance sheet and presented in the detailed portfolio provided in the notes to the financial statements. The commitment related to the swap is presented in the off-balance sheet statement. The valuation rules for these financial instruments are disclosed in the "Significant accounting policies" note to the financial statements.</p>	<p>We verified that the swap's valuation as recorded at year-end agreed to the value communicated by the counterparty to the swap.</p> <p>We gained an understanding of the internal control procedure performed by the management company over swaps valuation. We verified that this procedure had been applied at year-end.</p>
<p>Existence of financial instruments</p> <p>The portfolio's financial instruments are held in custody or maintained by the SICAV's depositary. The depositary certifies the existence of financial instruments at year-end.</p> <p>There is nonetheless a risk that these financial instruments could be inaccurately or only partially recorded in the SICAV's accounting.</p> <p>The existence of these financial instruments is a key audit matter as the related amounts are material and could lead to a material misstatement.</p>	<p>We verified the existence of the portfolio's financial instruments by reviewing the SICAV's reconciliation between the SICAV's financial instruments held at year-end and these identified by the depositary in an account opened in the SICAV's name. Any material differences were examined, if applicable using trade tickets or contracts.</p>

Specific verifications

In accordance with professional standards applicable in France, we have also performed the specific verifications required by French law.

Information given in the management report and in other documents addressed to shareholders on the financial situation and annual accounts

We have no matters to report as to the fair presentation and the consistency with the financial statements of the information given in the management report, and in the others documents addressed to the shareholders with respect to the financial situation and annual accounts.

Corporate governance report

We certify the existence, in the corporate governance report, of the information required by Article L. 225-37-4 of the French Commercial Code.

MULTI UNITS FRANCE SICAV

Disclosures arising from other legal and regulatory requirements*Appointment of the Statutory Auditors*

We were appointed as Statutory Auditor of MULTI UNITS FRANCE Mutual Fund (SICAV), a UCITS established in the form of an open-ended collective investment funds, by the board of directors on 04/10/2013.

At 29 October 2021, our firm was in the eighth consecutive year of its engagement, i.e. the seventh year following the admission of the SICAV's securities for trading on a regulated market.

Responsibilities of management and those charged with governance for the financial statements

It is the management company's responsibility to prepare financial statements presenting a true and fair view in accordance with French accounting principles and to implement the internal control that it deems appropriate for the preparation of financial statements that do not contain material misstatements, whether due to fraud or error.

In preparing the financial statements, management is responsible for assessing the SICAV's ability to continue as a going concern, disclosing in the financial statements, as applicable, matters related to going concern and using the going concern basis of accounting unless management either intends to liquidate the SICAV or to cease operations.

It is the management company's responsibility to monitor the preparation of financial information and oversee the efficiency of the internal control and risk management system and the internal audit system relating to the preparation and processing of financial and accounting information.

These financial statements have been prepared by the board of directors.

Statutory Auditor's responsibilities for the audit of the financial statements*Audit purpose and approach*

It is our responsibility to prepare a report on the financial statements. Our objective is to obtain reasonable assurance about whether the financial statements, taken as a whole, are free of material misstatement. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with professional standards will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

As specified by Article L. 823-10-1 of the French Commercial Code, our role in certifying the accounts does not consist of guaranteeing the viability or quality of management.

MULTI UNITS FRANCE SICAV

As part of an audit conducted in accordance with professional standards applicable in France, the Statutory Auditor uses professional judgement throughout the entire audit. He also:

- ∞ identifies and assesses the risks of material misstatement of the financial statements, whether due to fraud or error, designs and performs audit procedures responsive to those risks, and obtains audit evidence that is sufficient and appropriate to provide a basis for his opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control;
- ∞ obtains an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the company's internal control;
- ∞ evaluates the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management in the financial statements;
- ∞ concludes on the appropriateness of management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the SICAV's ability to continue as a going concern. Such conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the company to cease to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the financial statements or, if such disclosures are not provided or inadequate, to issue a qualified opinion or a disclaimer of opinion;
- ∞ evaluates the overall presentation of the financial statements and whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation.

To the Shareholders,

In our capacity as statutory auditor for your company, we present to you our report on the regulated agreements.

It is our responsibility to provide you, on the basis of the information given to us, with the characteristics and material provisions of the agreements of which we have been informed or that we may have discovered during our mission, without having to express an opinion as to their usefulness or merit or to seek out the existence of other agreements. It is up to you, according to the terms of article R.225-31 of the French Commercial code, to assess the importance of signing these contracts with a view to approving them.

It is also our responsibility, where applicable, to further provide you with the information indicated in article R.225-31 of the French Commercial code relative to the performance, during the elapsed fiscal year, of agreements already approved by the general meeting.

We have implemented the due diligence reviews that we considered necessary in view of the professional doctrine of the Compagnie nationale des commissaires aux comptes (the French National Society of Statutory Auditors) relative to this mission.

AGREEMENTS SUBMITTED FOR THE APPROVAL OF THE GENERAL MEETING

We hereby inform you that we have not been made aware of any authorised agreement during the elapsed fiscal year that would require the approval of the general meeting in application of the provisions of article L. 225-38 of the French Commercial code.

AGREEMENTS ALREADY APPROVED BY THE GENERAL MEETING

We hereby inform you that we have not been made aware of any agreement already approved by the general meeting performance of which continued during the elapsed fiscal year.

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information, in the evolving context of the Covid-19 crisis.

The aggregation of the annual accounts is presented in euros.

The income statement presented only takes into account sub-funds that are active at the balance sheet date.

The sub-funds in the GBP currency have been converted to euros at the rate applicable on 29 October 2021 (WMC Reuters).

The sub-funds in the USD currency have been converted to euros at the rate applicable on 29 October 2021 (WMC Reuters).

The sub-funds in the CHF currency have been converted to euros at the rate applicable on 29 October 2021 (WMC Reuters).

The sub-funds in the JPY currency have been converted to euros at the rate applicable on 29 October 2021 (WMC Reuters).

On 29 October 2021, the Multi Units France mutual fund consisted of 43 Compartments:

Compartment No. 1: LYXOR BEL 20 TR (DR) UCITS ETF

Compartment No. 2: LYXOR BTP DAILY (-2X) INVERSE UCITS ETF

Compartment No. 3: LYXOR 10Y US TREASURY DAILY (-2X) INVERSE UCITS ETF

Compartment No. 4: LYXOR FTSE ITALIA PMI PIR 2020 (DR) UCITS ETF

Compartment No. 5: LYXOR GERMAN MID-CAP MDAX UCITS ETF

Compartment No. 6: LYXOR HWABAO WP MSCI CHINA A (DR) UCITS ETF

Compartment No. 7: LYXOR MSCI WORLD EX EMU UCITS ETF

Compartment No. 8: LYXOR DJ GLOBAL TITANS 50 UCITS ETF

Compartment No. 9: LYXOR SMI DAILY (-2X) INVERSE UCITS ETF

Compartment No. 10: LYXOR DAILY SHORTDAX X2 UCITS ETF

Compartment No. 11: LYXOR IBEX 35 DOBLE APALANCADO DIARIO UCITS ETF

Compartment No. 12: LYXOR IBEX 35 DOBLE INVERSO DIARIO UCITS ETF

Compartment No. 13: LYXOR NASDAQ-100 DAILY (2X) LEVERAGED UCITS ETF

Compartment No. 14: LYXOR PEA PME (DR) UCITS ETF

Compartment No. 15: LYXOR RUSSELL 1000 GROWTH UCITS ETF

Compartment No. 16: LYXOR CAC 40 DAILY (2X) LEVERAGED UCITS ETF

Compartment No. 17: LYXOR CAC 40 DAILY (-2X) INVERSE UCITS ETF

Compartment No. 18: LYXOR CAC 40 DAILY (-1X) INVERSE UCITS ETF

Compartment No. 19: LYXOR CAC MID 60 (DR) UCITS ETF

Compartment No. 20: LYXOR EURO OVERNIGHT RETURN UCITS ETF

Compartment No. 21: Lyxor MSCI Water ESG Filtered (DR) UCITS ETF

Compartment No. 22: LYXOR EURO STOXX 50 DAILY (-2X) INVERSE UCITS ETF

Compartment No. 23: LYXOR EURO STOXX 50 DAILY (2X) LEVERAGED UCITS ETF

Compartment No. 24: LYXOR EURO STOXX 50 DAILY (-1X) INVERSE UCITS ETF

Compartment No. 25: LYXOR FTSE MIB DAILY (-2X) INVERSE (XBEAR) UCITS ETF

Compartment No. 26: LYXOR FTSE MIB DAILY (2X) LEVERAGED UCITS ETF

Compartment No. 27: LYXOR FTSE MIB DAILY (-1X) INVERSE (BEAR) UCITS ETF

Compartment No. 28: LYXOR BUND DAILY (-2X) INVERSE UCITS ETF

Compartment No. 29: LYXOR FTSE MIB UCITS ETF

Compartment No. 30: LYXOR IBEX 35 (DR) UCITS ETF

Compartment No. 31: LYXOR MSCI EUROPE (DR) UCITS ETF

Compartment No. 32: LYXOR MSCI USA ESG (DR) UCITS ETF

Compartment No. 33: LYXOR MSCI WORLD UCITS ETF

Compartment No. 34: LYXOR MSCI EMERGING MARKETS UCITS ETF

Compartment No. 35: LYXOR JAPAN (TOPIX) (DR) UCITS ETF

Compartment No. 36: LYXOR CAC 40 (DR) UCITS ETF

Compartment No. 37: LYXOR EURO STOXX 50 (DR) UCITS ETF

Compartment No. 38: LYXOR PEA OBLIGATIONS D'ÉTAT EURO UCITS ETF

Compartment No. 39: LYXOR MSCI GREECE UCITS ETF

Compartment No. 40: LYXOR MSCI INDIA UCITS ETF

Compartment No. 41: LYXOR NEW ENERGY UCITS ETF

Compartment No. 42: PLANET MONDE

Compartment No. 43: LYXOR GREEN BOND INDICIEL

- Reminder of the orientation of the investments and of the management policy (*)

- Accounting rules and methods (*)

- Additional information (*)

- Changes during the year:

3 sub-funds have been liquidated:

Date of the NAV	Name of the CIU
07/04/2021	LYXOR BTP DAILY (2X) LEVERAGED UCITS ETF
07/04/2021	LYXOR BUND DAILY (2X) LEVERAGED UCITS ETF
07/04/2021	LYXOR RUSSELL 1000 VALUE UCITS ETF

During the financial year, one sub-fund was created:

Date of the NAV	Name of the CIU
16/08/2021	LYXOR GREEN BOND INDICIEL

(*) We recommend that you refer to the information on each compartment.

SUB-FUND OF THE MULTI UNITS FRANCE SICAV

FISCAL YEAR ENDING ON: 29.10.2021

Compartments / feeder	LYXOR BEL 20 TR (DR) UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
Management Company	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy – 92987 Paris La Défense Cedex.
Depository and Custodian	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

Information on the investments and management

Classification:

Equities from countries in the Eurozone.

At all times, the Lyxor BEL 20 TR (DR) UCITS ETF subfund (“Subfund”) has at least 60% exposure in the market for equities issued in one or more eurozone countries, possibly including the French market.

The Subfund is an index-tracking UCITS ETF.

Terms of determination and allocation of amounts available for distribution:

The Board of Directors reserves the right to distribute all or part of the distributable amounts and/or to capitalise them.

Management objective:

The Compartment is a passively managed index-based UCITS.

The investment objective of this Subfund is to track the upward and downward performance of the Bel 20 NR™ index (“Benchmark”), listed in euros, while minimising the tracking error between the Subfund’s performance and the Benchmark’s performance as much as possible.

The anticipated level of the ex-post tracking error under normal market conditions is 0.20%.

Benchmark indicator:

The Benchmark is the Bel 20™ NR (Net Return) index (net dividends reinvested, which means that the Benchmark’s performance includes the net dividends paid by its underlying equities).

The Benchmark is a basket index communicated in real time that continuously tracks the prices of the 20 most liquid Belgian equities. The equities in the Benchmark are weighted according to their free float adjusted market capitalisations using the FTSE free float system. The Benchmark is communicated continuously in real time, but the official closing index is not communicated until after 5:40 p.m.

The performance tracked is that of the index closing price.

A full description and full methodology for the construction of the Benchmark Index as well as information on the composition and respective weights of the components of the Benchmark Index are available on the website: <https://www.euronext.com/en>

Benchmark revision and composition:

The composition of the Benchmark is revised annually.

The exact composition and revision rules of the Benchmark published by Euronext are available on the website: <https://www.euronext.com>
The above-mentioned frequency of rebalancing has no effect on costs as part of the implementation of the investment strategy.

Benchmark indicator publication

The closing price of the Benchmark is available on the website: <https://www.euronext.com>

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Euronext administrator of the Benchmark Indicator is included in the register of administrators and benchmark indices maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmarks used which describes the measures to be implemented in the event of substantial changes to an index or the cessation of provision of that index.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark, the Subfund will be exposed to the Benchmark via a direct tracking method, which means that the Subfund will invest mainly in a basket of assets made up of the equities comprising the Benchmark and/or financial instruments representative of all or part of the equities comprising the Benchmark.

In addition, the sub-fund may use forward financial instruments ("FFIs"). Futures in which the sub-fund is likely to invest include contracts such as index futures, futures on all or part of the Benchmark Index components, and hedging swaps entered into to minimise the Sub-Fund's tracking error.

Where the Subfund's investment strategy (e.g. use of futures) requires it to hold cash, the Manager may, in the best interests of the holders, use deposits with credit institutions and/or invest cash in on-balance sheet assets and/or off-balance sheet assets (as described below).

In order to optimise the direct tracking method with respect to the Benchmark, the Subfund, represented by its appointed financial manager, may decide to use a "sampling" technique consisting in investing in a selection of representative securities composing the Benchmark in order to limit the costs associated with investment in the various components of the Benchmark. A sampling replication strategy could notably lead the Sub-Fund to invest in a selection of representative securities (and not all securities) comprising the Benchmark, in proportions different from those of the Benchmark Index or even to invest in securities other than the Benchmark Index components.

In order to allow investors to benefit from transparency on the direct tracking method used (full tracking of the Benchmark or sampling to limit replication costs) and its consequences in terms of assets held by the Subfund, information on the updated composition of the basket of balance sheet assets held in the Subfund's portfolio is available on the page dedicated to the Subfund available on the website www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

As part of the management of its exposure, the Compartment may be exposed up to 20 % of its assets in equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Index, in particular in the event of a public offering affecting one of the securities making up the Benchmark Index or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Index.

2. Balance sheet assets (excluding embedded derivatives)

The Sub-Fund will mainly be invested in the securities described below:

Equities

The Sub-Fund will be mainly invested in the shares comprising the Benchmark Index.

Holding shares or units of other UCIs or investment funds

The Sub-Fund may invest up to 10% of its assets in units or shares of the following CIS or investment funds:

- French or foreign UCITS compliant with Directive 2009/65/EC – For the purposes of these investments, the Sub-Fund may subscribe for units or shares in UCITS managed by the Management Company or a related company.

3. Off-balance sheet assets (derivatives)

The Sub-Fund may invest in the following FFIs:

Eligible markets:

- regulated
- organised
- over-the-counter

⌘ Risks in which the Sub-Fund wishes to trade:

- equity

⌘ Types of operations, all transactions being limited to achieving the management objective:

- hedging
- exposure

⌘ Type of instruments used:

- futures: on equities and indices
- forward exchange contracts

⌘ Strategy for using derivatives to achieve the investment objective:

- overall hedging of the portfolio or of certain risks, securities, etc. – up to 100% of net assets
- to achieve synthetic exposure to assets or risks – up to 100% of assets

The counterparties of OTC derivatives processed by the Sub-Fund will be selected in accordance with the Management Company's best execution policies (including the execution matrix by asset type mentioned in the Appendix). The above-mentioned policy can be accessed at the following address: <https://www.lyxor.com/politique-demeilleure-execution-liam-janvier-2020-fr>.

The counterparty to the financial futures instruments will not have discretionary power over the composition of the Sub-Fund's investment portfolio, nor over the underlying assets of the financial futures instruments within the limits and under the conditions provided for by the regulations.

Situations of conflict of interest may arise between the Management Company and Société Générale when Société Générale acts as a counterparty to FFI's. These situations are governed by the Management Company's conflict of interest management policy.

4. Securities with integrated derivatives

None.

5. Dépôts

Up to a maximum of 20% of its net assets, the Sub-Fund can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

The subfund may temporarily borrow funds equivalent to up to 10% of its net assets.

7. Temporary purchases and sales of securities

The Subfund may use various techniques to manage its portfolio efficiently in compliance with Article R214-18 of the French Monetary and Financial Code, including the temporary sale of securities.

- Maximum proportion of assets under management that may be covered by securities financing contracts: up to 25% of the Subfund's assets.
- Expected proportion of assets under management that can be financed by securities transactions: 0% of the Subfund's assets

In this context, the Management Company has appointed Societe Generale as an intermediary (hereinafter the "Agent"). In the event of recourse to an Agent, it may be authorised (i) to carry out, on behalf of the Sub-Fund, securities lending transactions, governed by GMSLA (Global Master Securities Lending Agreements) and/or any other internationally recognised framework agreements, and (ii) to invest, on behalf of the MF, the cash received as collateral for these securities lending transactions, in accordance with and within the limits defined by the securities lending agreement, the rules of this prospectus and the regulations in force.

As a reminder, the Management Company is an entity of the Societe Generale Group and is therefore linked to the Agent.

Where Société Générale S.A. is appointed as Agent, it is not authorised to act as a counterparty to securities lending transactions. If such temporary sales are used:

- all income arising from these transactions, net of direct and indirect operational costs/fees, will be returned to the Sub-Fund;
- the above operational costs/fees related to efficient portfolio management techniques will be those incurred by the Management Company, the Agent (if applicable) and/or the other intermediaries involved in these transactions in connection with their services;
- the direct or indirect operating costs/fees will be calculated as a percentage of the gross income generated by the Subfund. Information on operational, direct and indirect fees/costs and the identity of the entities to which these fees/costs are paid will be mentioned in the Sub-Fund's annual report.
- income from the lending of securities will be paid to the Subfund after deduction of any direct and indirect operating costs/fees that may be borne by the Agent and the Management Company. To the extent that these fees/costs, direct and indirect, do not increase the operating costs of the Sub-Fund, they have been excluded from current expenses.

The Compartment's annual report will include, where applicable, the following details:

- the exposure generated through effective portfolio management techniques;
- the identity of the counterparty(ies) to these effective portfolio management techniques;
- the nature and amount of any collateral received to reduce the Subfund's counterparty risk, and;
- the income generated by efficient portfolio management techniques over the relevant period, and any associated direct and indirect operating costs/fees.

8. Contracts constituting financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of temporary purchases and sales of securities, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depository. As such, the received financial guarantees will be listed amongst the Compartment's assets. In the event of default by the counterparty, the Compartment may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt towards the Compartment as part of the guaranteed transaction.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20 % of the Sub-Fund's net asset value;
- (e) The Subfund's Management Company must be able to enforce this collateral in full and at any time without having to consult with the counterparty or obtain its approval.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received collateral are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and
- such securities collateral consists of at least six different issues of securities of which no single issue exceeds 30% of the Subfund's assets.

In compliance with the aforesaid conditions, the guarantees received by the Sub-Fund can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e)(above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as collateral;
- Maturity of the asset received as collateral (if applicable);
- Rating of the issuer of the asset received as collateral (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged.

Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Compartment may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

COUNTERPARTY SELECTION POLICY

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Compartment. The selection of counterparties for financial contracts and financial intermediaries is performed rigorously from among the reputable counterparties and intermediaries in the market, on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes various criteria into consideration to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating
- Quantitative criteria based on the CDS LT spread (absolute criteria, volatility and comparison with a reference group, etc.)

Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the management company applies its "best execution" policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: www.lyxor.com, section "regulatory information".

Risk profile:

The Sub-Fund will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Subfund, the shareholder is primarily exposed to the following risks:

- Equity risk

An equity price can vary upwards or downwards, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

If, when the Compartment (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The subfund's on-exchange price may deviate from its indicative net asset value. The liquidity of the Sub-Fund's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) trading in the market(s) in the Benchmark's underlying assets is suspended, and/or
- iii) an exchange cannot obtain or calculate the Subfund's indicative net asset value, and/or
- iv) a market maker fails to comply with an exchange's rules, and/or
- v) A failure of this marketplace's IT or electronic systems.

- Concentration risk

The Subfund replicates the performance of a Benchmark concentrated on a limited number of underlying securities. Exposure to a Benchmark with such a limited diversification may result in higher volatility than a more diversified index and increased liquidity risk in the event of deterioration of liquidity or suspension of trading in one or more components of the Benchmark.

- Risk related to the use of derivative instruments

The Compartment may use over-the-counter forward Financial Instruments ("FFIs") or listed FFIs, in particular futures contracts and/or hedging swaps. These FFIs can result in a series of risks on the level of the contract that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Index, risk related to the tax regime, risk related to the regulations, and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI contract, which could affect the Sub-Fund's net asset value.

Investing in futures may involve a high level of risk. The amount required to trade certain FFIs is potentially much lower than the exposure obtained through these instruments, which implies a "leverage" at the level of each transaction. A relatively limited market movement would then have a proportionately very high impact, which could be favourable or unfavourable to the Fund. The market value of forward financial instruments is highly volatile and may therefore be subject to significant fluctuations.

The Sub-Fund may use OTC futures. Over-the-counter transactions may be less liquid than transactions traded on organised markets, where trading volumes are generally higher, and their prices may be more volatile.

- Counterparty risk

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

- Risks arising from a lack of perfect replication

Replicating the Benchmark by investing in all components of the Benchmark can be costly or very difficult to operate. The Sub-Fund's manager may also use optimisation techniques, in particular the sampling technique, which consists in investing in a selection of representative securities (and not all securities) comprising the Benchmark, in proportions different from those of the Benchmark Index or even investing in securities other than the components of the index or financial futures. The use of these optimisation techniques may lead to an increase in the ex-post tracking error and will notably lead to different performances between the Sub-Fund and the Benchmark Indicator.

- Risk that the investment objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Index, notably should one or more of the following risks arise:

- Risk due to a change in tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to the use of effective portfolio techniques

In the event that the counterparty to the efficient portfolio management technique (hereinafter referred to as the "EPMT") processed by the Sub-Fund fails to provide the counterparty, the Sub-Fund may be exposed to a risk in the event that the value of the guarantees received by the MF is lower than the value of the assets of the MF transferred to the counterparty under the EPMT in question. This risk could materialise in particular in the event of (i) a poor valuation of the securities subject to this transaction and/or (ii) adverse market movements and/or (iii) a deterioration in the credit rating of issuers of securities received as collateral and/or (iv) illiquidity of the market on which the collateral received is admitted to listing. Unitholders should note that (i) EPMTs may be entered into with Societe Generale (entity of the same group as the Management Company) and/or (ii) that Societe Generale may be appointed as agent of the Subfund under the EPMTs.

- Risks related to the management of guarantees

Operational risk:

The Subfund may be exposed to the risk of direct and indirect losses resulting from operational deficiencies in executing total return swaps (TRS) and/or securities financing transactions, as indicated in Regulation (EU) No. 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Index

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Index is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Index is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Index,
- iv) the index provider makes a material change in the Benchmark calculation formula or method (other than a minor modification such as an adjustment to the Benchmark's underlying components or their respective weightings) that the Subfund cannot effectively replicate at a reasonable cost.
- v) one or more Benchmark components become illiquid because they are no longer traded on a regulated market or because their over-the-counter trading (e.g. bonds) is disrupted;
- vi) The Benchmark Index's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Index's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Index undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Sub-Fund (and/or in a valuation of the ST by the Sub-Fund's counterparty in a future financial instrument), the Sub-Fund's net asset value may be affected, notably should the actual treatment of the ST by the Sub-Fund differ from the ST's treatment in the methodology used by the Benchmark Index.

- Currency risk associated with the Sub-Fund's listing

The Subfund may be listed on an exchange or multilateral trading facility in a currency that is not the currency of the Benchmark. Investors who purchase shares in the Subfund in a currency other than the Benchmark's currency are exposed to currency risk. As a result, due to exchange rate fluctuations, the value of an investment made in a currency other than that of the Benchmark may decrease even though the value of the Benchmark increases.

- Sustainability risks

The Sub-Fund does not consider sustainability factors in the investment decision-making process but remains exposed to sustainability risks. The occurrence of such risks could have a negative impact on the value of the investments made by the Sub-Fund. Additional information can be found in the "Sustainability Information" section of the Prospectus.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

Investors subscribing to this Subfund are seeking exposure to the Belgian equity markets.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, investors must take into account their personal wealth and/or estate, their cash requirements at present and for the next five years, and their willingness to take on risk or their preference for more prudent investment. It is also highly recommended to sufficiently diversify your investments so as to avoid an exposure only to this Sub-Fund's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment term is greater than 5 years.

U.S. Persons (as defined in the prospectus - see "COMMERCIAL INFORMATION") may not invest in the Sub-Fund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy-92800 Puteaux.*
- *Creation date of the Multi Units France Sicav: 04 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 14 June 2002.*
- *Compartment creation date: 31 July 2002.*

business report

The fund tracks the performance of the BEL20 Private Return index EUR (Ticker: BELPRX).

Performance trend at the closing date:

Share name	ISIN	Share currency	Performance from 28/02/19 to 31/10/19			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor BEL 20 TR (DR) UCITS ETF - Dist	FR0000021842	EUR	42.51% ⁽¹⁾	43.20%		212.54%

⁽¹⁾ "The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- The index replication cost (such as the index rebalancing cost);
- taxation incurred in relation to the methodology used in the Benchmark;
- whether the manager uses sampling or advanced indexing techniques"

The tracking error realised is 0.0178%. The target tracking error over the period was 0.2%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

This Fund is covered by Article 6 of Regulation (EU) 2019/2088 (the "SFDR Regulation"). It does not promote environmental and/or social characteristics and does not aim to invest sustainably

Transparency of environmentally sustainable investments in periodic reports under Regulation (EU) 2020/2

Regulation (EU) 2020/852 on the establishment of a framework for promoting sustainable investments (the "Taxonomy Regulation") sets out the criteria for determining whether an economic activity is environmentally sustainable in the European Union.

According to the Taxonomy Regulation, an activity can be considered "sustainable" if it contributes substantially to one of the 6 environmental objectives set out in the Taxonomy Regulation, including climate change mitigation and adaptation, pollution prevention and reduction, or the protection and restoration of biodiversity and ecosystems.

In addition, in order to be considered to be sustainable, this economic activity must respect the principle of "not to cause significant harm" to one of the other five objectives of the Taxonomy Regulation and must also comply with basic social criteria (alignment to OECD and UN guidelines on business and human rights).

In accordance with article 7 of the Taxonomy Regulation, the management company draws investors' attention to the fact that the underlying investments of this Fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Provision of environmental, social and governance (ESG) information - in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website [Lyxor.com](https://www.lyxor.com) and is revised each

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

(a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

- French, German & Luxembourgish Funds (Fonds Communs de Placement - FCP) and SICAV (*)
- Securities of issuers domiciled in Europe: in order to prevent excessive costs inherent in the voting process, Lyxor participates in general meetings when the consolidated holding represents more than 0.10% of the company's capital
- Securities of issuers domiciled in the United States: Lyxor will exercise its voting rights on its largest consolidated holdings •Equity securities of issuers domiciled in Japan: Lyxor will exercise its right to vote on its largest consolidated holdings

(*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership.

In terms of engagement, Lyxor has defined an engagement policy that is structured around three axes: an engagement related to general meetings, an engagement related to environmental, social and/or governance issues, and an engagement related to climate. This third axis comprises four engagement campaigns:

- The first campaign related to the Climate Action 100+ initiative, committing Lyxor to ask companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosure) recommendations.
- The second campaign related to plastics and the circular economy.
- The third campaign related to localized water management.
- The fourth campaign related to responsible cleantech.

This fund is part of the following campaigns: Corporate Governance, ESG, General meeting, Localized Water Management

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy). •Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group's Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defence policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to

controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website [Lyxor.com](https://www.lyxor.com)

Active Ownership - Operational set up:

In addition to the internal analysis carried out, Lyxor uses the services of ISS (Institutional Shareholder Services), as a proxy advisor.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

Engagement policy:

To carry out its engagement campaigns, Lyxor can:

organize one-on-one meetings with management, board members, investor relations, sustainable development teams or any person within the company who can provide answers to the issue; partner with other management companies to gain greater leverage with targeted companies; (iii) join working groups or initiatives specializing in certain areas.

Description of how the results of the analysis on ESG issues are integrated in investment policies

In terms of engagement, the details are presented below.

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website [Lyxor.com](https://www.lyxor.com).

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their Current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e /\$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal , oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environments solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuers in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of October 2021

ESG score	Environment	Social	Governance	Portfolio rated	Nb Securities rated
5.6	6.5	4.9	5.8	100%	20

Pillars	Pillars			Government		
	Themes	Score	Weight	Themes	Score	Weight
Environment		6.5	22.6%		0.0	0.0%
	Climat Change	7.9	6.9%	Environmental Externalities	0.0	0.0%
	Environmental Opportunities	6.0	5.0%	Natural Resource	0.0	0.0%
	Natural Capital	6.3	5.1%			
	Pollution & Waste	5.4	5.6%			
Social					0.0	0.0%
	Human Capital	4.2	17.5%	Human Capital	0.0	0.0%
	Product Liability	5.9	17.1%	Economic Environment	0.0	0.0%
	Social Opportunities	3.9	5.3%			
	Stakeholder Opposition	8.9	0.1%			
Governance		5.8	37.4%		0.0	0.0%
				Financial Governance	0.0	0.0%
				Political Governance	0.0	0.0%

Breakdown of companies according to ESG rating

Sector	AAA	AA	A	BBB	BB	B	CCC	Not Rated
Communication Services			1.1%	1.9%				
Consumer Staples		10.8%	1.8%					
Financials	13.7%		8.0%	8.0%	4.5%			
Health Care			21.3%					
Information Technology					1.4%			
Materials	7.9%	7.2%						
Real Estate		2.9%		7.0%				
Utilities		2.6%						

For each issuer (Corporate & Government), ESG Industry sector classification is provided by MSCI ESG Ratings.
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The ESG score calculated at the portfolio level measures the capacity of the underlying issuers to manage the risks and key opportunities associated with environmental, social and governance factors. The risk scale ranges from 0 (high risk) to 10 (low risk). Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: employment, social relations, health and safety, training, compliance with ILO conventions
- Governance: Board of Directors or Supervisory Board, Audit and Internal Control, Executive Compensation

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source: The Company carbon footprint data are provided by the MSCI agency.
All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Measures the portfolio's exposure to companies experiencing controversies relating to their compliance with international standards as a function of their degree of severity:

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: indicates that the company is not involved in any major controversies
- None: Sovereign and/or Company not covered

Red Flag	0%
Orange Flag	0%
Yellow Flag	21%
Green Flag	79%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2021

Carbon Emissions (tons CO2e/\$M invested)	Carbon Intensity (tons CO2e/\$M sales)	Weighted Average Carbon Intensity (tons CO2e/\$M sales)	Portfolio rated by weight	100%
44	113	85	Scope 1 reported (vs estimated)	92%
			Scope 2 reported (vs estimated)	69%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GreenHouse Gas Protocol (GHG Protocol) was launched in 2001 by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: direct emissions resulting from the burning of fossil fuel resources owned or controlled by the company.
- Scope 2: indirect emissions related to the purchase or production of electricity.
- Scope 3: all other indirect emissions from the extended supply chain to the transport of goods and persons.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue).The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio invested in both equities and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest - total debt.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or the portion of the company's revenue generated from fossil fuel energies or the portion of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon:

Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gas	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of : \$ 1,000,000

Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

These metrics include only corporate issuers rated in Carbon.

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges - this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	0.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio. These metrics include only corporate issuers rated in Carbon.

	Use of cleaner energy sources	Energy consumption management and Operational efficiency	Carbon reduction objectives
Aggressive efforts	13.7%	5.4%	7.2%
Some efforts	59.8%	57.1%	47.3%
Limited efforts/Information	0.0%	27.5%	2.6%
No effort/No evidence	23.8%	10.0%	42.8%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low- carbon products.

(1) Metric developed by MSCI

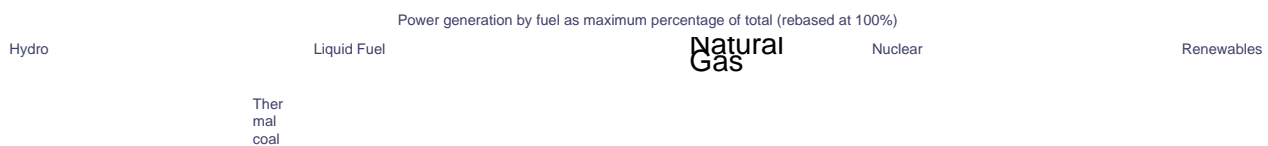

Low carbon transition score	6.4
Low carbon transition management Score	5.5
Operational Transition	16.2%
Product Transition	16.2%
Neutral	74.7%
Solutions	9.2%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source: MSCI ESG Research

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. Those issuers are likely to benefit from a low carbon transition

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	18%
20-49.9%	0%
50-100%	10%

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Weight of Companies Offering Clean Technology Solutions			
Alternative Energy	18.8%	Energy Efficiency	19.7%
Pollution Prevention	15.7%	Sustainable Water	7.8%
		Green Building	9.4%
		Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution			
Alternative Energy	2.1%	Energy Efficiency	0.4%
		Green Building	0.7%

Pollution Prevention	6.4%	Sustainable Water	0.1%	Sustainable Agriculture	0.0%
----------------------	------	-------------------	------	-------------------------	------

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

% estimated EU Taxo 9.6%

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 0

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	5%
Coldwave	26%
Flood	1%
Heatwave	6%
Hurricane	2%
Water Stress	57%
Wildfire	4%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks.

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	36.0%	40.0%	23.9%	90.7%	6.7%	2.6%
Carbon Emissions	0.1%	64.2%	35.7%	68.2%	26.9%	4.9%
Electronic Waste	0.2%	7.4%	92.4%	99.0%		1.0%
Opportunities in Green Building	0.6%	63.6%	35.9%	94.5%	0.1%	5.3%

Temperature - Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Level of alignment	2.0°C
Hedging	88.5%

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

-A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,

-An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates a carbon budget from global to company level over a chosen time horizon.

Alignment Trajectory in % Weight	
<1.5°C	18.3%
1.5-2°C	0.0%
2-3°C	24.5%
>3°C	57.2%

Alignment is measured using a temperature indicator.

Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

Meeting overview

This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	29
Number of Voted Meetings	16
Participation rate at General Meetings	55.2%

Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
Routine/Business	100.0%	0.0%	0.0%
Non-Salary Comp.	69.6%	21.7%	8.7%
Board of Directors	80.8%	19.2%	0.0%
Capitalization	84.4%	15.6%	0.0%

Breakdown by country

In 2021, the Lyxor's voting scope was issuers domiciled in Europe, in United States and in Japan.

The data details the geographical distribution of the General Meetings at which the Lyxor BEL 20 TR (DR) UCITS ETF fund participated during the financial year.

Belgium	93.8%
Netherlands	6.2%

Engagement

This fund is part of the following campaigns: Corporate Governance, ESG, General meeting, Localized Water Management

ESG: The consideration of environmental, social and/or governance issues is at the heart of Lyxor's responsible investor strategy. Lyxor therefore considers that it is the responsibility of the Board to supervise the definition of the company's non-financial and climate risks and opportunities, as well as the strategy implemented by management with regards to this risk/opportunity analysis. The objective of Lyxor on this type of engagement is to work with companies to encourage them to improve their Corporate Social Responsibility practices.

Corporate Governance: Outside the general assembly period, Lyxor promotes regular dialogue with companies on corporate governance issues such as changes in the composition of the Board and its committees, succession plans, the role and functions of the lead director, changes in the remuneration policy, etc.

Localized Water Management: Aware of the growing challenge of water management, Lyxor launched a collaborative thematic engagement campaign on water management in 2020. Most companies are aware of the importance of water management issues but do not make them a priority. The objective of this campaign is to remedy this phenomenon so that all companies can integrate these issues throughout their value chain.

The starting point for good management of water-related issues is to properly map the risks and associated impacts that fall under the direct and indirect control of companies. In addition to assessing companies' practices, the idea is to mobilize them more on this topic, in other words, to ensure that companies' approach to water risk assessment and management:

- Proactively and effectively contributes to long-term business continuity;
- Is environmentally sustainable;
- Respects the development needs of the countries concerned.

Engagement overview over the year

The table shows the number of engagement campaigns conducted by Lyxor during the year compared to the number of issuers present in the fund.

Number of companies under engagement	2
Number of engagement	4
Number of companies under engagement / Number of companies in the fund	10%

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des marchés financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Remuneration policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter "AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter "UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed Remuneration (EUR)	Variable Remuneration (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregate Remuneration (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the French Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual remuneration review campaign that was carried out during the course of the year, on the basis of the perimeter of the staff as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable remuneration are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable remuneration deferred from a previous financial year. No carried interest was paid for the fiscal year.

Lyxor's best selection and execution policy

Information on best selection and execution policies is available at www.lyxor.com.

Transparency of securities financing operations and reuse of SFTR financial instruments

(Accounting currency of the CIU)

During the fiscal year, the UCI did not carry out any transactions subject to the SFTR, namely no repurchase transactions, securities or commodities lending/borrowing, buy/sell back or sell/buy back transactions, margin lending transactions or total return swaps (TRS).

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information in the evolving context of the Covid-19 crisis.

Assessment rules

The Subfund's assets are assessed in compliance with the applicable laws and regulations and more particularly with the rules defined in Regulation No. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the accounting code for open-ended undertakings for collective investment.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded. However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") with a residual maturity upon acquisition that of 3 months or less are assessed with a straight-line extension over the residual maturity of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (interest rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- Negotiable debt securities with a residual maturity at acquisition of more than 3 months but with a residual maturity of 3 months or less at the net asset value date are assessed with a straight-line extension over the residual maturity, with the difference between the last retained present value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (interest rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- Negotiable debt securities with a residual maturity of more than 3 months at the net asset value date are measured at the present value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Futures traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Options traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter futures or options are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable trading value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and shares of UCITS operating under French law are assessed at the last net asset value known on the calculation date of the Subfund's net asset value.
- Units and shares of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Subfund's net asset value.

Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

The exchange rates used for the assessment of financial instruments listed in a currency other than the Subfund's reference currency are the WM Reuters fixing rates on the same day of the Subfund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under "Financial instruments" according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under "Other temporary operations".

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Sub-Fund) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Sub-Fund) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Subfund).

Operation and management fees

These fees include all of the fees charged directly to the Subfund, except for the activity fees. The activity fees include intermediary fees (brokerage, stock exchange tax, etc.) and the transfer commission, which, if relevant, may notably be collected by the depository and the appointed financial manager. For this Subfund, the following fees can be added to the operation and management fees (see summary table below):

- incentive fees: these reward the appointed financial manager company when the Subfund has exceeded its objectives and are therefore charged to the Subfund;
- activity fees charged to the Sub-Fund;
- direct and indirect operating costs/fees related to temporary purchases and sales of securities.

For more details on the fees actually charged to the Subfund, refer to the Statistics section of the Key Investor Information Document (KIID).

Fees invoiced to the Sub-Fund	Basis	Schedule rate
Financial management fees and administrative fees external to the management company (Auditor, Depository, distribution, lawyers) including tax ⁽¹⁾	Net assets	Maximum 0.50% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Outperformance commission	Net assets	None
Transactions commissions	Collection on each transaction	None
Direct and indirect operating costs/fees related to temporary purchases and sales of securities	Amount of income generated by these operations	Maximum 20% for the Management Company; maximum 15% for the Agent.

⁽¹⁾ including all fees except activity fees, incentive fees and fees related to investments in UCITS.

Accounting currency

The subfund's accounting is carried out in euros.

Future sales of currencies	-
Total traded amount of future Purchases of currencies	-
Other debts:	
Accrued expenses	20,388.79
-	-
-	-
-	-
-	-
Other operations	-

3.6. Shareholders' equities

	Subscriptions		Redemptions	
	Number of equities	Amount	Number of equities	Amount
Number of shares issued/redeemed during the fiscal year:	-	-	196,269	11,235,603.30
Subscription / redemption commission		-		4,494.24
Retrocessions		-		-
Fees paid to the sub-fund		-		4,494.24

3.7. Management fees

Operating and management fees (fixed fees) as % of the average net assets	0.50
Performance commissions (variable fees): amount of costs for the year	-
Retrocession of management fees:	-
- Total amount of fees retroceded to the Compartment	-
- Breakdown by "target" CIU:	
- CIU 1	-
- CIU 2	-

3.8. Commitments given and received

- 3.8.1. Description of guarantees received by the subfund with indication of the capital guarantees **none**
3.8.2. Description of the other commitments received and/or given **none**

3.9. Other information

3.9.1. Current value of the financial instruments that are the subject of temporary acquisition:	
- Financial instruments sold under forward repurchase agreements	-
- Other temporary operations	-
3.9.2. Current value of the financial instruments comprising security deposits: Financial instruments received as guarantees and not included in the balance sheet:	
- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-
Financial estimates given as guarantees and maintained in their original item:	
- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-
3.9.3 Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (SICAV) and UCI managed by these entities:	
- CIU securities	-
- Swaps	-

3.10. Allocation of the profit and loss table *(in the Compartment's accounting currency)*

report

SUB-FUND OF THE MULTI UNITS FRANCE SICAV

FISCAL YEAR ENDING ON: 29.10.2021

Compartments / feeder	LYXOR BTP DAILY (-2X) INVERSE UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
Management Company	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
Depository and Custodian	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

Information about investments and management

Classification

The Lyxor BTP Daily sub-fund (-2x) Inverse UCITS ETF (hereinafter the "Sub-Fund") is a strategy index fund. The Sub-Fund is an index-based fund of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution:

Capitalisation of all the amounts available for distribution.

Management objective

The Compartment is a passively managed index-based UCITS.

The Sub-Fund's investment objective is to expose itself inversely, both upwards and downwards and with daily leverage amplifying 2, to the daily performance of the Italian government bond market with residual maturities between 8,5 and 11 years by replicating the evolution of the Solactive BTP Daily Index (-2x) Inverse Index (the "Benchmark Index"), denominated in euros (EUR), while minimising the tracking error between the performance of the Sub-Fund and that of the Benchmark as much as possible.

The anticipated level of the ex-post tracking error under normal market conditions is 0.02%. **Benchmark**

indicator

The Benchmark Index is a strategy index established by Solactive AG, using a proprietary methodology. The Benchmark Index is calculated and maintained by Solactive AG.

The Benchmark Index offers an inverse exposure, both upwards and downwards, to changes in the Italian government bond market with residual maturities of between 8,5 and 11 years, for which Euro-BTP long-term futures contracts are a representative indicator, with daily x2 leverage. Thus, in the event of a decline in Euro-BTP Long-Term Futures on a trading day, the net asset value of the Sub-Fund should increase twice on that same trading day and, in the event of a rise in Euro-BTP Long-Term Futures on a trading day, the Sub-Fund's net asset value should fall twice on that same trading day and shareholders will not benefit from the increase in Euro-BTP Long-Term Futures. Long-Term Euro-BTP futures are a representative indicator of the Italian government bond market with residual maturities of between 8,5 and 11 years and with initial maturities of less than 16 years. They are listed on Eurex, and their methodology is available at www.eurexchange.com

The Benchmark Index's daily performance is equal to the inverse of twice the daily performance of the Euro-BTP Long-Term Futures, accrued interest (at the reference rate) received daily on the valuation of the fixing on the day before the Benchmark Index.

The Benchmark Index is representative of a strategy of short positions with leverage amplifying 2 of the Euro-BTP long-term futures with a daily adjustment. An additional adjustment may be made during the session if the Benchmark falls by more than 40% on a trading day (i.e. if the increase in Euro-BTP long-term futures in absolute value during the day is greater than 20%)

The monitored performance is that of the Benchmark Index closing prices in Euros.

As the Benchmark Index calculation methodology is not based on a direct investment in Italian government bonds, but is based on an indirect investment via futures, the Sub-fund's performance will be impacted by the cost of rolling the aforementioned futures on a quarterly basis.

This phenomenon may negatively and gradually impact the difference between the performance of the Sub-fund and the gross performance of the short positions in the underlyings of the aforementioned futures, in particular in the case of a long-term investment in the shares of the Sub-Fund.

A full description and full methodology for the construction of the Benchmark Index as well as information on the composition and respective weights of the components of the Benchmark Index are available on the website: www.solactive.com

Revision and composition of the Benchmark Index

The revision of the Benchmark Index takes place daily.

The adjustment frequency mentioned above may have an impact in terms of the cost(s) borne by the Sub-Fund and may therefore affect the performance of the Sub-Fund.

Benchmark Index publication

The Benchmark Index is calculated daily based on the official closing fixing of Long-Term Euro-BTP futures at 5:15 pm.

The fixing of the Benchmark Index is available on the website: <https://www.solactive.com>

In accordance with the provisions of Article 34 of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Solactive AG director of the Benchmark Index Solactive BTP Daily (-2x) Inverse Index is included in the register of directors and benchmark indices maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmarks used which describes the measures to be implemented in the event of substantial changes to an index or the cessation of provision of that index.

Investment strategy

1. Strategy employed

The Sub-Fund will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Index, the Sub-Fund will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

Investors who subscribe to this Sub-fund are exposed inversely and with an amplifying leverage of 2 daily, both upwards and downwards to the daily performance of the Italian government bond market, for which the Benchmark Index is representative.

The Sub-Fund's assets will mainly be bonds issued by an OECD member state or issued by non-governmental issuers residing in one of the OECD countries.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Sub-Fund's portfolio and (ii) the market value of the future exchange operation entered into by the Sub-Fund are available on the page dedicated to the Sub-Fund on the website: www.lyxoretf.com

The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

As part of the management of its exposure, the Sub-Fund may be exposed up to 20% of its assets in debt issued by a member state of the OECD. This limit of 20% may be raised to 35% for a single bond, where this proves to be justified by exceptional market conditions, particularly when certain securities are largely dominant and/or in the event of high volatility of a debt issue, or in the event of a political and/or economic event having or may have an impact on the appreciation of the debt of an issuing State and/or affecting the financial rating of an issuing State or any other event likely to affect the liquidity of a financial security included in the Benchmark.

Notwithstanding the assumptions referred to in paragraph above, securities guaranteed or issued by the same issuer may represent up to 35% of the assets and 100% of the assets if the Sub-Fund holds at least 6 issues, none of which exceeds 30% of the assets. Securities are financial instruments issued or guaranteed by an OECD member state, local authorities of a Member State of the European Union or party to the EEA agreement.

The Sub-Fund's interest rate sensitivity is between 10 and 22.

2. Balance sheet assets (excluding integrated derivatives)

The Sub-Fund may hold, in accordance with regulatory ratios, international securities (equities, bonds) denominated in one of the currencies of OECD countries.

The investment in undertaking for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Sub-Fund.

The aforementioned financial securities will be bonds selected on the basis of eligibility criteria, in particular:

- Senior debt;
- Fixed maturity;
- Maximum residual maturity;
- Minimum issue size;
- Minimum threshold for S&P rating or equivalent;

Of diversification, notably:

- Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code);
- Geographical area;
- Sector.

For more information on the abovementioned eligibility and diversification criteria, investors can visit www.lyxoretf.com

The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law. As part of these investments, the Sub-Fund may subscribe for units or shares of UCITS managed by the management company or a company to which it is linked.

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of the future optimisation of the Sub-Fund's management the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Sub-Fund will have recourse to index-linked swaps traded over-the-counter, exchanging the value of the equities in the Sub-Fund's assets (or of any other financial instrument or asset held by the Sub-Fund, where appropriate) against the value of the Benchmark Index (in compliance with the description contained in this section's paragraph 1 above):

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including future financial instruments other than index-linked swaps.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Sub-Fund's investment portfolio, nor regarding the underlying assets of the future financial instruments. Situations of conflict of interest may arise between the Management Company and Société Générale when Société Générale acts as a counterparty to FFIs. These situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted. Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Sub-Fund can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Sub-Fund is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Sub-Fund's use of forward swap contracts traded over the counter, the Sub-Fund can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Sub-Fund's net asset value;
- (e) The Sub-Fund's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- Such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State or (iv) a public international organization to which one or more Member States belong; and
- Such financial guarantees consist of at least six different issues of which none exceeds 30% of the Sub-Fund's assets.

In compliance with the aforesaid conditions, the guarantees received by the Sub-Fund can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by supranational institutions and bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Sub-Fund's management company will apply a margin to the financial guarantees received by the Sub-Fund. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;

- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged. Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees. In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Compartment may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

Counterparty selection policy

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Compartment. The selection of counterparties for financial contracts and financial intermediaries is performed rigorously from among the reputable counterparties and intermediaries in the market, on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes various criteria into consideration to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating;
- Quantitative criteria based on the CDS LT spread (absolute criteria, volatility and comparison with a reference group, etc.). Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: www.lyxor.com, section "regulatory information".

Risk profile

The shareholder's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

Interest rate risk

The price of a bond may be affected by unexpected changes in interest rates, which may affect yield curves. The bonds included in the Benchmark Index are therefore exposed to such interest rate fluctuations. In general, the price of a bond rises when interest rates fall, and the price falls when interest rates rise.

Risk of daily readjustment of leverage

Investors are inversely and twice exposed to fluctuations that affect the price or level of BTP futures underlying the Benchmark Index on a daily basis. In particular, any appreciation of the underlying market will be inversely amplified and will imply an even greater depreciation in the net asset value of the Sub-Fund. The daily readjustment of the exposure contained in the underlying double-short Benchmark formula implies that, over a period greater than one business day, the Sub-Fund's performance will not be equal to twice the opposite of the performance of the BTP futures underlying the Benchmark. For example, if the Benchmark's underlying BTP futures appreciate by 10% on a given business day and then depreciate by 5% on the following business day, the Sub-Fund will have depreciated in total by 12% after these two days (and before deduction of applicable fees), while the underlying BTP futures of the Benchmark have appreciated by 4.5% over the same period.

If the benchmark index's underlying BTP futures depreciate by 10% on a given business day, then increase by 6% on the next business day, they have depreciated in total by 4.6%, while the Sub-fund will have appreciated (before deduction of applicable fees) by 5.6% over the same period.

Negative scenario 1

If the negative leverage generated is greater than 2 in a scenario of a rise in the Benchmark's underlying

Benchmark Index underlying			Benchmark Index		leverage induced
	day i performance	day i value	day i performance	day i value	
		100		100	
day 1	10%	110	-20%	80	x-2
day 2	-5%	104.5	10%	88	x-2
total period	4.50%		-12.00%		x-2.67

Negative scenario 2

If the negative leverage involved is less than 2 in a scenario of a decline in the Benchmark's underlying asset.

Benchmark Index underlying			Benchmark Index		leverage induced
	day i performance	day i value	day i performance	day i value	
		100		100	
day 1	-10%	90	20%	120	x-2
day 2	6%	95.4	-12%	105.6	x-2
total period	-4.60%		5.60%		x-1.22

In addition, it is possible that over a observation period greater than one day and in the event of high volatility of the Benchmark Index's underlyings over this period, the net asset value of the Sub-Fund may fall even though the underlyings of the Benchmark also posted a decline over the same period.

Reverse Leverage Scenario 3

If the leverage generated is positive over the period.

Benchmark Index underlying			Benchmark Index		leverage induced
	day i performance	day i value	day i performance	day i value	
		100		100	
day 1	5%	105	-10%	90	x-2
day 2	-5%	99.75	10%	99	x-2
total period	-0.25%		-1.00%		x4

Risk that the Sub-Fund's management objective will only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

Risk related to the use of derivative instruments

In order to achieve its investment objective, the Sub-Fund uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Index. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

Risks related to collateral management

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Operational risk encompasses the risks of direct or indirect losses related to a number of factors (for example, human error, fraud and maliciousness, information system failures and external events, etc.) that could have an impact on the fund and/or investors. The Management Company aims to reduce this risk by implementing controls and procedures.

Legal risk

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Index is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Index,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Index (other than a minor modification such as the adjustment of the underlyings of this index or of the respective weightings between its various components), that cannot be effectively replicated by the Sub-Fund at a reasonable cost.
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

Securities transaction risk

Should the issuer of a security underlying the Benchmark Index undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Sub-Fund (and/or in a valuation of the ST by the Sub-Fund's counterparty in a future financial instrument), the Sub-Fund's net asset value may be affected, notably should the actual treatment of the ST by the Sub-Fund differ from the ST's treatment in the methodology used by the Benchmark Index.

Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

Counterparty risk

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

Liquidity risk (primary market)

If, when the Sub-Fund (or one of its counterparties for FFIs adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Sub-Fund could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

Liquidity risk on a place of listing

The ETF's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Index, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Sub-Fund's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

Low diversification risk

The Benchmark Index to which the investors are exposed covers only the market for bonds issued by the Italian government and therefore does not necessarily allow for as broad a diversification of the assets as would be the case of an index that is exposed to several regions, sectors or strategies. The exposure to such an index with such low diversification can result in greater volatility than in more diversified markets. Nevertheless, the diversification rules resulting from the UCITS standards always apply to the Compartment's underlyings.

Credit risk

It represents the potential risk of an improvement in the credit quality of the issuer, which may in particular result in an improvement in the rating carried out by the issuer's rating agencies, which would then have a positive impact on the price of the issuer's bonds and thus a negative impact on the net asset value of the Sub-Fund. The Sub-Fund is exposed to the credit risk of the Italian government.

Sustainability risks

The Sub-Fund does not consider sustainability factors in the investment decision-making process but remains exposed to sustainability risks. The occurrence of such risks could have a negative impact on the value of the investments made by the Sub-Fund. Additional information can be found in the "Sustainability Information" section of the Prospectus.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

The investor who subscribes to this Sub-Fund wishes to gain exposure, both upwards and downwards, and with a daily amplifying leverage of 2, to the performance of the Italian government bonds market with residual maturities between 8.5 and 11 years.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks. Investors are therefore recommended to study their individual situations with their usual estate management advisers. As an arbitrage product, this Sub-Fund may not be suitable for investors wishing to make a medium or long-term investment.

"U.S. Persons" (as defined below - see "COMMERCIAL INFORMATION") may not invest in the Sub-Fund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

activity report

The fund replicates the performance of the Solactive BTP Daily index (-2x) Inverse Index EUR (Ticker: SODI2BTP).

Performance trend at the closing date:

Share name	ISIN	Share curren cy	Performance from 28/02/19 to 31/10/19			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor BTP Daily (-2x) Inverse UCITS ETF - Acc	FR0011023621	EUR	1.62% ⁽¹⁾	2.19%		-84.45%

⁽¹⁾ "The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs (for example the index rebalancing cost);
- taxation incurred in relation to the methodology used in the Benchmark Index»

The tracking error realised is 0.0062%. The target tracking error over the period was 0.02%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams. This difference is considered insignificant.

Index Linked Swap's counterparty is: Société Générale.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction.

Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (*not audited by the auditor*)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

This Fund is covered by Article 6 of Regulation (EU) 2019/2088 (the "SFDR Regulation"). It does not promote environmental and/or social characteristics and does not aim to invest sustainably

Transparency of environmentally sustainable investments in periodic reports under Regulation (EU) 2020/852

Regulation (EU) 2020/852 on the establishment of a framework for promoting sustainable investments (the "Taxonomy Regulation") sets out the criteria for determining whether an economic activity is environmentally sustainable in the European Union.

According to the Taxonomy Regulation, an activity can be considered "sustainable" if it contributes substantially to one of the 6 environmental objectives set out in the Taxonomy Regulation, including climate change mitigation and adaptation, pollution prevention and reduction, or the protection and restoration of biodiversity and ecosystems.

In addition, in order to be considered to be sustainable, this economic activity must respect the principle of "not to cause significant harm" to one of the other five objectives of the Taxonomy Regulation and must also comply with basic social criteria (alignment to OECD and UN guidelines on business and human rights).

In accordance with article 7 of the Taxonomy Regulation, the management company draws investors' attention to the fact that the underlying investments of this Fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Provision of environmental, social and governance (ESG) information - in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website [Lyxor.com](https://www.lyxor.com) and is revised each

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

(a) Description of the nature of the ESG criteria considered

To the basket of assets held by the fund, the fund applies an exclusion of issuers associated with serious and repeated violations of the Principles of the United Nations Global Compact and regulatory requirements related to controversial sectors and products. This list is supplemented by a list of companies to exclude in the context of applying the Defence sector policy due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- ✎ Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- ✎ Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- ✎ Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- ✎ Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- ✎ Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- ✎ In the global context of the Societe Generale Group's Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- ✎ In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to

controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution.

The post trade control is on NAV frequency basis.

Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website [Lyxor.com](https://www.lyxor.com).

The exclusion described above is applied to the fund holdings.

2. Description of how the results of the analysis implemented on ESG criteria, in particular exposure to climate risks, are integrated into the investment policy 1

LYXOR extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

Measuring the GHG emissions of its investments is seen as a first step. This will give investors an indication of their financed issues.

After carefully analysing the available indicators and data in order to take into account and measure the transition risks that climate change poses to issuers, LYXOR will not report on these issues at this stage. We will work with our external suppliers to enhance our expertise to report and reflect the transition risk in the years to come.

The portfolio management company disclaims any and all liability relating to information contained in this document and to a decision based or on reliance on this document.

Persons receiving this document undertake to use the information contained therein in the limit of the sole assessment of their own interest.

Any partial or total reproduction of the information or the document is subject to the prior express authorization of the portfolio management company.

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des marchés financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 ("AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 ("UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management compensation policy notably ensures appropriate risk management and adherence to compliance on the part of its employees.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No "carried interest" was paid during the financial year.

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information, in the evolving context of the Covid-19 crisis.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded. However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value.

The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.

- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued;
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities in undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Sub-Fund's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Sub-Fund's reference currency are the exchange rates published the fixing WM Reuters on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Sub-Fund) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Sub-Fund) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transfer commission which, if relevant, may notably be collected by the financial management company. For this Sub-Fund, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: These fees remunerate the delegated financial manager when the Sub-Fund exceeds its objectives. and are invoiced to the Sub-Fund;
- Transfer commissions invoiced to the Sub-Fund.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees charged to the CIS	Basis	Schedule rate
Financial management fees and administrative fees external to the portfolio management company (Auditor, Depository, distribution, lawyers) including tax ⁽¹⁾	Net assets	maximum 0.40% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Outperformance commission	Net assets	None
Transactions commissions	Collection on each transaction	None

⁽¹⁾ including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Accounting currency

The Sub-Fund accounting is carried out in Euro.

Number of outstanding equities	11,119,000	8,248,000	8,928,000	10,243,000	25,069,000
Net asset value	15.5466	15.2984	17.5215	28.4143	25.305
Unit distribution on net capital gains and losses (including advances)	-	-	-	-	-
Unit distribution (including advances)	-	-	-	-	-
Unit tax credit transferred to holders (natural persons) ⁽¹⁾	-	-	-	-	-
Unit capitalisation ⁽²⁾	0.39	-2.29	-10.32	3.87	-5.54

⁽¹⁾ In pursuant to the Fiscal Instruction of 4 March 1993 of the French Tax Department, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits between the circulating units on that date.

⁽²⁾ The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of outstanding units. This calculation method is applied from 1 January 2013.

Compartment creation date: 12 April 2011.

4 inventory as of 29.10.2021

SUB-FUND OF THE MULTI UNITS FRANCE SICAV

LYXOR 10Y US TREASURY DAILY (-2X) INVERSE UCITS ETF (compartment of the Multi Units France Sicav)

Sub-fund/feeder fund	LYXOR 10Y US TREASURY DAILY (-2X) INVERSE UCITS ETF is a sub-fund of the MULTI UNITS FRANCE Sicav.
Management Company	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy, 92987 Paris La Défense, Cedex, France.
Depository and custodian	SOCIETE GENERALE 75886 Paris Cedex 18.
Statutory auditor	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

Information about investments and management

Terms of determination and allocation of amounts available for distribution:

Acc share class: accumulation of all distributable amounts.

Dist share class: the Board of Directors reserves the right to distribute, one or more times a year, all or part of the income and/or to accumulate it. Realised net capital gains will be accumulated.

Management objective:

The Compartment is a passively managed index-based UCITS.

The Sub-fund's investment objective is to achieve inverse exposure, both upwards and downwards, and with amplifying leverage of 2, to the daily performance of the US Treasury bond market with residual maturities of between 6.5 and 10 years by replicating the Solactive 10Y US Treasury Futures Daily (-2x) Inverse Index (the "Benchmark Index"), denominated in US Dollars (USD), while minimising the tracking error between the performance of the Sub-fund and that of the Benchmark as much as possible.

The anticipated ex-post tracking error under normal market conditions is 0.07%.

Benchmark indicator:

The Benchmark Index is a strategy index established by Solactive AG, using a proprietary methodology. The Benchmark Index is calculated and maintained by Solactive AG.

The Benchmark Index offers inverse exposure, both upwards and downwards, to changes in the US Treasury bond market with residual maturities of between 6.5 and 10 years, for which CBOT 10-Year T-Note futures contracts are a representative indicator, with daily leverage of x2. Thus, in the event of a decline in CBOT 10-Year T-Note futures during a trading day, the net asset value of the Sub-fund should increase twice on that same trading day and, in the event of a rise in CBOT 10-Year T-Note futures on a trading day, the Sub-fund's net asset value should fall twice on that same trading day, and shareholders will not benefit from the increase in CBOT 10-Year T-Note futures.

CBOT 10-Year T-Note futures are a representative indicator of the US Treasury bond market with residual maturities of between 6.5 and 10 years, the methodology of which is available at: <https://www.cmegroup.com>

The Benchmark Index's daily performance is equal to the inverse of twice the daily performance of CBOT 10-Year T-Note futures, with cumulative interest (Fed Fund) received daily based on the valuation of the previous day's Benchmark Index fixing.

It is therefore an index representative of a short position strategy with leverage amplification of 2 on the CBOT 10-Year T-Note futures and with a daily adjustment. An additional adjustment may be made during trading if the Benchmark falls by more than 40% in one trading day (i.e. if the increase during the day of the CBOT 10-Year T-Note futures, in absolute value, is greater than 20%).

The monitored performance is that of the Benchmark Index's closing fixed price in USD.

As the methodology for calculating the Benchmark Index is not based on a direct investment in US Treasury bonds, but rather on an indirect investment via futures contracts, the Sub-fund's performance will be impacted by the cost of rolling the above-mentioned futures on a quarterly basis.

This phenomenon may have a negative and gradual impact on the difference between the performance of the Sub-fund and the gross performance of the short positions on the underlyings of the aforementioned futures, in particular in the event of a long-term investment in the shares of the Sub-fund. A comprehensive description of the methodology for the construction of the Benchmark Index as well as information on its composition can be found on the website: <https://www.solactive.com>.

Benchmark Index revision and composition

The revision of the Benchmark Index takes place daily.

The adjustment frequency mentioned above may have an impact in terms of the cost(s) borne by the Sub-Fund and may therefore affect the performance of the Sub-Fund.

Benchmark indicator publication

The Benchmark Index is calculated daily based on the valuation at the 3 p.m. Eastern Standard Time fixing of CBOT 10-Year T-Note futures.

The fixing of the Benchmark Index is available on the website: <https://www.solactive.com>.

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, Solactive AG, the administrator of the Solactive 10Y US Treasury Futures Daily (-2x) Inverse Index, is included in the register of administrators and benchmark indices maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmarks used which describes the measures to be implemented in the event of substantial changes to an index or the cessation of provision of that index.

Investment strategy:

1. Strategy employed

The Sub-Fund will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009. In pursuit of the greatest possible correlation with the performance of the Benchmark Index, the Sub-Fund will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

Investors who subscribe for this Sub-fund are exposed inversely, both upwards and downwards, with a daily amplification leverage of 2, to the performance of the US Treasury bond market with residual maturities of between 6.5 and 10 years, which the Benchmark Index represents.

The Sub-Fund's assets will mainly be bonds issued by an OECD member state or issued by non-governmental issuers residing in one of the OECD countries.

Targeted interest-rate sensitivity of the UCITS:	Between 8 and 20
Currency of the securities in which the Sub-fund invests:	USD: up to 100% of the net assets
Currency risk to which the Subfund is exposed:	0% maximum of the net assets ⁽¹⁾
Geographic regions of the issuers of the securities to which the Subfund is exposed:	US: up to 100% of the net assets

⁽¹⁾ however, a foreign exchange risk may apply to share classes denominated in a currency other than the USD.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the future exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the website: www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

2. Balance sheet assets (excluding embedded derivatives)

The Sub-fund may hold, within the limits of the applicable regulatory ratios, bonds issued by an OECD member state or by non-governmental issuers residing in an OECD member state.

These bonds will be selected on the basis of criteria relating to:

- Of eligibility, in particular:

- o senior debt
- o fixed maturity
- o maximum residual maturity
- o minimum issue size
- o minimum threshold for S&P rating or equivalent

- Of diversification, notably:

Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Article Art. R214-21 of the [French] Monetary and Financial Code);

o geographical

o Sector

For more information on the above-mentioned eligibility and diversification criteria, investors can visit the website: www.lyxoretf.com
The investment in undertaking for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Sub-Fund.

The manager will not invest in units or shares of AIFs or other investment funds established under foreign law. In the context of such investments, the Sub-fund may subscribe for units or shares of UCITS managed by the management company or a company to which it is related.

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of the future optimisation of the Sub-Fund's management the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivatives)

The Sub-Fund will have recourse to index-linked swaps traded over-the-counter, exchanging the value of the equities in the Sub-Fund's assets (or of any other financial instrument or asset held by the Sub-Fund, where appropriate) against the value of the Benchmark Index (in compliance with the description contained in this section's paragraph 1 above).

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including future financial instruments other than index-linked swaps.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Sub-Fund's portfolio, nor regarding the underlying assets of the future financial instruments.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted.

When the Subfund enters into two or more TRS with one or more counterparties above risks mentioned above apply to the portion of assets that are committed under the swap that is prematurely terminated and/or to which the counterparty has defaulted.

4. Securities with embedded derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Sub-Fund can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Sub-Fund is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Sub-Fund's use of forward swap contracts traded over the counter, the Sub-Fund can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets. In the event of default by the counterparty, the Compartment may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt towards the Compartment as part of the guaranteed transaction.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) they must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;
- (c) they must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) they must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20 % of the Sub-Fund's net asset value;
- (e) the Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Fund may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and

Such financial guarantees consist of at least six different issues of which none exceeds 30% of the Sub-Fund's assets.

In compliance with the aforesaid conditions, the guarantees received by the Sub-Fund can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e)(above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points
- (v) and (vi) below;
- (vi) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vii) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Sub-Fund's management company will apply a margin to the financial guarantees received by the Sub-Fund. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged.

Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European collective investment schemes.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Compartment may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

COUNTERPARTY SELECTION POLICY

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Compartment. The selection of counterparties for financial contracts and financial intermediaries is performed rigorously from among the reputable counterparties and intermediaries in the market, on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes various criteria into consideration to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating
 - Quantitative criteria based on the CDS LT spread (absolute criteria, volatility and comparison with a reference group, etc.)
- Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the management company applies its "best execution" policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: www.lyxor.com, section "regulatory information".

Risk profile:

The Sub-fund will primarily be invested in financial instruments selected by the delegated management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Counterparty risk

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

- Interest rate risk

The price of a bond may be affected by unexpected changes in interest rates, which may affect yield curves. The bonds included in the Benchmark Index are therefore exposed to such interest rate fluctuations. In general, the price of a bond rises when interest rates fall, and the price falls when interest rates rise.

LYXOR 10Y US TREASURY DAILY (-2X) INVERSE UCITS ETF
(compartment of the Multi Units France Sicav)

- Risk of daily readjustment of leverage

Investors are inversely and doubly exposed to fluctuations that affect the price or level of the CBOT 10y US Treasury futures underlying the Benchmark Index on a daily basis. In particular, any appreciation of the underlying market will be inversely amplified and will imply an even greater depreciation in the net asset value of the Sub-Fund. The daily readjustment of the exposure included in the underlying double-short formula of the Benchmark Index means that over a period greater than one business day, the Sub-fund's performance will not be equal to twice the inverse of the performance of the CBOT 10y US Treasury futures underlying the Benchmark Index. For example, if the CBOT 10-year US Treasury futures underlying the Benchmark Index increase by 10% on a given business day and then depreciated by 5% on the next business day, the Sub-fund will have depreciated by a total of 12% after these two days (and before deduction of applicable fees), while the CBOT 10-year US Treasury futures underlying the Benchmark Index will have appreciated by 4.5% over the same period.

If the CBOT 10y US Treasury futures underlying the Benchmark Index depreciate by 10% on a given business day, then increase by 6% on the next business day, they will have depreciated by a total of 4.6%, while the Sub-fund will have appreciated (before deduction of applicable fees) by 5.6% over the same period.

Negative scenario 1

If the negative leverage generated is greater than 2 in a scenario of a rise in the Benchmark's underlying asset.

	Benchmark Index underlying		Benchmark Index		leverage induced
	day i performance	day i value	day i performance	day i value	
day 1	10%	100	-20%	100	x-2
day 2	-5%	110	10%	80	x-2
		104.5		88	
total period	4.50%		-12.00%		x-2.67

Negative scenario 2

If the negative leverage involved is less than 2 in a scenario of a decline in the Benchmark's underlying asset.

	Benchmark Index underlying		Benchmark Index		leverage generated
	day i performance	day i value	day i performance	day i value	
day 1	-10%	100	20%	100	x-2
day 2	6%	90	-12%	120	x-2
		95.4		105.6	
total period	-4.60%		5.60%		x-1.22

In addition, it is possible that over a observation period greater than one day and in the event of high volatility of the Benchmark Index's underlyings over this period, the net asset value of the Sub-Fund may fall even though the underlyings of the Benchmark also posted a decline over the same period.

Reverse Leverage Scenario 3

If the leverage generated is positive over the period.

	Benchmark Index underlying		Benchmark Index		leverage generated
	day i performance	day i value	day i performance	day i value	
day 1	5%	100	-10%	100	x-2
day 2	-5%	105	10%	90	x-2
		99.75		99	
total period	-0.25%		-1.00%		x4

Risk that the investment objective is only partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to achieve its investment objective, the Sub-Fund uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Index. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Index, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risks related to the management of

guarantees Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of tax regime applicable to the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Index

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Index" are understood to mean the following situations:

- i) The Benchmark Index is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Index is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Index,
- iv) the supplier of the index makes a significant change to the formula or calculation method of the Benchmark Index (other than a minor modification such as the adjustment of the underlyings of the Index or of the respective weightings between its various components) that cannot be effectively replicated by the Sub-fund at a reasonable cost,
- v) one or more components of the Benchmark Index becomes illiquid, with the listing on an organised market being suspended, or components traded over-the-counter (such as bonds, for example) become illiquid,
- vi) the components of the Benchmark Index are impacted by transaction fees relating to execution, delivery-settlement or specific tax constraints, without these fees being reflected in the performance of the Benchmark Index.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Index undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Sub-Fund (and/or in a valuation of the ST by the Sub-Fund's counterparty in a future financial instrument), the Sub-Fund's net asset value may be affected, notably should the actual treatment of the ST by the Sub-Fund differ from the ST's treatment in the methodology used by the Benchmark Index.

- Liquidity risk (primary market)

If, when the Sub-Fund (or one of its counterparties for FFIs) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Sub-Fund could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The ETF's equity price can deviate from its indicative net asset value. The liquidity of the Sub-Fund's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Index, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Index, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Sub-Fund's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

- Low diversification risk

The Benchmark Index to which the investors are exposed covers the US treasury bond market only and therefore does not necessarily allow for as broad a diversification of the assets as would be the case of an index that is exposed to several regions, sectors or strategies. The exposure to such an index with such low diversification can result in greater volatility than in more diversified markets. Nevertheless, the diversification rules under the UCITS standards apply at all times to the Sub-fund's underlying assets.

- Credit risk

It represents the potential risk of an improvement in the credit quality of the issuer, which may in particular result in an improvement in the rating carried out by the issuer's rating agencies, which would then have a positive impact on the price of the issuer's bonds and thus a negative impact on the net asset value of the Sub-Fund. The Sub-fund is exposed to U.S. government credit risk.

- Sustainability risks

The Sub-Fund does not consider sustainability factors in the investment decision-making process but remains exposed to sustainability risks. The occurrence of such risks could have a negative impact on the value of the investments made by the Sub-Fund. Additional information can be found in the "Sustainability Information" section of the Prospectus.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

Investors who subscribe for this Sub-fund seek inverse exposure, both upwards and downwards, with a daily amplification leverage of 2, to the performance of the US Treasury bond market with residual maturities of between 6.5 and 10 years.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

As an arbitrage product, this Sub-Fund may not be suitable for investors wishing to make a medium or long-term investment.

U.S. Persons (as defined in the "Commercial information" section of the Prospectus) may not invest in the Sub-fund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy-92800 Puteaux.*
- *Creation date of the Multi Units France Sicav: 04 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 10 December 2013.*

activity report

The fund replicates the performance of the Solactive 10Y US Treasury Futures Daily (-2x) Inverse Index USD (Ticker: SODI2TYF).

Performance trend at the closing date:

Share name	ISIN	Share currency	Performance from 28/02/19 to 31/10/19			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor 10Y US Treasury Daily (-2x) Inverse UCITS ETF - Acc	FR0011607084	USD	6.16% ⁽¹⁾	6.54%		-28.90%

⁽¹⁾ "The difference between the yearly performance of the fund and that of its Benchmark Index is due to:

- the management and the administrative fees;
- index replication costs (for example the index rebalancing cost);
- - taxation incurred in relation to the methodology used in the Benchmark Index»

The tracking error realised is 0.0040%. The target tracking error over the period was 0.07%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams. This difference is considered insignificant.

Index Linked Swap's counterparty is: Société Générale.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction.

Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

This Fund is covered by Article 6 of Regulation (EU) 2019/2088 (the "SFDR Regulation"). It does not promote environmental and/or social characteristics and does not aim to invest sustainably

Transparency of environmentally sustainable investments in periodic reports under Regulation (EU) 2020/852

Regulation (EU) 2020/852 on the establishment of a framework for promoting sustainable investments (the "Taxonomy Regulation") sets out the criteria for determining whether an economic activity is environmentally sustainable in the European Union.

According to the Taxonomy Regulation, an activity can be considered "sustainable" if it contributes substantially to one of the 6 environmental objectives set out in the Taxonomy Regulation, including climate change mitigation and adaptation, pollution prevention and reduction, or the protection and restoration of biodiversity and ecosystems.

In addition, in order to be considered sustainable, this economic activity must respect the principle of "not causing significant harm" to one of the other five objectives of the Taxonomy Regulation and must also comply with basic social criteria (alignment with OECD and UN guidelines on business and human rights).

In accordance with article 7 of the Taxonomy Regulation, the management company draws investors' attention to the fact that the underlying investments of this Fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

LYXOR 10Y US TREASURY DAILY (-2X) INVERSE UCITS ETF (compartment of the Multi Units France Sicav)

Provision of environmental, social and governance (ESG) information - in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website [Lyxor.com](https://www.lyxor.com) and is revised each

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

(a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

To the basket of assets held by the fund, the fund applies an exclusion of issuers associated with serious and repeated violations of the Principles of the United Nations Global Compact and regulatory requirements related to controversial sectors and products. This list is supplemented by a list of companies to exclude in the context of applying the Defence sector policy due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group's Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defence policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Methodology and implementation of this analysis

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution.

The post trade control is on NAV frequency basis.

Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website [Lyxor.com](https://www.lyxor.com).

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

LYXOR extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

Measuring the GHG emissions of its investments is seen as a first step. This will give investors an indication of their financed issues.

After carefully analysing the available indicators and data in order to take into account and measure the transition risks that climate change poses to issuers, LYXOR will not report on these issues at this stage. We will work with our external suppliers to enhance our expertise to report and reflect the transition risk in the years to come.

Any partial or total reproduction of the information or the document is subject to the prior express authorization of the portfolio management company.

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des marchés financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 ("AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 ("UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors. The Lyxor International Asset Management compensation policy notably ensures appropriate risk management and adherence to compliance on the part of its employees.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No "carried interest" was paid during the financial year.

Lyxor's best selection and execution policy

Information on best selection and execution policies is available at: www.lyxor.com.

Transparency of securities financing operations and reuse of financial instruments SFTR regulation

(Accounting currency of the CIU)

1. General information.

1.1. Amount of securities and raw materials loaned in proportion with the total assets that can be loaned, defined as excluding the cash and cash equivalents.

Securities lending

% of assets that can be loaned	-
--------------------------------	---

1.2. Amount of the assets committed to each type of securities financing operation and total return swap, expressed in absolute value (in the currency of the collective investment undertaking) and in proportion with the assets under management of the collective investment undertaking.

	Securities lending ⁽¹⁾	Securities borrowing ⁽²⁾	Repo operations ⁽³⁾	Reverse repo operations ⁽⁴⁾	TRS ⁽⁵⁾
Absolute value	-	-	-	-	115,865,413.51
% of assets under management	-	-	-	-	100.00

⁽¹⁾ The amount of assets engaged in securities lending transactions corresponds to the market value of the securities lent at the balance sheet date.

⁽²⁾ The amount of assets engaged in securities borrowing transactions corresponds to the market value of the guarantees (cash or securities) delivered by the fund as part of the securities borrowing on the balance sheet date.

⁽³⁾ The amount of assets engaged in repurchase transactions corresponds to the market value of the securities repurchased on the balance sheet date.

⁽⁴⁾ The amount of assets engaged in reverse repurchase transactions corresponds to the market value of securities purchased under repurchase agreements at the balance sheet date.

⁽⁵⁾ The amount of assets committed in the TRS corresponds (i) for the TRS for which the management company has undertaken to deliver a basket of securities to the TRS counterparty, to the market value of the basket of securities committed in the TRS, increased by the market value of the TRS on the accounting date and/or (ii) for the TRS for which the management company does not deliver a basket of securities, to the value of the nominal value of the TRS on the balance sheet date.

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information, in the evolving context of the Covid-19 crisis.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded. However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.

Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.

- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities of UCITS operating under French law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.

Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

The exchange rates used for the assessment of financial instruments listed in a currency other than the Sub-Fund's reference currency are the exchange rates published the fixing WM Reuters on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment)

multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- outperformance commissions: these commissions reward the management company when the Sub-fund has exceeded its objectives and are invoiced to the Sub-fund;
- activity fees charged to the Subfund;

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Sub-Fund	Basis	Schedule rate
Financial management fees and administrative fees external to the portfolio management company (Auditor, Depository, distribution, lawyers) including tax ⁽¹⁾	Net assets	Maximum 0.20% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Outperformance commission	Net assets	None
Transactions commissions	Collection on each transaction	None

⁽¹⁾ including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Accounting currency

The Subfund accounting is carried out in USD.

Indication of accountancy changes declared to each of the shareholders individually

- - Occurred change: None.
- - Future change: None.

Other changes declared to each of the shareholders individually *(Not certified by the auditor)*

- - Occurred change: None.
- - Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Acc share class: accumulation of all distributable amounts.

Dist share class: the Board of Directors reserves the right to distribute, one or more times a year, all or part of the income and/or to accumulate it. Realised net capital gains will be accumulated.

Lyxor 10Y US Treasury Daily (-2x) Inverse UCITS ETF is a French-governed sub-fund authorised by the French Financial Market Authority (Autorité des Marchés Financiers - AMF). The prospectus of the Sub-Fund is available on the website www.lyxoretf.com or upon request from the Management Company.

The Sub-Fund does not benefit in any way from sponsorship, support, promotion and is not sold by Solactive AG. Solactive AG makes no warranties or undertakings, either expressly or implicitly, or as to the results to be obtained by using the Benchmark and/or the Benchmark's trademark or the level at which the Benchmark is located at a given time and on a given day or any other type. The Benchmark Index is calculated and published by Solactive AG. Solactive AG makes every effort to ensure that the Benchmark is correctly calculated. Regardless of its obligations towards the issuer, Solactive AG is under no obligation to report errors affecting the Benchmark to third parties, including the investors or financial intermediaries of the Sub-Fund. Neither the publication of the Benchmark Index by Solactive AG nor the license of the Benchmark or its trademark in connection with the Sub-Fund constitutes a recommendation by Solactive AG to invest in the shares of the Sub-Fund and under no circumstances represents a guarantee or an opinion of Solactive AG of an investment in the shares of the Sub-Fund. Solactive AG shall not be liable for the consequences of any opinions or opinions arising from this statement or any omission.

(1)**

-

Unit capitalisation*

4.81 -7.09 -9.62 12.78 -1.73

* The amounts of the unit distribution, the unit capitalisation and the tax credits are indicated in the accounting currency of the Compartment. The unit capitalisation corresponds to the sum of profit and loss and net capital gains or losses on the number of circulating units. This calculation method is applied from 1 January 2013.

⁽¹⁾ Pursuant to the Fiscal Instruction of 4 March 1993 of the French Tax Department, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits between the circulating units on that date.

activity
report

SOCIÉTÉ D'INVESTISSEMENT À CAPITAL VARIABLE - SICAV (VARIABLE CAPITAL

FISCAL YEAR ENDING ON: 29.10.2021

Compartments / feeder	LYXOR FTSE ITALIA PMI PIR 2020 (DR) UCITS ETF is a Sub-Fund of the MULTI UNITS FRANCE Sicav.
Management Company	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy – 92987 Paris La Défense Cedex.
Depository and Custodian	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

Information about investments and management

Classification:

Equities from countries in the Eurozone.

The Lyxor FTSE Italia PMI PIR 2020 (DR) UCITS ETF Sub-Fund (hereinafter the “Sub-Fund”) is permanently exposed at least 60% to one or more markets of equities issued in one or more eurozone countries, including possibly the French market.

The Sub-Fund is an index-based fund of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution:

Capitalisation of all the amounts available for distribution.

Management objective:

The Compartment is a passively managed index-based UCITS.

The management objective of this Sub-Fund is to replicate the upward or downward evolution of the FTSE Italia PIR PMI Net Tax index (the “Benchmark Indicator”), listed in Euros (EUR), while insofar as possible minimizing the tracking error between the Sub-Fund’s performances and those of the Benchmark Indicator. It is representative of the performances of mid-cap stocks listed on Borsa Italiana. The maximum tracking error between the change in the net asset value of the Sub-Fund and that of the Benchmark Indicator is 2%.

Benchmark indicator:

The Benchmark Indicator is the FTSE Italia PIR PMI Net Tax Index.

The Benchmark Indicator is a free float-adjusted market capitalisation weighted index representing the performance of small and mid-cap stocks listed on Borsa Italiana.

The Benchmark Indicator includes the constituents of the FTSE Italia Mid Cap Index and twenty constituents of the FTSE Italia Small Cap Index selected on the basis of daily trading volumes and market capitalisation.

The constituents of the Benchmark Indicator are consistent with the regime “Piano Individuale di Risparmio a lungo termine” (PIR), set up before 31 December 2018 or from 1 January 2020, according to the Italian Finance Act 2017 (Law No. 232 of 11 December 2016) as amended and supplemented.

The FTSE Italia Mid Cap Index represents the 60 companies listed on Borsa Italiana best ranked in terms of market capitalisation and liquidity (based on daily trading volumes) and which are not included in the FTSE MIB Index.

The FTSE Italia Small Cap Index represents the companies listed on Borsa Italiana that verify the cash and market capitalisation criteria required by FTSE and are not included in the FTSE MIB Index and FTSE Italia Mid Cap Index.

At each rebalancing, the weighting of the Benchmark Indicator constituents from the FTSE Italia Small Cap Index is set at 5%.

Each component of the Benchmark Indicator is capped at 10%, at each quarterly rebalancing of the Benchmark Indicator. Any component with a weighting greater than 10% will be reduced to a weighting of 10%.

The sum of the weights of components with a weight greater than 5% is capped at 40%.

The Benchmark Indicator is rebalanced quarterly in March, June, September and December.

The Benchmark Indicator is a Net Reinvested Dividends index. A Net Reinvested Dividends index considers the performance of the components, including net dividends and all forms of distribution in the performance of the index.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator's components are available on the website: www.ftserussell.com/.

Benchmark Index revision and composition

The revision of the Reference Indicator takes place quarterly.

The exact composition and revision rules of the Benchmark Indicator published by FTSE are available on the website: www.ftsrussell.com

The above-mentioned frequency of rebalancing has no effect on costs as part of the implementation of the investment strategy.

Benchmark indicator publication

The Benchmark Index is calculated on a daily basis at closing prices using the official closing stock market prices for the constituent stocks.

The Benchmark is also calculated in real time each trading day.

The closing price of the Benchmark Indicator is available on the website www.ftserussell.com/.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the administrator FTSE International Limited of the Benchmark has until 31 December 2023 to request authorisation or registration, where applicable, from the competent authority.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmarks used which describes the measures to be implemented in the event of substantial changes to an index or the cessation of provision of that index.

Investment strategy:

1.Strategy employed

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009. In order to seek the highest possible correlation with the performance of the Benchmark Indicator, the Compartment will be exposed to the Benchmark Indicator via a direct replication method, which means that the Compartment will invest in a basket of assets comprising the Benchmark Indicator and/or financial instruments representative of all or part of the securities comprising the Benchmark Indicator.

In addition, the sub-fund may use forward financial instruments ("FFIs"). Futures in which the sub-fund is likely to invest include contracts such as index futures, futures on all or part of the Benchmark Index components, and hedging swaps entered into to minimise the Sub-Fund's tracking error.

Where the Subfund's investment strategy (e.g. use of futures) requires it to hold cash, the Manager may, in the best interests of the holders, use deposits with credit institutions and/or invest cash in on-balance sheet assets and/or off-balance sheet assets (as described below).

The shares of the Compartment are included in the list of investments eligible for the "Piano Individuale di Risparmio a lungo termine" scheme (PIR), established before 31 December 2018 or from 1 January 2020, according to the Italian Finance Act 2017 (Law No. 232 of 11 December 2016) as amended and supplemented.

The Compartment shall invest at least 70% of its assets in financial instruments, whether or not they are traded on a regulated market or multilateral trading facility, issued by or entered into with companies domiciled in Italy, or in a Member State of the European Union or EEA with a permanent establishment in Italy.

At least 25% of these financial instruments, which corresponds to 17.5% of the total value of the Compartment's assets, shall be issued by companies not belonging to the FTSE MIB Index or any other equivalent index. At least 5% of these financial instruments, which corresponds to 3.5% of the total value of the Compartment's assets, shall be issued by companies not belonging to the FTSE MIB Index and FTSE Italia Mid Cap Index or any other equivalent index.

The Compartment may not invest more than 10% of the total value of its assets in financial instruments resulting from or entered into with a single company, or companies belonging to the same group, or in cash deposits.

The Compartment may not invest in companies domiciled in countries that do not have an adequate information exchange agreement with Italy.

In order for the Sub-Fund to be eligible for the PIR law for a calendar year, these investment restrictions will be complied with for at least two-thirds of each calendar year from 01/01/2020.

In order to optimise the direct tracking method with respect to the Benchmark, the Sub-Fund, represented by its appointed financial manager, may decide to use a “sampling” technique consisting in investing in a selection of representative securities composing the Benchmark in order to limit the costs associated with investment in the various components of the Benchmark. A sampling replication strategy could notably lead the Sub-Fund to invest in a selection of representative securities (and not all securities) comprising the Benchmark, in proportions different from those of the Benchmark Index or even to invest in securities other than the Benchmark Index components.

In order to allow investors to benefit from transparency on the direct tracking method used (full tracking of the Benchmark or sampling to limit replication costs) and its consequences in terms of assets held by the Sub-Fund, information on the updated composition of the basket of balance sheet assets held in the Sub-Fund’s portfolio is available on the page dedicated to the Sub-Fund available on the website www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

As part of the management of its exposure, the Sub-Fund may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Index, in particular in the event of a public offering affecting one of the securities making up the Benchmark Index or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Index.

In this case, the manager intends to use mainly the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Sub-Fund will mainly be invested in the securities described below:

• Equities

The Sub-Fund will be mainly invested in the shares comprising the Benchmark Index.

• Holding of shares or units in other UCI or investment funds

The Sub-Fund may invest up to 10% of its assets in units or shares of the following CIS or investment funds:

- French or foreign UCITS compliant with Directive 2009/65/EC - For the purposes of these investments, the Sub-Fund may subscribe for units or shares in UCITS managed by the Management Company or a company to which it is linked.

3. Off-balance sheet assets (derivative instruments)

The Sub-Fund may invest in the following FFIs:

• Eligible markets:

- regulated
- organised
- over-the-counter

• Risks in which the Sub-Fund wishes to trade:

- Equities

• Types of operations, all transactions must be limited to achieving the management objective:

- hedging

- exposure

• Types of instruments used:

- futures: on equities and indices
- forward exchange contracts

• Strategy for using derivatives to achieve the investment objective:

- General hedging of the portfolio, certain risks, securities, etc. - up to 100% of assets

- reconstitution of synthetic exposure to assets and risks - up to 100% of assets

The counterparties of OTC derivatives processed by the Sub-Fund will be selected in accordance with the Management Company's best execution policies (including the execution matrix by asset type mentioned in the Appendix). The above-mentioned policy can be accessed at the following address: <https://www.lyxor.com/politique-demeilleure-execution-liam-January-2020-en>

Counterparties to futures will have no discretion over the composition of the Sub-Fund’s investment portfolio over the underlying assets of these futures, in accordance with regulatory limits and requirements.

Situations of conflict of interest may arise between the Management Company and Societe Generale when Societe Generale acts as a counterparty to FFIs. These situations are governed by the Management Company's conflict of interest management policy.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Sub-Fund can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10 % of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

The Sub-Fund may use various techniques to manage its portfolio efficiently in compliance with Article R214-18 of the French Monetary and Financial Code, including the temporary sale of securities.

- Maximum proportion of assets under management that may be covered by securities financing contracts: up to 25% of the Sub-Fund's assets.

- Expected proportion of assets under management that can be financed by securities transactions: 0% of the Sub-Fund's assets

In this context, the Management Company has appointed Societe Generale as an intermediary (hereinafter the "Agent"). In the event of recourse to temporary sales, the Agent may be authorised (i) to carry out, on behalf of the Sub-Fund, securities lending transactions, governed by GMSLA (Global Master Securities Lending Agreements) and/or any other internationally recognised framework agreements, and (ii) to invest, on behalf of the Sub-Fund, the cash received as collateral for these securities lending transactions, in accordance with and within the limits defined by the securities lending agreement, the rules of this prospectus and the regulations in force.

As a reminder, the Management Company is an entity of the Societe Generale Group and is therefore linked to the Agent.

Where Société Générale S.A. is appointed as Agent, it is not authorised to act as a counterparty in securities lending transactions. If such temporary sales are used:

- the Subfund will be entitled to all income from such transactions securities, net of any direct and indirect operating costs fees.
- the above operational costs/fees related to efficient portfolio management techniques will be those incurred by the Management Company, the Agent (if applicable) and/or the other intermediaries involved in these transactions in connection with their services;
- the direct or indirect operating costs/fees will be calculated as a percentage of the gross income generated by the Sub-Fund. Information on operational, direct and indirect fees/costs and the identity of the entities to which these fees/costs are paid will be mentioned in the Sub-Fund's annual report; and
- income from the lending of securities will be paid to the Sub-Fund after deduction of any direct and indirect operating costs/fees that may be borne by the Agent and the Management Company. To the extent that these fees/costs, direct and indirect, do not increase the operating costs of the Sub-Fund, they have been excluded from current expenses.

The Compartment's annual report will include, where applicable, the following details:

- the exposure generated through effective portfolio management techniques;
- the identity of the counterparty(ies) to these effective portfolio management techniques;
- the nature and amount of any collateral received to reduce the Subfund's counterparty risk, and;
- income from effective portfolio management techniques for the whole period concerned, as well as direct and indirect operational costs and expenses incurred.

8. Financial guarantees

In all cases in which the Sub-Fund is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Sub-Fund's use of temporary purchases and sales of securities, the Sub-Fund can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Sub-Fund is totally neutralised.

Any financial guarantee received by the Sub-Fund will be provided to the Sub-Fund in full ownership and listed in the Sub-Fund's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Sub-Fund's assets. In the event of default by the counterparty, the Sub-Fund may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt towards the Sub-Fund as part of the guaranteed transaction.

Any financial guarantee received by the Sub-Fund within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) they must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;
- (c) they must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) they must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Sub-Fund's net asset value;
- (e) the Sub-Fund's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Fund may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and
- such financial guarantees consist of at least six different issues of which none exceeds 30% of the Sub-Fund's assets.

In compliance with the aforesaid conditions, the guarantees received by the Sub-Fund can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market money-market instruments
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e)(above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment.

The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Collateral received in a currency other than the euro may be subject to an additional margin.

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged.

Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Sub-Fund may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Sub-Fund is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

COUNTERPARTY SELECTION POLICY

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Sub-Fund. The selection of counterparties for financial contracts and financial intermediaries is performed rigorously from among the reputable counterparties and intermediaries in the market, on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes various criteria into consideration to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating
- Quantitative criteria based on the CDS LT spread (absolute criteria, volatility and comparison with a reference group, etc.)

Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information about this policy and on the relative importance of the execution criteria for each asset class, please visit our website: www.lyxor.com, “regulatory information” section.

Risk profile:

The Sub-Fund will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

The holder is exposed through the Subfund mainly to the following risks:

- Equity risk

An equity price can vary upwards or downwards, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

If, when the Sub-Fund (or one of its counterparties for future financial instrument (“FFI”)) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase/sale price discrepancies, the value and/or liquidity of the Sub-Fund could be negatively affected.

Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Sub-Fund's units or equities on a place of listing can be affected by any suspension, that could notably be due to: i) suspension or stoppage of the calculation of the Benchmark Indicator, and/or

ii) trading in the market(s) in the Benchmark's underlying assets is suspended, and/or

iii) an exchange cannot obtain or calculate the Sub-Fund's indicative net asset value, and/or

iv) a market maker fails to comply with an exchange's rules, and/or

v) A failure of this marketplace's IT or electronic systems.

- Risks arising from a lack of perfect replication

Replicating the Benchmark by investing in all components of the Benchmark can be costly or very difficult to operate. The Sub-Fund's manager may also use optimisation techniques, in particular the sampling technique, which consists in investing in a selection of representative securities (and not all securities) comprising the Benchmark, in proportions different from those of the Benchmark Index or even investing in securities other than the components of the index or financial futures.

The use of these optimisation techniques may lead to an increase in the ex-post tracking error and will notably lead to different performances between the Sub-Fund and the Benchmark Indicator.

- Counterparty risk

The Sub-Fund is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as “OTC derivatives”) and/or efficient portfolio management techniques (hereinafter referred to as “EPMTs”). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Sub-Fund may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realisation of this risk may result in losses for the Sub-Fund and have an impact on the ability of the Sub-Fund to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Sub-Fund's assets per counterparty.

- Risk related to investment in mid-cap companies

The Compartment is exposed to mid-cap companies, which may increase market and liquidity risks. Market movements impacting the prices of these securities are therefore more pronounced, both upwards and downwards, and faster than on large caps. The net asset value of the Sub-Fund may have the same behaviour and therefore decline more quickly and significantly than a similar investment in large-cap securities.

- Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

The Sub-Fund may use over-the-counter forward Financial Instruments (“FFIs”) or listed FFIs, in particular futures contracts and/or hedging swaps. These futures can result in a series of risks on the level of the contract, including but not limited to the following: counterparty risk, event affecting the hedging, event affecting the Benchmark, risk related to the tax regime, risk related to the regulations and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI contract, which could affect the Sub-Fund's net asset value.

Investing in futures may involve a high level of risk. The amount required to trade certain FFIs is potentially much lower than the exposure obtained through these instruments, which implies a “leverage” at the level of each transaction. A relatively limited market movement would then have a proportionately very high impact, which could be favourable or unfavourable to the Fund.

The market value of forward financial instruments is highly volatile and may therefore be subject to significant fluctuations.

The Sub-Fund may use OTC futures. Over-the-counter transactions may be less liquid than transactions traded on organised markets, where trading volumes are generally higher, and their prices may be more volatile.

- Risk related to the use of effective portfolio management techniques

In the event that the counterparty to the efficient portfolio management technique (hereinafter referred to as the “EPMT”) processed by the Sub-Fund fails to provide the counterparty, the Sub-Fund may be exposed to a risk in the event that the value of the guarantees received by the MF is lower than the value of the assets of the MF transferred to the counterparty under the EPMT in question. This risk could materialise in particular in the event of (i) a poor valuation of the securities subject to this transaction and/or (ii) adverse market movements and/or (iii) a deterioration in the credit rating of issuers of securities received as collateral and/or (iv) illiquidity of the market on which the collateral received is admitted to listing. Unitholders should note that (i) EPMTs may be entered into with Societe Generale (entity of the same group as the Management Company) and/or (ii) that Societe Generale may be appointed as agent of the Sub-Fund under the EPMTs.

- Risks related to the management of guarantees

Operational risk:

The Sub-Fund may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Sub-Fund may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Sub-Fund is established, authorised for marketing or listed can affect the tax treatment of investors.

In this case, the Sub-Fund's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Sub-Fund's underlyings can affect the Sub-Fund's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Sub-Fund (and/or to its counterparty in the FFI), the Sub-Fund's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Sub-Fund is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to regulations applicable to the underlyings

In case of change of the regulations applicable to the Sub-Fund's underlyings, the Sub-Fund's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Sub-Fund's equities. The calculation of the Sub-Fund's net asset value can also be affected.

If the event persists, the Sub-Fund's manager will decide on measures having to be adopted, which can have an impact on the Sub-Fund's net asset value.

"Events affecting the Benchmark Index" are understood to mean the following situations:

- i) The Benchmark Index is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Index is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark,
- iv) The index provider makes a material change in the Benchmark calculation formula or method (other than a minor modification such as an adjustment to this Benchmark's underlying components or their respective weightings) that the Sub-Fund cannot effectively replicate at a reasonable cost;
- v) One or more Benchmark components become illiquid because they are no longer traded on a regulated market or because their over-the-counter trading (e.g. bonds) is disrupted;
- vi) The Benchmark Index's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Index's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Index undertake an unanticipated review of a corporate action ("CA"), that contradicts a prior and official announcement that had resulted in a valuation of the CA by the Sub-Fund (and/or in a valuation of the CA by the Sub-Fund's counterparty in a future financial instrument), the Sub-Fund's net asset value may be affected, notably should the actual treatment of the CA by the Sub-Fund differ from the CA's treatment in the methodology used by the Benchmark Index.

- Risk specific to the PIR law

The Sub-Fund intends to comply with the requirements of the PIR law, the long-term individual savings plan introduced in Italy by the 2017 Finance Act by referring to the Benchmark Indicator. Factors that may affect the Sub-Fund's ability to comply with the PIR law include updates to the methodology of the Benchmark Indicator provider, the listing or changes in the incorporation of securities held by the Sub-Fund, or securities that no longer meet the criteria prescribed by the PIR law. When securities are existing components of the Benchmark Indicator, they will remain in the Benchmark Indicator and may therefore continue to be held by the Sub-Fund until they are removed from the Benchmark Indicator at the next scheduled rebalancing. The Sub-Fund may also hold other securities in mitigating circumstances in addition to the components of the Benchmark Indicator. The Management Company may manage these events at its discretion. In addition, the regulatory framework of the PIR law may be subject to change from time to time, which may in turn lead to a change in the Benchmark Indicator or the investment strategy, subject to the authorisation of the CSSF.

- Sustainability risks

The Sub-Fund does not consider sustainability factors in the investment decision-making process but remains exposed to sustainability risks. The occurrence of such risks could have a negative impact on the value of the investments made by the Sub-Fund. Additional information can be found in the "Sustainability Information" section of the Prospectus.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

The investor who subscribes to this Sub-Fund wishes to gain exposure to the equity market of mid-caps listed on Borsa Italiana.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for three years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Sub-Fund's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment term is greater than 5 years.

U.S. Persons (as defined in the "COMMERCIAL INFORMATION" prospectus) may not invest in the Sub-Fund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

LYXOR FTSE ITALIA PMI PIR 2020 (DR) UCITS ETF (compartment of the Multi Units France Sicav)

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Sub-Fund's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy-92800 Puteaux.*

activity report

The fund replicates the performance of the FTSE Italia PMI Net Tax Index EUR (Ticker:ITPIRMEN).

Performance trend at the closing date:

Share name	ISIN	Share currency	Performance from 28/02/19 to 31/10/19			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor FTSE Italia PMI PIR 2020 (DR) UCITS ETF - Acc	FR0011758085	EUR	64.24% ⁽¹⁾	64.06%		87.80%

⁽¹⁾ "The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs (for example the index rebalancing cost);
- taxation incurred in relation to the methodology used in the Benchmark;
- possible use by the manager of sampling or advanced index management techniques;

The tracking error realised is 0.2454%. The target tracking error over the period was 2%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the statutory auditor) None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the SICAV that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: The method chosen is the commitment method.

This Fund is covered by Article 6 of Regulation (EU) 2019/2088 (the "SFDR Regulation"). It does not promote environmental and/or social characteristics and does not aim to invest sustainably in the European Union.

Transparency of environmentally sustainable investments in periodic reports under Regulation (EU) 2020/852

Regulation (EU) 2020/852 on the establishment of a framework for promoting sustainable investments (the "Taxonomy Regulation") sets out the criteria for determining whether an economic activity is environmentally sustainable in the European Union.

According to the Taxonomy Regulation, an activity can be considered "sustainable" if it contributes substantially to one of the 6 environmental objectives set out in the Taxonomy Regulation, including climate change mitigation and adaptation, pollution prevention and reduction, or the protection and restoration of biodiversity and ecosystems.

In addition, in order to be considered to be sustainable, this economic activity must respect the principle of "not to cause significant harm" to one of the other five objectives of the Taxonomy Regulation and must also comply with basic social criteria (alignment to OECD and UN guidelines on business and human rights).

In accordance with article 7 of the Taxonomy Regulation, the management company draws investors' attention to the fact that the underlying investments of this Fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Provision of environmental, social and governance (ESG) information - in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website [Lyxor.com](https://www.lyxor.com) and is revised each

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

(a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

- French, German & Luxembourgish Funds (Fonds Communs de Placement - FCP) and SICAV (*)
 - Securities of issuers domiciled in Europe: in order to prevent excessive costs inherent in the voting process, Lyxor participates in general meetings when the consolidated holding represents more than 0.10% of the company's capital
 - Securities of issuers domiciled in the United States: Lyxor will exercise its right to vote on its largest consolidated holdings
 - Securities of issuers domiciled in Japan: Lyxor will exercise its right to vote on its largest consolidated holdings
- (*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership.

In terms of engagement, Lyxor has defined an engagement policy that is structured around three axes: an engagement related to general meetings, an engagement related to environmental, social and/or governance issues, and an engagement related to climate. This third axis comprises four engagement campaigns:

- The first campaign related to the Climate Action 100+ initiative, committing Lyxor to ask companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosure) recommendations.
- The second campaign related to plastics and the circular economy.
- The third campaign related to localized water management.
- The fourth campaign related to responsible cleantech.

This fund is part of the following campaigns: Corporate Governance, General Meeting

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (in connection with Lyxor's voting policy). • Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group's Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defence policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website [Lyxor.com](https://www.lyxor.com)

Active Ownership - Operational set up:

In addition to the internal analysis carried out, Lyxor uses the services of ISS (Institutional Shareholder Services), as a proxy advisor.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

Engagement policy:

To carry out its engagement campaigns, Lyxor can:

- organize one-on-one meetings with management, board members, investor relations, sustainable development teams or any person within the company who can provide answers to the issue;
- (ii) partner with other management companies to have greater influence on targeted companies;
- (iii) join working groups or specialised initiatives in certain areas.

Description of how the results of the analysis on ESG issues are integrated in investment policies

In terms of engagement, the details are presented below.

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the [Lyxor.com](https://www.lyxor.com) website.

LYXOR FTSE ITALIA PMI PIR 2020 (DR) UCITS ETF (compartment of the Multi Units France Sicav)

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:
 - Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.
- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:
 - The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
 - Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
 - A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).
- With regard to carbon risk management:
 - Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).
- In regards with the portfolio's exposure to issuers offering environmental solutions :
 - Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).
 - In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuers in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

LYXOR FTSE ITALIA PMI PIR 2020 (DR) UCITS ETF (compartment of the Multi Units France Sicav)

Portfolio ESG Rating as of October 2021

For each issuer (Corporate & Government), ESG Industry sector classification is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The ESG score calculated at the portfolio level measures the capacity of the underlying issuers to manage the risks and key opportunities associated with environmental, social and governance factors. The risk scale ranges from 0 (high risk) to 10 (low risk). Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: employment, social relations, health and safety, training, compliance with ILO conventions
- Governance: Board of Directors or Supervisory Board, Audit and Internal Control, Executive Compensation

Source: The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Portfolio Exposure to ESG Controversies

Measures the portfolio's exposure to companies experiencing controversies relating to their compliance with international standards as a function of their degree of severity:

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: indicates that the company is not involved in any major controversies
- None: Sovereign and/or Company not covered

Red Flag	0%
Orange Flag	1%
Yellow Flag	4%
Green Flag	87%

Carbon Measurement methodology

The GreenHouse Gas Protocol (GHG Protocol) was launched in 2001 by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: direct emissions resulting from the burning of fossil fuel resources owned or controlled by the company.
- Scope 2: indirect emissions related to the purchase or production of electricity.
- Scope 3: all other indirect emissions from the extended supply chain to the transport of goods and persons.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio.

The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio invested in both equities and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest - total debt.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or the portion of the company's revenue generated from fossil fuel energies or the portion of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon:

Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gas	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of : \$ 1,000,000

Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested

Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

LYXOR FTSE ITALIA PMI PIR 2020 (DR) UCITS ETF (compartment of the Multi Units France Sicav)

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges - this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Enenergy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	12.6%	0.0%	0.0%
Some efforts	61.3%	75.9%	18.4%
Limited efforts/Information	3.8%	17.5%	10.3%
No effort/No evidence	22.3%	6.5%	71.4%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign each one a score exposure to transition risks, while taking into account their ability to manage these risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low- carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.1
Low carbon transition management Score	3.6
Operational Transition	10.1%
Product Transition	10.1%
Neutral	75.3%
Solutions	8.3%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

Share of issuers in terms of power generation in portfolio	12.4%
--	-------

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures. Source: MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	11.6%	Liquid Fuel	0.0%	Natural Gas	51.7%
Nuclear		Renewables	36.6%	Thermal Coal	

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. Those issuers are likely to benefit from a low carbon transition

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenu dedicated to environmental solutions between:	
0-19.9%	21%
20-49.9%	6%
50-100%	2%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	16.6%	Energy Efficiency	27.4%	Green Building	0.6%
Pollution Prevention	7.4%	Sustainable Water	9.7%	Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

		Environmental Solutions Contribution			
Alternative Energy	4.3%	Energy Efficiency	0.9%	Green Building	0.1%
Pollution Prevention	0.2%	Sustainable Water	0.5%	Sustainable Agriculture	0.0%

LYXOR FTSE ITALIA PMI PIR 2020 (DR) UCITS ETF (compartment of the Multi Units France Sicav)

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

Trucost's Climate Change Physical Risk dataset helps investors to

understand their exposure to the physical impacts of climate change as part of future climate change scenarios. The Trucost dataset evaluates the company's exposure to physical risk at the asset level based on a database of over 500,000 assets

mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	1%
Coldwave	27%
Flood	2%
Heatwave	8%
Hurricane	1%
Water Stress	54%
Wildfire	6%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.).

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	1.5%	95.5%	3.0%	85.6%	14.4%	
Carbon Emissions	0.5%	87.5%	11.9%	87.4%	11.8%	0.7%
Electronic Waste	0.7%	3.6%	95.7%	88.5%	10.9%	0.7%
Opportunities in Green Building	0.5%	87.1%	12.4%	99.4%	0.0%	0.6%
Opp's in Renewable Energy	1.6%	44.0%	54.4%	90.0%	2.0%	8.0%
Packaging Material & Waste	3.9%	16.4%	79.7%	89.3%		10.7%
Water Stress	3.0%	94.8%	2.2%	65.8%	23.3%	10.8%
Toxic Emissions & Waste				56.6%	34.2%	9.2%

Temperature - Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

- A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,
- An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates a carbon budget from global to company level over a chosen time horizon.

Level of alignment	1.5°C
Hedging	82.5%
Alignment Trajectory in % Weight	
<1.5°C	39.4%
1.5-2°C	14.8%
2-3°C	14.3%
>3°C	31.4%

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

LYXOR FTSE ITALIA PMI PIR 2020 (DR) UCITS ETF (compartment of the Multi Units France Sicav)

Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

Meeting overview

This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	109
Number of Voted Meetings	99
Participation rate at General Meetings	90.8%

Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
Board of Directors	52.4%	47.6%	0.0%
Routine/Business	99.4%	0.6%	0.0%
Reorg. and Mergers	80.0%	20.0%	0.0%
Capitalization	56.7%	43.3%	0.0%
Shareholders Proposals	69.2%	30.8%	0.0%
Non-Salary Comp.	54.0%	41.7%	4.3%
Antitakeover	60.0%	40.0%	0.0%

Breakdown by country

In 2021, the Lyxor's voting scope was issuers domiciled in Europe, in United States and in Japan.

The data details the geographical distribution of the General Meetings at which the Lyxor FTSE Italia PMI PIR 2020 (DR) UCITS ETF fund participated during the financial year.

Italy	98.0%
Netherlands	2.0%

Engagement

This fund is part of the following campaigns: Corporate Governance, General Meeting

Corporate Governance: Outside the general meeting period, Lyxor promotes regular dialogue with companies on corporate governance issues such as changes in the composition of the Board and its committees, succession plans, the role and functions of the lead director, changes in the remuneration policy, etc.

Engagement overview over the year

The table shows the number of engagement campaigns conducted by Lyxor during the year compared to the number of issuers present in the fund.

Number of companies under engagement	2
Number of engagement	2
Number of companies under engagement / Number of companies in the fund	3%

Breakdown by country

The data present the geographical breakdown of the issuers concerned by an engagement campaign over the financial year by the fund.

Italy	100%

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des marchés financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter "AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter "UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the French Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual remuneration review campaign that was carried out during the course of the year, on the basis of the perimeter of the staff as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable remuneration are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable remuneration deferred from a previous financial year. No "carried interest" was paid during the financial year.

Lyxor's best selection and execution policy

Information on best selection and execution policies is available at www.lyxor.com.

Transparency of securities financing operations and reuse of financial instruments SFTR regulation

(Accounting currency of the CIU)

During the fiscal year, the UCI did not carry out any transactions subject to the SFTR, namely no repurchase transactions, securities or commodities lending/borrowing, buy/sell back or sell/buy back transactions, margin lending transactions or total return swaps (TRS).

1 accounting rules & methodology

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information in the evolving context of the Covid-19 crisis.

Assessment rules

The Sub-Fund's assets are valued according to the applicable laws and regulations, and more particularly the rules defined in Regulation No. 2014-01 of the French regulatory accounting committee (CRC) dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded. However, in the absence of significant transactions on a regulated market, the following financial instruments are valued using the following specific methods:

- Negotiable debt securities ("NDS") with a residual maturity upon acquisition that of 3 months or less are assessed with a straight-line extension over the residual maturity of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- Negotiable debt securities with a residual maturity of more than 3 months at the net asset value date are measured at the present value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Futures traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable trading value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities of UCITS operating under French law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.
- Units and shares of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.

Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

The exchange rates used for the assessment of financial instruments listed in a currency other than the Sub-Fund's reference currency are the WM Reuters fixing rates on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under "Financial instruments" according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under "Other temporary operations".

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment)

multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security

(in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta

multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Sub-Fund).

Operation and management fees

These fees include all of the fees invoiced directly to the Sub-Fund, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Sub-Fund, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Sub-Fund has exceeded its objectives and are invoiced to the Sub-Fund;
- activity fees charged to the Subfund;
- Direct and indirect operating costs/fees related to temporary acquisitions and disposals of securities.

For more details on the fees actually charged to the Sub-Fund, refer to the Statistics section of the Key Investor Information Document (KIID).

Fees invoiced to the Sub-Fund	Basis	Schedule rate
Financial management fees and administrative fees external to the portfolio management company (Auditor, Depository, distribution, lawyers) including tax ⁽¹⁾	Net assets	Maximum 0.40% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Outperformance commission	Net assets	None
Transactions commissions	Collection on each transaction	None

Fees invoiced to the Sub-Fund	Basis	Schedule rate
Operating costs/fees related to temporary acquisitions and disposals of securities	Amount of income generated by these operations	20% maximum for the Management Company; 15% maximum for the Agent

⁽¹⁾ including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

3.5. Receivables and Debts: breakdown by type

Breakdown of items comprising "other receivables" and "other debts," in particular the breakdown of forward foreign exchange transactions by type of transaction (buy/sell).

Receivables	5,833,296.43
Future currency exchange operations:	
Future purchases of currency	-
Total traded amount of future Sales of currencies	-
Other receivables:	
Deferred settlement sales	5,833,296.43
-	-
-	-
-	-
-	-
Other operations	-
Debts	106,030.25
Future currency exchange operations:	
Future sales of currencies	-
Total traded amount of future Purchases of currencies	-
Other debts:	
Accrued expenses	104,251.27
Sundry Debtors and Creditors	1,778.98
-	-
-	-
-	-
Other operations	-

3.6. Shareholders' equities

	Subscriptions		Redemptions	
	Number of equities	Amount	Number of equities	Amount
Number of equities issued/redeemed during the fiscal year	1,092,948	163,247,886.99	707,256	107,151,019.37
Subscription / redemption commission		228,547.08		44,758.39
Retrocessions		-		-
Fees paid to the sub-fund		228,547.08		44,758.39

3.7. Management fees

Operating and management fees (fixed fees) as % of the average net assets	0.40
Performance commissions (variable fees): amount of costs for the year	-
Retrocession of management fees:	
- Total amount of fees retroceded to the Compartment	-
- Breakdown by "target" CIU:	
- CIU 1	-
- CIU 2	-

3.8. Commitments given and received

Description of guarantees received by the Sub-Fund with indication of the capital guarantees	none
Description of the other commitments received and/or given	none

3.9. Other information

3.9.1. Current value of the financial instruments that are the subject of temporary acquisition:

- Financial instruments sold under forward repurchase agreements	-
- Other temporary operations -	

3.9.2. Current value of the financial instruments comprising security deposits:

Financial instruments received as guarantees and not included in the balance sheet:

- equities	-
- bonds -	
- debt securities -	
- other financial instruments -	

Financial estimates given as guarantees and maintained in their original item:

- equities	-
- bonds -	
- debt securities -	
- other financial instruments -	

3.9.3. Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (Sicav) and CIU managed by these entities:

- CIU securities	-
- Swaps -	

3.10. Allocation of the profit and loss table *(in the Compartment's accounting currency)*

Advances paid during the fiscal year

Date	Overall amount	Unit amount	Total tax credits	Unit tax credits

Net asset value	175.0785	106.5998	129.3405	118.5586	142.4941
Unit distribution on net capital gains and losses (including advances)	-	-	-	-	-
Unit distribution (including advances)	-	-	-	-	-
Unit tax credit transferred to holders (natural persons) ⁽¹⁾	-	-	-	-	-
Unit capitalisation ⁽²⁾	12.41	-9.77	-3.16	7.34	37.29

(1) Pursuant to the Fiscal Instruction of 4 March 1993 of the French Tax Department, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits among the outstanding shares on that date.

(2) The unit capitalisation corresponds to the sum of profit and loss and net capital gains or losses on the number of circulating units. This calculation method is applied from 1 January 2013.

Compartment creation date: 28 March 2014.

4 Inventory at 29.10.2021

activity
report

SOCIÉTÉ D'INVESTISSEMENT À CAPITAL VARIABLE - SICAV (VARIABLE CAPITAL

FISCAL YEAR ENDING ON: 29.10.2021

Compartments / feeder	LYXOR GERMAN MID-CAP MDAX UCITS ETF is a sub-fund of the MULTI UNITS FRANCE Sicav.
Management Company	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy – 92987 Paris La Défense Cedex.
Depository and Custodian	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

Information about investments and management

Classification:

Equities of eurozone countries.

At least 60% of the Lyxor German Mid-Cap MDAX UCITS ETF sub-fund (the “Sub-Fund”) is permanently exposed to one or more equity markets of one or more eurozone countries, and may include the French market.

The Sub-Fund is an index-based fund of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution:

Dist. Share Class: the Board of Directors reserves the right to distribute, one or more times a year, all or part of the amounts available for distribution and/or accumulate them.

Management objective:

The Compartment is a passively managed index-based UCITS.

The Sub-Fund’s objective is to track, both upwards and downwards, the “MDAX Index” (the “Benchmark”), denominated in EUR, while minimising the tracking error between the performance of the Sub-Fund and that of its Benchmark. It is representative of intermediate-sized German companies.

The anticipated level of the ex-post tracking error under normal market conditions is 0.08%.

Benchmark indicator:

The Benchmark is the MDAX Index.

The Benchmark is an index weighted by market capitalisation adjusted for free float. It represents the performance of mid-cap stocks, ranked after DAX equities in terms of market capitalisation and liquidity.

The Benchmark is calculated by Deutsche Borse AG.

The Benchmark is a Total Return index (dividends reinvested). A Total Return index takes account of the performance of the components, including dividends and all forms of distribution in the performance of the index.

A full description and the full methodology for the construction of the Benchmark as well as information on the composition and respective weights of the components of the Benchmark are available on the website: www.dax-indices.com

Benchmark Index revision and composition

The composition of the Benchmark is reviewed every six months and rebalanced quarterly. Each component of the Benchmark is weighted by market capitalisation adjusted for free float with a limit set at 10% for each component, during the rebalancing of the Benchmark. The free float-adjusted market capitalisation is the market value of the available issued shares.

The above-mentioned frequency of rebalancing has no effect on costs in the implementation of the investment strategy.

Benchmark indicator publication

The Benchmark Index is calculated on a daily basis at closing prices using the official closing stock market prices for the constituent stocks. The Benchmark is also calculated in real time each trading day.

The closing price of the Benchmark is available on the Deutsche Borse AG website: www.dax-indices.com. The benchmark administrator is STOXX Limited.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Benchmark administrator is listed on the register of benchmark administrators held by ESMA. In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmarks used which describes the measures to be implemented in the event of substantial changes to an index or the cessation of provision of that index.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009. In pursuit of the greatest possible correlation with the performance of the Benchmark Index, the Sub-Fund will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The equities held as assets by the Sub-Fund will notably include those comprising the Benchmark, as well as other international equities, from all economic sectors, listed on all markets, including small cap markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Sub-Fund's portfolio and (ii) the market value of the future exchange operation entered into by the Sub-Fund are available on the page dedicated to the Sub-Fund on the website: www.lyxoretf.com. The frequency of update and/or the update date of the aforesaid information is also specified on the same page of the website indicated above.

As part of the management of its exposure, the Compartment may be exposed up to 20 % of its assets in equities from a single issuing entity. This limit of 20% will be verified, on each rebalancing date of the Benchmark, in accordance with the Benchmark Index calculation method, which limits the exposure of each of the shares of the same issuing entity to 20%, the calculation of which is provided by the Benchmark's sponsor or calculation agent. This 20% limit may be increased to 35% for a single issuing entity, when this proves to be justified by exceptional market conditions, particularly when certain securities are largely dominant and/or in the event of high volatility of a financial instrument or securities linked to an economic sector represented in the Benchmark Index, in particular in the event of a public offering affecting one of the securities making up the Benchmark Index or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Index.

In this case, the manager intends to use mainly the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Sub-Fund may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets.

The aforementioned equities will be chosen on the basis of criteria:

- Of eligibility, in particular:

- Subordination to the main market indices or to the Benchmark Index;
- Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation);
- Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent).

- Of diversification, notably:

- Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code);
- Geographical area;
- Sector.

For more information on the abovementioned eligibility and diversification criteria, investors can visit the website: www.lyxoretf.com

The investment in undertaking for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Sub-Fund. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law. As part of these investments, the Sub-Fund may subscribe for units or shares of UCITS managed by the management company or a company to which it is linked.

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of the future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Sub-Fund will have recourse to index-linked swaps traded over-the-counter, exchanging the value of the equities in the Sub-Fund's assets (or of any other financial instrument or asset held by the Sub-Fund, where appropriate) against the value of the Benchmark Index (in compliance with the description contained in this section's paragraph 1 above).

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including future financial instruments other than index-linked swaps.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Sub-Fund's portfolio, nor regarding the underlying assets of the future financial instruments.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted. Where the Sub-Fund enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Sub-Fund can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

For up to a maximum of 10% of its net assets, the Sub-Fund may temporarily borrow cash.

7. Temporary securities acquisition and sale operations

The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Sub-Fund is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Sub-Fund's use of forward swap contracts traded over the counter, the Sub-Fund can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets. In the event of default by the counterparty, the Compartment may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt towards the Compartment as part of the guaranteed transaction.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) they must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;
- (c) they must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) they must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20 % of the Sub-Fund's net asset value;
- (e) the Subfund's Management Company must be able to realise this collateral in full and at any time without having to consult with the counterparty or obtain its approval.

By way of derogation from the condition set out in (d) (above), the Fund may receive a basket of financial guarantees with an exposure to a given issuer greater than 20% of its net asset value provided that: the financial guarantees received are issued by a (i) Member State, (ii) one or more of its local authorities, (iii) a third country or (iv) a public international body to which one or more Member States belong; and that these financial guarantees come from at least six different issues, none of which exceed 30% of the Sub-Fund's assets. In compliance with the aforesaid conditions, the guarantees received by the Sub-Fund can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e)(above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Sub-Fund's management company will apply a margin to the financial guarantees received by the Sub-Fund. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged. Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Compartment may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss.

In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

COUNTERPARTY SELECTION POLICY

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (financial futures and temporary acquisitions and disposals of securities) on behalf of the Mutual Fund.

The selection of counterparties for financial contracts and financial intermediaries is performed rigorously from among the reputable counterparties and intermediaries in the market, on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes various criteria into consideration to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating
- Quantitative criteria based on the CDS LT spread (absolute criteria, volatility and comparison with a reference group, etc.)

Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the management company applies its "best execution" policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: www.lyxor.com, section "regulatory information".

Risk profile:

The Sub-Fund will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

The holder is exposed through the Subfund mainly to the following risks:

- Equity risk

An equity price can vary upwards or downwards, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

If, when the Sub-Fund (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Sub-Fund could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Sub-Fund's shares on an exchange may be adversely affected by any suspensions, which could be due, in particular, to i) suspension or discontinuation of the calculation of the Reference Indicator, and/or

ii) trading in the market(s) in the Benchmark's underlying assets is suspended, and/or

iii) an exchange cannot obtain or calculate the Subfund's indicative net asset value, and/or

iv) a market maker fails to comply with an exchange's rules, and/or

v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

- Risk associated with investing in mid-cap companies

The Sub-Fund is exposed to mid-cap companies, and more specifically to the equity markets for medium-sized and intermediate-sized companies, which may increase market and liquidity risks. Market movements are therefore more pronounced both upwards and downwards, and faster than for big caps. The net asset value of the Subfund may have the same behaviour and therefore decline more quickly and significantly than a similar investment in large-cap securities.

- Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument enables automatic and continuous replication of the Benchmark, notably if one or more of the following risks occur:

- Risk related to the use of derivative instruments

In order to achieve its investment objective, the Sub-Fund uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Index. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Index, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risks related to the management of guarantees Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

In particular, "event affecting the Benchmark" refers to the following situations: i) the Benchmark is deemed inaccurate or does not reflect actual market trends,

ii) The Benchmark Index is definitively discontinued by its supplier,

iii) The supplier of the index is incapable of providing the level or value of the said Benchmark,

iv) The index provider makes a material change in the Benchmark calculation formula or method (other than a minor modification such as an adjustment to this Benchmark's underlying components or their respective weightings) that the Subfund cannot effectively replicate at a reasonable cost;

v) one or more Benchmark components become illiquid because they are no longer traded on a regulated market or because their over-the-counter trading (e.g. bonds) is disrupted;

vi) The Benchmark Index's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Index's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Index undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Sub-Fund (and/or in a valuation of the ST by the Sub-Fund's counterparty in a future financial instrument), the Sub-Fund's net asset value may be affected, notably should the actual treatment of the ST by the Sub-Fund differ from the ST's treatment in the methodology used by the Benchmark Index.

- Sustainability risks

The Sub-Fund does not consider sustainability factors in the investment decision-making process but remains exposed to sustainability risks. The occurrence of such risks could have a negative impact on the value of the investments made by the Sub-Fund. Additional information can be found in the "Sustainability Information" section of the Prospectus.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

Investors who subscribe to this Sub-Fund are seeking to gain exposure to the German equity market for intermediate-sized companies. The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers. The minimum recommended investment term is greater than 5 years.

"U.S. Persons" (as defined in the prospectus - see "COMMERCIAL INFORMATION") may not invest in the Sub-Fund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *Creation date of the Multi Units France Sicav: 04 March 2002.*
- *Sub-Fund approval date by the AMF (Financial Markets Authority): 23 April 2014.*
- *Compartment creation date: 15 May 2014.*

activity report

The fund replicates the performance of the DAX MID CAP INDEX EUR (Ticker: MDAX).

Performance trend at the closing date:

Share name	ISIN	Share currency	Performance from 28/02/19 to 31/10/19			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor German Mid-Cap MDAX UCITS ETF - Dist	FR0011857234	EUR	35.22% ⁽¹⁾	35.50%		106.36%

⁽¹⁾ "The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs (for example the index rebalancing cost);
- - taxation incurred in relation to the methodology used in the Benchmark Index»

The tracking error realised is 0.0216%. The target tracking error over the period was 0.08%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams. This difference is considered insignificant. Index Linked Swap's counterparty is: Bank of America.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction.

Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

This Fund is covered by Article 6 of Regulation (EU) 2019/2088 (the "SFDR Regulation"). It does not promote environmental and/or social characteristics and does not aim to invest sustainably

Transparency of environmentally sustainable investments in periodic reports under Regulation (EU) 2020/852

Regulation (EU) 2020/852 on the establishment of a framework for promoting sustainable investments (the "Taxonomy Regulation") sets out the criteria for determining whether an economic activity is environmentally sustainable in the European Union.

According to the Taxonomy Regulation, an activity can be considered "sustainable" if it contributes substantially to one of the 6 environmental objectives set out in the Taxonomy Regulation, including climate change mitigation and adaptation, pollution prevention and reduction, or the protection and restoration of biodiversity and ecosystems.

In addition, in order to be considered to be sustainable, this economic activity must respect the principle of "not to cause significant harm" to one of the other five objectives of the Taxonomy Regulation and must also comply with basic social criteria (alignment to OECD and UN guidelines on business and human rights).

In accordance with article 7 of the Taxonomy Regulation, the management company draws investors' attention to the fact that the underlying investments of this Fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Provision of environmental, social and governance (ESG) information - in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website [Lyxor.com](https://www.lyxor.com) and is revised each

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

(a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

To the basket of assets held by the fund, the fund applies an exclusion of issuers associated with serious and repeated violations of the Principles of the United Nations Global Compact and regulatory requirements related to controversial sectors and products. This list is supplemented by a list of companies to be excluded due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological chemical, nuclear or radiological weapons, etc.).

(b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (in connection with Lyxor's voting policy). • Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group's Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defence policy.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products.

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

(c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution.

The post trade control is on NAV frequency basis.

Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the [Lyxor.com](https://www.lyxor.com) website.

The exclusion described above is applied to the fund holdings.

12. Description of integration of climate risks and the contribution to the energy transition

Lyxor is gradually expanding its ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

• Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

• The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested), • Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),

• A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

• Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

• Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs). -In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including : • the Germanwatch Climate Performance Index Score • Environmental Performance Score • Environmental Vulnerability Index

For corporate issuers in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

LYXOR GERMAN MID-CAP MDAX UCITS ETF (compartment of the Multi Units France Sicav)

•Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations

•Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

For each issuer (Corporate & Government), ESG Industry sector classification is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The ESG score calculated at the portfolio level measures the capacity of the underlying issuers to manage the risks and key opportunities associated with environmental, social and governance factors. The risk scale ranges from 0 (high risk) to 10 (low risk). Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: employment, social relations, health and safety, training, compliance with ILO conventions
- Governance: Board of Directors or Supervisory Board, Audit and Internal Control, Executive Compensation

Source: The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Portfolio Exposure to ESG Controversies

Measures the portfolio's exposure to companies experiencing controversies relating to their compliance with international standards as a function of their degree of severity:

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: indicates that the company is not involved in any major controversies
- None: Sovereign and/or Company not covered

Red Flag	0%
Orange Flag	2%
Yellow Flag	15%
Green Flag	83%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2021

Carbon Emissions (tons CO2e/\$M invested)	Carbon Intensity (tons CO2e/\$M sales)	Weighted Average Carbon Intensity (tons CO2e/\$M sales)	Portfolio rated by weight	98%
157	250	125	Scope 1 reported (vs estimated)	99%
			Scope 2 reported (vs estimated)	96%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GreenHouse Gas Protocol (GHG Protocol) was launched in 2001 by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: direct emissions resulting from the burning of fossil fuel resources owned or controlled by the company.
- Scope 2: indirect emissions related to the purchase or production of electricity.
- Scope 3: all other indirect emissions from the extended supply chain to the transport of goods and persons.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio invested in both equities and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt. All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or the portion of the company's revenue generated from fossil fuel energies or the portion of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon:

All thermal coal reserves	0% 0%
Natural Gas	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of : \$ 1,000,000

Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

LYXOR GERMAN MID-CAP MDAX UCITS ETF (compartment of the Multi Units France Sicav)

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges - this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum of high-impact fossil fuel reserves	0.0
Other	0.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Ennergy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	3.4%	8.5%	7.0%
Some efforts	69.1%	77.7%	47.4%
Limited efforts/Information	12.2%	12.1%	4.6%
No effort/No evidence	15.2%	1.7%	41.0%

Low Carbon Transition Score

The Low Carbon Transition Score⁽¹⁾ uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

•Asset stranding: risk of holding assets which may become stranded

•Operational Transition: risk of increase in operational costs

•Product Transition: risk of a decrease in demand for high-carbon products and services

•Neutral: low exposure to transition risks

•Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low- carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.0
Low carbon transition management Score	4.8
Operational Transition	13.1%
Product Transition	13.1%
Neutral	71.0%
Solutions	8.2%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source: MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)				
Hydro	14.4%	Liquid Fuel	56.7%	Nuclear
8.4%	Renewables	0.0%	Thermal Coal	20.5%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. Those issuers are likely to benefit from a low carbon transition

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenu dedicated to environmental solutions between:	
0-19.9%	24%
20-49.9%	13%
50-100%	0%

Weight of Companies Offering Clean Technology Solutions			
Alternative Energy	7.3%	Energy Efficiency	21.5%
Pollution Prevention	19.1%	Sustainable Water	9.1%
		Green Building	1.5%
		Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution			
Alternative Energy	0.1%	Energy Efficiency	4.4%
Pollution Prevention	0.9%	Sustainable Water	0.1%
		Green Building	0.0%
		Sustainable Agriculture	0.0%

LYXOR GERMAN MID-CAP MDAX UCITS ETF (compartment of the Multi Units France Sicav)

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

% estimated EU Taxo 5.5%

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database. The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators. The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030. To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	2%
Coldwave	39%
Flood	4%
Heatwave	8%
Hurricane	2%
Water Stress	40%
Wildfire	5%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.).

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	2.0%	91.5%	6.5%	89.2%	10.7%	0.1%
Carbon Emissions	0.1%	29.1%	70.8%	67.5%	24.8%	7.8%
Electronic Waste	0.3%	5.5%	94.2%	98.2%	0.5%	1.3%
Opportunities in Green Building	0.2%	39.1%	60.7%	86.6%	11.9%	1.5%
Opp's in Renewable Energy	1.8%	94.5%	3.7%	98.3%		1.7%
Packaging Material & Waste	4.4%	29.8%	65.8%	99.3%		0.7%
Water Stress	5.5%	93.0%	1.5%	53.2%	34.2%	12.6%
Toxic Emissions & Waste				55.1%	25.2%	19.7%

Temperature - Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

- A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,
- An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates a carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Level of alignment	>3°C
Hedging	87.7%
Alignment Trajectory in % Weight

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des marchés financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 ("AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 ("UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management compensation policy notably ensures appropriate risk management and adherence to compliance on the part of its employees.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No "carried interest" was paid during the financial year.

Lyxor's best selection and execution policy

Information on best selection and execution policies is available at: www.lyxor.com.

Transparency of securities financing operations and reuse of financial instruments SFTR regulation

(Accounting currency of the CIU)

1. General information.

1.1. Amount of securities and raw materials loaned in proportion with the total assets that can be loaned, defined as excluding the cash and cash equivalents.

Securities lending	
% of assets that can be loaned	-

1.2. Amount of the assets committed to each type of securities financing operation and total return swap, expressed in absolute value (in the currency of the collective investment undertaking) and in proportion with the assets under management of the collective investment undertaking.

	Securities lending ⁽¹⁾	Securities borrowing ⁽²⁾	Repo operations ⁽³⁾	Reverse repo operations ⁽⁴⁾	TRS ⁽⁵⁾
Absolute value	-	-	-	-	76,959,917.16
% of assets under management	-	-	-	-	100.00

⁽¹⁾ The amount of assets engaged in securities lending transactions corresponds to the market value of the securities lent at the balance sheet date.

⁽²⁾ The amount of assets engaged in securities borrowing transactions corresponds to the market value of the guarantees (cash or securities) delivered by the fund as part of the securities borrowing on the balance sheet date.

⁽³⁾ The amount of assets engaged in repurchase transactions corresponds to the market value of the securities repurchased on the balance sheet date.

⁽⁴⁾ The amount of assets engaged in reverse repurchase transactions corresponds to the market value of securities purchased under repurchase agreements at the balance sheet date.

⁽⁵⁾ The amount of assets committed in the TRS corresponds (i) for the TRS for which the management company has undertaken to deliver a basket of securities to the TRS counterparty, to the market value of the basket of securities committed in the TRS, increased by the market value of the TRS on the accounting date and/or (ii) for the TRS for which the management company does not deliver a basket of securities, to the value of the nominal value of the TRS on the balance sheet date.

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information, in the evolving context of the Covid-19 crisis.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded. However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities of UCITS operating under French law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.

Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

The exchange rates used for the assessment of financial instruments listed in a currency other than the Sub-Fund's reference currency are the exchange rates published the fixing WM Reuters on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the CIS) multiplied by the number of contracts multiplied by the face value. The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Sub-Fund) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company. For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Sub-Fund has exceeded its objectives and are invoiced to the Sub-Fund;
- Transfer commissions invoiced to the Sub-Fund.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Sub-Fund	Basis	Schedule rate
Financial management fees and administrative fees external to the portfolio management company (Auditor, Depository, distribution, lawyers) including tax ⁽¹⁾	Net assets	Maximum 0.2% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Outperformance commission	Net assets	None
Transactions commissions	Collection on each transaction	None

⁽¹⁾ including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Accounting currency

The Sub-Fund's accounting is carried out in euro (EUR).

Indication of accountancy changes declared to each of the shareholders individually

-- Occurred change: None.

-- Future change: None.

Other changes declared to each of the shareholders individually *(Not certified by the auditor)*

-- Occurred change: None.

-- Future change: None.

Indication and justification of the changes to estimates and application provisions
None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Dist. Share Class: the Board of Directors reserves the right to distribute, one or more times a year, all or part of the amounts available for distribution and/or accumulate them.

This financial instrument is not sponsored, recommended, distributed or otherwise supported by Deutsche Borse AG ("Licensor"). The Licensor makes no representation or warranty or representation, express or implied, or with respect to the results arising from the use of the Index and/or the registered trademark of the Index, or with respect to the value of the Index at any time or at a certain date or in any other respect. The Index is calculated and published by the Licensor. However, to the extent permissible under the law, the Licensor will not respond to potential errors in the Index vis-à-vis third parties. In addition, the Licensor is not required to report potential errors in the Index vis-à-vis third parties, including investors. Neither the publication of the Index by the Licensor nor the granting of a license in respect of the Index or the registered trademark of the Index for their use in respect of the financial instrument or other securities or financial products derived from the Index do not represent a recommendation by the Licensor for a capital placement or contain, in any way whatsoever, a guarantee or opinion of the Licensor regarding the attractiveness of an investment in this product. In its capacity as sole owner of all rights to the Index and the registered trademark of the Index, the Licensor has granted under licence to the issuer of the financial instrument only the use of the Index and the registered trademark of the Index, as well as any reference to the Index and the registered trademark of the index in relation to the financial instrument.

Information about investments and management

Classification:

International equities.

At least 60% of the Lyxor Hwabao WP MSCI China A (DR) UCITS ETF (the “Sub-Fund”) is permanently exposed to a foreign equity market or the equity markets of several countries, and may include the French market.

The Sub-Fund is an index UCITS ETF.

Terms for the determination and allocation of income:

Acc Share Class: Accumulation of income.

Dist share class: the Board of Directors reserves the right to distribute, one or more times a year, all or part of the income and/or to accumulate it. Net realised capital gains will be capitalised.

Management objective:

The Compartment is a passively managed index-based UCITS.

The Sub-Fund’s objective is to track, both upwards and downwards, the MSCI China A Net Total Return Index (the “Benchmark”), denominated in US Dollars (USD), while minimising the tracking error between the performance of the Sub-Fund and that of its Benchmark. The anticipated level of the ex-post tracking error under normal market conditions is 2%.

Benchmark indicator:

The Benchmark is an index weighted by market capitalisation adjusted for the free float representing exposure to the performance of the large and mid cap A-Shares market.

A-Shares are shares of companies incorporated in the People's Republic of China excluding Hong Kong and Macau (the “PRC”), traded on the Shanghai and Shenzhen stock exchanges and listed in Chinese yuan (“CNY”).

The Benchmark corresponds to the A-Shares available on the Shanghai Hong Kong Stock Connect or the Shenzhen Hong Kong Stock Connect (“Stock Connect Programmes”), which are components of the MSCI China All Shares Index.

The MSCI China All Shares Index is representative of large and mid cap companies within a universe that includes companies incorporated in China or outside China but considered by the MSCI as Chinese. This universe includes stocks listed in Hong Kong, Shanghai, Shenzhen or other markets outside China.

The Benchmark is an index weighted by market capitalisation adjusted for the free float, meaning that the weight of each of its components is proportional to its free float market capitalisation.

The Benchmark Indicator is a Net Reinvested Dividends index. A Net Reinvested Dividends index considers the performance of the components, including net dividends and all forms of distribution in the performance of the index.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark's components are available on the website: www.msci.com

Benchmark revision and composition:

The Benchmark is revised on a quarterly basis, in accordance with the methodology described in the Benchmark's manual, available on the MSCI website: www.msci.com

The frequency of rebalancing mentioned above has no effect on costs in the implementation of the investment strategy.

Benchmark indicator publication

The Benchmark Index is calculated on a daily basis at closing prices using the official closing stock market prices for the constituent stocks. The Benchmark is available on a daily fixing basis via Reuters and Bloomberg. The closing price of the Benchmark is available on the website: <http://www.msci.com>. In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the administrator of the Benchmark, MSCI Limited, has until 31 December 2023 to request authorisation or registration, where necessary, from the competent authority.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmarks used which describes the measures to be implemented in the event of substantial changes to an index or the cessation of provision of that index.

Investment strategy:

1. Strategy employed

The Sub-Fund will comply with the investment rules set out by European Directive No. 2009/65/EC of 13 July 2009. In pursuit of the greatest possible correlation with the performance of the Benchmark, the Subfund will use a direct replication method, which means that the Subfund will invest in a basket of assets made up of the equities comprising the Benchmark and/or financial instruments representative of all or part of the equities comprising the Benchmark.

In addition, the sub-fund may use forward financial instruments ("FFIs"). Futures in which the sub-fund is likely to invest include contracts such as index futures, futures on all or part of the Benchmark Index components, and hedging swaps entered into to minimise the Sub-Fund's tracking error.

When pursuant to its investment strategy (e.g. use of futures) the Sub-Fund is required to hold cash, the manager in the best interest of the unitholders may use deposits with credit institutions, and or invest cash in balance sheet assets and/or off-balance sheet assets (as described below).

As part of the optimisation of the direct replication method of the Benchmark, the Sub-Fund, represented by its delegate financial manager, may decide to use a "sampling" technique, consisting of investing in a selection of representative securities that are components of the Benchmark, with the aim of limiting the costs of investing in the various components of the Benchmark and/or to take into account operational constraints related to investing in the various components of the Benchmark. A sampling replication strategy could notably lead the Sub-Fund to invest in a selection of representative securities (and not all securities) comprising the Benchmark, in proportions different from those of the Benchmark Index or even to invest in securities other than the Benchmark Index components.

In order to allow investors to benefit from transparency on the direct replication method used (full replication of the Benchmark Indicator or sampling to limit replication costs) and its consequences in terms of assets held by the Compartment, information on the updated composition of the basket of balance sheet assets held in the Compartment's portfolio is available on the page dedicated to the Compartment available on the website www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

As part of the management of its exposure, the Compartment may be exposed up to 20 % of its assets in equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Index, in particular in the event of a public offering affecting one of the securities making up the Benchmark Index or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Index.

Investors are also advised that holding a Renminbi Qualified Foreign Institutional Investor ("RQFII") licence in the People's Republic of China ("PRC") and obtaining an RQFII quota dedicated to the Sub-Fund's investments (the "Quota") will allow the sub-delegate investment manager of the Sub-Fund, acting in the name and on behalf of the Sub-Fund, to implement the investment strategy described above. More specifically, subject to the risks identified in the Risk Profile section below, it is indicated that the above-mentioned Licence and RQFII Quota will enable the sub-delegate investment manager to:

- invest in A-Shares, in the name and on behalf of the Sub-Fund, under the conditions and limits set by said Quota and Licence, without a minimum holding period; and
- repatriate to and from the PRC the amounts related to the purchase/sale of A-Shares by the Sub-Fund on each business day in the PRC, by executing, where applicable, the foreign exchange transactions necessary for the conversion of amounts denominated in RMB into the currency of the unit class concerned.

In order to implement the investment strategy described above, the Sub-Fund's sub-delegate investment manager may also invest in A-Shares through the common trading platforms of the Stock Connect Programmes. The Stock Connect Programmes notably allow investors outside the PRC to invest in A-Shares traded in RMB on the Shanghai and Shenzhen stock exchanges, without necessarily having a licence and a RQFII Quota. Further information on the conditions and limits governing the transactions carried out by the sub-delegate investment manager in connection with Chinese A-Shares, within the framework of the Licence and Quota RQFII and/or Stock Connect Programmes may also be communicated to investors who request it in writing from the Management Company.

In this case, the manager intends to use mainly the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Sub-Fund will mainly be invested in the securities described below:

• Equities

The Sub-Fund will be mainly invested in the shares comprising the Benchmark Index.

• Holding of shares or units in other UCI or investment funds

The Sub-Fund may invest up to 10% of its assets in units or shares of the following CIS or investment funds:

- French or foreign UCITS compliant with Directive 2009/65/EC - For the purposes of these investments, the Sub-Fund may subscribe for units or shares in UCITS managed by the Management Company or a company to which it is linked.

3. Off-balance sheet assets (derivative instruments)

The Sub-Fund may invest in the following FFIs:

• Eligible markets:

- regulated
- organised
- over-the-counter

• Risks in which the Sub-Fund wishes to trade:

- Equities

• Types of operations, all transactions must be limited to achieving the management objective:

- hedging
- exposure

• Types of instruments used:

- futures: on equities and indices
- forward exchange contracts

• Strategy for using derivatives to achieve the investment objective:

- General hedging of the portfolio, certain risks, securities, etc. - up to 100% of assets
- reconstitution of synthetic exposure to assets and risks - up to 100% of assets

The counterparties of OTC derivatives processed by the Sub-Fund will be selected in accordance with the Management Company's best execution policies (including the execution matrix by asset type mentioned in the Appendix). The above-mentioned policy can be accessed at the following address: [https://www.lyxor.com/politique-de- best-execution-liam-January-2020-fr](https://www.lyxor.com/politique-de-best-execution-liam-January-2020-fr) The counterparty to financial derivative instruments will not have discretionary power over the composition of the Sub-Fund's investment portfolio, nor over the underlying assets of the derivatives within the limits and conditions provided for by the regulations.

Situations of conflict of interest may arise between the Management Company and Société Générale when Société Générale acts as a counterparty to FFIs. These situations are governed by the Management Company's conflict of interest management policy.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Sub-Fund can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

The manager will not enter into securities financing transactions.

8. Financial guarantees

No financial collateral will be given/received by the Sub-Fund in connection with the implementation of its management objective.

COUNTERPARTY SELECTION POLICY

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (financial futures and temporary acquisitions and disposals of securities) on behalf of the Mutual Fund. The selection of counterparties for financial contracts and financial intermediaries is performed rigorously from among the reputable counterparties and intermediaries in the market, on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes various criteria into consideration to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating
- Quantitative criteria based on the CDS LT spread (absolute criteria, volatility and comparison with a reference group, etc.) Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: www.lyxor.com, section "regulatory information".

Risk profile:

The Sub-fund will primarily be invested in financial instruments selected by the delegated management company.

These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

Specific risks related to investment in the People's Republic of China:

Persons purchasing shares of the Sub-Fund must be aware of the following risks, which are inherent in investing in the People's Republic of China ("PRC"):

- Risks related to the RQFII regime

The ability of the Sub-Fund to achieve its investment objective depends in particular on the RQFII quota made available to the Sub-Fund. If the RQFII quota size made available to the Sub-Fund is inadequate, the operation of the Sub-Fund may be altered. The PRC's regulations on RQFII status may be amended at any time by the China Securities Regulatory Commission (CSRC) and/or the State Administration of Foreign Exchange (SAFE), which could have a detrimental and negative impact on the Sub-Fund's ability to achieve its investment objective and lead to the dissolution of the Sub-Fund. In particular, RQFII status subordinates any increase in the investment quota to SAFE's authorisation. If the Sub-Fund wishes to obtain an increase in the quota made available to it at a given time, it could take a fairly long time to obtain approval from SAFE. Any restriction on the level of the quota made available to the Sub-Fund could affect its investments. Consequently, this restriction may affect the listing on the secondary market of the Sub-Fund's shares, which may, in such circumstances, trade on said secondary market (subject to the rules applicable to these secondary markets) at a price above their Net Asset Value. Lastly, if the sub-delegate investment manager loses its RQFII licence, if the RQFII quota size is reduced or if the applicable restrictions under RQFII status are materially modified, the Board of Directors may decide, subject to the AMF's approval, to dissolve the Sub-Fund.

- Risks related to Stock Connect Programmes

The ability of the Sub-Fund to achieve its investment objective depends in particular on the possibility of accessing A-Shares through the Stock Connect Programmes. To date, the Stock Connect Programmes are subject to a daily quota on the accumulation of net purchase orders executed. The saturation of this quota would result in the automatic suspension of purchase orders on the relevant Stock Connect Programme (at least temporarily), which could have a detrimental and negative impact on the Sub-Fund's ability to achieve its investment objective.

- Economic, political and social risks

Any political change, social instability, insecurity, and/or unfavourable diplomatic, political, economic and/or social developments that may occur in or concerning the PRC (hereinafter a “Political Change”) could lead to the introduction by the Chinese State of additional restrictions and limitations, including expropriation, confiscatory taxes and/or the nationalisation of certain companies included in the Benchmark. Investors’ attention is also drawn to the fact that any Political Change may have detrimental consequences on the stock exchanges of the PRC as well as on the performance of the Sub-Fund and could ultimately result in the dissolution of the Sub-Fund by decision of the Board of Directors.

- Economic risks in the PRC

The economy of the PRC has recently undergone rapid growth. However, it is not certain that this growth will continue and it may be uneven across the various sectors of the economy in the PRC. Moreover, the government of the PRC has, from time to time, implemented various measures to prevent an excessive acceleration of economic cycles. In addition, the transformation of the economy of the PRC, from a socialist economy into a more market-oriented economy, has led to economic and social tensions in the country such that there can be no guarantee that this transformation will continue or remain successful. All of these considerations could have a negative impact on the Sub-Fund's performance.

- Risks related to the repatriation of capital

The system for repatriation of capital is subject to approval by the Chinese authority SAFE and there are restrictions on repatriation amounts and intervals (at the launch date of the Sub-Fund, the RQFII regulation allows repatriation of capital on a daily basis without prior approval).

In addition, regulations or certain economic standards in the PRC, regarding the legal status of repatriation or the convertibility of amounts into foreign currency from the local Chinese market to other markets, could be modified in a way that is unfavourable for the Sub-Fund.

Where applicable, these regulatory changes and unfavourable situations specified above could lead to an interruption or restriction of currency convertibility or transferability, and could potentially:

- - negatively impact the ability of the Sub-Fund to achieve its investment objective correctly, and/or;
- - adversely affect the performance of the Sub-Fund, and/or;
- - ultimately result in the dissolution of the Sub-Fund by decision of the Board of Directors.

Capital gains and other capital income are subject to the same risk.

- Legal system of the PRC

The legal system in the PRC is based on written law. However, some regulations have not yet been implemented and there is no certainty as to its effective and full implementation over time. In particular, the PRC’s regulations on exchange rate controls are quite recent and its application is still very uncertain. In addition, this regulation leaves the Chinese authorities (and in particular the CSRC and SAFE) with broad discretion in their respective interpretation of the regulations, which is a source of uncertainty about their application and use. All of these considerations could have a negative impact on the Sub-Fund's performance.

- State control of exchange rates and their future variations

The RQFII scheme currently allows the conversion of offshore RMB (CNH) into onshore RMB (CNY) and vice versa without applying an exchange rate. The CNH also serves as a pivotal currency between the USD and CNY currencies. There can be no assurance that in the future the possibility of converting CNH into CNY and vice versa without application of an exchange rate will be maintained.

- Dependence on the A-Share market

The existence of a liquid market for A-Shares may be based on the offer and demand for A-Shares. It should be noted that the Shanghai and Shenzhen stock exchanges on which A-Shares are listed and traded are undergoing strong growth and that their market capitalisation and the transaction volume on these exchanges are lower than in developed markets. The volatility of the A-Share markets and the difficulties of settlement transactions on them could lead to significant fluctuations in the prices of securities traded there, and therefore ultimately of the Net Asset Value of the Sub-Fund.

Taxation in the PRC

Several tax reforms have been implemented by the government of the PRC in recent years. Current tax laws and regulations may be revised or amended in the future.

In addition, the State Administration of Taxation of the PRC has confirmed the 10% withholding tax on dividends, premiums and interest paid to investors with RQFII status (following the PRC Corporate Income Tax Law that came into effect on 1 January 2008) or investing via Shanghai Hong Kong Stock Connect (following the Caishui Circular [2014] No 81).

Such withholding tax may be reduced by virtue of a double taxation agreement with China provided that certain conditions are met and the PRC's tax authorities have given their approval.

It should also be noted that any dividends paid to shareholders by the Sub-Fund will come from receipt of the corresponding amounts in connection with the investment in A-Shares and that any such amounts shall be net of the withholding tax on dividends, premiums and interest in effect in the PRC. On 14 November 2014, the PRC's Ministry of Finance and tax administration issued circulars specifying the tax treatment of the proceeds from the sale of A-Shares invested through an RQFII quota or through Shanghai Hong Kong Stock Connect. In particular, it should be noted that:

Capital gains on disposals made before 17 November 2014 are taxable,

Capital gains on disposals made after 17 November 2014 are temporarily exempt.

The tax authorities in the PRC have not definitively specified the practical arrangements for levying and calculating the tax, nor the duration of the exemption.

As a result, we draw investors' attention to the fact that:

the Net Asset Value of the Sub-Fund may be reduced as a result of any tax adjustment in the PRC;

the negative impact on the performance of the Sub-Fund that its shareholders may suffer as a result of such a tax adjustment in the PRC will depend on the date on which they purchased and/or sold shares of the Sub-Fund; and the extent of this negative impact on the performance of the Sub-Fund may not be proportional to the number of shares that an investor holds in the Sub-Fund as a result of any retroactive change in the tax payable in the PRC and, under certain circumstances, it could reach 100% of the Net Asset Value of a Share Class.

The delegated financial manager established a 10% provision on the capital gains realised at the level of the Sub-Fund until 14 November 2014. Furthermore, while the tax authorities of the PRC have confirmed the temporary absence of withholding tax on the capital gains on disposals from 17/11/2014, it should be noted that it is impossible to know with certainty the obligations of investors with regard to the taxes levied by the PRC on the capital gains on disposals realised before 17/11/2014. Pending clarification on the procedures for deducting and calculating the withholding tax on capital gains realised before 17 November 2014, no assurance can be provided as to whether the provision is sufficient or not, as it is impossible to know with certainty the obligations that could be imposed on investors with RQFII status with regard to the taxes levied by the PRC on capital gains. In the event that the provision is insufficient, the Net Asset Value of the Sub-Fund could fall. However, and as with any fund compliant with Directive 2009/65/EC, the maximum risk that a shareholder of the Sub-Fund may bear is limited to the capital invested and to the costs associated with the acquisition/sale. Furthermore, as the Chinese tax authorities only decided on a temporary exemption of the tax applicable to capital gains on disposals realised as of 17 November, the delegated financial manager could decide to establish a provision if the Chinese tax authorities specify the duration of the exemption or revise all or part of this transitory rule. If so, this provision would reduce all of the Sub-Fund's net asset values calculated from the first provisioning date. This provision would also negatively impact the performance of the Sub-Fund in comparison with the performance of the Benchmark. In addition to the withholding tax on dividends, premiums, interest and capital gains mentioned above, since 19 September 2008 the PRC has deducted from the transferor a stock exchange duty on the transfer of A-Shares that is equal to 0.1% of the value of the securities transferred. This tax is subject to change in the event that the State takes additional measures.

- Accounting standards and reporting

Accounting, auditing and financial reporting standards as well as practices applicable to PRC companies in these areas may differ from those in force in countries with more developed financial markets. These disparities may concern areas such as valuation methods for assets and property and the rules for communicating information to investors.

- Risks related to order execution activities in the PRC

Under the RQFII regulation, the sub-delegate investment manager chooses one or more intermediary(ies) in charge of executing orders (the "Broker") in the PRC to process A-shares on the Shanghai Stock Exchange and the Shenzhen Stock Exchange. The sub-delegate investment manager could choose the same Broker for transactions on the Shanghai and Shenzhen stock exchanges. In the event of default by a Broker, the Sub-Fund could encounter difficulties and delays in recovering its assets, which could adversely affect the Sub-Fund's valuation. The Management Company and the sub-delegate investment manager manage these risks of conflict of interest by establishing procedures designed to identify, limit and ensure that they are resolved fairly where needed.

- Custody in the PRC

Under the RQFII regulation, a sub-custodian in the PRC must be chosen. The selected sub-custodian is Bank of China Limited, which acts as sub-custodian for the Sub-Fund. As such, Bank of China Limited maintains the onshore RMB accounts and securities accounts of the Sub-Fund in the PRC. In accordance with the RQFII regulations, these accounts must be registered under the joint name of the sub-delegate investment manager (which holds the RQFII licence) and the Sub-Fund.

Consequently, there is a risk that the assets in the PRC will not be as well protected as if they were registered only in the name of the Sub-Fund.

When, in application of the investment strategy, the delegate investment manager processes the acquisition and/or disposal of A-Shares through the Stock Connect Programmes, the sub-custody related to these transactions may be carried out by a sub-custodian other than Bank of China Limited (the “Third Party Sub-Custodian”). In this context, the Sub-Fund's accounts opened in the books of the Third-Party Sub-Custodian shall be opened under the joint name of the Depository and the Sub-Fund.

- Risk of temporary suspension of listing

The securities comprising the benchmark may be subject to a temporary suspension of listing, resulting in the inability of the Sub-Fund to value them correctly and/or to buy or sell such securities.

Other risks related to investment in this Sub-Fund:

Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. All or part of the sums invested may not be recovered, notably should the performance of the Benchmark be negative over the investment period.

- Equity risk:

Share prices can vary upwards or downwards, and notably reflect the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

- Risk associated with investments in small and mid-cap companies

The Sub-Fund is exposed to small and mid cap companies, which may increase market and liquidity risks. Market movements impacting the prices of these securities are therefore more pronounced, both upwards and downwards, and faster than on large caps. The net asset value of the Compartment may have the same behaviour and therefore decline more quickly and significantly than a similar investment in large-cap securities.

- Risk related to low diversification of the Benchmark Indicator

The Benchmark Indicator to which the investors are exposed covers a given region, sector or strategy and therefore does not necessarily allow for as broad a diversification of the assets as would be the case of an index that is exposed to several regions, sectors or strategies. The exposure to such an index with such low diversification can result in greater volatility than in more diversified markets. Nevertheless, the diversification rules resulting from the UCITS standards always apply to the Compartment's underlyings.

- Risks arising from a lack of perfect replication

Replicating the Benchmark by investing in all components of the Benchmark can be costly or very difficult to operate. The Sub-Fund's manager may also use optimisation techniques, in particular the sampling technique, which consists in investing in a selection of representative securities (and not all securities) comprising the Benchmark, in proportions different from those of the Benchmark Index or even investing in securities other than the components of the index or financial futures. The use of these optimisation techniques may lead to an increase in the ex-post tracking error and will notably lead to different performances between the Sub-Fund and the Benchmark Indicator.

- Risk related to the exposure to Emerging Markets

The Compartment's exposure to emerging markets results in a greater risk of loss that would exist in the event of investments carried out within traditional developed markets. In particular, the operating and supervision rules in an emerging market may differ from the standards applicable to developed markets. The exposure to emerging markets notably results in: increased volatility of the markets, lower transaction volumes, the risk of economic and/or political instability, an unstable or uncertain fiscal and/or regulatory regime, risks of closing of the markets, government restrictions on foreign investments and interruption or restriction of the convertibility or transferability of any of the currencies comprising the Benchmark Indicator.

- Exchange risk linked to the Benchmark Indicator

The Sub-Fund is exposed to an exchange risk to the extent that the underlying securities making up the Benchmark Index could be listed in a currency other than that of the Benchmark Index, or be derivatives of securities listed in a currency other than that of the Benchmark Index. Fluctuating exchange rates are then likely to negatively affect the Benchmark Indicator monitored by the Compartment.

- Currency risk associated with the Sub-Fund's listing

The Subfund may be listed on an exchange or multilateral trading facility in a currency that is not the currency of the Benchmark. Investors who purchase shares in the Subfund in a currency other than the Benchmark's currency are exposed to currency risk. As a result, due to exchange rate fluctuations, the value of an investment made in a currency other than that of the Benchmark may decrease even though the value of the Benchmark increases.

- Liquidity risk (primary market)

If, when the Sub-Fund adjusts its exposure, the markets corresponding to this exposure are limited, closed or subject to significant buy/sell spreads, the value and/or liquidity of the Sub-Fund could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Sub-Fund's equities on a place of listing can be affected by any suspension, that could notably be due to:

- the calculation of the Benchmark is suspended or stopped, and/or
- trading in the market(s) in the Benchmark's underlying assets is suspended, and/or
- an exchange cannot obtain or calculate the Sub-Fund's indicative net asset value, and/or
- a market maker's violation of the rules applicable to this marketplace, and/or
- A failure of this marketplace's IT or electronic systems.

- Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

The Sub-Fund may use derivative financial instruments (FFIs) in the form of futures. These FFIs can result in a series of risks at the level of the derivatives themselves, which notably include: an event affecting the hedging, an event affecting the Benchmark, risk related to the tax treatment, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect an FDI and can result in the adjustment or early termination of the FDI transaction, which could affect the Sub-Fund's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in the event of divergence between the anticipated tax treatment and the treatment actually applied to the Sub-Fund, the Sub-Fund's net asset value could be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Indicator

In the case of events affecting the Benchmark, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscriptions and redemptions of Sub-Fund shares. The calculation of the Compartment's net asset value can also be affected. If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

In particular, "event affecting the Benchmark" refers to the following situations: i) the Benchmark is

deemed inaccurate or does not reflect actual market trends;

ii) the Benchmark is definitively discontinued by its supplier;

iii) the supplier of the index is incapable of providing the level or value of the Benchmark,

iv) The index provider makes a material change in the Benchmark calculation formula or method (other than a minor modification such as an adjustment to this Benchmark's underlying components or their respective weightings) that the Subfund cannot effectively replicate at a reasonable cost;

v) one or more components of the Benchmark becomes illiquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become illiquid;

vi) The Benchmark Index's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Index's performance.

- Securities transaction risk

An unforeseen change, by the issuer of a security that is a component of the Benchmark, in a planned corporate action that is in contradiction with a previous official announcement on which the Sub-Fund based its valuation of the corporate action (and/or on which the Sub-Fund's counterparty to a derivative or transaction based its valuation of the corporate action) can adversely affect the Sub-Fund's net asset value, particularly if the Sub-Fund's treatment of the corporate event differs from that of the Benchmark.

- Sustainability risks

The Sub-Fund does not consider sustainability factors in the investment decision-making process but remains exposed to sustainability risks. The occurrence of such risks could have a negative impact on the value of the investments made by the Sub-Fund. Additional information can be found in the "Sustainability Information" section of the Prospectus.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

Investors who subscribe to this Sub-Fund are seeking to gain exposure to the performance of the large and mid cap segment of the "A-Shares" market, i.e. securities issued by companies incorporated in the People's Republic of China excluding Hong Kong. The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers. The minimum recommended investment term is greater than 5 years.

"U.S. Persons" (as defined in the prospectus - see "COMMERCIAL INFORMATION") may not invest in the Sub-Fund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy-92800 Puteaux.*
- *Creation date of the Multi Units France Sicav: 04 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 07 May 2014.*
- *Compartment creation date: 28 August 2014.*

Activity report

The fund replicates the performance of the MSCI China A Net Return USD Index USD (Ticker: NU718708).

Performance trend at the closing date:

Share name	ISIN	Share currency	Performance for the fiscal year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor Hwabao WP MSCI China A (DR) UCITS ETF - Acc	FR0011720911	USD	16.60% ⁽¹⁾	16.85%		109.93%

⁽¹⁾ "The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs (for example the index rebalancing cost);
- the taxation of the fund in relation to the methodology used within the Benchmark Indicator;
- possible use by the manager of sampling or advanced index management techniques".

The tracking error realised is 0.2027%. The target tracking error over the period was 2%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

This Fund is covered by Article 6 of Regulation (EU) 2019/2088 (the "SFDR Regulation"). It does not promote environmental and/or social characteristics and does not aim to invest sustainably

Transparency of environmentally sustainable investments in periodic reports under Regulation (EU) 2020/852

Regulation (EU) 2020/852 on the establishment of a framework for promoting sustainable investments (the "Taxonomy Regulation") sets out the criteria for determining whether an economic activity is environmentally sustainable in the European Union.

According to the Taxonomy Regulation, an activity can be considered "sustainable" if it contributes substantially to one of the 6 environmental objectives set out in the Taxonomy Regulation, including climate change mitigation and adaptation, pollution prevention and reduction, or the protection and restoration of biodiversity and ecosystems.

In addition, in order to be considered to be sustainable, this economic activity must respect the principle of "not to cause significant harm" to one of the other five objectives of the Taxonomy Regulation and must also comply with basic social criteria (alignment to OECD and UN guidelines on business and human rights).

In accordance with article 7 of the Taxonomy Regulation, the management company draws investors' attention to the fact that the underlying investments of this Fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Provision of environmental, social and governance (ESG) information - in accordance with Articles 533-22-1 and D.533-16-1 of the French Monetary and Financial Code

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website www.lyxor.com and is revised each

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

(a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies exclusions to its investment holdings for issuers associated with serious and repeated breaches of regulatory requirements related to controversial sectors and products.

This exclusion list is supplemented by a list of firms that are to be excluded in application of the Defence Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs, depleted uranium weapons).

The fund applies exclusions related to thermal coal, in application of the Lyxor's climate policy.

Lyxor excludes companies for which their turnover from activities related to the extraction of thermal coal is greater than 10% or companies that belong to the energy sector and for which more than 30% of the electricity production (energy mix) comes from coal.

b) Description of the general information used for the analysis implemented on ESG criteria

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy). • Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns

- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.

- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.

- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.

- In the global context of the Societe Generale Group's Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defence policy,

- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to

controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department in full independence of the operational teams. All breaches are notified to the fund managers for immediate resolution.

The post trade control is on NAV frequency basis.

Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website [Lyxor.com](https://www.lyxor.com).

The exclusion described above is applied to the financial exposure of the fund.

2. Description of how the results of the analysis implemented on ESG criteria, in particular exposure to climate risks, are integrated into the investment policy

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),

- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),

- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

- Regarding the physical risk, and more specifically biodiversity and land use, Lyxor has chosen to present:

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score

- the environment performance score

LYXOR HWABAO WP MSCI CHINA A (DR) UCITS ETF (sub-fund of the Multi Units France Sicav)

- the Environmental Vulnerability index

For corporate issuers in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations

Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

For each issuer (Corporate & Government), ESG Industry sector classification is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The ESG score calculated at the portfolio level measures the capacity of the underlying issuers to manage the risks and key opportunities associated with environmental, social and governance factors. The risk scale ranges from 0 (high risk) to 10 (low risk). Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: employment, social relations, health and safety, training, compliance with ILO conventions
- Governance: Board of Directors or Supervisory Board, Audit and Internal Control, Executive Compensation

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source: The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Measures the portfolio's exposure to companies experiencing controversies relating to their compliance with international standards as a function of their degree of severity:

Red: Indicates that a company is involved in one or more very severe controversies;

- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;

- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;

- Green: Indicates that the company is not involved in any major controversies.

- None: Sovereign and/or Company not covered

Red Flag	0%
Orange Flag	3%
Yellow Flag	6%
Green Flag	91%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2021

Carbon Emissions (tons CO2e/\$M invested)	Carbon Intensity (tons CO2e/\$M sales)	Weighted Average Carbon Intensity tons (CO2e/\$M sales)	Portfolio rated by weight	100%
101	407	237	Scope 1 reported (vs estimated)	32%
			Scope 2 reported (vs estimated)	40%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GreenHouse Gas Protocol (GHG Protocol) was launched in 2001 by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: direct emissions resulting from the burning of fossil fuel resources owned or controlled by the company.
- Scope 2: indirect emissions related to the purchase or production of electricity.
- Scope 3: all other indirect emissions from the extended supply chain to the transport of goods and persons.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio invested in both equities and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest - total debt.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or the portion of the company's revenue generated from fossil fuel energies or the portion of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon:	
Fossil Fuel Reserves	3%
Thermal Coal	2%
Natural Gaz	1%
Oil	1%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of : \$ 1,000,000	
Thermal Coal (Tons)	2,521
Gas (MMBOE)	0.0002
Oil (MMBOE)	0.0001

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	1,538.2
Thermal Coal	4,604.1
Oil	59.1
Gas	59.6
Total	6,264.2

LYXOR HWABAO WP MSCI CHINA A (DR) UCITS ETF

(sub-fund of the Multi Units France Sicav)

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges - this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	4,604.1
Oil Sands	0.0
Shale Oil or Shale Gas	3.2
Sum High Impact Reserves	4,607.3
Other	1,656.9

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	1.5%	0.6%	0.6%
Some efforts	32.3%	51.5%	6.9%
Limited efforts/Information	17.6%	26.7%	0.8%
No effort/No evidence	48.7%	19.7%	91.7%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

•Asset stranding: risk of holding assets which may become stranded

•Operational Transition: risk of increase in operational costs

•Product Transition: risk of a decrease in demand for high-carbon products and services

•Neutral: low exposure to transition risks

•Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low- carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.1
Low carbon transition management Score	3.0
Operational Transition	13.6%
Product Transition	13.6%
Neutral	68.4%
Solutions	12.2%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source: MSCI ESG Research

Share of issuers in terms of power generation in portfolio	3.8%
--	------

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	11%
20-49.9%	5%
50-100%	7%

Weight of Companies Offering Clean Technology Solutions			
Alternative Energy	14.9%	Energy Efficiency	20.2%
Pollution Prevention	5.1%	Sustainable Water	3.6%
		Green Building	2.0%
		Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution			
Alternative Energy	3.4%	Energy Efficiency	5.4%
Pollution Prevention	0.4%	Sustainable Water	0.0%
		Green Building	0.2%
		Sustainable Agriculture	0.0%

LYXOR HWABAO WP MSCI CHINA A (DR) UCITS ETF (sub-fund of the Multi Units France Sicav)

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

% estimated EU Taxo 9.4%

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 0

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	2%
Coldwave	22%
Flood	2%
Heatwave	6%
Hurricane	3%
Water Stress	58%
Wildfire	8%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks.

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	0.1%	13.0%	86.9%	81.1%	13.9%	5.0%
Carbon Emissions	0.2%	99.1%	0.7%	74.7%	17.6%	7.7%
Electronic Waste	0.4%	0.3%	99.3%	92.4%	1.1%	6.4%
Opportunities in Green Building	0.4%	98.8%	0.7%	97.7%	2.3%	0.0%
Opp's in Renewable Energy	0.5%	14.9%	84.6%	97.8%		2.2%
Packaging Material & Waste	85.2%	14.0%	0.9%	79.4%	0.3%	20.3%
Water Stress	1.4%	98.3%	0.3%	36.5%	48.7%	14.8%
Toxic Emissions & Waste				35.4%	42.9%	21.7%

Temperature - Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

- A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,
- An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates a carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Level of alignment	2.2°C
Hedging	94.6%
Alignment Trajectory in % Weight	
<1.5°C	12.7%
1.5-2°C	14.2%
2-3°C	11.6%
>3°C	61.4%

Lyxor International Asset Management (LIAM) is a portfolio management company by the Autorité des marchés financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 ("AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 ("UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management compensation policy notably ensures appropriate risk management and adherence to compliance on the part of its employees.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No "carried interest" was paid during the financial year.

Lyxor's best selection and execution policy

Information on best selection and execution policies is available at: www.lyxor.com.

Transparency of securities financing operations and reuse of financial instruments SFTR regulation

(Accounting currency of the CIS)

During the financial year, the UCI did not carry out any transactions subject to the SFTR regulation, namely no repurchase transactions, securities or commodities lending/borrowing, buy-sell back or sell-buy back transactions, margin lending transactions and total return swaps (TRS).

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information, in the evolving context of the Covid-19 crisis.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded. However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;

- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;

- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;

- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.

- Deposits are assessed at their nominal value, plus any related interest that has accrued.

- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.

- Temporary securities acquisitions and sales are assessed at the market price.

- Shares and units of undertakings for collective investment in transferable securities under French law are valued at the last net asset value known on the calculation date of the Sub-Fund's net asset value.

- Shares and units of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.

Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been adjusted are valued at their probable trading value under the Management Company's responsibility.

The exchange rates used for the valuation of financial instruments denominated in Renminbi (RMB) is the WM Reuters fixing of 5:00 pm (CET) published by Thomson Reuters on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the CIU) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the CIU) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Sub-Fund).

Operation and management fees

These fees include all of the fees invoiced directly to the Sub-Fund, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and any turnover commissions that may notably be collected by the depository and delegate investment manager. For this Sub-Fund, the following operating expenses and management fees are also charged (see summary table below):

- performance fees: these fees reward the management company when the Sub-Fund has exceeded its objectives and are thus charged to the Sub-Fund;
- Transfer fees invoiced to the Subfund.

For more details on the fees actually charged to the Sub-Fund, refer to the statistics section of the Key Investor Information Document "KIID".

Fees invoiced to the Sub-Fund	Basis	Schedule rate
Financial management fees and administrative fees external to the portfolio management company (Auditor, Depository, distribution, lawyers) including tax ⁽¹⁾	Net assets	maximum 0.35% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commission	Net assets	None

⁽¹⁾ including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS or investment funds.

Accounting currency

The Subfund accounting is carried out in USD.

Indication of accountancy changes declared to each of the shareholders individually

- Occurred change: None.
- Future change: None.

Other changes subject to shareholders' individual information (*Not certified by the auditor*)

- Occurred change: None.
- Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Acc Share Class: Accumulation of income.

Dist Share Class: the Board of Directors reserves the right to distribute, one or more times a year, all or part of the income and/or accumulate it. Net realised capital gains will be capitalised.

3.4. Breakdown by listing or assessment currency of the asset, liability and off-balance sheet items

This breakdown is given for the main listing or assessment currencies, with the exception of the currency for the keeping of the accounts.

By main currency	-	CNY	-	Other currencies
Assets				
Deposits	-	-	-	-
Equities and similar securities	-	227,939,866.66	-	-
Bonds and similar securities	-		-	-
Debt securities	-		-	-
CIU	-		-	-
Temporary financial securities operations	-	-	-	-
Receivables	-		-	-
Financial accounts	-	545,697.43	-	-
Other assets	-		-	-
Liabilities				
Sale operations on financial instruments	-	-	-	-
Temporary financial securities operations	-	-	-	-
Debts	-	121,006.82	-	-
Financial accounts	-		-	-
Off-balance sheet				
Hedging	-	-	-	-
Other operations	-		-	-

3.5. Receivables and Debts: breakdown by type

Breakdown of items comprising "other receivables" and "other payables", in particular the breakdown of forward foreign exchange transactions by type of transaction (buy/sell).

Receivables	-
Future currency exchange operations:	
Future purchases of currency	-
Total traded amount of future Sales of currencies	-
Other receivables:	
-	-
-	-
-	-
-	-
-	-
Other operations	-
Debts	184,225.03
Future currency exchange operations:	
Future sales of currencies	-
Total traded amount of future Purchases of currencies	-
Other debts:	
Adjustment accounts	121,006.82
Accrued expenses	63,218.21
-	-
-	-
-	-
Other operations	-

3.6. Shareholders' equities

Equity category issued/redeemed during the fiscal year:	Number of equities	Subscriptions		Redemptions	
		Amount	Number of equities	Amount	
Dist Shares/FR0011720937	-	-	-	-	
Acc Shares/FR0011720911	760,319	158,186,789.87	423,278	87,596,396.34	
Subscription / redemption commission by equity category:		Amount		Amount	
Dist Shares/FR0011720937		296,849.06		161,586.43	
Acc Shares/FR0011720911		-		-	
Retrocessions by equity category:		Amount		Amount	
Dist Shares/FR0011720937		-		-	
Acc Shares/FR0011720911		-		-	
Commissions acquired by the Sub-Fund by equity category:		Amount		Amount	
Dist Shares/FR0011720937		296,849.06		161,586.43	
Acc Shares/FR0011720911		-		-	

3.7. Management fees

Operating and management fees (fixed fees) as % of the average net assets	%
Equity category:	
Dist Shares/FR0011720937	-
Acc Shares/FR0011720911	0.34
Performance commissions (variable fees): amount of costs for the year	Amount
Equity category:	
Dist Shares/FR0011720937	-
Acc Shares/FR0011720911	-
Retrocession of management fees:	
- Total amount of fees retroceded to the Compartment	-
- Breakdown by "target" CIS:	
- CIU 1	-
- CIU 2	-
- CIU 3	-
- CIU 4	-

3.8. Commitments given and received

3.8.1. Description of guarantees received by the Sub-Fund with indication of the capital guarantees.....	None
3.8.2. Description of the other commitments received and/or given	None

3.9. Other information

3.9.1. Current value of the financial instruments that are the subject of temporary acquisition:

- Financial instruments sold under forward repurchase agreements	-
- Other temporary operations	-

3.9.2. Current value of the financial instruments comprising security deposits: Financial instruments received as guarantees and not included in the balance sheet:

- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-

Financial instruments given as guarantees and maintained in their original item:

- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-

3.9.3. Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (Sicav) and CIU managed by these entities:

- CIS securities	-
- Swaps	-

3.10. Allocation of the profit and loss table *(in the Sub-Fund's accounting currency)*

Advances paid during the fiscal year

Date	Equity category	Overall amount	Unit amount	Total tax credits	Unit tax credits

APPENDIX TO THE REPORT intended for Swiss subscribers

This appendix makes the annual report with the FINMA requirements for the marketing in Switzerland. **It has not been certified by the statutory auditors auditors.**

Subfund country of origin:

France.

Representative of the Swiss Compartment

Société Générale, Paris, Zurich Branch, has been authorised by the FINMA as the Fund's representative in Switzerland while also assuming the payment service. The prospectus, articles of association, annual and semi-annual reports of the Fund, the KIIDs as well as the list of purchases and sales made by the Fund during the financial year can be obtained on request and at no cost from the representative's head office in Switzerland, Société Générale, Paris, Zurich Branch, Talacker 50, PO Box 5070, 8021 Zurich.

Calculation of the Total Expense Ratio (in compliance with the recommendations of the Swiss Funds & Asset Management Association SFAMA)

Annual closing of the collective investment:

31-Oct

Average assets of the fund for the period from 01/11/19 to 30/10/20:

53,151,813.11

Management commission of the fund:

0.35

% including tax

Excerpt from the profit and loss statement

Expenses in euros	Annual report 31/10/2019	Half-yearly report 30/04/2020	Annual report 30/10/2020
Fund management commission	250,284.59	69,290.96	185,379.87
Performance fee of the investment manager	0.00	0.00	0.00
Depository bank commission	0.00	0.00	0.00
Other expenses	0.00	0.00	0.00
Taxes	0.00	0.00	0.00
Total operating expenses	250,284.59	69,290.96	185,379.87

Calculation of the TER for 12 months, from 01/11/19 to 30/10/20:

TER, including performance fee

$185379.87 / 53151813.11 / 100$

0.35

%

Performance fee as a share in percentage of the net average assets

-

%

LYXOR HWABAO WP MSCI CHINA A (DR) UCITS ETF
(compartment of the Multi Units France Sicav) - Fiscal year ending on 29/10/2021

Performance of the Sub-Fund

The detailed performance of the units in the Sub-Fund calculated in accordance with the principles of the Swiss Fund Association is presented below:

	Annual performance from 31/10/2020 to 29/10/2021	Annual performance from 31/10/2019 to 30/10/2020	Annual performance from 31/10/2018 to 31/10/2019
LYXOR HWABAO WP MSCI CHINA A (DR) UCITS ETF			
C-USD unit	+16.60%	+33.28%	+25.79%
MSCI CHINA A NET TOTAL RETURN (USD)			
C-USD unit	+16.85%	+33.97%	+27.64%

Past performances are no indicator of future performances. The performances presented here do not take into account the fees and expenses arising from the subscription or redemption of the contract.

report

SUB-FUND OF THE MULTI UNITS FRANCE SICAV

FISCAL YEAR ENDING ON: 29.10.2021

Compartments / feeder	LYXOR MSCI WORLD EX EMU UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
Management Company	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy – 92987 Paris La Défense Cedex.
Depository and Custodian	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

Information on the investments and management

Classification:

International equities.

At all times, Lyxor MSCI World Ex EMU UCITS ETF (“Subfund”) has at least 60% exposure in foreign equity markets or in equity markets of several countries, possibly including the French market.

The Sub-Fund is an index-based fund of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution:

Acc share class: accumulation of all distributable amounts.

Dist share class: the Board of Directors reserves the right to distribute, one or more times per year, all or part of the result and/or to accumulate it. Realised net capital gains will be accumulated.

Monthly Hedged to EUR - Acc share class: accumulation of all distributable amounts.

Monthly Hedged to EUR - Dist share class: the Board of Directors reserves the right to distribute, one or more times per year, all or part of the result and/or to accumulate it. Realised net capital gains will be accumulated.

Monthly Hedged to GBP - Acc share class: accumulation of all distributable amounts.

Monthly Hedged to GBP - Dist share class: the Board of Directors reserves the right to distribute, one or more times per year, all or part of the result and/or to accumulate it. Realised net capital gains will be accumulated.

Monthly Hedged to CHF - Acc share class: accumulation of all distributable amounts.

Monthly Hedged to CHF - Dist share class: the Board of Directors reserves the right to distribute, one or more times per year, all or part of the result and/or to accumulate it. Realised net capital gains will be accumulated.

Management objective:

The Compartment is a passively managed index-based UCITS.

The investment objective of the Subfund is to track the upward and downward performance of the MSCI World ex EMU Net Total Return index (“Benchmark”) listed in USD, representative of the performance of large and mid-cap companies in developed countries, excluding eurozone countries, while minimising the tracking error between the Subfund and the Benchmark.

The anticipated level of the ex-post tracking error under normal market conditions is 0.07%.

Benchmark indicator:

The Benchmark is a “Net Total Return” index (i.e. all dividends paid by the Benchmark components are reinvested in the Benchmark).

The Benchmark is an equity index calculated and published by the supplier of international indices MSCI.

It measures the overall performance of developed markets outside the eurozone. It covers approximately 85% of the market capitalisations of each country.

The Benchmark is formed from the meeting of several MSCI indices representing each country classified as developed by MSCI, excluding eurozone countries.

The weighting of each security in the Benchmark is adjusted according to its market capitalisation based on the free float. Consequently, the number of securities included in the basket making up the Benchmark may change over time.

The MSCI methodology and its calculation method entail a variable number of component companies of the Benchmark. A full description of the Benchmark and its construction methodology and information on the composition and respective weightings of the Benchmark components are available on the website: <https://www.msci.com/>.

The performance tracked is that of the Benchmark closing value.

Benchmark revision and composition

The revision of the Reference Indicator takes place quarterly.

The exact composition and revision rules of the Benchmark Indicator published by MSCI are available on the website: <https://www.msci.com/>.

The above-mentioned frequency of rebalancing has no effect on costs in the implementation of the investment strategy.

Benchmark Index publication

The Benchmark is calculated on a daily basis at closing prices using the official closing stock market price for the component stocks. The Benchmark is also calculated in real time each trading day.

The Benchmark's closing price is available on the website <https://www.msci.com/>.

The administrator of the benchmark is MSCI Limited.

Pursuant to European Parliament and Council Regulation (EU) 2016/1011 of 8 June 2016, the administrator of the Benchmark has until 31 December 2023 to apply to the competent authority for the necessary certification or registration where applicable.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmarks used, describing the measures to be implemented in the event of substantial changes to an index or if that index ceases to be provided.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Index, the Sub-Fund will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Sub-Fund may notably be securities that make up the Benchmark Index, as well as other international equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the future exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the website: www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

As part of the management of its exposure, the Compartment may be exposed up to 20 % of its assets in equities from a single issuing entity.

This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Index, in particular in the event of a public offering affecting one of the securities making up the Benchmark Index or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Index.

2. Balance sheet assets (excluding integrated derivatives)

The Sub-Fund may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets.

The aforementioned equities will be chosen on the basis of criteria:

- Of eligibility, in particular:
 - o Subordination to the main market indices or to the Benchmark Index;
 - o Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation);
 - o rating of the country of the issuer's head office (requirement of a minimum threshold of S&P rating or equivalent).
- Of diversification, notably:
 - o Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code);
 - o Geographical area;
 - o Sector.

For more information on the abovementioned eligibility and diversification criteria, investors can visit the website: www.lyxoretf.com

Investment in undertakings for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the net assets. As part of these investments, the Sub-Fund may subscribe for units or shares of UCITS managed by the management company or a company to which it is linked. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of the future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Sub-Fund will have recourse to index-linked swaps traded over-the-counter, exchanging the value of the equities in the Sub-Fund's assets (or of any other financial instrument or asset held by the Sub-Fund, where appropriate) against the value of the Benchmark Index (in compliance with the description contained in this section's paragraph 1 above).

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including future financial instruments other than index-linked swaps.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Sub-Fund's investment portfolio, nor regarding the underlying assets of the future financial instruments. When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/fees and its ability to achieve its management objective may also be negatively impacted. Where the Sub-Fund enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Sub-Fund can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10 % of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Sub-Fund is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Sub-Fund's use of forward swap contracts traded over the counter, the Sub-Fund can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets. In the event of default by the counterparty, the Compartment may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt towards the Compartment as part of the guaranteed transaction. Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20 % of the Sub-Fund's net asset value;
- (e) The Sub-Fund's Management Company must be able to realise this collateral in full and at any time without having to consult with the counterparty or obtain its approval.

Notwithstanding the condition specified in (d) above, the Fund may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and

Such financial guarantees consist of at least six different issues of which none exceeds 30% of the Sub-Fund's assets. In compliance with the aforesaid conditions, the guarantees received by the Sub-Fund can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e)(above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Sub-Fund's management company will apply a margin to the financial guarantees received by the Sub-Fund. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged.

Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
 - (ii) invested in high-quality State bonds;
 - (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
 - (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.
- Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Compartment may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

COUNTERPARTY SELECTION POLICY

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (financial futures and temporary acquisitions and disposals of securities) on behalf of the Mutual Fund. The selection of counterparties for financial contracts and financial intermediaries is performed rigorously from among the reputable counterparties and intermediaries in the market, on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes various criteria into consideration to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating
- Quantitative criteria based on the CDS LT spread (absolute criteria, volatility and comparison with a reference group, etc.)

Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the management company applies its "best execution" policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: www.lyxor.com, section "regulatory information".

Risk profile:

The Subfund will be invested primarily in financial instruments selected by the Management Company. These instruments will be subject to the vagaries of the markets.

The holder is exposed through the Subfund mainly to the following risks:

- Equity risk

An equity price can vary upwards or downwards, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Index be negative over the investment period.

- Liquidity risk (primary market)

If, when the Compartment (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Subfund's shares on an exchange may be adversely affected by a suspension of or disruption in market operation, such as one of the following events:

- i) Suspension or stoppage of the calculation of the Benchmark Index, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Index, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Sub-Fund's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

- Risks related to the management of guarantees

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Sub-Fund may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk associated with investments in small and mid-cap companies:

The Subfund is exposed to small and mid-cap companies and, more specifically, to securities from the small and medium-sized enterprises (SMEs) and mid-cap companies equity markets, which may increase market and liquidity risks. Market movements are therefore more pronounced both upwards and downwards, and faster than for big caps. The net asset value of the Subfund may have the same behaviour and therefore decline more quickly and significantly than a similar investment in large-cap securities.

- Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk associated with the use of financial futures

In order to achieve its investment objective, the Sub-Fund uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Index. These futures involve various risks, such as counterparty risk, hedging disruption, Benchmark disruption, taxation risk, regulatory risk, and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Index is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Index is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark,
- iv) The index provider makes a material change in the Benchmark calculation formula or method (other than a minor modification such as an adjustment to this Benchmark's underlying components or their respective weightings) that the Sub-Fund cannot effectively replicate at a reasonable cost;
- v) one or more Benchmark components become illiquid because they are no longer traded on a regulated market or because their over-the-counter trading (e.g. bonds) is disrupted;
- vi) the Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

An unforeseen change, by the issuer of a security that is a component of the Benchmark, in a planned corporate action that is in contradiction with a previous official announcement on which the Subfund based its valuation of the corporate action (and/or on which the Subfund's counterparty to a derivative or transaction based its valuation of the corporate action) can adversely affect the Subfund's net asset value, particularly if the Subfund's treatment of the corporate event differs from that of the Benchmark.

- Exchange risk linked to the Benchmark

The Subfund is exposed to an exchange risk to the extent that the underlying securities making up the Benchmark Index could be listed in a currency other than that of the Benchmark Index, or be derivatives of securities listed in a currency other than that of the Benchmark Index. Fluctuating exchange rates are then likely to negatively affect the Benchmark Index monitored by the Subfund.

- Risk associated with the currency hedging specific to the Monthly Hedged to EUR - Acc, Monthly Hedged to EUR - Dist, Monthly Hedged to GBP - Acc, Monthly Hedged to GBP - Dist, Monthly Hedged to CHF - Acc, and Monthly Hedged to CHF - Dist shares

In order to hedge the EUR currency risk (GBP and CHF respectively) against the currency of each of the securities comprising the Benchmark specific to the relevant Monthly Hedged Share class, the Sub-Fund uses a hedging strategy to reduce the impact of the change between the currency of each of the securities comprising the Benchmark and the currency of that Share class. However, this hedging remains imperfect due to its monthly adjustment frequency and the instruments used; the Sub-Fund may therefore be subject to downward market movements impacting the net asset value of the share class. In addition, the cost of implementing the currency hedge will negatively impact the net asset value of the Monthly Hedged share classes.

- Sustainability risks

The Sub-Fund does not consider sustainability factors in the investment decision-making process but remains exposed to sustainability risks. The occurrence of such risks could have a negative impact on the value of the investments made by the Sub-Fund. Additional information can be found in the "Sustainability Information" section of the Prospectus.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

Investors who subscribe to this Subfund wish to gain exposure to the performance of large- and mid-cap companies in developed countries outside the eurozone.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment.

It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks. Investors are therefore recommended to study their individual situations with their usual estate management advisers. The minimum recommended investment term is greater than 5 years.

U.S. Persons (as defined in the "COMMERCIAL ORDER INFORMATION" prospectus) may not invest in the Sub-Fund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

Activity report

The fund tracks the performance of the MSCI World ex EMU Net Return USD Index USD (Ticker: M1WOM).

Performance trend at the closing date:

Share name	ISIN	Share currency	Performance from 28/02/19 to 31/10/19			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor MSCI World Ex EMU UCITS ETF - Acc	FR0013209921	USD	40.16. %	40.16%		108.68%

(1) "There is no difference between the annual performance of the class and that of its Benchmark."

The tracking error realised is 0.0155%. The target tracking error over the period was 0.07%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams. This difference is considered insignificant.

Index Linked Swap's counterparty is: Bank of America.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

This Fund is covered by Article 6 of Regulation (EU) 2019/2088 (the "SFDR Regulation"). It does not promote environmental and/or social characteristics and does not aim to invest sustainably

Transparency of environmentally sustainable investments in periodic reports under Regulation (EU) 2020/852

Regulation (EU) 2020/852 on the establishment of a framework for promoting sustainable investments (the "Taxonomy Regulation") sets out the criteria for determining whether an economic activity is environmentally sustainable in the European Union.

According to the Taxonomy Regulation, an activity can be considered "sustainable" if it contributes substantially to one of the 6 environmental objectives set out in the Taxonomy Regulation, including climate change mitigation and adaptation, pollution prevention and reduction, or the protection and restoration of biodiversity and ecosystems.

In addition, in order to be considered to be sustainable, this economic activity must respect the principle of "not to cause significant harm" to one of the other five objectives of the Taxonomy Regulation and must also comply with basic social criteria (alignment to OECD and UN guidelines on business and human rights).

In accordance with article 7 of the Taxonomy Regulation, the management company draws investors' attention to the fact that the underlying investments of this Fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Provision of environmental, social and governance (ESG) information - in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website [Lyxor.com](https://www.lyxor.com) and is revised each

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The Fund promotes environmental and/or social characteristics within the meaning of Article 8 of Regulation (EU) 2019/2088 (SFDR).

Environmental and/or social characteristics promoted by the Fund are met through the investment process. For further information in relation such characteristics, please refer to the prospectus of the Fund.

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

In accordance with Articles L.533-22-1 and D. 533-16-1 of the French Monetary and Financial Code, investors are informed that the UCI does not simultaneously take into account social, environmental and governance quality criteria in its investment policy.

For ETF (exchange-traded) funds whose management objective is to replicate the performance of its benchmark via a physical replication.

Applying an exclusion or selection of securities on the basis of ESG criteria would imply a deviation from the benchmark and therefore a higher tracking error. Lyxor has implemented a shareholder commitment. Lyxor's voting policy is referenced in Lyxor's SRI policy and available on [Lyxor.com](https://www.lyxor.com)'s website. The voting scope defined by Lyxor for this fiscal year did not include this fund. All the general actions carried out by the management company relating to ESG criteria are presented in the responsible investor policy available on the [Lyxor.com](https://www.lyxor.com) website.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor is gradually expanding its ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint

•Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of 1 the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

•The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested), •Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$M invested),

•A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

•Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions:

•Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs). -In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

•the Germanwatch climate performance index score

•the environment performance score

•the Environmental Vulnerability index

For corporate issuers in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

•Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations

•Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

LYXOR MSCI WORLD EX EMU UCITS ETF (compartment of the Multi Units France Sicav)

For each issuer (Corporate & Government), the ESG Industry sector classification is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The ESG score calculated at the portfolio level measures the capacity of the underlying issuers to manage the risks and key opportunities associated with environmental, social and governance factors. The risk scale ranges from 0 (high risk) to 10 (low risk). Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: employment, social relations, health and safety, training, compliance with ILO conventions
- Governance: Board of Directors or Supervisory Board, Audit and Internal Control, Executive Compensation

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source: The Company carbon footprint data are provided by the MSCI agency. All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Measures the portfolio's exposure to companies experiencing controversies relating to their compliance with international standards as a function of their degree of severity:

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: indicates that the company is not involved in any major controversies
- None: Sovereign and/or Company not covered

Red Flag	1%
Orange Flag	34%
Yellow Flag	24%

Climate Risks & Energy Transition

Portfolio carbon footprint as of 1 October 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons (CO2e/\$M sales)	Portfolio rated by weight	100%
40	142	129	Scope 1 reported (vs estimated)	93%
			Scope 2 reported (vs estimated)	86%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GreenHouse Gas Protocol (GHG Protocol) was launched in 2001 by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: direct emissions resulting from the burning of fossil fuel resources owned or controlled by the company.
- Scope 2: indirect emissions related to the purchase or production of electricity.
- Scope 3: other indirect emissions from the extended supply chain to the transport of goods and persons.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions standardised by revenue), and these intensities are weighted by the weight of the companies in the portfolio.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

"Methodology change".

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio invested in both equities and bonds.

EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest - total debt.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage or MWh generated from fossil fuels or the portion of the company's revenues earned from fossil fuels or the portion of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon:	
Fossil Fuel Reserves	6%
Thermal Coal	2%
Natural Gas	4%
Oil	4%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of : \$ 1,000,000	60
Thermal Coal (Tons)	0.0007
Gas (MMBOE)	0.0011
Oil (MMBOE)	

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	170.9
Thermal Coal	110.0
Oil	526.2
Gas	165.8
Total	1,020.9

LYXOR MSCI WORLD EX EMU UCITS ETF (compartment of the Multi Units France Sicav)

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges - this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	110.0
Oil Sands	204.4
Shale Oil or Shale Gas	110.7
Sum High Impact Reserves	425.0
Other	595.9

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	6.3%	4.9%	4.2%
Some efforts	78.6%	88.4%	69.8%
Limited efforts/Information	4.9%	2.5%	3.6%
No effort/No evidence	9.9%	4.1%	22.5%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

•Asset stranding: risk of holding assets which may become stranded

•Operational Transition: risk of increase in operational costs

•Product Transition: risk of a decrease in demand for high-carbon products and services

•Neutral: low exposure to transition risks

•Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low- carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.2
Low carbon transition management Score	5.4
Operational Transition	5.3%
Product Transition	5.3%
Neutral	78.0%
Solutions	8.4%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The issuer data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source: MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	4.0%	Liquid Fuel	0.3%	Natural Gas	37.3%
Nuclear	24.3%	Renewables	10.5%	Thermal Coal	23.6%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. Those issuers are likely to benefit from a low carbon transition

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	22%
20-49.9%	8%
50-100%	2%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	10.7%	Energy Efficiency	30.6%	Green Building	2.5%
Pollution Prevention	4.9%	Sustainable Water	4.4%	Sustainable Agriculture	0.3%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	0.6%	Energy Efficiency	4.3%	Green Building	0.4%
Pollution Prevention	0.2%	Sustainable Water	0.1%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

% estimated EU Taxo

5.6%

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	2%
Coldwave	23%
Flood	2%
Heatwave	7%
Hurricane	5%
Water Stress	44%
Wildfire	16%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.).

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business		Segment
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	1.7%	43.1%	55.3%	88.7%	7.3%	4.0%
Carbon Emissions	0.7%	27.4%	72.0%	79.5%	16.8%	3.7%
Electronic Waste	1.7%	6.8%	91.6%	94.2%	0.7%	5.1%
Opportunities in Green Building	1.4%	36.2%	62.5%	98.1%	1.2%	0.8%
Opp's in Renewable Energy	2.6%	88.1%	9.3%	96.2%	0.6%	1.1%
Packaging Material & Waste	8.5%	75.2%	16.4%	87.5%		12.5%
Water Stress	8.6%	89.0%	2.4%	62.1%	29.5%	8.5%
Toxic Emissions & Waste				57.6%	32.1%	10.3%

Temperature - Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

- A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,
- An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates a carbon budget from global to company level over a chosen time horizon.

Alignment Degree	>3°C
Coverage	96.6%
Alignment Trajectory in % Weight <1.5°C	
1.5-2°C	28.8%
2-3°C	18.3%
>3°C	12.9%
	40.0%

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

Meeting overview

This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	0
Number of Voted Meetings	0
Participation rate at General Meetings	0.0%

Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
------------	-----	---------	------------

Breakdown by country

In 2021, Lyxor's voting scope was issuers domiciled in Europe, in United States and in Japan.

The data details the geographical distribution of the General Meetings at which the Lyxor MSCI World Ex EMU Leaders Extra UCITS ETF fund participated during the fiscal year.

Engagement

This fund is part of the following campaigns: Corporate Governance, ESG, General meeting, No

ESG: The consideration of environmental, social and/or governance issues is at the heart of Lyxor's responsible investor strategy. Lyxor therefore considers that it is the responsibility of the Board to supervise the definition of the company's non-financial and climate risks and opportunities, as well as the strategy implemented by management with regards to this risk/opportunity analysis. The objective of Lyxor on this type of engagement is to work with companies to encourage them to improve their Corporate Social Responsibility practices.

Corporate Governance: Outside the general meeting period, Lyxor promotes regular dialogue with companies on corporate governance issues such as changes in the composition of the Board and its committees, succession plans, the role and functions of the lead director, changes in the remuneration policy, etc.

Engagement overview over the year

The table shows the number of engagement campaigns conducted by Lyxor during the year compared to the number of issuers present in the fund.

Number of companies under engagement	4
Number of engagement	5
Number of companies under engagement / Number of companies in the fund	10%

Breakdown by country

The data present the geographical breakdown of the issuers concerned by an engagement campaign over the financial year by the fund.

Netherlands	20%
Germany	40%
USA	40%

Breakdown by engagement campaigns carried out by the fund over the year

For the year, the fund participated in the various engagement campaigns presented below and conducted by Lyxor.

For more details on Lyxor's engagement activities, an annual report is available on the Lyxor website: <https://www.lyxor.com/en/socially-responsible-investment>

General Meeting	20%
ESG	40%
Plastic & Circular Economy	20%
Climate Action 100+	20%

Any partial or total reproduction of the information or the document is subject to the prior express authorization of the portfolio management company.

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des marchés financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 ("AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 ("UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management compensation policy notably ensures appropriate risk management and adherence to compliance on the part of its employees.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the French Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No "carried interest" was paid during the financial year.

Lyxor's best selection and execution policy

Information on best selection and execution policies is available at: www.lyxor.com.

Transparency of securities financing operations and reuse of financial instruments SFTR regulation

(Accounting currency of the CIU)

1. General information.

1.1. Amount of securities and raw materials loaned in proportion with the total assets that can be loaned, defined as excluding the cash and cash equivalents.

Securities lending	
% of assets that can be loaned	-

1.2. Amount of the assets committed to each type of securities financing operation and total return swap, expressed in absolute value (in the currency of the collective investment undertaking) and in proportion with the assets under management of the collective investment undertaking.

	Securities lending ⁽¹⁾	Securities borrowing ⁽²⁾	Repo operations ⁽³⁾	Reverse repo operations ⁽⁴⁾	TRS ⁽⁵⁾
Absolute value	-	-	-	-	130,609,946.03
% of assets under management	-	-	-	-	100.00

⁽¹⁾ The amount of assets engaged in securities lending transactions corresponds to the market value of the securities lent at the balance sheet date.

⁽²⁾ The amount of assets engaged in securities borrowing transactions corresponds to the market value of the guarantees (cash or securities) delivered by the fund as part of the securities borrowing on the balance sheet date.

⁽³⁾ The amount of assets engaged in repurchase transactions corresponds to the market value of the securities repurchased on the balance sheet date.

⁽⁴⁾ The amount of assets engaged in reverse repurchase transactions corresponds to the market value of securities purchased under repurchase agreements at the balance sheet date.

⁽⁵⁾ The amount of assets committed in the TRS corresponds (i) for the TRS for which the management company has undertaken to deliver a basket of securities to the TRS counterparty, to the market value of the basket of securities committed in the TRS, increased by the market value of the TRS on the accounting date and/or (ii) for the TRS for which the management company does not deliver a basket of securities, to the value of the nominal value of the TRS on the balance sheet date.

2. Concentration data

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information, in the evolving context of the Covid-19 crisis.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded. However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities of UCITS operating under French law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.

Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

The exchange rates used for the assessment of financial instruments listed in a currency other than the Sub-Fund's reference currency are the exchange rates published the fixing WM Reuters on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the CIS) multiplied by the number of contracts multiplied by the face value. The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Sub-Fund) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Sub-Fund, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Sub-Fund has exceeded its objectives and are invoiced to the Sub-Fund;
- Transfer commissions invoiced to the Sub-Fund.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Sub-Fund	Basis	Maximum scale for Acc and Dist shares	Maximum schedule rate: Monthly Hedged to EUR - Acc, Monthly Hedged to EUR - Dist, Monthly Hedged to GBP - Acc, Monthly Hedged to GBP - Dist, Monthly Hedged to CHF - Acc, Monthly Hedged to CHF - Dist
Financial management fees and administrative fees external to the portfolio management company (Auditor, Depository, distribution, lawyers) including tax ⁽¹⁾	Net assets	0.35% per year	0.45% per year

Fees invoiced to the Sub-Fund	Basis	Maximum scale for Acc and Dist shares	Maximum schedule rate: Monthly Hedged to EUR - Acc, Monthly Hedged to EUR - Dist, Monthly Hedged to GBP - Acc, Monthly Hedged to GBP - Dist, Monthly Hedged to CHF- Acc, Monthly Hedged to CHF - Dist
Administrative fees external to the portfolio management company (auditor, depository, distribution, lawyers)	Net assets	0.12% per year	
Maximum indirect costs (commissions and management fees)	Net assets	None	
Outperformance commission	Net assets	None	
Transactions commissions	Collection on each transaction	None	

⁽¹⁾ including all fees except activity fees, incentive fees and fees related to investments in UCITS.

Accounting currency

The Subfund accounting is carried out in USD.

Indication of accountancy changes declared to each of the shareholders individually

- - Occurred change: None.
- - Future change: None.

Other changes declared to each of the shareholders individually *(Not certified by the auditor)*

- - Occurred change: None.
- - Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Acc share class: accumulation of all distributable amounts.

Dist share class: the Board of Directors reserves the right to distribute, one or more times per year, all or part of the result and/or to accumulate it. Realised net capital gains will be accumulated.

Monthly Hedged to EUR - Acc share class: accumulation of all distributable amounts.

Monthly Hedged to EUR - Dist share class: the Board of Directors reserves the right to distribute, one or more times per year, all or part of the result and/or to accumulate it. Realised net capital gains will be accumulated.

Monthly Hedged to GBP - Acc share class: accumulation of all distributable amounts.

Monthly Hedged to GBP - Dist share class: the Board of Directors reserves the right to distribute, one or more times per year, all or part of the result and/or to accumulate it. Realised net capital gains will be accumulated.

Monthly Hedged to CHF - Acc share class: accumulation of all distributable amounts.

Monthly Hedged to CHF - Dist share class: the Board of Directors reserves the right to distribute, one or more times per year, all or part of the result and/or to accumulate it. Realised net capital gains will be accumulated.

The Subfund is in no way sponsored, endorsed, sold or promoted by MSCI Inc. ("MSCI"), or by any MSCI subsidiary, or by any of the entities involved in the preparation of the MSCI indices. The MSCI indices are the exclusive property of MSCI and the MSCI indices are trademarks belonging to MSCI or its subsidiaries and have been the subject of a licence granted, for certain requirements, to Lyxor Asset Management. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the preparation or calculation of the MSCI indices makes any declaration or issues any express or implicit guarantee relative to holders of the Subshares of the Subfund or more generally to the public, with regard to the appropriateness of a transaction involving shares of the fund or shares of the Subfund in particular, or regarding the ability of any MSCI index to replicate the performance of the overall equity market. MSCI or its subsidiaries are the owners of certain names, registered trademarks and of the MSCI indices that are determined, composed and calculated by MSCI without discussion with Lyxor International Asset Management or the Subfund. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the preparation of the MSCI indices is required to take into account the needs of Lyxor International Asset Management or of the holders of the MF's equities when determining, composing or calculating the MSCI indices. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the preparation of the MSCI indices makes any decision regarding the launch date, the price, the quantity of the shares of the Subfund, or even the determination and calculation of the formula used to establish the Fund's net asset value. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the preparation of the MSCI indices assumes any liability or obligation with regard to the Subfund's administration, management or marketing.

ALTHOUGH MSCI OBTAINS INFORMATION INTEGRATED OR USED IN THE CALCULATION OF INDICES FROM SOURCES THAT MSCI CONSIDERS TO BE RELIABLE, NEITHER MSCI NOR ANY OTHER PARTY INVOLVED IN THE CREATION OR THE CALCULATION OF MSCI INDICES GUARANTEE THE ACCURACY AND/OR EXHAUSTIVE NATURE OF THE INDICES OR ANY DATA INCLUDED. NEITHER MSCI NOR ANY OTHER PARTY INVOLVED IN THE CREATION OF A CALCULATION OF THE MSCI INDICES MAKES ANY WARRANTY, EXPRESS OR IMPLIED, AS TO THE RESULTS OBTAINED BY THE HOLDER OF AN MSCI LICENSE, THE CLIENTS OF THIS LICENSE AS WELL AS THE COUNTERPARTIES, THE HOLDERS OF SHARES OF THE SUBFUND OR ANY OTHER PERSON OR ENTITY, THE USE OF INDICES OR ANY DATA INCLUDED IN RELATION TO THE RIGHTS GRANTED UNDER LICENSE OR ANY OTHER USE. NEITHER MSCI NOR ANY OTHER PARTY GIVES EXPRESS OR IMPLICIT GUARANTEES AND MSCI REJECTS ALL GUARANTEES REGARDING THE COMMERCIAL VALUE OR ADEQUACY FOR A SPECIFIC USAGE OF THE INDICES OR INCLUDED DATA. NOTWITHSTANDING THE ABOVE, UNDER NO CIRCUMSTANCES MAY THE LIABILITY OF MSCI OR OF ANY OTHER PARTY BE SOUGHT WITH REGARD TO ANY DAMAGES, WHETHER DIRECT, INDIRECT OR OTHER (INCLUDING THE LOSS OF EARNINGS), EVEN IN CASE OF KNOWLEDGE OF THE POSSIBILITY OF SUCH DAMAGES.

* The amounts of the unit distribution, the unit capitalisation and the tax credits are indicated in the accounting currency of the Compartment. The unit capitalisation corresponds to the sum of profit and loss and net capital gains or losses on the number of circulating units. This calculation method is applied from 1 January 2013.

⁽¹⁾ Pursuant to the Fiscal Instruction of 4 March 1993 of the French Tax Department, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits between the shares outstanding on that date.

activity
report

SUB-FUND OF THE MULTI UNITS FRANCE SICAV

FISCAL YEAR ENDING ON: 29.10.2021

Compartments / feeder	LYXOR DJ GLOBAL TITANS 50 UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
Management Company	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy – 92987 Paris La Défense Cedex.
Depository and Custodian	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

Information on the investments and management

Classification:

International equities.

At all times, the Lyxor DJ Global Titans 50 UCITS ETF subfund (“Subfund”) has at least 60% exposure in foreign equity markets or in equity markets of several countries, possibly including the French market. The Compartment is an index-based fund of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution:

Dist share classes: the Board of Directors reserves the right to distribute all or part of the distributable amounts and/or to distribute them once or several times a year.

Management objective:

The Compartment is a passively managed index-based UCITS.

The management objective of the Lyxor DJ Global Titans 50 UCITS ETF subfund is to replicate the upward or downward evolution of the Dow Jones Global Titans 50 Total Return index (“Benchmark”), listed in euros, while minimizing the tracking error between the Subfund’s performance and the Benchmark’s performance as much as possible. The anticipated level of the ex-post tracking error under normal market conditions is 0.05 %.

Benchmark indicator:

The Benchmark is the Dow Jones Global Titans 50 Total Return index.

The Benchmark is a “Total Return” index (i.e. all dividends paid by the Benchmark components are reinvested in the Benchmark).

The Benchmark is a capitalization-weighted index of global and multinational companies. It represents the performance of the world’s top 50 companies selected from 18 sectors. 9 countries are represented in this index. The stocks are selected by Dow Jones according to four criteria:

- relatively low risk and price volatility
- established leadership in their sector at a global level
- stable earning power
- broad global diversification

It is published by Dow Jones on five business days and is the world’s leading index with regulated futures contracts. The monitored performance is that of the Benchmark Index stock closing prices.

A full description and the full methodology for the construction of the Benchmark as well as information on the composition and respective weights of the components of the Benchmark are available on the website: <https://us.spindices.com/>

Benchmark Index publication

The Benchmark's closing price is available on the website <https://us.spindices.com/>

The administrator of the Benchmark is S&P DJI LLC. In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Euronext administrator of the Benchmark Index is included in the register of administrators and benchmark indices maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmarks used which describes the measures to be implemented in the event of substantial changes to an index or the cessation of provision of that index.

Benchmark revision and composition

The components of the Benchmark are revised quarterly by DJI Opco, LLC.

The above-mentioned frequency of rebalancing has no effect on costs as part of the implementation of the investment strategy.

The exact composition and rules for revision of the composition of the Benchmark Indicator published by the Dow Jones are available on the website:

<https://us.spindices.com/>

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Index, the Sub-Fund will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Subfund may notably be securities that make up the Benchmark, international equities, and/or eurozone equities from all economic sectors, listed on all markets, including the small-cap markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100 % of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the future exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the website: www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

As part of the management of its exposure, the Compartment may be exposed up to 20 % of its assets in equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Index, in particular in the event of a public offering affecting one of the securities making up the Benchmark Index or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Index.

2. Balance sheet assets (excluding integrated derivatives)

The Sub-Fund may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets. The aforementioned equities will be chosen on the basis of criteria:

- Of eligibility, in particular:

- Subordination to the main market indices or to the Benchmark Index;
- Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation);
- Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent).

- Of diversification, notably:

- Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in R214-21 of the French Monetary and Financial Code)
- geographic or sectoral

For more information on the abovementioned eligibility and diversification criteria, investors can visit the website: www.lyxoretf.com
Investment in undertakings for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10 % of the net assets.

As part of these investments, the Sub-Fund may subscribe for units or shares of UCITS managed by the management company or a company to which it is linked. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

As part of the future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Sub-Fund will have recourse to index-linked swaps traded over-the-counter, exchanging the value of the equities in the Sub-Fund's assets (or of any other financial instrument or asset held by the Sub-Fund, where appropriate) against the value of the Benchmark Index (in compliance with the description contained in this section's paragraph 1 above).

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including future financial instruments other than index-linked swaps.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Sub-Fund's investment portfolio, nor regarding the underlying assets of the future financial instruments. When Societe Generale is a counterparty to the aforementioned transactions involving derivatives, conflict-of-interests situations may arise between the Management Company and Societe Generale. These situations will be dealt with in accordance with the Management Company's conflicts-of-interests policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/fees and its ability to achieve its management objective may also be negatively impacted. When the Subfund enters into two or more TRS with one or more counterparties above risks mentioned above apply to the portion of assets that are committed under the swap that is prematurely terminated and/or to which the counterparty has defaulted.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Sub-Fund can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10 % of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Sub-Fund is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Sub-Fund's use of forward swap contracts traded over the counter, the Sub-Fund can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20 % of the Sub-Fund's net asset value;
- (e) the Sub-Fund's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20 % of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and
- Such financial guarantees consist of at least six different issues of which none exceeds 30 % of the Sub-Fund's assets.

In compliance with the aforesaid conditions, the guarantees received by the Sub-Fund can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e)(above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Sub-Fund's management company will apply a margin to the financial guarantees received by the Sub-Fund. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged.

Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
 - (ii) invested in high-quality State bonds;
 - (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
 - (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.
- Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees. In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Compartment may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

COUNTERPARTY SELECTION POLICY

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Compartment. The selection of counterparties for financial contracts and financial intermediaries is performed rigorously from among the reputable counterparties and intermediaries in the market, on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes various criteria into consideration to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating
- Quantitative criteria based on the CDS LT spread (absolute criteria, volatility and comparison with a reference group, etc.)

Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the management company applies its "best execution" policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: www.lyxor.com, section "regulatory information".

Risk profile:

The shareholder's money will primarily be invested in financial instruments selected by the entity appointed for financial management. These instruments will be subject to the vagaries of the markets. Through the Compartment, the shareholder is primarily exposed to the following risks:

- Equity risk

An equity price can vary upwards or downwards, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

If, when the Sub-Fund (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase/sale price discrepancies, the value and/or liquidity of the Sub-Fund could be negatively affected.

Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Subfund's shares on an exchange may be adversely affected by a suspension of or disruption in market operation, such as one of the following events:

- i) Suspension or stoppage of the calculation of the Benchmark Index, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Index, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Sub-Fund's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

- Risks related to the management of guarantees

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Subfund may be exposed to a legal risk arising from a total return swap and/or a securities financing transaction as indicated in EU Regulation No. 2015/2365.

- Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Index, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to achieve its investment objective, the Sub-Fund uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Index. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected. If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Index is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Index is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Index,
- iv) The index provider makes a material change in the Benchmark calculation formula or method (other than a minor modification such as an adjustment to this Benchmark's underlying components or their respective weightings) that the Subfund cannot effectively replicate at a reasonable cost.
- v) One or more components of the Benchmark Index becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) the Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

An unforeseen change, by the issuer of a security that is a component of the Benchmark, in a planned corporate action that is in contradiction with a previous official announcement on which the Subfund based its valuation of the corporate action (and/or on which the Subfund's counterparty to a derivative financial instrument or transaction based its valuation of the corporate action) can adversely affect the Subfund's net asset value, particularly if the Subfund's treatment of the corporate event differs from that of the Benchmark.

- Exchange risk linked to the Benchmark Indicator

The Compartment is exposed to an exchange risk to the extent that the underlying securities making up the Benchmark Indicator could be listed in a currency other than that of the Benchmark Indicator, or be derivatives of securities listed in a currency other than that of the Benchmark Indicator. Fluctuating exchange rates are then likely to negatively affect the Benchmark Indicator monitored by the Compartment.

- Sustainability risks

The Sub-Fund does not consider sustainability factors in the investment decision-making process but remains exposed to sustainability risks. The occurrence of such risks could have a negative impact on the value of the investments made by the Sub-Fund. Additional information can be found in the "Sustainability Information" section of the Prospectus.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

Investors subscribing to this Subfund are seeking exposure to international equity markets.

The amount that it is reasonable to invest in this Sub-Fund depends on your personal situation. To determine this amount, investors must take into account their personal wealth and/or estate, their cash requirements currently and for the next five years, and their willingness to take on risk or their preference for more prudent investment. It is also highly recommended to sufficiently diversify your investments so as to avoid an exposure only to this Sub-Fund's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers. The minimum recommended investment term is greater than 5 years.

U.S. Persons (as defined in the "COMMERCIAL ORDER INFORMATION" prospectus) may not invest in the Sub-Fund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy-92800 Puteaux.*
- *Creation date of the Multi Units France Sicav: 04 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 08 February 2018.*
- *Compartment creation date: 23 March 2018.*

business report

The fund replicates the performance of the DJGT 50 TRE EUR index (Ticker:DJGTET).

Performance trend at the closing date:

Share name	ISIN	Share currency	Performance from 28/02/19 to 31/10/19			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor DJ Global Titans 50 UCITS ETF - Dist	FR0007075494	EUR	41.73.%	42.36%		321.69%

(1) "The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs (for example the index rebalancing cost);
- taxation incurred in relation to the methodology used in the Benchmark Index»

The tracking error realised is 0.0142%. The target tracking error over the period was 0.05%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams. This difference is considered insignificant.

Index Linked Swap's counterparty is: Société Générale.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

This Fund is covered by Article 6 of Regulation (EU) 2019/2088 (the "SFDR Regulation"). It does not promote environmental and/or social characteristics and does not aim to invest sustainably

Transparency of environmentally sustainable investments in periodic reports under Regulation (EU) 2020/852

Regulation (EU) 2020/852 on the establishment of a framework for promoting sustainable investments (the "Taxonomy Regulation") sets out the criteria for determining whether an economic activity is environmentally sustainable in the European Union.

According to the Taxonomy Regulation, an activity can be considered "sustainable" if it contributes substantially to one of the 6 environmental objectives set out in the Taxonomy Regulation, including climate change mitigation and adaptation, pollution prevention and reduction, or the protection and restoration of biodiversity and ecosystems.

In addition, in order to be considered to be sustainable, this economic activity must respect the principle of "not to cause significant harm" to one of the other five objectives of the Taxonomy Regulation and must also comply with basic social criteria (alignment to OECD and UN guidelines on business and human rights).

In accordance with article 7 of the Taxonomy Regulation, the management company draws investors' attention to the fact that the underlying investments of this Fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Provision of environmental, social and governance (ESG) information - in accordance with Articles 533-22-1 and D.533-16-1 of the French Monetary and Financial Code

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website [Lyxor.com](https://www.lyxor.com) and is revised each

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues

To the basket of assets held by the fund, the fund applies an exclusion of issuers associated with serious and repeated violations of the Principles of the United Nations Global Compact and regulatory requirements related to controversial sectors and products. This list is supplemented by a list of companies to be excluded due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological chemical, nuclear or radiological weapons, etc.).

B) Information used for the analysis implemented on ESG criteria

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (in connection with Lyxor's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defence policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to

controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Methodology and implementation of this analysis

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution.

The post trade control is on NAV frequency basis.

d) Presentation of the integration of analysis results in the investment policy

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the [Lyxor.com](https://www.lyxor.com) website.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor is gradually expanding its ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint

• Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

• Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions:

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

- In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including : • the Germanwatch climate performance index score

- the environment performance score
- the Environmental Vulnerability index

For corporate issuers in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

LYXOR DJ GLOBAL TITANS 50 UCITS ETF (compartment of the Multi Units France Sicav)

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations

- Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

LYXOR DJ GLOBAL TITANS 50 UCITS ETF (compartment of the Multi Units France Sicav)

Portfolio ESG Rating as of October 2021

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The ESG score calculated at the portfolio level measures the capacity of the underlying issuers to manage the risks and key opportunities associated with environmental, social and governance factors. The risk scale ranges from 0 (high risk) to 10 (low risk). Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: employment, social relations, health and safety, training, compliance with ILO conventions
- Governance: Board of Directors or Supervisory Board, Audit and Internal Control, Executive Compensation

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source: The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Measures the portfolio's exposure to companies experiencing controversies relating to their compliance with international standards as a function of their degree of severity:

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: indicates that the company is not involved in any major controversies
- None: Sovereign and/or Company not covered

Red Flag	2%
Orange Flag	63%
Yellow Flag	21%
Green Flag	15%

LYXOR DJ GLOBAL TITANS 50 UCITS ETF (compartment of the Multi Units France Sicav)

Climate Risks & Energy Transition

Portfolio carbon footprint as of 1 October 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons (CO2e/\$M sales)	Portfolio rated by weight	100%
17	98	47	Scope 1 reported (vs estimated)	100%
			Scope 2 reported (vs estimated)	97%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GreenHouse Gas Protocol (GHG Protocol) was launched in 2001 by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: direct emissions resulting from the burning of fossil fuel resources owned or controlled by the company.
- Scope 2: indirect emissions related to the purchase or production of electricity.
- Scope 3: other indirect emissions from the extended supply chain to the transport of goods and persons.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions standardised by revenue), and these intensities are weighted by the weight of the companies in the portfolio.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio invested in both equities and bonds.

EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest - total debt.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage or MWh generated from fossil fuels or the portion of the company's revenues earned from fossil fuels or the portion of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon:	
Fossil Fuel Reserves	6%
Thermal Coal	2%
Natural Gaz	4%
Oil	4%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of : \$ 1,000,000	27
Thermal Coal (Tons)	0.0009
Gas (MMBOE)	0.0011
Oil (MMBOE)	

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

tCO2e/\$M invested	
Metallurgical Coal	165.2
Thermal Coal	49.1
Oil	473.3
Gas	285.2
Total	978.8

These metrics include only corporate issuers rated in Carbon.

LYXOR DJ GLOBAL TITANS 50 UCITS ETF (compartment of the Multi Units France Sicav)

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges - this is the case with oil sands, which have been targeted as being particularly climate-unfriendly. With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

tCO2e/\$M Invested	
Thermal Coal	49.1
Oil Sands	54.0
Shale Oil or Shale Gas	21.1
Sum High Impact Reserves	124.2
Other	854.6

These metrics include only corporate issuers rated in Carbon.

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Enenergy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	13.2%	10.8%	2.9%
Some efforts	86.8%	89.2%	80.7%
Limited efforts/Information	0.0%	0.0%	2.1%
No effort/No evidence	0.0%	0.0%	14.3%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

•Asset stranding: risk of holding assets which may become stranded

•Operational Transition: risk of increase in operational costs

•Product Transition: risk of a decrease in demand for high-carbon products and services

•Neutral: low exposure to transition risks

•Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low- carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.4
Low carbon transition management Score	6.3
Operational Transition	2.0%
Product Transition	2.0%
Neutral	76.5%
Solutions	16.0%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The issuer data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source: MSCI ESG Research

Share of issuers in terms of power generation in portfolio	1.2%
--	------

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	5.6%	Liquid Fuel	Natural Gas	Nuclear
Renewables	94.4%	Thermal Coal		

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. Those issuers are likely to benefit from a low carbon transition

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenu dedicated to environmental solutions between:	
0-19.9%	27%
20-49.9%	16%
50-100%	5%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	7.0%	Energy Efficiency	49.2%	Green Building	0.0%
Pollution Prevention	1.0%	Sustainable Water	0.0%	Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

		Environmental Solutions Contribution			
Alternative Energy	0.4%	Energy Efficiency	9.7%	Green Building	0.0%
Pollution Prevention	0.0%	Sustainable Water	0.0%	Sustainable Agriculture	0.0%

LYXOR DJ GLOBAL TITANS 50 UCITS ETF (compartment of the Multi Units France Sicav)

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

% estimated EU Taxo 10.0%

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	2%
Coldwave	22%
Flood	2%
Heatwave	7%
Hurricane	5%
Water Stress	45%
Wildfire	16%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.).

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	2.0%	45.3%	52.7%	91.0%	5.3%	3.7%
Carbon Emissions	0.2%	36.7%	63.1%	80.8%	16.0%	3.2%
Electronic Waste	0.9%	10.9%	88.2%	91.5%	0.3%	8.1%
Opportunities in Green Building	0.3%	52.6%	47.0%	100.0%		
Opp's in Renewable Energy	2.9%	90.8%	6.3%	100.0%		
Packaging Material & Waste	7.6%	77.5%	14.9%	83.6%		16.4%
Water Stress	3.5%	92.9%	3.6%	63.1%	30.2%	6.6%
Toxic Emissions & Waste				55.4%	34.8%	9.9%

Temperature - Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

- A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,
- An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates a carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Level of alignment	>3°C
Hedging	99.7%

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des marchés financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 ("AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 ("UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management compensation policy notably ensures appropriate risk management and adherence to compliance on the part of its employees.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No "carried interest" was paid during the financial year.

Lyxor's best selection and execution policy

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information, in the evolving context of the Covid-19 crisis.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings. The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded. However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities of UCITS operating under French law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Sub-Fund's reference currency are the exchange rates published the fixing WM Reuters on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the CIS) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Sub-Fund) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company. For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Sub-Fund has exceeded its objectives and are invoiced to the Sub-Fund;
- Transfer commissions invoiced to the Sub-Fund.

For more details on the fees actually charged to the Subfund, refer to the Statistics section of the Key Investor Information Document (KIID)

Fees invoiced to the Sub-Fund	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	Maximum 0.40 % per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commission	Net assets	None

() including all fees except activity fees, incentive fees and fees related to investments in UCITS.

Accounting currency

The Compartment accounting is carried out in Euro.

Indication of accountancy changes declared to each of the shareholders individually

- - Occurred change: None.
- - Future change: None.

Other changes declared to each of the shareholders individually *(Not certified by the auditor)*

- - Occurred change: None.
- - Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Dist share classes: the Board of Directors reserves the right to distribute all or part of the distributable amounts and/or to distribute them once or several times a year.

The LYXOR DJ GLOBAL TITANS 50 UCITS ETF subfund is not, in any way whatsoever, sponsored, endorsed, promoted or sold by Dow Jones.

Dow Jones makes no warranties or representations, express or implied, either as to the results to be obtained from the use of the Dow Jones Global Titans 50 Net Total Return Index ("Index") and/or the level at which the Index stands at any particular time or on any particular day or otherwise. The Index is calculated by or on behalf of Dow Jones. Dow Jones will not be liable (whether in negligence or otherwise) to anyone for any error in the Index and will have no obligation to advise anyone of any error in the Index.

2 Evolution of the net assets

Hedging	-	-	-	-
Other operations	-	-	-	-

3.5. Receivables and Debts: breakdown by type

Breakdown of items comprising "other receivables" and "other debts", in particular the breakdown of forward foreign exchange transactions by type of transaction (buy/sell).

Receivables	3,619,685.84
Future currency exchange operations:	
Future purchases of currency	-
Total traded amount of future Sales of currencies	-
Other receivables:	
Deferred settlement sales	2,634,726.05
Amounts receivable	984,959.79
-	-
-	-
-	-
Other operations	-
Debts	o (jcj ceo co
Future currency exchange operations:	3,654,563.63
Future sales of currencies	-
Total traded amount of future Purchases of currencies	-
Other debts:	
Deferred settlement purchases	3,619,685.85
Accrued expenses	34,877.78
-	-
-	-
-	-
Other operations	-

3.6. Shareholders' equities

Equity category issued/redeemed during the fiscal year:	Subscriptions		Redemptions	
	Number of equities	Amount	Number of equities	Amount
D-USD shares / FR0011523505	-	-	-	-
Dist shares / FR0007075494	76,336	4,122,305.00	305,000	15,773,262.73
Subscription / redemption commission by equity category:		Amount		Amount
D-USD shares / FR0011523505		-		-
Dist shares / FR0007075494		-		-
Retrocessions by equity category:		Amount		Amount
D-USD shares / FR0011523505		-		-
Dist shares / FR0007075494		-		-
Commissions acquired by the Compartment by equity category:		Amount		Amount
D-USD shares / FR0011523505		-		-
Dist shares / FR0007075494		-		-

3.7. Management fees

Operating and management fees (fixed fees) as % of the average net assets %

Equity category:

D-USD shares / FR0011523505	-
Dist shares / FR0007075494	0.40

Performance commissions (variable fees): amount of costs for the year Amount

Equity category:

D-USD shares / FR0011523505	-
Dist shares / FR0007075494	-

Retrocession of management fees:

- Total amount of fees retroceded to the Compartment	-
- Breakdown by "target" CIU:	
- CIU 1	-
- CIU 2	-
- CIU 3	-
- CIU 4	-

3.8. Commitments given and received

- 3.8.1. Description of guarantees received by the Sub-Fund with indication of the capital guarantees.....**none**
3.8.2. Description of the other commitments received and/or given**None**

3.9. Other information

- 3.9.1. Current value of the financial instruments that are the subject of temporary acquisition:

- Financial instruments sold under forward repurchase agreements	-
- Other temporary operations	-

- 3.9.2. Current value of the financial instruments comprising security deposits:

Financial instruments received as guarantees and not included in the balance sheet:

- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-

Financial estimates given as guarantees and maintained in their original item:

- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-

- 3.9.3. Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (Sicav) and CIU managed by these entities:

- CIU securities	-
- Swaps	-529,588.54

FISCAL YEAR ENDING ON: 29.10.2021

Compartments / feeder	LYXOR SMI DAILY (-2X) INVERSE UCITS ETF is a Sub-Fund of the MULTI UNITS FRANCE Sicav.
Management Company	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy – 92987 Paris La Défense Cedex.
Depository and Custodian	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

Information on the investments and management

Classification

The Lyxor SMI Daily (-2x) Inverse UCITS ETF sub-fund (the "Sub-Fund") is an index-based strategy UCITS ETF type fund.

Terms of determination and allocation of amounts available for distribution

Capitalisation of all the amounts available for distribution.

Management objective

The Compartment is a passively managed index-based UCITS.

The Sub-Fund's investment objective is to gain exposure to the Swiss equity market inversely and with daily x2 leverage by replicating the performance of the SMI Daily Short Leverage Index (the "Benchmark Index") and minimising the tracking error between the performance of the Sub-Fund and that of the Benchmark as much as possible.

The SMI Daily Short Leverage Benchmark reflects the evolution of the SMI® Swiss Market Index Total Return (the "Parent Index") with a daily inverted x2 leverage, meaning that if the underlying index grows by 2% over the same day, the leverage index decreases 4% less borrowing costs on the same day and vice versa.

The anticipated level of the ex-post tracking error under normal market conditions is 0.15 %.

Benchmark indicator

The Benchmark Index is the SMI Daily Short Leverage strategy index (gross dividends reinvested, meaning that the performance of the Benchmark includes gross dividends detached by the equities comprising it) denominated in Swiss francs (CHF).

The Benchmark Index is a strategy index defined and calculated by SIX Swiss Exchange Ltd.

The Benchmark Index offers daily inverse exposure to the increase or decrease of the Parent Index with daily x2 leverage. Thus, in the event of a decline in the Parent Index over one day, the net asset value of the Sub-fund will increase twice on the same day and, in the event of a rise in the Parent Index over one day, the net asset value of the Sub-fund will fall twice on the same day and shareholders will not benefit from the increase in this index. The Parent Index is weighted on the basis of the market value of the free float with a large capitalisation of the Swiss equity market. It includes the 20 largest and most liquid securities representing approximately 85% of the total capitalisation of the Swiss equity market. The index is calculated in real time in CHF and is available on the website: www.six-swiss-exchange.com.

The Benchmark Index's performance is equal to double the daily inverse performance of the Aggregate Parent Index of Interest (SAR Swiss Average Rate On® received daily out of 3 times the valuation of the closing price of the Parent Index). It is therefore an index representative of a strategy of short positions with leverage x2 of the Parent Index with daily rebalancing. An additional rebalancing will be carried out during the session if the Parent Index rises by more than 25% on a trading day, compared to the closing price of the previous trading day.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator's components are available on the website:

http://www.six-swiss-exchange.com/indices/data_centre/strategy_indices/leveraged_indices_en.html and http://www.six-swiss-exchange.com/indices/data_centre/shares/smi_family_fr.html

The monitored performance is that of the Index closing prices in CHF.

Benchmark Index publication

The Benchmark Index is calculated on a daily basis at closing prices using the official closing stock market prices for the constituent stocks.

The closing price of the Benchmark Index is available on the website https://www.six-group.com/exchanges/indices/data_centre/index_overview.html

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Euronext administrator of the Benchmark Index is included in the register of administrators and benchmark indices maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmarks used which describes the measures to be implemented in the event of substantial changes to an index or the cessation of provision of that index.

Revision and composition of the Benchmark Index

The composition of the SMI Daily Short Leverage strategy index depends on the revision of the Benchmark.

The leverage introduced in the Benchmark Index calculation formula is subject to daily readjustment. The consequences of daily readjustment of leverage are explained in particular in the Reference Indicator and Risk Profile sections of the prospectus.

The revision of the composition of the Benchmark depends on the revision of the composition of its Parent Index. The composition of the Parent Index is revised on a daily basis.

The exact composition and revision of the composition of the Parent Index and, incidentally, the Benchmark Index published by SIX Swiss Exchange are available on the website: https://www.six-group.com/exchanges/indices/data_centre/index_overview.html

The above-mentioned frequency of rebalancing has no effect on costs in the implementation of the investment strategy.

Investment strategy

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Index, the Sub-Fund will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Sub-Fund may notably be securities that make up the Parent Index, as well as other international equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100 % of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the future exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the website: www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

As part of the management of its exposure, the Compartment may be exposed up to 20 % of its assets in equities from a single issuing entity. This limit of 20% will be verified, on each rebalancing date of the Benchmark, in accordance with the Benchmark Index calculation method, which limits the exposure of each of the shares of the same issuing entity to 20%, the calculation of which is provided by the Benchmark's sponsor or calculation agent. This 20 % limit may be increased to 35% for a single issuing entity, when this proves to be justified by exceptional market conditions, particularly when certain securities are largely dominant and/or in the event of high volatility of a financial instrument or securities linked to an economic sector represented in the Benchmark Index, in particular in the event of a public offering affecting one of the securities making up the Benchmark Index or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Index.

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets. The aforementioned equities will be chosen on the basis of the following criteria:

- eligibility criteria, in particular:

- o Subordination to the main market indices or to the Benchmark Index;
- o Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation);
- o Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent).

- diversification criteria, in particular:

- o Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code);
- o Geographical area;
- o Sector.

For more information on the abovementioned eligibility and diversification criteria, investors can visit the website: www.lyxoretf.com

Investment in undertakings for collective investment in transferable securities ("UCITS") in accordance with Directive 2009/65/EC is limited to 10% of the net assets. The manager will not invest in units or shares of AIFs or other investment funds constituted under foreign law.

As part of the future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Sub-Fund will have recourse to index-linked swaps traded over-the-counter, exchanging the value of the equities in the Sub-Fund's assets (or of any other financial instrument or asset held by the Sub-Fund, where appropriate) against the value of the Benchmark Index (in compliance with the description contained in this section's paragraph 1 above).

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.

- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including future financial instruments other than index-linked swaps.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Sub-Fund's investment portfolio, nor regarding the underlying assets of the future financial instruments.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/fees and its ability to achieve its management objective may also be negatively impacted. Where the Sub-Fund enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Sub-Fund can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10 % of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Sub-Fund is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Sub-Fund's use of forward swap contracts traded over the counter, the Sub-Fund can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20 % of the Sub-Fund's net asset value;
- (e) The Sub-Fund's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20 % of its net asset value provided that:

such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and

Such financial guarantees consist of at least six different issues of which none exceeds 30 % of the Sub-Fund's assets. In compliance with the aforesaid conditions, the guarantees received by the Sub-Fund can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e)(above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (iv) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (v) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a (vi) stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Sub-Fund's management company will apply a margin to the financial guarantees received by the Sub-Fund. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged. Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;

(iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;

(iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Compartment may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

Counterparty selection policy

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (financial futures and temporary acquisitions and disposals of securities) on behalf of the Mutual Fund. The selection of counterparties for financial contracts and financial intermediaries is performed rigorously from among the reputable counterparties and intermediaries in the market, on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes various criteria into consideration to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating
- Quantitative criteria based on the CDS LT spread (absolute criteria, volatility and comparison with a reference group, etc.)

Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: www.lyxor.com, section "regulatory information".

Risk profile

The shareholder's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Equity risk

An equity price can vary upwards or downwards, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

If, when the Compartment (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Index, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Index, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Sub-Fund's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

- Risks related to the management of guarantees

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk related to daily readjustment of leverage

Investors are inversely and twice exposed to fluctuations that affect the price or level of the Parent Index on a daily basis. In particular, any appreciation of the underlying market will be inversely amplified and will imply an even greater depreciation in the net asset value of the Sub-Fund. The daily readjustment of the exposure contained in the formula of the underlying double-short strategy index implies that, over a period greater than one business day, the Sub-fund's performance will not be equal to twice the inverse of the performance of the Parent Index. For example, if the Parent Index appreciates 10% on a given business day and then depreciates by 5% on the next business day, the ETF will have depreciated in total by 12% after these two days (and before deduction of applicable fees), while the Parent Index has appreciated by 4,5% over the same period.

If the Parent Index depreciates by 5% per day for 2 consecutive business days, it will have depreciated a total of 9,75 %, while the ETF will have appreciated (before deduction of applicable fees) by 21% over the same period.

Negative scenario 1 Case where the negative leverage induced is greater than 2 in a scenario of a rise in the Parent Index					
	Parent Index		strategy index		
	day i performance	day i value	day i performance	day i value	leverage induced
		100		100	
day 1	10 %	110	-20 %	80	-2
day 2	-5 %	104.5	10 %	88	-2
total period	4.50 %		-12.00 %		x-2.67

Negative scenario 2 Cases where the negative leverage induced is less than 2 in a scenario of a decline in the Parent Index					
	Parent Index		strategy index		
	day i performance	day i value	day i performance	day i value	leverage induced
		100		100	
day 1	-10 %	90	20 %	120	x-2
day 2	6 %	95.4	-12 %	105.6	x-2
total period	-4.60 %		5.60 %		x-1.22

LYXOR SMI DAILY (-2X) INVERSE UCITS ETF
(compartment of the Multi Units France Sicav) - Fiscal year ending on 29/10/2021

In addition, it is possible that over a observation period greater than one day and in the event of high volatility of the Parent Index over that period, the net asset value of the Sub-Fund may fall even though the Parent Index also posted a decline over the same period.

Reverse induced leverage scenario: Case where the leverage generated is positive over the period					
	Parent Index		strategy index		
	day i performance	day i value	day i performance	day i value	leverage induced
		100		100	
day 1	5 %	105	-10 %	90	x-2
day 2	-5 %	99.75	10 %	99	x-2
total period	-0.25 %		-1.00 %		x4

- Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to achieve its investment objective, the Compartment uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Index is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Index is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Index,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Index (other than a minor modification such as the adjustment of the underlyings of this Benchmark Index or of the respective weightings between its various components), that cannot be effectively replicated by the Sub-Fund at a reasonable cost.
- v) One or more components of the Benchmark Index becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Index's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Index's performance.

- Securities transaction risk

An unforeseen change, by the issuer of a security that is a component of the Benchmark, in a planned corporate action ("CA") that is in contradiction with a previous official announcement on which the Sub-Fund based its valuation of the corporate action (and/or on which the Sub-Fund's counterparty to a derivative or transaction based its valuation of the corporate action) can adversely affect the Sub-Fund's net asset value, particularly if the Sub-Fund's treatment of the corporate event differs from that of the Benchmark.

- Sustainability risks

The Sub-Fund does not consider sustainability factors in the investment decision-making process but remains exposed to sustainability risks. The occurrence of such risks could have a negative impact on the value of the investments made by the Sub-Fund. Additional information can be found in the "Sustainability Information" section of the Prospectus.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

The investor who subscribes to this Sub-Fund wishes to gain exposure to the Swiss equity market with a leverage of 2 to the upside or fall.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks. As an arbitrage product, this Sub-Fund may not be suitable for investors wishing to make a medium or long-term investment. Investors are therefore recommended to study their individual situations with their usual estate management advisers.

U.S. Persons (as defined in the "COMMERCIAL ORDER INFORMATION" prospectus) may not invest in the Sub-Fund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

business report

The fund replicates the performance of the SMI Daily Short Leverage CHF index (Ticker:SMISL).

Performance trend at the closing date:

Share name	ISIN	Share currency	Performance from 28/02/19 to 31/10/19			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor SMI Daily (-2x) Inverse UCITS ETF - Acc	FR0010869438	CHF	-44.62% ⁽¹⁾	-44.34%		-94.79%

⁽¹⁾ "The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs (for example the index rebalancing cost);
- taxation incurred in relation to the methodology used in the Benchmark Index»

The tracking error realised is 0.0454%. The target tracking error over the period was 0.15%. The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

Index Linked Swap's counterparty is: Barclays Bank Ireland.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

This Fund is covered by Article 6 of Regulation (EU) 2019/2088 (the "SFDR Regulation"). It does not promote environmental and/or social characteristics and does not aim to invest sustainably

Transparency of environmentally sustainable investments in periodic reports under Regulation (EU) 2020/852

Regulation (EU) 2020/852 on the establishment of a framework for promoting sustainable investments (the "Taxonomy Regulation") sets out the criteria for determining whether an economic activity is environmentally sustainable in the European Union.

According to the Taxonomy Regulation, an activity can be considered "sustainable" if it contributes substantially to one of the 6 environmental objectives set out in the Taxonomy Regulation, including climate change mitigation and adaptation, pollution prevention and reduction, or the protection and restoration of biodiversity and ecosystems.

In addition, in order to be considered to be sustainable, this economic activity must respect the principle of "not to cause significant harm" to one of the other five objectives of the Taxonomy Regulation and must also comply with basic social criteria (alignment to OECD and UN guidelines on business and human rights).

In accordance with article 7 of the Taxonomy Regulation, the management company draws investors' attention to the fact that the underlying investments of this Fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Provision of environmental, social and governance (ESG) information – in accordance with Articles L.533-22-1 and D.533-16-1 of the French Monetary and Financial Code

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website [Lyxor.com](https://www.lyxor.com) and is revised each

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues

To the basket of assets held by the fund, the fund applies an exclusion of issuers associated with serious and repeated violations of the Principles of the United Nations Global Compact and regulatory requirements related to controversial sectors and products. This list is supplemented by a list of companies to be excluded due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological chemical, nuclear or radiological weapons, etc.).

b) Information used for the analysis implemented on ESG criteria

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (in connection with Lyxor's voting policy). • Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns

- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.

- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.

- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.

- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defence policy,

- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to

controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution.

The post trade control is on NAV frequency basis.

Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the [Lyxor.com](https://www.lyxor.com) website.

The exclusion described above is applied to the fund holdings.

2. Description of how the results of the analysis implemented on ESG criteria, in particular exposure to climate risks, are integrated into the investment policy

Lyxor is gradually expanding its ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs). -In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuers in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

LYXOR SMI DAILY (-2X) INVERSE UCITS ETF (compartment of the Multi Units France Sicav) - Fiscal year ending on 29/10/2021

•Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations

•Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The ESG score calculated at the portfolio level measures the capacity of the underlying issuers to manage the risks and key opportunities associated with environmental, social and governance factors. The risk scale ranges from 0 (high risk) to 10 (low risk). Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: employment, social relations, health and safety, training, compliance with ILO conventions
- Governance: Board of Directors or Supervisory Board, Audit and Internal Control, Executive Compensation

Source: The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Portfolio Exposure to ESG Controverses

Measures the portfolio's exposure to companies experiencing controversies relating to their compliance with international standards as a function of their degree of severity:

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: indicates that the company is not involved in any major controversies
- None: Sovereign and/or Company not covered

Red Flag	0%
Orange Flag	61%
Yellow Flag	16%
Green Flag	23%

Climate Risks & Energy Transition

Portfolio carbon footprint as of 1 October 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons (CO2e/\$M sales)	Portfolio rated by weight	100%
0	0	0	Scope 1 reported (vs estimated)	0%
			Scope 2 reported (vs estimated)	0%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GreenHouse Gas Protocol (GHG Protocol) was launched in 2001 by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: direct emissions resulting from the burning of fossil resources owned or controlled by the company.
- Scope 2: indirect emissions related to the purchase or production of electricity.
- Scope 3: other indirect emissions from the extended supply chain to the transport of goods and persons.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardised portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalised by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD)*. Moreover only the use of the Enterprise Value enables the analysis of a portfolio invested in both equities and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest - total debt.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

Weight of the portfolio rated in Carbon:

Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gas	0%
Oil	0%

The brown area is defined as the percentage or MWh generated from fossil fuels or the portion of the company's revenues earned from fossil fuels or the portion of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of : \$ 1,000,000

Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

These metrics include only corporate issuers rated in Carbon.

LYXOR SMI DAILY (-2X) INVERSE UCITS ETF

(compartment of the Multi Units France Sicav) - Fiscal year ending on 29/10/2021

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges - this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	0.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Enenergy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	0.0%	0.0%	0.0%
Some efforts	0.0%	0.0%	0.0%
Limited efforts/Information	0.0%	0.0%	0.0%
No effort/No evidence	0.0%	0.0%	0.0%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
 - Operational Transition: risk of increase in operational costs
 - Product Transition: risk of a decrease in demand for high-carbon products and services
 - Neutral: low exposure to transition risks
 - Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low- carbon products.
- (1) Metric developed by MSCI

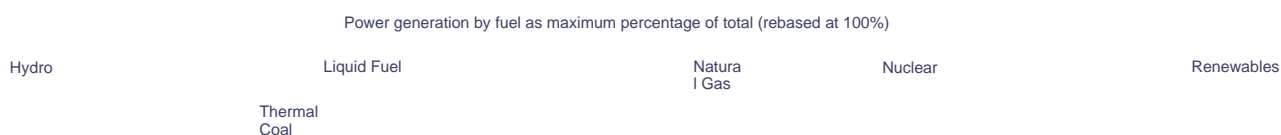

Low carbon transition score	0.0
Low carbon transition management Score	0.0
Operational Transition	0.0%
Product Transition	0.0%
Neutral	0.0%
Solutions	0.0%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The issuer data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source: MSCI ESG Research

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. Those issuers are likely to benefit from a low carbon transition

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	0%
20-49.9%	0%
50-100%	0%

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	0.0%	Energy Efficiency	0.0%	Green Building	0.0%
Pollution Prevention	0.0%	Sustainable Water	0.0%	Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	0.0%	Energy Efficiency	0.0%	Green Building	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

% estimated EU Taxo 0.0%

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	2%
Coldwave	32%
Flood	9%
Heatwave	9%
Hurricane	3%
Water Stress	36%
Wildfire	9%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.).

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		Segment
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	13.3%	63.7%	23.0%	92.6%	7.4%	
Carbon Emissions	0.1%	46.8%	53.1%	77.6%	19.8%	2.6%
Electronic Waste	0.7%	17.2%	82.2%	97.5%		2.5%
Opportunities in Green Building	1.5%	47.6%	50.9%	100.0%		
Opp's in Renewable Energy	7.9%	79.8%	12.3%	100.0%		
Packaging Material & Waste	15.5%	52.3%	32.3%	49.5%		50.5%
Water Stress	15.9%	83.4%	0.7%	27.7%	46.4%	25.9%
Toxic Emissions & Waste				28.1%	67.2%	4.7%

Temperature - Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

- A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,
- An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates a carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Alignment Degree	null 100.0%
Coverage

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des marchés financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 ("AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 ("UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management compensation policy notably ensures appropriate risk management and adherence to compliance on the part of its employees.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No "carried interest" was paid during the financial year.

Lyxor's best selection and execution policy

Information on best selection and execution policies is available at: www.lyxor.com.

Transparency of securities financing operations and reuse of financial instruments SFTR regulation

(Accounting currency of the CIU)

1. General information.

1.1. Amount of securities and raw materials loaned in proportion with the total assets that can be loaned, defined as excluding the cash and cash equivalents.

Securities lending	
% of assets that can be loaned	-

1.2. Amount of the assets committed to each type of securities financing operation and total return swap, expressed in absolute value (in the currency of the collective investment undertaking) and in proportion with the assets under management of the collective investment undertaking.

	Securities lending ⁽¹⁾	Securities borrowing ⁽²⁾	Repo operations ⁽³⁾	Reverse repo operations ⁽⁴⁾	TRS ⁽⁵⁾
Absolute value	-	-	-	-	28,757,697.60

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information, in the evolving context of the Covid-19 crisis.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings. The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded. However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities of UCITS operating under French law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Sub-Fund's reference currency are the exchange rates published the fixing WM Reuters on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the CIS) multiplied by the number of contracts multiplied by the face value. The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Sub-Fund) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company. For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Sub-Fund has exceeded its objectives and are invoiced to the Sub-Fund;
- Transfer commissions invoiced to the Sub-Fund.

For more details on the fees actually charged to the Subfund, refer to the Statistics section of the Key Investor Information Document (KIID)

Fees invoiced to the Sub-Fund	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	Maximum 0.60 % per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commission	Net assets	None

Including all fees excluding transaction fees, performance fees and fees related to investments in UCITS.

Accounting currency

The Sub-Fund accounting is carried out in CHF.

activity
report

SUB-FUND OF THE MULTI UNITS FRANCE SICAV

FISCAL YEAR ENDING ON: 29.10.2021

Compartments / feeder	LYXOR DAILY SHORTDAX X2 UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
Management Company	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy – 92987 Paris La Défense Cedex.
Depository and Custodian	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Auditors	PRICEWATERHOUSECOOPERS AUDIT 63, rue Villiers - 92208 Neuilly-sur-Seine

Information on the investments and management

Classification:

The Lyxor Daily Shortdax x2 UCITS ETF sub-fund (the "Sub-Fund") is an index-based UCITS of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution:

I-USD share class: the Board of Directors reserves the right to distribute, once or several times a year, all or part of the distributable amounts and/or to accumulate them.

Acc share class: accumulation of all distributable amounts.

Management objective:

The Compartment is a passively managed index-based UCITS.

The Sub-Fund's investment objective is to expose itself to the upside or fall in the German equity market with daily x2 leverage by replicating the performance of the ShortDAX x2 benchmark (the "Benchmark Index") and minimising the tracking error between the performance of the Sub-Fund and that of the Benchmark as much as possible. The Benchmark Index reflects the performance of the DAX® index (the "Parent Index") with daily reverse leverage x2, meaning that if the underlying index grows by 2% over the same day, the leverage index will decrease by 4%, less borrowing costs over the same day and vice versa.

The anticipated level of the ex-post tracking error under normal market conditions is 0.15 %.

Benchmark indicator:

The Benchmark Index is the ShortDAX x2 strategy index, (gross dividends reinvested, i.e. the performance of the Benchmark Index includes the gross dividends detached by the shares that compose it) denominated in Euros (EUR).

The Benchmark Index is a strategy index defined and calculated by Deutsche Borse AG.

The Benchmark Index offers daily inverse exposure to the increase or decrease of the Parent Index with daily x2 leverage. Thus, in the event of a decline in the Parent Index over one day, the net asset value of the Sub-fund will increase twice on the same day and, in the event of a rise in the Parent Index over one day, the net asset value of the Sub-fund will fall twice on the same day and shareholders will not benefit from the increase in this index. The Parent Index is the index composed of the 30 largest German stocks. These companies are the most actively traded companies on the Frankfurt Stock Exchange. The Frankfurt Stock Exchange accounts for 85% of German trade and 35% of European trade. The index methodology is available on <http://www.dax-indices.com>.

The Benchmark Index's performance is equal to double the daily inverse performance of the Parent Index, accrued interest (EONIA) received daily over 3 times the valuation of the closing price of the Parent Index. It is therefore an index representative of a strategy of short positions with leverage x2 of the Parent Index with daily rebalancing. An additional rebalancing may be carried out during the session if the strategy index falls by more than 50% on a Trading Day.

The Parent Index is a free float-weighted index measuring the evolution of 30 largest German stocks listed on the regulated markets of the Frankfurt Stock Exchange.

A full description and full methodology for the construction of the Benchmark Index as well as information on the composition and respective weights of the components of the Benchmark Index are available on the website: <https://www.dax-indices.com/indices>

The monitored performance is that of the Index closing prices in Euros.

Benchmark Index publication

The Benchmark Index is calculated on a daily basis at closing prices using the official closing stock market prices for the constituent stocks. The closing price of the Benchmark Index is available on the website: <http://www.dax-indices.com>

The benchmark administrator is STOXX Limited.

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Euronext administrator of the Benchmark Index is included in the register of administrators and benchmark indices maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmarks used which describes the measures to be implemented in the event of substantial changes to an index or the cessation of provision of that index.

Benchmark Index revision and composition

The revision of the composition of the Benchmark depends on the revision of the composition of its Parent Index. The composition of the Parent Index is revised on a daily basis.

The leverage introduced in the Benchmark Index calculation formula is subject to daily readjustment. The consequences of daily readjustment of leverage are explained in particular in the Reference Indicator and Risk Profile sections of the prospectus.

The exact composition and revision of the composition of the Parent Index and, incidentally, the Benchmark Index published by NASDAQ OMX Group Inc. are available on the website <https://www.dax-indices.com/indices>. The rebalancing frequency mentioned above has no impact on costs in implementing the Investment Strategy.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Index, the Sub-Fund will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Sub-Fund may notably be securities that make up the Benchmark Index, as well as other international equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100 % of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the future exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the website: www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

As part of the management of its exposure, the Compartment may be exposed up to 20 % of its assets in equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Index, in particular in the event of a public offering affecting one of the securities making up the Benchmark Index or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Index.

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets.

The aforementioned equities will be chosen on the basis of criteria:

- Of eligibility, in particular:
 - o Subordination to the main market indices or to the Benchmark Index;
 - o Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation);
 - o Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent).
- Of diversification, notably:
 - o Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in R214-21 of the French Monetary and Financial Code)
 - o Geographical area;
 - o Sector.

For more information on the abovementioned eligibility and diversification criteria, investors can visit the website: www.lyxoretf.com

The investment in undertaking for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Sub-Fund. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of the future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Sub-Fund will have recourse to index-linked swaps traded over-the-counter, exchanging the value of the equities in the Sub-Fund's assets (or of any other financial instrument or asset held by the Sub-Fund, where appropriate) against the value of the Benchmark Index (in compliance with the description contained in this section's paragraph 1 above).

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including future financial instruments other than index-linked swaps.

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Sub-Fund's portfolio, nor regarding the underlying assets of the future financial instruments. Situations of conflict of interest may arise between the Management Company and Société Générale when Société Générale acts as a counterparty to FFIs. These situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/fees and its ability to achieve its management objective may also be negatively impacted. Where the Sub-Fund enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20 % of its net assets, the Sub-Fund can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10 % of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Sub-Fund is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Sub-Fund's use of forward swap contracts traded over the counter, the Sub-Fund can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20 % of the Sub-Fund's net asset value;
- (e) The Sub-Fund's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20 % of its net asset value provided that:

such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and

Such financial guarantees consist of at least six different issues of which none exceeds 30 % of the Sub-Fund's assets. In compliance with the aforesaid conditions, the guarantees received by the Sub-Fund can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e)(above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Sub-Fund's management company will apply a margin to the financial guarantees received by the Sub-Fund. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged. Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Compartment may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

Counterparty selection policy

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (financial futures and temporary acquisitions and disposals of securities) on behalf of the Mutual Fund. The selection of counterparties for financial contracts and financial intermediaries is performed rigorously from among the reputable counterparties and intermediaries in the market, on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes various criteria into consideration to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating
- Quantitative criteria based on the CDS LT spread (absolute criteria, volatility and comparison with a reference group, etc.)

Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the management company applies its "best execution" policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: www.lyxor.com, section "regulatory information".

Risk profile:

The Sub-Fund will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Equity risk

An equity price can vary upwards or downwards, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Index be negative over the investment period.

- Liquidity risk (primary market)

If, when the Compartment (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Index, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Index, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Sub-Fund's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

- Risks related to the management of guarantees

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk related to daily readjustment of leverage

Investors are inversely and twice exposed to fluctuations that affect the price or level of the Parent Index on a daily basis. In particular, any appreciation of the underlying market will be inversely amplified and will imply an even greater depreciation in the net asset value of the Sub-Fund. The daily readjustment of the exposure contained in the formula of the underlying double-short strategy index implies that, over a period greater than one business day, the Sub-fund's performance will not be equal to twice the inverse of the performance of the Parent Index.

For example, if the Parent Index appreciates 10% on a given business day and then depreciates by 5% on the next business day, the ETF will have depreciated in total by 12% after these two days (and before deduction of applicable fees), while the Parent Index has appreciated by 4,5% over the same period.

If the Parent Index depreciates by 5% per day for 2 consecutive business days, it will have depreciated a total of 9,75 %, while the ETF will have appreciated (before deduction of applicable fees) by 21% over the same period.

Negative scenario 1	Case where the negative leverage induced is greater than 1 in a scenario of a rise in the Parent Index				
	Parent Index		strategy index		
	day i performance	day i value	day i performance	day i value	leverage induced
		100		100	
day 1	10 %	110	-10 %	90	x-1
day 2	-8 %	101.2	8 %	97.2	x-1
total period	1.20 %		-2.80 %		x-2.33

Negative scenario 2	Case where the negative leverage induced is less than 1 in a scenario of a decline in the Parent Index				
	Parent Index		strategy index		
	day i performance	day i value	day i performance	day i value	leverage induced
		100		100	
day 1	-10 %	90	10 %	110	x-1
day 2	6 %	95.4	-6 %	103.4	x-1
total period	-4.60 %		3.40 %		x-0.74

In addition, it is possible that over a observation period greater than one day and in the event of high volatility of the Parent Index over that period, the net asset value of the Sub-Fund may fall even though the Parent Index also posted a decline over the same period.

Reverse induced leverage scenario:	Case where the leverage generated is positive over the period				
	Parent Index		strategy index		
	day i performance	day i value	day i performance	day i value	leverage induced
		100		100	
day 1	5 %	105	-5 %	95	x-1
day 2	-5 %	99.75	5 %	99.75	x-1
total period	-0.25 %		-0.25 %		x1

- Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to achieve its investment objective, the Compartment uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Index is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Index is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Index,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Index (other than a minor modification such as the adjustment of the underlyings of this Benchmark Index or of the respective weightings between its various components), that cannot be effectively replicated by the Sub-Fund at a reasonable cost.
- v) One or more components of the Benchmark Index becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Index's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Index's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Index undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Sub-Fund (and/or in a valuation of the ST by the Sub-Fund's counterparty in a future financial instrument), the Sub-Fund's net asset value may be affected, notably should the actual treatment of the ST by the Sub-Fund differ from the ST's treatment in the methodology used by the Benchmark Index.

- Sustainability risks

The Sub-Fund does not consider sustainability factors in the investment decision-making process but remains exposed to sustainability risks. The occurrence of such risks could have a negative impact on the value of the investments made by the Sub-Fund. Additional information can be found in the "Sustainability Information" section of the Prospectus.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

The investor who subscribes to this Sub-Fund wishes to gain exposure to the German equity market with a leverage of 2 to the upside or fall.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

As an arbitrage product, this Sub-Fund may not be suitable for investors wishing to make a medium or long-term investment. Investors are therefore recommended to study their individual situations with their usual estate management advisers.

U.S. Persons (as defined in the "COMMERCIAL ORDER INFORMATION" prospectus) may not invest in the Sub-Fund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy-92800 Puteaux.
- Creation date of the Multi Units France Sicav: 04 March 2002.
- Compartment approval date by the AMF (Financial Markets Authority): 15 February 2018.
- Compartment creation date: 19 April 2018.

Activity report

The fund replicates the performance of the SHORTDAX X2 Index EUR (Ticker:SHRTDAX2).

Performance trend at the closing date:

Share name	ISIN	Share currency	Performance from 28/02/19 to 31/10/19			Share performance since inception
			Share	Index	Foreign exchange	
LYXOR DAILY SHORTDAX X2 UCITS ETF-	FR0010869495	EUR	-50.39% ⁽¹⁾	-50.20%		-96.71%

⁽¹⁾ "The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs (for example the index rebalancing cost);
- taxation incurred in relation to the methodology used in the Benchmark Index»

The tracking error realised is 0.0524%. The target tracking error over the period was 0.15%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams. This difference is considered insignificant.

Index Linked Swap's counterparty is: Morgan Stanley.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor) None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

This Fund is covered by Article 6 of Regulation (EU) 2019/2088 (the "SFDR Regulation"). It does not promote environmental and/or social characteristics and does not aim to invest sustainably

Transparency of environmentally sustainable investments in periodic reports under Regulation (EU) 2020/852
Regulation (EU) 2020/852 on the establishment of a framework for promoting sustainable investments (the "Taxonomy Regulation") sets out the criteria for determining whether an economic activity is environmentally sustainable in the European Union.

According to the Taxonomy Regulation, an activity can be considered "sustainable" if it contributes substantially to one of the 6 environmental objectives set out in the Taxonomy Regulation, including climate change mitigation and adaptation, pollution prevention and reduction, or the protection and restoration of biodiversity and ecosystems.

In addition, in order to be considered to be sustainable, this economic activity must respect the principle of "not to cause significant harm" to one of the other five objectives of the Taxonomy Regulation and must also comply with basic social criteria (alignment to OECD and UN guidelines on business and human rights).

In accordance with article 7 of the Taxonomy Regulation, the management company draws investors' attention to the fact that the underlying investments of this Fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Provision of environmental, social and governance (ESG) information - in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues

To the basket of assets held by the fund, the fund applies an exclusion of issuers associated with serious and repeated violations of the Principles of the United Nations Global Compact and regulatory requirements related to controversial sectors and products. This list is supplemented by a list of companies to be excluded due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological chemical, nuclear or radiological weapons, etc.).

B) Information used for the analysis implemented on ESG criteria

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (in connection with Lyxor's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defence policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Methodology and implementation of this analysis

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution.

The post trade control is on NAV frequency basis.

d) Presentation of the integration of analysis results in the investment policy

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor is gradually expanding its ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

• Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

• Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

• Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

- In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environmental performance score • the environmental vulnerability index

For corporate issuers in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

LYXOR DAILY SHORTDAX X2 UCITS ETF (compartment of the Multi Units France Sicav)

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations

- Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

LYXOR DAILY SHORTDAX X2 UCITS ETF (compartment of the Multi Units France Sicav)

Portfolio ESG Rating as of October 2021

ESG Rating	Environment	Social	Governance	Portfolio rated	100%
2.9	2.4	3.0	3.3	Nb Securities rated	40

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The ESG score calculated at the portfolio level measures the capacity of the underlying issuers to manage the risks and key opportunities associated with environmental, social and governance factors. The risk scale ranges from 0 (high risk) to 10 (low risk). Issuer scores are calculated in absolute terms for each pillar and sub-theme and are comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities

- Social: employment, social relations, health and safety, training, compliance with ILO conventions

- Governance: Board of Directors or Supervisory Board, Audit and Internal Control, Executive Compensation

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources

- Social: Human Capital, Economic Environment

- Governance: Financial Governance, Political Governance

Source: The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Measures the portfolio's exposure to companies experiencing controversies relating to their compliance with international standards as a function of their degree of severity:

- Red: Indicates that a company is involved in one or more very severe controversies;

- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;

- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;

- Green: indicates that the company is not involved in any major controversies

- None: Sovereign and/or Company not covered

Red Flag	3%
Orange Flag	33%
Yellow Flag	37%
Green Flag	26%

LYXOR DAILY SHORTDAX X2 UCITS ETF (compartment of the Multi Units France Sicav)

Climate Risks & Energy Transition

Portfolio carbon footprint as of 1 October 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons (CO2e/\$M sales)	Portfolio rated by weight	100%
0	0	0	Scope 1 reported (vs estimated)	0%
			Scope 2 reported (vs estimated)	0
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: direct emissions resulting from the burning of fossil resources owned or controlled by the company.
- Scope 2: indirect emissions related to the purchase or production of electricity.
- Scope 3: other indirect emissions from the extended supply chain to the transport of goods and persons.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions standardised by revenue), and these intensities are weighted by the weight of the companies in the portfolio.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD)*. Moreover only the use of the Enterprise Value enables the analysis of a portfolio invested in both equities and bonds.

EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest - total debt.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage or MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon:	
Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gaz	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of : \$ 1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges - this is the case with oil sands, which have been targeted as being particularly climate-unfriendly. With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Enenergy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	0.0%	0.0%	0.0%
Some efforts	0.0%	0.0%	0.0%
Limited efforts/Information	0.0%	0.0%	0.0%
No effort/No evidence	0.0%	0.0%	0.0%

Low Carbon Transition Score

The Low Carbon Transition Score⁽¹⁾ uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low- carbon products.

(1) Metric developed by MSCI

Low carbon transition score	0.0
Low carbon transition management Score	0.0
Operational Transition	0.0%
Product Transition	0.0%
Neutral	0.0%
Solutions	0.0%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The issuer data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Share of issuers in terms of power generation in portfolio	3.2%
--	------

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. Those issuers are likely to benefit from a low carbon transition

Issuer with a revenue dedicated to environmental solutions between:

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	4%
Coldwave	32%
Flood	2%
Heatwave	8%
Hurricane	3%
Water Stress	41%
Wildfire	9%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.).

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	1.6%	74.8%	23.6%	92.9%	4.8%	2.3%

Water Stress	6.6%	90.6%	2.8%	51.5%	31.4%	17.1%
Toxic Emissions & Waste				44.9%	24.6%	30.5%

Temperature - Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

- A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,
- An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates a carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des marchés financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter “AIFM Directive”) and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter “UCITS V Directive”), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the French Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual remuneration review campaign that was carried out during the course of the year, on the basis of the perimeter of the staff as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable remuneration are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable remuneration deferred from a previous financial year. No “carried interest” was paid during the financial year.

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information in the evolving context of the Covid-19 crisis.

Assessment rules

The Sub-Fund's assets are valued according to the applicable laws and regulations, and more particularly the rules defined in Regulation No. 2014-01 of the French regulatory accounting committee (CRC) dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded. However, in the absence of significant transactions on a regulated market, the following financial instruments are valued using the following specific methods:

- Negotiable debt securities ("NDS") with a residual maturity upon acquisition that of 3 months or less are assessed with a straight-line extension over the residual maturity of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- Negotiable debt securities with a residual maturity of more than 3 months at the net asset value date are measured at the present value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Futures traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable trading value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities in undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Sub-Fund's net asset value.
- Units and shares of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.

Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

The exchange rates used for the assessment of financial instruments listed in a currency other than the Sub-Fund's reference currency are the exchange rates published the fixing WM Reuters on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under "Financial instruments" according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under "Other temporary operations".

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Sub-Fund) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Sub-Fund) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Sub-Fund).

Operation and management fees

These fees include all of the fees invoiced directly to the Sub-Fund, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Sub-Fund, the following fees can be added to the operation and management fees (see summary table hereinafter):

- Outperformance commissions: These commissions reward the management company when the Sub-Fund exceeds its objectives. and are invoiced to the Sub-Fund;
- Transfer commissions invoiced to the Sub-Fund.

For more details on the fees actually charged to the Sub-Fund, refer to the Statistics section of the Key Investor Information Document (KIID).

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	Maximum 0.60 % per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commission	Net assets	None

⁽¹⁾ including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Accounting currency

The Compartment accounting is carried out in Euro.

Indication of accountancy changes declared to each of the shareholders individually

- - Occurred change: None.
- - Future change: None.

Other changes declared to each of the shareholders individually (*Not certified by the auditor*)

- - Occurred change: None.
- - Future change: None.

Indication and justification of the changes to estimates and application provisions
None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

I-USD share class: the Board of Directors reserves the right to distribute, once or several times a year, all or part of the distributable amounts and/or to accumulate them.

Acc share class: accumulation of all distributable amounts.

This financial instrument is not sponsored, recommended, distributed or otherwise supported by Deutsche Börse AG ("Licensor"). The Licensor makes no representation or warranty or representation, express or implied, or with respect to the results arising from the use of the Index and/or the registered trademark of the Index, or with respect to the value of the Index at any time or at a certain date or in any other respect. The Index is calculated and published by the Licensor. However, to the extent permissible under the law, the Licensor will not respond to potential errors in the Index vis-à-vis third parties. In addition, the Licensor is not required to report potential errors in the Index vis-à-vis third parties, including investors. Neither the publication of the Index by the Licensor nor the granting of a license in respect of the Index or the registered trademark of the Index for their use in respect of the financial instrument or other securities or financial products derived from the Index do not represent a recommendation by the Licensor for a capital placement or contain, in any way whatsoever, a guarantee or opinion of the Licensor regarding the attractiveness of an investment in this product. In its capacity as sole owner of all rights to the Index and the registered trademark of the Index, the Licensor has only licensed to the issuer of the financial instrument the use of the Index and the registered trademark of the Index, as well as any reference to the Index and the registered trademark of the index in relation to the financial instrument. Investors should make their own opinion as to the suitability of the investment under consideration and to consult their usual advisers prior to any acquisition of shares.

2 Evolution of the net assets

	29.10.2021	30.10.2020
Currency	EUR	EUR

Unit capitalisation*	-1.66	-0.46	-1.58	0.60	-2.99
-----------------------------	--------------	-------	-------	------	-------

* The amounts of the unit distribution, the unit capitalisation and the tax credits are indicated in the accounting currency of the Compartment. The unit capitalisation corresponds to the sum of profit and loss and net capital gains or losses on the number of circulating units. This calculation method is applied from 1 January 2013.

⁽¹⁾ Pursuant to the Fiscal Instruction of 4 March 1993 of the French Tax Department, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits between the circulating units on that date.

SUB-FUND OF THE MULTI UNITS FRANCE SICAV

FISCAL YEAR ENDING ON: 29.10.2021

Compartments / feeder	LYXOR IBEX 35 DOBLE APALANCADO DIARO UCITS ETF is a Sub-Fund of the MULTI UNITS FRANCE SICAV.
Management Company	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy – 92987 Paris La Défense Cedex.
Depository and Custodian	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

Information on investments and management

Classification

Equities from countries in the Eurozone.

The Lyxor Ibex 35 Doble Apalancado Diario UCITS ETF Sub-Fund (the “Sub-Fund”) is permanently exposed to at least 60% to one or more markets of equities issued in one or more euro zone countries, including possibly the French market.

The Sub-Fund is an index-based strategy UCITS of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution:

Acc share class: Capitalisation of all the amounts available for distribution.

Management objective

The Compartment is a passively managed index-based UCITS.

The Sub-Fund’s investment objective is to gain exposure to the Spanish equity market with daily x2 leverage, both upwards and downwards by replicating the performance of the Ibex 35[®] Doble Apalancado Neto strategy index (the “Benchmark Index”), denominated in euros (EUR), while minimising the tracking error between the performance of the Sub-Fund and that of its Benchmark as much as possible.

The anticipated level of the ex-post tracking error under normal market conditions is 0.10 %.

Benchmark indicator

The Sub-Fund’s Benchmark Index is the strategy index Ibex 35[®] Doble Apalancado Neto plus any dividends received by the Sub-Fund in respect of holding the shares comprising the Benchmark Index.

The Benchmark Index is an equity strategy index calculated, maintained and published by Sociedad de Bolsas. The Benchmark Index offers daily leverage X 2 exposure to the IBEX 35[®] index (the “Parent Index”). Thus, in the event of a rise in the Parent Index on a day when the net asset value of the Sub-Fund is calculated, the net asset value of the Sub-Fund will increase twice on the same day of calculation of the net asset value and, in the event of a decline in the Parent Index on a day when the net asset value is calculated, the Sub-Fund’s net asset value will decrease twice on that same day of calculation of the net asset value.

The Parent Index is the main benchmark of the Madrid Stock Exchange and is composed of the 35 most traded stocks on the Spanish market. The Parent Index is a free float-weighted index.

The Benchmark Index is calculated on a daily basis at closing prices using the official closing stock market prices for the constituent stocks.

A full description and full methodology for the construction of the Benchmark Index and respective weights of the components of the Benchmark Index are available on the website: <http://www.bolsamadrid.es/ing/aspx/Indices/Resumen.aspx>

The monitored performance is that of the Benchmark Indicator closing prices.

Benchmark Index publication

The closing price of the Benchmark is available on the website <http://www.bolsamadrid.es/ing/asp/Indices/Resumen.aspx>

The administrator of the Benchmark Index is Sociedad de Bolsas.

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Euronext administrator of the Benchmark Index is included in the register of administrators and benchmark indices maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmarks used which describes the measures to be implemented in the event of substantial changes to an index or the cessation of provision of that index.

Revision and composition of the Benchmark Index

The revision of the composition of the Benchmark depends on the revision of the composition of its Parent Index. The composition of the Parent Index is revised every six months.

The leverage introduced in the Benchmark Index calculation formula is subject to daily readjustment. The consequences of daily readjustment of leverage are explained in particular in the Reference Indicator and Risk Profile sections of the prospectus.

The exact composition and revision rules of the Benchmark Index are available on the website: <http://www.bolsamadrid.es/ing/asp/Indices/Resumen.aspx>

The above-mentioned frequency of rebalancing has no effect on costs in the implementation of the investment strategy.

Interest in the Leverage Strategy

The “Leverage” strategy (with daily leverage) is a dynamic strategy applied at the Benchmark level. It allows all investors to double their investment on a daily basis compared to a “simple” investment in the Parent Index, thanks to the loan taken out to achieve the strategy. In the event of an increase in the Benchmark Index, the one-day gains are 2 times greater than for a “simple” investment in the Parent Index. Conversely, in the case of a bear market, losses are also doubled daily due to the multiplier effect of leverage. The strategy's risks are thus subject to a daily multiplier effect.

Investment strategy

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009. In pursuit of the greatest possible correlation with the performance of the Benchmark Index, the Sub-Fund will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Sub-Fund's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

The securities held as assets by the Sub-Fund may notably be securities that make up the Parent Index, as well as other international equities, from all economic sectors, listed on all markets, including the small caps markets.

The shares in the Sub-fund's assets will be chosen in order to limit the costs related to the replication of the Benchmark Index. Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Sub-Fund's portfolio and (ii) the market value of the future exchange operation entered into by the Sub-Fund are available on the page dedicated to the Sub-Fund on the website www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

As part of the management of its exposure, the Sub-Fund may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Index, in particular in the event of a public offering affecting one of the securities making up the Benchmark Index or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Index.

2. Balance sheet assets (excluding integrated derivatives)

The Sub-Fund may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets.

The aforementioned equities will be chosen on the basis of criteria:

- Of eligibility, in particular:
 - o Subordination to the main market indices or to the Benchmark Index;
 - o Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation);
 - o Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent).
- Of diversification, notably:
 - o Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code);
 - o Geographical area;
 - o Sector.

For more information on the above eligibility and diversification criteria, investors can visit the website www.lyxoretf.com.

The investment in undertaking for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Sub-Fund. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

When the Sub-Fund receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Sub-Fund, given that they are received by the Sub-Fund in full ownership.

As part of these investments, the Sub-Fund may subscribe for units or shares of UCITS managed by the management company or a company to which it is linked.

As part of the future optimisation of the Sub-Fund's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Sub-Fund will have recourse to index-linked swaps traded over-the-counter, exchanging the value of the equities in the Sub-Fund's assets (or of any other financial instrument or asset held by the Sub-Fund, where appropriate) against the value of the Benchmark Index (in compliance with the description contained in this section's paragraph 1 above).

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

As part of a future optimisation of the Sub-Fund management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including future financial instruments other than index-linked swaps.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Sub-Fund's investment portfolio, nor regarding the underlying assets of the future financial instruments. When Societe Generale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Societe Generale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Sub-Fund may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Sub-Fund may suffer losses and/or incur fees/costs and its ability to achieve its management objective may also be negatively impacted.

Where the Sub-Fund enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Sub-Fund can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

The Sub-Fund may temporarily borrow up to 10% of its net assets.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Sub-Fund is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Sub-Fund's use of forward swap contracts traded over the counter, the Sub-Fund can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Sub-Fund is totally neutralised.

Any financial guarantee received by the Sub-Fund will be provided to the Sub-Fund in full ownership and listed in the Sub-Fund's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Sub-Fund's assets.

Any financial guarantee received by the Sub-Fund within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20 % of the Sub-Fund's net asset value;
- (e) The Sub-Fund's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Sub-Fund may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that: such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and

such financial guarantees consist of at least six different issues of which none exceeds 30% of the Sub-Fund's assets. In compliance with the aforesaid conditions, the guarantees received by the Sub-Fund can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (i) Bonds issued or guaranteed by an OECD Member State or by its local government entities, or by an EU, regional, or global supranational institution or organisation, or by any country provided that conditions (a) to (e) above are fully complied with;
- (ii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Sub-Fund's management company will apply a margin to the financial guarantees received by the Sub-Fund. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged. Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Sub-Fund may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Sub-Fund is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

Counterparty selection policy

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (financial futures and temporary acquisitions and disposals of securities) on behalf of the Sub-Fund. The selection of counterparties for financial contracts and financial intermediaries is performed rigorously from among the reputable counterparties and intermediaries in the market, on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes various criteria into consideration to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating
- Quantitative criteria based on the CDS LT spread (absolute criteria, volatility and comparison with a reference group, etc.)

Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information about this policy and on the relative importance of the execution criteria for each asset class, please visit our website: www.lyxor.com, "regulatory information" section.

Risk profile

The Sub-Fund will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Equity risk

An equity price can vary upwards or downwards, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

The Sub-Fund has a high equity risk.

Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Risk of daily readjustment of leverage

Investors are twice exposed to fluctuations that affect the price or level of the Parent Index on a day-to-day basis. In particular, any decline in the underlying market will be amplified and will imply an even greater depreciation in the net asset value of the Sub-Fund. The daily readjustment contained in the underlying Benchmark Index formula implies that, over a period greater than one business day, the Sub-Fund's performance will not be equal to twice the performance of the Parent Index. For example, if the Parent Index appreciates 10% on a given business day and then depreciates by 5% on the next business day, the Sub-Fund will have appreciated in total by 8% after these two days (and before deduction of applicable fees), while the Parent Index has appreciated by 4.5% over the same period.

LYXOR IBEX 35 DOBLE APALANCADO DIARO UCITS ETF
(compartment of the Multi Units France Sicav)

If the Parent Index depreciates by 5% per day for 2 consecutive business days, it will have depreciated a total of 9.75%, while the Sub-Fund will have depreciated (before deduction of applicable fees) by 19% over the same period.

Negative scenario 1	Case where the leverage induced is greater than 2 in a scenario of a decline in the Parent Index				
	Parent Index		strategy index		
	day i performance	day i value	day i performance	day i value	leverage induced
		100		100	
day 1	10 %	110	20 %	120	x2
day 2	-11 %	97.9	-22 %	93.6	x2
total period	-2.10 %		-6.40 %		x3.05

Negative scenario 2	Case where the leverage induced is less than 2 in a scenario of a rise in the Parent Index				
	Parent Index		strategy index		
	day i performance	day i value	day i performance	day i value	leverage induced
		100		100	
day 1	-5 %	95	-10 %	90	x2
day 2	6 %	100.7	12 %	100.8	x2
total period	0.70 %		0.80 %		x1.14

In addition, it is possible that over a observation period greater than one day and in the event of high volatility of the Parent Index over that period, the net asset value of the Sub-Fund may fall even as the Parent Index rises over the same period.

Reverse induced leverage scenario:	Case where the leverage generated is negative over the period				
	Parent Index		strategy index		
	day i performance	day i value	day i performance	day i value	leverage induced
		100		100	
day 1	20 %	120	40 %	140	x2
day 2	-16 %	100.8	-32 %	95.2	x2
total period	0.80 %		-4.80 %		x-6

- Liquidity risk (primary market)

If, when the Sub-Fund (or one of its counterparties for future financial instrument (“FFI”)) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase/sale price discrepancies, the value and/or liquidity of the Sub-Fund could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Sub-Fund's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Index, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Index, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Sub-Fund's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Sub-Fund is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as “OTC derivatives”) and/or efficient portfolio management techniques (hereinafter referred to as “EPMTs”). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Sub-Fund may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realisation of this risk may result in losses for the Sub-Fund and have an impact on the ability of the Sub-Fund to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Sub-Fund 's assets per counterparty.

- Risks related to the management of guarantees

Operational risk:

The Sub-Fund may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Sub-Fund may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

Risk that the Sub-Fund's management objective will only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Index, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to achieve its investment objective, the Sub-Fund uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Index. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the index risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Sub-Fund's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Sub-Fund is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Sub-Fund's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Sub-Fund's underlyings can affect the Sub-Fund's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Sub-Fund (and/or to its counterparty in the FFI), the Sub-Fund's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Sub-Fund is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to regulations applicable to the underlyings

In case of change of the regulations applicable to the Sub-Fund's underlyings, the Sub-Fund's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Sub-Fund's equities. The calculation of the Sub-Fund's net asset value can also be affected. If the event persists, the Sub-Fund's manager will decide on measures having to be adopted, which can have an impact on the Sub-Fund's net asset value. “Events affecting the Benchmark Index” are understood to mean the following situations:

- i) The Benchmark Index is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Index is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Index,

- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Index (other than a minor modification such as the adjustment of the underlyings of this Benchmark Index or of the respective weightings between its various components), that cannot be effectively replicated by the Sub-Fund at a reasonable cost,
- v) One or more components of the Benchmark Index becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Index's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Index's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Index undertake an unanticipated review of a corporate action ("CA"), that contradicts a prior and official announcement that had resulted in a valuation of the CA by the Sub-Fund (and/or in a valuation of the CA by the Sub-Fund's counterparty in a future financial instrument), the Sub-Fund's net asset value may be affected, notably should the actual treatment of the CA by the Sub-Fund differ from the CA's treatment in the methodology used by the Benchmark Index.

- Sustainability risks

The Sub-Fund does not consider sustainability factors in the investment decision-making process but remains exposed to sustainability risks. The occurrence of such risks could have a negative impact on the value of the investments made by the Sub-Fund. Additional information can be found in the "Sustainability Information" section of the Prospectus.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

Investors who subscribe to this Sub-Fund wish to gain exposure to the Spanish equity market with daily x2 leverage.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Sub-Fund's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers. The minimum recommended investment term is greater than 5 years.

U.S. Persons (as defined in the "COMMERCIAL INFORMATION" prospectus) may not invest in the Sub-Fund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Sub-Fund's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy-92800 Puteaux.*

Activity report

The fund replicates the performance of the IBEX 35 Double Lev Net EUR index (Ticker:IBXQ).

Performance trend at the closing date:

Share name	ISIN	Share currency	Performance from 28/02/19 to 31/10/19			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor IBEX 35 Doble Apalancado Diario UCITS ETF - Acc	FR0011042753	EUR	99.19% ⁽¹⁾	99.74%	-	58.96%

⁽¹⁾ "The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index»

The tracking error realised is 0.0619%. The target tracking error over the period was 0.1%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams. This difference is considered insignificant.

Index Linked Swap's counterparty is: Société Générale.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the SICAV that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: The method chosen is the commitment method.

This Fund is covered by Article 6 of Regulation (EU) 2019/2088 (the "SFDR Regulation"). It does not promote environmental and/or social characteristics and does not aim to invest sustainably

Transparency of environmentally sustainable investments in periodic reports under Regulation (EU) 2020/852

Regulation (EU) 2020/852 on the establishment of a framework for promoting sustainable investments (the "Taxonomy Regulation") sets out the criteria for determining whether an economic activity is environmentally sustainable in the European Union.

According to the Taxonomy Regulation, an activity can be considered "sustainable" if it contributes substantially to one of the 6 environmental objectives set out in the Taxonomy Regulation, including climate change mitigation and adaptation, pollution prevention and reduction, or the protection and restoration of biodiversity and ecosystems.

In addition, in order to be considered sustainable, this economic activity must respect the principle of "do no significant harm" along with one of the other five objectives of the Taxonomy Regulation and must also comply with basic social criteria (alignment with OECD and UN guidelines on business and human rights).

In accordance with article 7 of the Taxonomy Regulation, the management company draws investors' attention to the fact that the underlying investments of this Fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Provision of environmental, social and governance (ESG) information - in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate Environmental, Social, and Governance ("ESG") issues into its investment solutions. Lyxor's SRI Policy is available under the website [Lyxor.com](https://www.lyxor.com) and is revised each

Integration of sustainability risks by Lyxor in its investment decision-making processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues

To the basket of assets held by the fund, the fund applies an exclusion of issuers associated with serious and repeated violations of the Principles of the United Nations Global Compact and regulatory requirements related to controversial sectors and products. This list is supplemented by a list of companies to be excluded due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological chemical, nuclear or radiological weapons, etc.).

B) Information used for the analysis implemented on ESG criteria

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets (PME/ETI).
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defence policy.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products.

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Methodology and implementation of this analysis

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution.

The post trade control is on NAV frequency basis.

d) Presentation of the integration of analysis results in the investment policy

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the [Lyxor.com](https://www.lyxor.com) website.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:
 - Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports. Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.
 - In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:
 - The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
 - Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
 - A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).
 - With regard to carbon risk management:
 - Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).
 - In regards with the portfolio's exposure to issuers offering environmental solutions :
 - Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).
 - In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :
- For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :
- the Germanwatch climate performance index score
 - the environment performance score
 - the Environmental Vulnerability index

For corporate issuers in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the Key Issue:

LYXOR IBEX 35 DOBLE APALANCADO DIARO UCITS ETF (compartment of the Multi Units France Sicav)

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
 - Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations
- In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund

LYXOR IBEX 35 DOBLE APALANCADO DIARO UCITS ETF

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The ESG score calculated at the portfolio level measures the capacity of the underlying issuers to manage the risks and key opportunities associated with environmental, social and governance factors. The risk scale ranges from 0 (high risk) to 10 (low risk). Issuer scores are calculated in absolute terms for each pillar and sub-theme and are comparable across all industries. For sectors and themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For companies, exposure to measures and management of ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: employment, social relations, health and safety, training, compliance with ILO conventions
- Governance: Board of Directors or Supervisory Board, Audit and Internal Control, Executive Compensation

Source: The Company carbon footprint data are provided by the MSCI agency.
All ESG metrics are calculated on benchmark index.

For governments, exposure to measures and management of ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Portfolio Exposure to ESG Controversies

Measures the portfolio's exposure to companies experiencing controversies relating to their compliance with international standards as a function of their degree of severity:

Red: Indicates that a company is involved in one or more very severe controversies;

- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;

- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;

- Green: indicates that the company is not involved in any major controversies

- None: Sovereign and/or Company not covered

Red Flag 0%
Orange Flag 36%
Yellow Flag 33%
Green Flag 29%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2021

Carbon Emissions (tons CO2e/\$M invested)	Carbon Intensity (tons CO2e/\$M sales)	Weighted Average Carbon Intensity (tons CO2e/\$M sales)	Portfolio rated by weight	100%
245	388	221	Scope 1 reported (vs estimated)	100%
			Scope 2 reported (vs estimated)	98%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GreenHouse Gas Protocol (GHG Protocol) was launched in 2001 by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on reported data and/or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: direct emissions resulting from the burning of fossil fuel resources owned or controlled by the company.
- Scope 2: indirect emissions related to the purchase or production of electricity.
- Scope 3: other indirect emissions from the extended supply chain to the transport of goods and persons.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions standardised by revenue), and these intensities are weighted by the weight of the companies in the portfolio.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the enterprise value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of enterprise value as the most recent available fiscal year-end enterprise value including cash (USD)*. Moreover only the use of the Enterprise Value enables the analysis of a portfolio invested in both equities and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest - total debt.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage or MWh generated from fossil fuels or the portion of the company's revenues earned from fossil fuels or the portion of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon:

Fossil Fuel Reserves	6%
Thermal Coal	0%
Natural Gaz	4%
Oil	3%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of : \$ 1,000,000

Thermal Coal (Tons)	0
Gas (MMBOE)	0.0025
Oil (MMBOE)	0.0011

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilised.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	357.3
Thermal Coal	0.0
Oil	485.4
Gas	820.6
Total	1,663.3

LYXOR IBEX 35 DOBLE APALANCADO DIARO UCITS ETF

(compartment of the Multi Units France Sicav)

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum of high-impact fossil fuel reserves	0.0
Other	1,663.3

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorise them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Management of Energy Consumption and Operational Efficiency	Target Effort
Aggressive efforts	15.2%	0.0%	4.3%
Some efforts	78.3%	99.6%	84.8%
Limited efforts/Information	3.7%	0.0%	8.2%
No effort/No evidence	0.9%	0.0%	2.6%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

•Asset stranding: risk of holding assets which may become stranded

•Operational Transition: risk of increase in operational costs

•Product Transition: risk of a decrease in demand for high-carbon products and services •Neutral: low exposure to transition risks

•Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.1
Low carbon transition management Score	6.2
Operational Transition	4.5%
Product Transition	4.5%
Neutral	70.0%
Solutions	5.2%

Energy Mix of energy producers within the portfolio

A company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The issuer data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source: MSCI ESG Research

Share of issuers in terms of power generation in portfolio	21.8%
--	-------

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	13.6%	Liquid Fuel	0.0%	Natural Gas	38.2%
Nuclear	17.5%	Renewables	30.2%	Thermal Coal	0.5%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. Those issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuers with revenue dedicated to environmental solutions between:	
0-19.9%	28%
20-49.9%	5%
50-100%	3%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	30.5%	Energy Efficiency	37.7%	Green Building	4.4%
Pollution Prevention	4.1%	Sustainable Water	8.1%	Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

		Environmental Solutions Contribution			
Alternative Energy	4.4%	Energy Efficiency	1.3%	Green Building	1.3%
Pollution Prevention	0.0%	Sustainable Water	0.6%	Sustainable Agriculture	0.0%

LYXOR IBEX 35 DOBLE APALANCADO DIARO UCITS ETF (compartment of the Multi Units France Sicav)

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the "Do No Significant Harm" and "Minimum Social Safeguards criteria" of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

% estimated EU Taxo 7.7%

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	1%
Coldwave	27%
Flood	5%
Heatwave	9%
Hurricane	2%
Water Stress	50%
Wildfire	6%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.).

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure - analyses the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	0.7%	85.4%	13.9%	78.2%	18.6%	3.2%
Carbon Emissions	3.0%	66.0%	31.0%	82.8%	13.0%	4.1%
Electronic Waste	3.4%	17.0%	79.6%	100.0%		
Opportunities in Green Building	8.4%	63.9%	27.7%	98.6%	0.0%	1.3%
Opp's in Renewable Energy	10.3%	84.6%	5.1%	84.0%	6.2%	9.8%
Packaging Material & Waste	20.3%	21.6%	58.1%	99.1%		0.9%
Water Stress	15.2%	42.3%	42.5%	72.4%	18.3%	9.2%
Toxic Emissions & Waste				64.9%	26.3%	8.7%

Temperature - Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

- A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,
- An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates a carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Level of alignment	>3°C
Hedging	98.7%
Alignment Trajectory in % Weight	
<1.5°C	25.8%
1.5-2°C	24.4%
2-3°C	3.7%
>3°C	46.1%

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des marchés financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter "AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter "UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the French Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual remuneration review campaign that was carried out during the course of the year, on the basis of the perimeter of the staff as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable remuneration are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable remuneration deferred from a previous financial year. No "carried interest" was paid during the financial year.

Transparency of securities financing operations and reuse of financial instruments SFTR regulation

(Accounting currency of the CIU)

1. General information.

1.1. Amount of securities and raw materials loaned in proportion with the total assets that can be loaned, defined as excluding the cash and cash equivalents.

Securities lending

% of assets that can be loaned	-
--------------------------------	---

1.2. Amount of the assets committed to each type of securities financing operation and total return swap, expressed in absolute value (in the currency of the collective investment undertaking) and in proportion with the assets under management of the collective investment undertaking

	Securities lending ⁽¹⁾	Securities borrowing ⁽²⁾	Repo operations ⁽³⁾	Reverse repo operations ⁽⁴⁾	TRS ⁽⁵⁾
Absolute value	-	-	-	-	77,603,549.10
% of assets under management	-	-	-	-	100.00

⁽¹⁾ The amount of assets engaged in securities lending transactions corresponds to the market value of the securities lent at the balance sheet date.

⁽²⁾ The amount of assets engaged in securities borrowing transactions corresponds to the market value of the guarantees (cash or securities) delivered by the fund as part of the securities borrowing on the balance sheet date.

⁽³⁾ The amount of assets engaged in repurchase transactions corresponds to the market value of the securities repurchased on the balance sheet date.

⁽⁴⁾ The amount of assets engaged in reverse repurchase transactions corresponds to the market value of securities purchased under repurchase agreements at the balance sheet date.

⁽⁵⁾ The amount of assets committed in the TRS corresponds (i) for the TRS for which the management company has undertaken to deliver a basket of securities to the TRS counterparty, to the market value of the basket of securities committed in the TRS, increased by the market value of the TRS on the accounting date and/or (ii) for the TRS for which the management company does not deliver a basket of securities, to the value of the nominal value of the TRS on the balance sheet date.

2. Concentration data

2.1. The ten biggest issuers of guarantees for all types of securities financing operations and total return swaps (breakdown of the volumes of guarantees and raw materials received, with the names of the issuers).

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information in the evolving context of the Covid-19 crisis.

Assessment rules

The Sub-Fund's assets are valued according to the applicable laws and regulations, and more particularly the rules defined in Regulation No. 2014-01 of the French regulatory accounting committee (CRC) dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are valued using the following specific methods:

- Negotiable debt securities ("NDS") with a residual maturity upon acquisition that of 3 months or less are assessed with a straight-line extension over the residual maturity of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- Negotiable debt securities with a residual maturity of more than 3 months at the net asset value date are measured at the present value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Futures traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.

Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable trading value, under the management company's responsibility.

- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities in undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Sub-Fund's net asset value.

Units and shares of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.

- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Sub-Fund's reference currency are the exchange rates published the fixing WM Reuters on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under "Financial instruments" according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under "Other temporary operations".

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Sub-Fund) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Sub-Fund) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Sub-Fund).

Operation and management fees

These fees include all of the fees invoiced directly to the Sub-Fund, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Sub-Fund, the following fees can be added to the operation and management fees (see summary table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Sub-Fund has exceeded its objectives and are invoiced to the Sub-Fund;
- Transfer commissions invoiced to the Sub-Fund.

For more details on the fees actually charged to the Sub-Fund, refer to the Statistics section of the Key Investor Information Document (KIID).

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	Maximum 0.40 % per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commission	Net assets	None

⁽¹⁾ including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Accounting currency

The Compartment accounting is carried out in Euro.

Net asset value	16.4278	8.2472	18.1497	15.9938	20.6046
Unit distribution on net capital gains and losses (including advances)	-	-	-	-	-
Unit distribution (including advances)	-	-	-	-	-
Unit tax credit transferred to holders (natural persons) (1)	-	-	-	-	-
Unit capitalisation (2)	7.81	-3.67	8.52	-6.56	9.25

(1) In pursuant to the Fiscal Instruction of 4 March 1993 of the French Tax Department, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits between the circulating units on that date.

(2) The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of outstanding units. This calculation method is applied from 1 January 2013.

Compartment creation date: 19 April 2018

SUB-FUND OF THE MULTI UNITS FRANCE SICAV

FISCAL YEAR ENDING ON: 29.10.2021

Compartments / feeder	LYXOR IBEX 35 DOBLE INVERSO DIARIO UCITS ETF is a Sub-Fund of the MULTI UNITS FRANCE Sicav.
Management Company	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy – 92987 Paris La Défense Cedex.
Depository and Custodian	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

Information on the investments and management

Classification

The Lyxor Ibex 35 Doble Inverso Diario UCITS ETF sub-fund (the “Sub-Fund”) is an index-based strategy UCITS ETF fund.

Terms of determination and allocation of amounts available for distribution:

Acc share class: Capitalisation of all the amounts available for distribution.

Management objective

The Compartment is a passively managed index-based UCITS.

The Sub-Fund’s investment objective is to expose itself inversely and with daily x2 leverage to the Spanish equity market by replicating the performance of the Ibex 35® Doble Inverso strategy index (the “Benchmark Index”), denominated in euros (EUR), regardless of changes, and while minimising as much as possible the tracking error between the performance of the Sub-Fund and that of its Benchmark Index.

The anticipated level of the ex-post tracking error under normal market conditions is 0.15 %.

Benchmark indicator

The Benchmark Index is the IBEX 35® DOBLE INVERSO TOTAL RETURN strategy index (gross dividends reinvested, i.e. the performance of the Benchmark Index includes the gross dividends detached by the underlying equities).

The Benchmark Index is an equity strategy index calculated, maintained and published by Sociedad de Bolsas. The Benchmark Index offers an inverted exposure with daily X2 leverage on the rise or fall of the IBEX 35® index (“the Parent Index”). In the event of a rise in the Parent Index on one day the net asset value of the Sub-Fund is calculated, the net asset value of the Sub-Fund will decrease twice on the same day of calculation of the net asset value and the shareholders will not benefit from the increase in the Parent Index.

The Parent Index is the main benchmark of the Madrid Stock Exchange and is composed of the 35 most traded stocks on the Spanish market.

The Benchmark Index is an index weighted by free-float market capitalisation.

An exhaustive description and the complete methodology for the construction of the Benchmark Index as well as information on the composition and relative weights of the Benchmark Index’s components are available online at: <http://www.bolsamadrid.es/ing/asp/Indices/Resumen.aspx>

The monitored performance is that of the Benchmark Index closing prices in Euros.

Benchmark Index publication

The Benchmark Index is calculated on a daily basis at closing prices using the official closing stock market prices for the constituent stocks. The Benchmark Indicator is also calculated in real time every day that the Benchmark Indicator is published.

The closing price of the Benchmark is available on the website:

<http://www.bolsamadrid.es/ing/asp/Indices/Resumen.aspx>

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Euronext administrator of the Benchmark Index is included in the register of administrators and benchmark indices maintained by ESMA. In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, SGP has a procedure for monitoring the benchmarks used which describes the measures to be implemented in the event of substantial changes to an index or the cessation of provision of that index.

Benchmark Index revision and composition

The revision of the composition of the Benchmark depends on the revision of the composition of its Parent Index.

The composition of the Parent Index is revised every six months.

The double reverse leverage introduced into the Benchmark Index calculation formula is subject to a daily readjustment. The consequences of daily readjustment of leverage are explained in particular in the Reference Indicator and Risk Profile sections of this prospectus.

The above-mentioned frequency of rebalancing has no effect on costs in the implementation of the investment strategy.

The exact composition and revision rules of the Benchmark Indicator are available on the website:

<http://www.bolsamadrid.es/ing/aspx/Indices/Resumen.aspx>

Investment strategy

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Index, the Sub-Fund will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Sub-Fund's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Sub-Fund may notably be securities that make up the Parent Index, as well as other international equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralised.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Sub-Fund's portfolio and (ii) the market value of the future exchange operation entered into by the Sub-Fund are available on the page dedicated to the Sub-Fund on the website www.lyxoretf.com.

The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

As part of the management of its exposure, the Sub-Fund may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Index, in particular in the event of a public offering affecting one of the securities making up the Benchmark Index or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Index.

2. Balance sheet assets (excluding integrated derivatives)

The Sub-Fund may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets.

The aforementioned equities will be chosen on the basis of criteria

Of eligibility, in particular:

- Subordination to the main market indices or to the Benchmark Indicator;
- Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation);
- Rating of the country of the issuer's head office (requirement of a minimum threshold of S&P rating or equivalent).

Of diversification, notably:

- Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the French Monetary and Financial Code);
- Geographical area;

- Sectorial.

For more information on the above eligibility and diversification criteria, investors can visit the website www.lyxoretf.com.

The investment in undertaking for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Sub-Fund.

The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

When the Sub-Fund receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Sub-Fund, given that they are received by the Sub-Fund in full ownership.

As part of these investments, the Sub-Fund may subscribe for units or shares of UCITS managed by the management company or a company to which it is linked.

As part of the future optimisation of the Sub-Fund's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Sub-Fund will have recourse to index-linked swaps traded over-the-counter, exchanging the value of the equities in the Sub-Fund's assets (or of any other financial instrument or asset held by the Sub-Fund, where appropriate) against the value of the Benchmark Index (in compliance with the description contained in this section's paragraph 1 above).

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

As part of a future optimisation of the Sub-Fund management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including future financial instruments other than index-linked swaps.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Sub-Fund's investment portfolio, nor regarding the underlying assets of the future financial instruments.

When Societe Generale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Societe Generale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Sub-Fund may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Sub-Fund may suffer losses and/or incur fees/costs and its ability to achieve its management objective may also be negatively impacted. Where the Sub-Fund enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Sub-Fund can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Sub-Fund is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Sub-Fund's use of forward swap contracts traded over the counter, the Sub-Fund can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Sub-Fund is totally neutralised.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Sub-Fund's assets.

Any financial guarantee received by the Sub-Fund within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Sub-Fund's net asset value;
- (e) The Sub-Fund's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Sub-Fund may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- Such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and
- Such financial guarantees consist of at least six different issues of which none exceeds 30% of the Sub-Fund's assets.

In compliance with the aforesaid conditions, the guarantees received by the Sub-Fund can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State or by its local government entities, or by an EU, regional, or global supranational institution or organisation, or by any country provided that conditions (a) to (e) above are fully complied with;
- (ii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Sub-Fund's management company will apply a margin to the financial guarantees received by the Sub-Fund. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged.

Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Sub-Fund may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Sub-Fund is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

Counterparty selection policy

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Sub-Fund. The selection of counterparties for financial contracts and financial intermediaries is performed rigorously from among the reputable counterparties and intermediaries in the market, on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes various criteria into consideration to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating;
- Quantitative criteria based on the LT CDS spread (absolute criteria, volatility and comparison with a reference group, etc.).

Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information about this policy and on the relative importance of the execution criteria for each asset class, please visit our website: www.lyxor.com, “regulatory information” section.

Risk profile

The shareholder's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

Equity risk

An equity price can vary upwards or downwards, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

Liquidity risk (primary market)

If, when the Sub-Fund (or one of its counterparties for future financial instrument (“FFI”)) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase/sale price discrepancies, the value and/or liquidity of the Sub-Fund could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Sub-Fund's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Index, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Index, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

Counterparty risk

The Sub-Fund is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as “OTC derivatives”) and/or efficient portfolio management techniques (hereinafter referred to as “EPMTs”). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Sub-Fund may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty,

LYXOR IBEX 35 DOBLE INVERSO DIARIO UCITS ETF
(compartment of the Multi Units France Sicav)

at the market conditions prevailing at the time of the occurrence of this event. In particular, the realisation of this risk may result in losses for the Sub-Fund and have an impact on the ability of the Sub-Fund to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Sub-Fund's assets per counterparty.

Risks related to collateral management

Operational risk:

The Sub-Fund may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk

The Sub-Fund may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

Risk related to daily readjustment of leverage

Investors are twice exposed to fluctuations that affect the price or level of the Parent Index on a day-to-day basis. In particular, any decline in the underlying market will be amplified and will imply an even greater depreciation in the net asset value of the Sub-Fund. The daily readjustment contained in the underlying Benchmark Index formula implies that, over a period greater than one business day, the Sub-Fund's performance will not be equal to twice the performance of the Parent Index.

For example, if the Parent Index appreciates 10% on a given business day and then depreciates by 5% on the next business day, the Sub-Fund will have appreciated in total by 8% after these two days (and before deduction of applicable fees), while the Parent Index has appreciated by 4.5% over the same period. If the Parent Index depreciates by 5% per day for 2 consecutive business days, it will have depreciated a total of 9.75%, while the ETF will have depreciated (before deduction of applicable fees) by 19% over the same period.

Negative scenario 1

Case where the leverage induced is greater than 2 in a scenario of a decline in the Parent Index.

	Parent Index		strategy index		
	day i performance	day i value	day i performance	day i value	leverage induced
		100		100	
day 1	10%	110	20%	80	x-2
day 2	-5%	104.5	-10%	88	x-2
total period	4.50%		-12%		x-2.67

Negative scenario 2

If the negative leverage involved is less than 2 in a scenario of a decline in the Parent Index.

	Parent Index		strategy index		
	day i performance	day i value	day i performance	day i value	leverage induced
		100		100	
day 1	-10%	90	20%	120	x-2
day 2	6%	95.4	-12%	105.6	x-2
total period	-4.60%		5.60%		x-1.22

In addition, it is possible that over a observation period greater than one day and in the event of high volatility of the Parent Index over that period, the net asset value of the Sub-Fund may fall even as the Parent Index rises over the same period.

Reverse leverage scenario

If the leverage generated is positive over the period:

	Parent Index	strategy index	
--	--------------	----------------	--

LYXOR IBEX 35 DOBLE INVERSO DIARIO UCITS ETF
(compartment of the Multi Units France Sicav)

	day i performance	day i value	day i performance	day i value	leverage induced
		100		100	
day 1	5%	105	-10%	90	x-2
day 2	-5%	99.75	10%	99	x-2
total period	-0.25%		-1.00%		x4

Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

Risk related to the use of derivative instruments

In order to achieve its investment objective, the Sub-Fund uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Index. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Sub-Fund's net asset value.

Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Sub-Fund is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Sub-Fund's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Sub-Fund's underlyings can affect the Sub-Fund's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Sub-Fund (and/or to its counterparty in the FFI), the Sub-Fund's net asset value may be affected.

Risk related to regulations

In case of change of the regulations in any country in which the Sub-Fund is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Sub-Fund's underlyings, the Sub-Fund's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Sub-Fund's equities. The calculation of the Sub-Fund's net asset value can also be affected. If the event persists, the Sub-Fund's manager will decide on measures having to be adopted, which can have an impact on the Sub-Fund's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Index is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Index is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Index,
- iv) The index provider makes a material change in the Benchmark calculation formula or method (other than a minor modification such as an adjustment to this Benchmark's underlying components or their respective weightings) that the Sub-Fund cannot effectively replicate at a reasonable cost;
- v) One or more components of the Benchmark Index becomes illiquid, with the listing on an organised market being suspended, or components traded over-the-counter (such as bonds, for example) become illiquid,
- vi) The Benchmark Index's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Index's performance.

Securities transaction risk

Should the issuer of a security underlying the Benchmark Index undertake an unanticipated review of a corporate action (“CA”), that contradicts a prior and official announcement that had resulted in a valuation of the CA by the Sub-Fund (and/or in a valuation of the CA by the Sub-Fund’s counterparty in a future financial instrument), the Sub-Fund's net asset value may be affected, notably should the actual treatment of the CA by the Sub-Fund differ from the CA’s treatment in the methodology used by the Benchmark Index.

Sustainability risks

The Sub-Fund does not consider sustainability factors in the investment decision-making process but remains exposed to sustainability risks. The occurrence of such risks could have a negative impact on the value of the investments made by the Sub-Fund. Additional information can be found in the “Sustainability Information” section of the Prospectus.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

The investor who subscribes to this Sub-Fund wishes to gain exposure to the Spanish equity market via daily x2 leverage.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one’s investments so as to avoid an exposure only to this Sub-Fund’s risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers. As an arbitrage product, this Sub-Fund may not be suitable for investors wishing to make a medium or long-term investment. “U.S. Persons” (as defined below - see “COMMERCIAL INFORMATION”) may not invest in the Sub-Fund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Sub-Fund’s complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy-92800 Puteaux.*
- *Creation date of the Multi Units France Sicav: 04 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 15 February 2018.*
- *Compartment creation date: 19 April 2018.*

Activity report

The fund replicates the performance of the IBEX 35 Double Short EUR index (Ticker:IBEXDS).

Performance trend at the closing date:

Share name	ISIN	Share currency	Performance from 28/02/19 to 31/10/19			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor IBEX 35 Doble Inverso Diario UCITS ETF - Acc	FR0011036268	EUR	-57.38% ⁽¹⁾	-57.01%	-	-89.48%

⁽¹⁾ "The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index»

The tracking error realised is 0.0480%. The target tracking error over the period was 0.15%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

Index Linked Swap's counterparty is: Société Générale.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the SICAV that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: The method chosen is the commitment method.

This Fund is covered by Article 6 of Regulation (EU) 2019/2088 (the "SFDR Regulation"). It does not promote environmental and/or social characteristics and does not aim to invest sustainably

Transparency of environmentally sustainable investments in periodic reports under Regulation (EU) 2020/852

Regulation (EU) 2020/852 on the establishment of a framework for promoting sustainable investments (the "Taxonomy Regulation") sets out the criteria for determining whether an economic activity is environmentally sustainable in the European Union.

According to the Taxonomy Regulation, an activity can be considered "sustainable" if it contributes substantially to one of the 6 environmental objectives set out in the Taxonomy Regulation, including climate change mitigation and adaptation, pollution prevention and reduction, or the protection and restoration of biodiversity and ecosystems.

In addition, in order to be considered sustainable, this economic activity must respect the principle of "do no significant harm" along with one of the other five objectives of the Taxonomy Regulation and must also comply with basic social criteria (alignment with OECD and UN guidelines on business and human rights).

In accordance with article 7 of the Taxonomy Regulation, the management company draws investors' attention to the fact that the underlying investments of this Fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Provision of environmental, social and governance (ESG) information - in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG I criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate Environmental, Social, and Governance ("ESG") issues into its investment solutions. Lyxor's SRI Policy is available under the website [Lyxor.com](https://www.lyxor.com) and is revised each

Integration of sustainability risks by Lyxor in its investment decision-making processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

(a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

To the basket of assets held by the fund, the fund applies an exclusion of issuers associated with serious and repeated violations of the Principles of the United Nations Global Compact and regulatory requirements related to controversial sectors and products. This list is supplemented by a list of companies to be excluded due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological chemical, nuclear or radiological weapons, etc.).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision. Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (in connection with Lyxor's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets (PME/ETI).
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defence policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution.

The post trade control is on NAV frequency basis.

Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the [Lyxor.com](https://www.lyxor.com) website.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:
 - Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.
- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:
 - The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
 - Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
 - A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).
- With regard to carbon risk management:
 - Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).
- In regards with the portfolio's exposure to issuers offering environmental solutions :
 - Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs). -In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuers in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the Key Issue:

LYXOR IBEX 35 DOBLE INVERSO DIARIO UCITS ETF (compartment of the Multi Units France Sicav)

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations

- Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The ESG score calculated at the portfolio level measures the capacity of the underlying issuers to manage the risks and key opportunities associated with environmental, social and governance factors. The risk scale ranges from 0 (high risk) to 10 (low risk). Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For sectors and themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For companies, exposure to measures and management of ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: employment, social relations, health and safety, training, compliance with ILO conventions
- Governance: Board of Directors or Supervisory Board, Audit and Internal Control, Executive Compensation

For governments, exposure to measures and management of ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source: The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Measures the portfolio's exposure to companies experiencing controversies relating to their compliance with international standards as a function of their degree of severity:

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: indicates that the company is not involved in any major controversies
- None: Sovereign and/or Company not covered

Red Flag	0%
Orange Flag	36%
Yellow Flag	33%
Green Flag	29%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2021

Carbon Emissions (tons CO2e/\$M invested)	Carbon Intensity (tons CO2e/\$M sales)	Weighted Average Carbon Intensity (tons CO2e/\$M sales)	Portfolio rated by weight	100%
0	0	0	Scope 1 reported (vs estimated)	0%
			Scope 2 reported (vs estimated)	0%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GreenHouse Gas Protocol (GHG Protocol) was launched in 2001 by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on reported data and/or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: direct emissions resulting from the burning of fossil fuel resources owned or controlled by the company.
- Scope 2: indirect emissions related to the purchase or production of electricity.
- Scope 3: other indirect emissions from the extended supply chain to the transport of goods and persons.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions standardised by revenue), and these intensities are weighted by the weight of the companies in the portfolio.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the enterprise value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of enterprise value as the most recent available fiscal year-end enterprise value including cash (USD)*. Moreover only the use of the Enterprise Value enables the analysis of a portfolio invested in both equities and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest - total debt.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

Weight of the portfolio rated in Carbon:	
Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gas	0%
Oil	0%

The brown area is defined as the percentage or MWh generated from fossil fuels or the portion of the company's revenues earned from fossil fuels or the portion of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of : \$ 1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.	tCO2e/\$M invested	
In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilised.	Metallurgical Coal	0.0
	Thermal Coal	0.0
	Oil	0.0
	Gas	0.0
	Total	0.0

These metrics include only corporate issuers rated in Carbon.

LYXOR IBEX 35 DOBLE INVERSO DIARIO UCITS ETF

(compartment of the Multi Units France Sicav)

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum of high-impact fossil fuel reserves	0.0
Other	0.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorise them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Management of Energy Consumption and Operational Efficiency	Target Effort
Aggressive efforts	0.0%	0.0%	0.0%
Some efforts	0.0%	0.0%	0.0%
Limited efforts/Information	0.0%	0.0%	0.0%
No effort/No evidence	0.0%	0.0%	0.0%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low- carbon products.

(1) Metric developed by MSCI

Low carbon transition score	0.0
Low carbon transition management Score	0.0
Operational Transition	0.0%
Product Transition	0.0%
Neutral	0.0%
Solutions	0.0%

Energy Mix of energy producers within the portfolio

A company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The issuer data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source: MSCI ESG Research

Share of issuers in terms of power generation in portfolio	21.8%
--	-------

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	Liquid Fuel	Natural Gas	Nuclear	Renewables
	Thermal Coal			

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. Those issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuers with revenue dedicated to environmental solutions between:	
0-19.9%	0%
20-49.9%	0%
50-100%	0%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	0.0%	Energy Efficiency	0.0%	Green Building	0.0%
Pollution Prevention	0.0%	Sustainable Water	0.0%	Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

		Environmental Solutions Contribution			
Alternative Energy	0.0%	Energy Efficiency	0.0%	Green Building	0.0%

LYXOR IBEX 35 DOBLE INVERSO DIARIO UCITS ETF (compartment of the Multi Units France Sicav)

Pollution Prevention 0.0% Sustainable Water 0.0% Sustainable Agriculture 0.0%

Estimated EU Taxonomy Alignment

The maximum percentage of revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the "Do No Significant Harm" and "Minimum Social Safeguards criteria" of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

% estimated EU Taxo 0.0%

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	1%
Coldwave	27%
Flood	5%
Heatwave	9%
Hurricane	2%
Water Stress	50%
Wildfire	6%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.).

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure - analyses the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	0.7%	85.4%	13.9%	78.2%	18.6%	3.2%
Carbon Emissions	3.0%	66.0%	31.0%	82.8%	13.0%	4.1%
Electronic Waste	3.4%	17.0%	79.6%	100.0%		
Opportunities in Green Building	8.4%	63.9%	27.7%	98.6%	0.0%	1.3%
Opp's in Renewable Energy	10.3%	84.6%	5.1%	84.0%	6.2%	9.8%
Packaging Material & Waste	20.3%	21.6%	58.1%	99.1%		0.9%
Water Stress	15.2%	42.3%	42.5%	72.4%	18.3%	9.2%
Toxic Emissions & Waste				64.9%	26.3%	8.7%

Temperature - Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

- A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,
- An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates a carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Level of alignment	null
Hedging	98.7%
Alignment Trajectory in % Weight	
<1.5°C	25.8%

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des marchés financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter “AIFM Directive”) and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter “UCITS V Directive”), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the French Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual remuneration review campaign that was carried out during the course of the year, on the basis of the perimeter of the staff as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable remuneration are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable remuneration deferred from a previous financial year. No “carried interest” was paid during the financial year.

Lyxor's best selection and execution policy

Information on best selection and execution policies is available at www.lyxor.com.

Transparency of securities financing operations and reuse of financial instruments SFTR regulation

(Accounting currency of the CIU)

1. General information.

1.1. Amount of securities and raw materials loaned in proportion with the total assets that can be loaned, defined as excluding the cash and cash equivalents.

Securities lending

% of assets that can be loaned	-

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information in the evolving context of the Covid-19 crisis.

Assessment rules

Accounting Regulation No. 2014-01 of 14 January 2014 relating to the chart of accounts for undertakings for collective investment with variable capital.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are valued using the following specific methods:

- Negotiable debt securities (“NDS”) with a residual maturity upon acquisition that of 3 months or less are assessed with a straight-line extension over the residual maturity of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- Negotiable debt securities with a residual maturity of more than 3 months at the net asset value date are measured at the present value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- Futures traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument’s counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued;
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable trading value, under the management company’s responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities of UCITS operating under French law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund’s net asset value.
- Units and shares of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund’s net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company’s responsibility.
- The exchange rates used for the assessment of financial instruments listed in a currency other than the Sub-Fund’s reference currency are the exchange rates published the fixing WM Reuters on the same day of the Sub-Fund’s net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under “Financial instruments” according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under “Other temporary operations”.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Sub-Fund) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Sub-Fund) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Sub-Fund).

Operation and management fees

These fees include all of the fees invoiced directly to the Sub-Fund, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Sub-Fund, the following fees can be added to the operation and management fees (see summary table hereinafter):

- - Outperformance commissions: these commissions reward the management company when the Sub-Fund has exceeded its objectives; They are charged to the Sub-Fund;
- Transfer commissions invoiced to the Sub-Fund;

For more details on the fees actually invoiced to the Sub-Fund, refer to the Statistical Part of the Key Investor Information Document (KIID).

Fees invoiced to the Sub-Fund	Basis	Schedule rate
Financial management fees and administrative fees external to the portfolio management company (Auditor, Depository, distribution, lawyers) including tax ⁽¹⁾	Net assets	Maximum 0.60% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commission	Net assets	None

⁽¹⁾ including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Accounting currency

The Sub-Fund accounting is carried out in EUR.

Indication of accountancy changes declared to each of the shareholders individually

- - Occurred change: None.
- - Future change: None.

Other changes declared to each of the shareholders individually (*Not certified by the auditor*)

- - Occurred change: None.

- - Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Acc share class: Capitalisation of all the amounts available for distribution.

Sociedad de Bolsa does not in any way guarantee, explicitly or implicitly, the results that could be obtained through the use of the Bolsa Sociedad Index.

Sociedad de Bolsa cannot in any way be held liable (for negligence and any other reason) for any error affecting the index, to anyone, and shall not be obliged to inform anyone of any error affecting the index.

The Lyxor IBEX 35 DOBLE INVERSO DIARIO UCITS ETF is in no way sponsored or promoted by Sociedad de Bolsa, which does not market it.

Unit distribution on net capital gains and losses (including advances)	-	-	-	-	-
Unit distribution (including advances)	-	-	-	-	-
Unit tax credit transferred to holders (natural persons) ⁽¹⁾	-	-	-	-	-
Unit capitalisation ⁽²⁾	-1.47	3.13	-2.92	4.96	-1.64

⁽¹⁾ In pursuant to the Fiscal Instruction of 4 March 1993 of the French Tax Department, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits between the circulating units on that date.

⁽²⁾ The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of outstanding units. This calculation method is applied from 1 January 2013.

Compartment creation date: 19 April 2018.

LYXOR NASDAQ100 DAILY (2X) LEVERAGED UCITS ETF

activity
report

SUB-FUND OF THE MULTI UNITS FRANCE SICAV

FISCAL YEAR ENDING ON: 29.10.2021

LYXOR NASDAQ-100 DAILY (2X) LEVERAGED UCITS ETF (compartment of the Multi Units France Sicav)

Compartments / feeder	LYXOR NASDAQ-100 DAILY (2X) LEVERAGED UCITS ETF is a sub-fund of the MULTI UNITS FRANCE SICAV.
Management Company	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy – 92987 Paris La Défense Cedex.
Depository and Custodian	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

Information on the investments and management

Classification:

International equities.

At least 60% of the Lyxor Nasdaq-100 Daily (2x) Leveraged UCITS ETF Sub-Fund (the “Sub-Fund”) is permanently exposed in a foreign equity market or in equity markets of several countries, possibly including the French market.
The Sub-Fund is an index-based strategy UCITS of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution:

Acc share class: accumulation of all distributable amounts.

Management objective:

The Compartment is a passively managed index-based UCITS.

The Sub-Fund’s management objective is to gain upward and downward exposure to the US equity market by replicating the NASDAQ-100 Leveraged Notional Net Return Index strategy index (the “Benchmark”), denominated in Dollars (USD), regardless of its trend, while minimising the tracking error (the “Tracking Error”) between the performance of the Sub-Fund and that of its Benchmark Index.

The anticipated level of the ex-post tracking error under normal market conditions is 0.15 %.

Benchmark indicator:

The Benchmark Index is the NASDAQ-100 Leveraged Notional Net Return Index strategy index (Net Dividends Reinvested, i.e. the performance of the Benchmark Index includes the net dividends detached by the underlying equities).

The Benchmark Index is a strategy index defined by NASDAQ OMX Group, Inc. It is calculated and maintained by S&P. The Benchmark Index is a strategy index that reflects the performance of the NASDAQ-100 (NDX) index (the “Parent Index”) with daily leverage x2, meaning that if the Parent Index grows by 2% on one trading day, the Benchmark Index grows 4% on that same trading day, less borrowing costs, and vice versa. The double performance is obtained by doubling, on each trading day, the investment, via a loan, in the basket of equities of the Parent Index. The cost of the loan is taken into account in the calculation of the Benchmark.

The Benchmark Index is a subset of the Parent Index. The Parent Index is a US technology index that indexed to the US technology sector. It is made up of 100 stocks and includes the largest capitalisations in the following sectors: Internet software and services, IT consulting and services, software, electronic equipment and instruments, office electronics and semiconductors. The NASDAQ-100 Leveraged Notional Net Return Index was created on 18 November 2009.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark’s components are available on the website: <https://indexes.nasdaqomx.com/> The monitored performance is that of the Index closing prices in USD.

BENCHMARK INDICATOR PUBLICATION

The Benchmark Index is calculated on a daily basis at closing prices using the official closing stock market prices for the constituent stocks. The Benchmark Indicator is also calculated in real time every day that the Benchmark Indicator is published.

The closing price of the Benchmark Index is available on the website: <https://indexes.nasdaqomx.com/>

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the administrator of the Benchmark Index is included in the register of administrators and benchmark indices maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, SGP has a procedure for monitoring the benchmarks used which describes the measures to be implemented in the event of substantial changes to an index or the cessation of provision of that index.

REVISION AND COMPOSITION OF THE Benchmark Index

The revision of the composition of the Benchmark depends on the revision of the composition of its Parent Index. The composition of the Parent Index is revised every six months.

The leverage introduced in the Benchmark Index calculation formula is subject to daily readjustment. The consequences of daily readjustment of leverage are explained in particular in the Reference Indicator and Risk Profile sections of the prospectus.

The exact composition and rules for revising the composition of the Parent Index and, incidentally, those of the Benchmark Index published by Euronext are available on the website <https://indexes.nasdaqomx.com/>

The above-mentioned frequency of rebalancing has no effect on costs in the implementation of the investment strategy.

INTEREST IN THE LEVERAGE STRATEGY

The “Leverage” strategy (with daily leverage) is a dynamic strategy applied at the Benchmark level. It allows all investors to double their investment on a daily basis compared to a “simple” investment in the Parent Index, thanks to the loan taken out to achieve the strategy. In the event of an increase in the Benchmark Index, the one-day gains are 2 times greater than for a “simple” investment in the Parent Index. Conversely, in the case of a bear market, losses are also doubled daily due to the multiplier effect of leverage. The strategy's risks are thus subject to a daily multiplier effect.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009. In pursuit of the greatest possible correlation with the performance of the Benchmark Index, the Sub-Fund will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Sub-Fund's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Sub-Fund may notably be securities that make up the Parent Index, as well as other international equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralised.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Sub-Fund's portfolio and (ii) the market value of the future exchange operation entered into by the Sub-Fund are available on the page dedicated to the Sub-Fund on the website www.lyxoretf.com. The frequency of update and/or the update date of the aforesaid information is also specified on the same page of the website indicated above.

The Sub-Fund will permanently invest a minimum of 75 % of its assets in companies that have their registered office in a Member State of the European Union, or in another State party to the Treaty on the European Economic Area that has entered into a tax agreement with France containing an administrative assistance clause with a view to combating fraud or tax evasion. This minimum holding level allows eligibility for the Equity Savings Plan.

As part of the management of its exposure, the Sub-Fund may be exposed up to 20% of its assets in equities from a single issuing entity. This limit of 20% will be verified, on each rebalancing date of the Benchmark, in accordance with the Benchmark Index calculation method, which limits the exposure of each of the shares of the same issuing entity to 20%, the calculation of which is provided by the Benchmark's sponsor or calculation agent. This limit of 20% may

be increased to 35% for a single issuing entity, when this proves to be justified by exceptional market conditions, particularly when certain securities are largely dominant and/or in the event of high volatility of a financial instrument or securities linked to an economic sector represented in the Benchmark Index, in particular in the event of a public offering affecting one of the securities making up the Benchmark Index or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Index.

2. Balance sheet assets (excluding integrated derivatives)

The Sub-Fund may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets.

The aforementioned equities will be chosen on the basis of criteria:

- eligibility criteria, in particular:

- o Subordination to the main market indices or to the Benchmark Index;
- o Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation);
- o Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent).

- diversification criteria, in particular:

- o Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code);
- o Geographical area;
- o Sector.

For more information on the above eligibility and diversification criteria, investors can visit the website www.lyxoretf.com.

The investment in undertaking for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Sub-Fund. The manager shall not invest in units or shares of AIFs referred to in Article R214-13 of the French Monetary and Financial Code.

As part of these investments, the Sub-Fund may subscribe for units or shares of UCITS managed by the management company or a company to which it is linked.

The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

When the Sub-Fund receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Sub-Fund, given that they are received by the Sub-Fund in full ownership.

As part of the future optimisation of the Sub-Fund's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Sub-Fund will have recourse to index-linked swaps traded over-the-counter, exchanging the value of the equities in the Sub-Fund's assets (or of any other financial instrument or asset held by the Sub-Fund, where appropriate) against the value of the Benchmark Index (in compliance with the description contained in this section's paragraph 1 above).

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

As part of a future optimisation of the Sub-Fund management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including future financial instruments other than index-linked swaps.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Sub-Fund's investment portfolio, nor regarding the underlying assets of the future financial instruments. When Societe Generale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Societe Generale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Sub-Fund may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable.

In this context, the Sub-Fund may suffer losses and/or incur costs/fees and its ability to achieve its management objective may also be negatively impacted. Where the Sub-Fund enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Sub-Fund can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10 % of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Sub-Fund is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Sub-Fund's use of forward swap contracts traded over the counter, the Sub-Fund can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Sub-Fund is totally neutralised.

Any financial guarantee received by the Sub-Fund will be provided to the Sub-Fund in full ownership and listed in the Sub-Fund's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Sub-Fund's assets.

Any financial guarantee received by the Sub-Fund within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Sub-Fund's net asset value;
- (e) The Sub-Fund's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Sub-Fund may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

Such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and

Such financial guarantees consist of at least six different issues of which none exceeds 30% of the Sub-Fund's assets. In compliance with the aforesaid conditions, the guarantees received by the Sub-Fund can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State or by its local government entities, or by an EU, regional, or global supranational institution or organisation, or by any country provided that conditions (a) to (e) above are fully complied with;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Sub-Fund's management company will apply a margin to the financial guarantees received by the Sub-Fund. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged. Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Sub-Fund may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Sub-Fund is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

Counterparty selection policy

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (financial futures and temporary acquisitions and disposals of securities) on behalf of the Sub-Fund. The selection of counterparties for financial contracts and financial intermediaries is performed rigorously from among the reputable counterparties and intermediaries in the market, on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes various criteria into consideration to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating
- Quantitative criteria based on the CDS LT spread (absolute criteria, volatility and comparison with a reference group, etc.)

Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information about this policy and on the relative importance of the execution criteria for each asset class, please visit our website: www.lyxor.com, "regulatory information" section.

Risk profile:

The shareholder's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Equity risk

An equity price can vary upwards or downwards, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

If, when the Sub-Fund (or one of its counterparties for future financial instruments ("FFI")) adjusts its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies,

LYXOR NASDAQ-100 DAILY (2X) LEVERAGED UCITS ETF

(compartment of the Multi Units France Sicav)

the value and/or liquidity of the Sub-Fund could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Sub-Fund's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Index, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Index, and/or
- iii) an exchange cannot obtain or calculate the Sub-Fund's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Sub-Fund is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Sub-Fund may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realisation of this risk may result in losses for the Sub-Fund and have an impact on the ability of the Sub-Fund to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Sub-Fund's assets per counterparty.

- Risks related to the management of guarantees

Operational risk:

The Sub-Fund may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Sub-Fund may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk related to daily readjustment of leverage

Investors are twice exposed to fluctuations that affect the price or level of the Parent Index on a day-to-day basis. In particular, any decline in the underlying market will be amplified and will imply an even greater depreciation in the net asset value of the Sub-Fund. The daily readjustment contained in the underlying Benchmark Index formula implies that, over a period greater than one business day, the Sub-Fund's performance will not be equal to twice the performance of the Parent Index.

For example, if the Parent Index appreciates 10% on a given business day and then depreciates by 5% on the next business day, the Sub-Fund will have appreciated in total by 8% after these two days (and before deduction of applicable fees), while the Parent Index will have appreciated by 4.5% over the same period. If the Parent Index depreciates by 5% per day for 2 consecutive business days, it will have depreciated a total of 9.75%, while the ETF will have depreciated (before deduction of applicable fees) by 19% over the same period.

Negative scenario 1	Case where the leverage induced is greater than 2 in a scenario of a decline in the Parent Index				
	Parent Index		strategy index		
	day i performance	day i value	day i performance	day i value	leverage induced
		100		100	
day 1	10 %	110	20 %	120	x2
day 2	-11 %	97.9	-22 %	93.6	x2
total period	-2.10 %		-6.40 %		x3.05

LYXOR NASDAQ-100 DAILY (2X) LEVERAGED UCITS ETF
(compartment of the Multi Units France Sicav)

Negative scenario 2	Case where the leverage induced is less than 2 in a scenario of a rise in the Parent Index				
	Parent Index		strategy index		
	day i performance	day i value	day i performance	day i value	leverage induced
		100		100	
day 1	-5 %	95	-10 %	90	x2
day 2	6 %	100.7	12 %	100.8	x2
total period	0.70 %		0.80 %		x1.14

In addition, it is possible that over a observation period greater than one day and in the event of high volatility of the Parent Index over that period, the net asset value of the Sub-Fund may fall even as the Parent Index rises over the same period.

Reverse induced leverage scenario:	Case where the leverage generated is negative over the period				
	Parent Index		strategy index		
	day i performance	day i value	day i performance	day i value	leverage induced
		100		100	
day 1	20 %	120	40 %	140	x2
day 2	-16 %	100.8	-32 %	95.2	x2
total period	0.80 %		-4.80 %		x-6

- Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to achieve its investment objective, the Sub-Fund uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Index. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Sub-Fund's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Sub-Fund is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Sub-Fund's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Sub-Fund's underlyings can affect the Sub-Fund's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Sub-Fund (and/or to its counterparty in the FFI), the Sub-Fund's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Sub-Fund is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to regulations applicable to the underlyings

In case of change of the regulations applicable to the Sub-Fund's underlyings, the Sub-Fund's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Sub-Fund's equities.

The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Sub-Fund's manager will decide on measures having to be adopted, which can have an impact on the Sub-Fund's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Index is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Index is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the Benchmark;
- iv) The index provider makes a material change in the Benchmark calculation formula or method (other than a minor modification such as an adjustment to this Benchmark's underlying components or their respective weightings) that the Sub-Fund cannot effectively replicate at a reasonable cost;
- v) One or more components of the Benchmark Index becomes illiquid, with the listing on an organised market being suspended, or components traded over-the-counter (such as bonds, for example) become illiquid,
- vi) The Benchmark Index's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Index's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Index undertake an unanticipated review of a corporate action ("CA"), that contradicts a prior and official announcement that had resulted in a valuation of the CA by the Sub-Fund (and/or in a valuation of the CA by the Sub-Fund's counterparty in a future financial instrument), the Sub-Fund's net asset value may be affected, notably should the actual treatment of the CA by the Sub-Fund differ from the CA's treatment in the methodology used by the Benchmark Index.

- Index Currency Risk

The Sub-Fund is exposed to an exchange risk to the extent that the underlying securities making up the strategy index could be listed in a currency other than that of the index, or be derivatives of securities listed in a currency other than that of the index. Fluctuating exchange rates are then likely to negatively affect the strategy index monitored by the Sub-Fund.

- Sustainability risks

The Sub-Fund does not consider sustainability factors in the investment decision-making process but remains exposed to sustainability risks. The occurrence of such risks could have a negative impact on the value of the investments made by the Sub-Fund. Additional information can be found in the "Sustainability Information" section of the Prospectus.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

The investor who subscribes to this Sub-Fund wishes to gain exposure to both the upward and downward trends of the US equity market.

The amount that it is reasonable to invest in this Sub-Fund depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify your investments so as to avoid an exposure only to this Sub-Fund's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers. The minimum recommended investment term is greater than 5 years.

U.S. Persons (as defined in the "COMMERCIAL INFORMATION" prospectus) may not invest in the Sub-Fund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Sub-Fund's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy-92800 Puteaux.*
- *Creation date of the Multi Units France Sicav: 04 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 15 February 2018.*
- *Compartment creation date: 19 April 2018.*

Activity report

The fund replicates the performance of the NASDAQ 100 Leveraged Notional Net Return Index USD (Ticker: XNDXNNRL).

Performance trend at the closing date:

Share name	ISIN	Share curren cy	Performance from 28/02/19 to 31/10/19			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor Nasdaq-100 Daily (2x) Leveraged UCITS ETF - Accxx	FR0010342592	EUR	100.68% ⁽¹⁾	101.58% ⁽³⁾	-0.65% ⁽²⁾	5668.15%

⁽¹⁾ "The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs (for example the index rebalancing cost);
- taxation incurred in relation to the methodology used in the Benchmark Index".

⁽²⁾ "Since the unit value is not calculated in the Index currency, its net asset value may be exposed to currency risk over the financial year. The calculation methodology for the Foreign Exchange rate during the period is share currency/ index currency."

⁽³⁾ "Where the Benchmark Index is denominated in a currency other than the currency of the Unit, the performance of the Benchmark Index is first converted into the currency of the Unit for the sake of clarity and comparison. For this purpose, a foreign exchange transaction (at the WM Reuters 5:00 p.m. rate on the relevant day) is applied daily to the value of the Benchmark Indicator".

The tracking error realised is 0.0385%. The target tracking error over the period was 0.15%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

The fund complies with the PEA eligibility constraints at all times, the details of which are available on request from the management company.

Index Linked Swap's counterparty is: Société Générale.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the SICAV that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: The method chosen is the commitment method.

LYXOR NASDAQ-100 DAILY (2X) LEVERAGED UCITS ETF

(compartment of the Multi Units France Sicav)

This Fund is covered by Article 6 of Regulation (EU) 2019/2088 (the "SFDR Regulation"). It does not promote environmental and/or social characteristics and does not aim to invest sustainably

Transparency of environmentally sustainable investments in periodic reports under Regulation (EU) 2020/852

Regulation (EU) 2020/852 on the establishment of a framework for promoting sustainable investments (the "Taxonomy Regulation") sets out the criteria for determining whether an economic activity is environmentally sustainable in the European Union.

According to the Taxonomy Regulation, an activity can be considered "sustainable" if it contributes substantially to one of the 6 environmental objectives set out in the Taxonomy Regulation, including climate change mitigation and adaptation, pollution prevention and reduction, or the protection and restoration of biodiversity and ecosystems.

In addition, in order to be considered sustainable, this economic activity must respect the principle of "do no significant harm" along with one of the other five objectives of the Taxonomy Regulation and must also comply with basic social criteria (alignment with OECD and UN guidelines on business and human rights).

In accordance with article 7 of the Taxonomy Regulation, the management company draws investors' attention to the fact that the underlying investments of this Fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Provision of environmental, social and governance (ESG) information - in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate Environmental, Social, and Governance ("ESG") issues into its investment solutions. Lyxor's SRI Policy is available under the website [Lyxor.com](https://www.lyxor.com) and is revised each

Integration of sustainability risks by Lyxor in its investment decision-making processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

(a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

To the basket of assets held by the fund, the fund applies an exclusion of issuers associated with serious and repeated violations of the Principles of the United Nations Global Compact and regulatory requirements related to controversial sectors and products. This list is supplemented by a list of companies to be excluded due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological chemical, nuclear or radiological weapons, etc.).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (in connection with Lyxor's voting policy). • Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets (PME/ETI).
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defence policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution.

The post trade control is on NAV frequency basis.

Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the [Lyxor.com](https://www.lyxor.com) website.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

• Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

• Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

- In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuers in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

LYXOR NASDAQ-100 DAILY (2X) LEVERAGED UCITS ETF (compartment of the Multi Units France Sicav)

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations

- Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The ESG score calculated at the portfolio level measures the capacity of the underlying issuers to manage the risks and key opportunities associated with environmental, social and governance factors. The risk scale ranges from 0 (high risk) to 10 (low risk). Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For sectors and themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For companies, exposure to measures and management of ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities

- Social: employment, social relations, health and safety, training, compliance with ILO conventions

- Governance: Board of Directors or Supervisory Board, Audit and Internal Control, Executive Compensation

Source: The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Measures the portfolio's exposure to companies experiencing controversies relating to their compliance with international standards as a function of their degree of severity:

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: indicates that the company is not involved in any major controversies
- None: Sovereign and/or Company not covered

Red Flag	0%
Orange Flag	43%
Yellow Flag	24%

LYXOR NASDAQ-100 DAILY (2X) LEVERAGED UCITS ETF

(compartment of the Multi Units France Sicav)

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2021

Carbon Emissions (tons CO2e/\$M invested)	Carbon Intensity (tons CO2e/\$M sales)	Weighted Average Carbon Intensity (tons CO2e/\$M sales)	Portfolio rated by weight	100%
18	61	47	Scope 1 reported (vs estimated)	98%
			Scope 2 reported (vs estimated)	71%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GreenHouse Gas Protocol (GHG Protocol) was launched in 2001 by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on reported data and/or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: direct emissions resulting from the burning of fossil fuel resources owned or controlled by the company.
- Scope 2: indirect emissions related to the purchase or production of electricity.
- Scope 3: other indirect emissions from the extended supply chain to the transport of goods and persons.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions standardised by revenue), and these intensities are weighted by the weight of the companies in the portfolio.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the enterprise value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of enterprise value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio invested in both equities and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest - total debt.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage or MWh generated from fossil fuels or the portion of the company's revenues earned from fossil fuels or the portion of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon:

Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gaz	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of : \$ 1,000,000

Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilised.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

LYXOR NASDAQ-100 DAILY (2X) LEVERAGED UCITS ETF (compartment of the Multi Units France Sicav)

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum of high-impact fossil fuel reserves	0.0
Other	0.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorise them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Management of Energy Consumption and Operational Efficiency	Target Effort
Aggressive efforts	11.8%	9.4%	1.0%
Some efforts	76.9%	84.4%	68.0%
Limited efforts/Information	3.1%	1.1%	0.6%
No effort/No evidence	8.2%	5.0%	30.4%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.6
Low carbon transition management Score	5.2
Operational Transition	1.7%
Product Transition	1.7%
Neutral	77.8%
Solutions	18.7%

Energy Mix of energy producers within the portfolio

A company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The issuer data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source: MSCI ESG Research

Share of issuers in terms of power generation in portfolio	0.9%
--	------

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	1.1%	Liquid Fuel	0.1%	Natural Gas	17.7%
Nuclear	58.3%	Renewables	4.9%	Thermal Coal	17.9%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. Those issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

Issuers with revenue dedicated to environmental solutions between:	
0-19.9%	27%
20-49.9%	17%
50-100%	6%

These metrics include only corporate issuers rated in Carbon.

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	9.7%	Energy Efficiency	50.0%	Green Building	0.0%
Pollution Prevention	1.0%	Sustainable Water	2.8%	Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	0.5%	Energy Efficiency	11.1%	Green Building	0.0%
Pollution Prevention	0.0%	Sustainable Water	0.0%	Sustainable Agriculture	0.0%

LYXOR NASDAQ-100 DAILY (2X) LEVERAGED UCITS ETF (compartment of the Multi Units France Sicav)

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the "Do No Significant Harm" and "Minimum Social Safeguards criteria" of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

% estimated EU Taxo 11.6%

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	1%
Coldwave	21%
Flood	2%
Heatwave	7%
Hurricane	4%
Water Stress	47%
Wildfire	18%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.).

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure - analyses the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	1.2%	26.1%	72.7%	96.2%	3.8%	
Carbon Emissions	0.1%	25.0%	74.8%	80.7%	19.2%	0.1%
Electronic Waste	0.6%	8.4%	91.1%	89.8%	0.1%	10.1%
Opportunities in Green Building	0.4%	45.9%	53.8%	100.0%		
Opp's in Renewable Energy	3.1%	87.7%	9.1%	99.2%	0.4%	0.4%
Packaging Material & Waste	10.2%	78.0%	11.8%	95.1%		4.9%
Water Stress	5.2%	91.7%	3.1%	70.1%	26.0%	3.9%
Toxic Emissions & Waste				62.9%	30.4%	6.7%

Temperature - Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

- A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,
- An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates a carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Level of alignment	<1.5°C
Hedging	96.8%
Alignment Trajectory in % Weight	
<1.5°C	32.9%
1.5-2°C	8.0%

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des marchés financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter "AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter "UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the French Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual remuneration review campaign that was carried out during the course of the year, on the basis of the perimeter of the staff as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable remuneration are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable remuneration deferred from a previous financial year. No "carried interest" was paid during the financial year.

Lyxor's best selection and execution policy

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information in the evolving context of the Covid-19 crisis.

Asset valuation rules

The Sub-Fund's assets are valued according to the applicable laws and regulations, and more particularly the rules defined in Regulation No. 2014-01 of the French regulatory accounting committee (CRC) dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are valued using the following specific methods:

- Negotiable debt securities ("NDS") with a residual maturity upon acquisition that of 3 months or less are assessed with a straight-line extension over the residual maturity of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- Negotiable debt securities with a residual maturity of more than 3 months at the net asset value date are measured at the present value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Futures traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable trading value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities in undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Sub-Fund's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Sub-Fund's reference currency are the WM Reuters fixing rates on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under "Financial instruments" according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under "Other temporary operations".

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Sub-Fund) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Sub-Fund) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Sub-Fund).

Operation and management fees

These fees include all of the fees invoiced directly to the Sub-Fund, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Sub-Fund, the following fees can be added to the operation and management fees (see summary table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Sub-Fund has exceeded its objectives and are invoiced to the Sub-Fund;
- Transfer commissions invoiced to the Sub-Fund.

For more details on the fees actually charged to the Sub-Fund, refer to the Statistics section of the Key Investor Information Document (KIID).

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	Maximum 0.60 % per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commission	Net assets	None

⁽¹⁾ including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Accounting currency

The Compartment accounting is carried out in Euro.

Indication of accountancy changes declared to each of the shareholders individually

- - Occurred change: None.
- - Future change: None.

Other changes declared to each of the shareholders individually (*Not certified by the auditor*)

- - Occurred change: None.
- - Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Acc share class: accumulation of all distributable amounts.

3.12. Table of the profit and loss and other characteristic elements of the Sub-Fund during the last 5 financial years

Currency					
EUR	29.10.2021	30.10.2020	31.10.2019	31.10.2018	31.10.2017
Net assets	380,659,063.21	176,697,301.53	84,666,999.52	75,176,765.91	58,900,576.15
Number of outstanding equities	436,220	406,359	304,467	348,525	331,938
Net asset value	872.6309	434.8305	278.0826	215.6997	177.4445
Unit distribution on net capital gains and losses (including advances)	-	-	-	-	-
Unit distribution (including advances)	-	-	-	-	-
Unit tax credit transferred to holders (natural persons) ⁽¹⁾	-	-	-	-	-
Unit capitalisation ⁽²⁾	378.56	195.86	50.47	55.61	39.00

⁽¹⁾ Pursuant to the Fiscal Instruction of 4 March 1993 of the French Tax Department, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits among the outstanding shares on that date.

⁽²⁾ The unit capitalisation corresponds to the sum of profit and loss and net capital gains or losses on the number of circulating units. This calculation method is applied from 1 January 2013.

Compartment creation date: 19 April 2018.

LYXOR PEA PME (DR) UCITS ETF

activity
report

SUB-FUND OF THE MULTI UNITS FRANCE SICAV

FISCAL YEAR ENDING ON: 29.10.2021

Compartments / feeder	LYXOR PEA PME (DR) UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
Management Company	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy – 92987 Paris La Défense Cedex.
Depository and Custodian	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

Information about investments and management

Classification:

Equities from countries in the Eurozone.

At all times, the Lyxor IBEX 35 (DR) UCITS ETF sub-fund (the “Sub-Fund”) has at least 60% exposure in one or more markets for equities issued in one or more eurozone countries, possibly including the French market. The Compartment is an index-based fund of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution:

The Board of Directors reserves the right to distribute, one or more times per year, all or part of the result and/or to accumulate it.

Management objective:

The Compartment is a passively managed index-based UCITS.

The Sub-Fund’s objective is to track, both upwards and downwards, the “MDAX Index” (the “Benchmark”), denominated in EUR, while minimising the tracking error between the performance of the Sub-Fund and that of its Benchmark. The Benchmark Index is representative of the equities of small and medium-sized companies and intermediate-sized companies listed on the Euronext Paris market and eligible for the PEA PME.

The anticipated level of the ex-post tracking error under normal market conditions is 0.30 %.

Benchmark indicator:

The Benchmark is the CAC PME GR Index.

The Benchmark Indicator represents the performance of the highest-rated small and mid-cap companies as well as intermediate-sized companies listed on the Euronext Paris market; selected according to a liquidity criterion and the “SME” criterion.

The Benchmark has between 20 and 40 components, representing the performance of the best-rated companies with small and mid-caps as well as intermediate-sized companies listed on the Euronext Paris market.

This Benchmark is weighted by the modified market capitalisation, with a cap set at 7.5% for each component of the Benchmark, as well as a cap set at 25% per industry sector.

The Benchmark Index is rebalanced quarterly over a period of 5 days. At each rebalancing date, eligible securities are selected on the basis of the following criteria:

- Securities are screened to select only securities that meet a “liquidity factor” set at a minimum daily average 3-month trading volume and 1% of the free float-adjusted market capitalisation.
- Securities must also meet the “SME criteria”, implying the following two conditions for the issuer of the said securities:
- The company must have between 250 and 4999 employees
- Annual turnover should not exceed EUR 1.5 billion, or a balance sheet total of less than EUR 2 billion.

The Benchmark Indicator is a Gross Reinvested Dividends index. A Gross Reinvested Dividends index takes account of the performance of the components, including reinvestment of gross dividends and all forms of distribution in the performance of the index.

Benchmark Index publication

The monitored performance is that of the Benchmark Index closing price. The full methodology is available at the following address: www.euronext.com.

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Euronext administrator of the Benchmark Indicator is included in the register of administrators and benchmark indices maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmarks used which describes the measures to be implemented in the event of substantial changes to an index or the cessation of provision of that index.

Revision and composition of the Benchmark Index

The Benchmark Index is rebalanced quarterly over a period of 5 days.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark's components are available on the website: www.euronext.com.

The above-mentioned frequency of rebalancing has no effect on costs in the implementation of the investment strategy.

Investment strategy:

1. Strategy employed

The Sub-Fund will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark, the Sub-Fund will use a direct replication method, which means that the Sub-Fund will invest in a basket of assets made up of the equities comprising the Benchmark and/or financial instruments representative of all or part of the equities comprising the Benchmark. In addition, the sub-fund may use forward financial instruments ("FFIs"). Futures in which the Sub-Fund is likely to invest include contracts such as index futures, futures on all or part of the Benchmark Index components, and hedging swaps entered into to minimise the Sub-Fund's tracking error.

When pursuant to its investment strategy (e.g. use of futures), the Sub-Fund is required to hold cash, the manager in the best interest of the unitholders, may use deposits with credit institutions, and or invest cash in balance sheet assets and/or off-balance sheet assets (as described below).

In order to optimise the direct tracking method with respect to the Benchmark, the Sub-Fund, represented by its appointed financial manager, may decide to use a "sampling" technique consisting in investing in a selection of representative securities composing the Benchmark in order to limit the costs associated with investment in the various components of the Benchmark. A sampling replication strategy could notably lead the Sub-Fund to invest in a selection of representative securities (and not all securities) comprising the Benchmark, in proportions different from those of the Benchmark Index or even to invest in securities other than the Benchmark Index components.

The website www.lyxoretf.com offers a page dedicated to the Sub-Fund, which notably allows investors to benefit from transparency on the direct replication method used (full replication of the Benchmark Index or sampling to limit replication costs). The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

The Sub-Fund also continuously complies with the asset constraints enabling it to be acquired as part of a PEA-PME, namely the requirement to hold securities whose eligibility is defined by INSEE criteria, the requirement that the issuing company employ 5,000 employees, and the requirement that its annual turnover not exceed €1.5 billion, or a balance sheet total of less than €2 billion.

As part of the management of its exposure, the Sub-Fund may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit may be increased to 35% for a single issuing entity, when this proves to be justified by exceptional market conditions, particularly when certain securities are largely dominant and/or in the event of high volatility of a financial instrument or securities linked to an economic sector represented in the Benchmark Index, in particular in the event of a public offering affecting one of the securities making up the Benchmark Index or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Index.

As part of the future optimisation of the Sub-Fund's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

In this case, the manager intends to use mainly the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Sub-Fund will mainly be invested in the securities described below:

Equities

The Compartment may hold international equities in accordance with regulatory ratios. The Sub-Fund will be mainly invested in the shares comprising the Benchmark Index.

Holding shares or units of other UCIs or investment funds

The Sub-Fund may invest up to 10% of its assets in units or shares of the following CIS or investment funds:

- French or foreign UCITS compliant with Directive 2009/65/EC - For the purposes of these investments, the Sub-Fund may subscribe for units or shares in UCITS managed by the Management Company or a company to which it is linked.

The Sub-Fund will permanently invest a minimum of 75% of its assets in companies that have their registered office in a Member State of the European Union, or in another State party to the Treaty on the European Economic Area that has entered into a tax agreement with France containing an administrative assistance clause with a view to combating fraud or tax evasion. This minimum holding level allows eligibility for the Equity Savings Plan.

When the Sub-Fund receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Sub-Fund, given that they are received by the Sub-Fund in full ownership.

3. Off-balance sheet assets (derivative instruments)

The Sub-Fund may invest in the following FFIs:

Eligible markets:

- regulated
- organised
- over-the-counter

Risks in which the Sub-Fund wishes to trade:

- Equities

Types of operations, all transactions being limited to achieving the management objective:

- hedging
- exposure

Type of instruments used:

- futures: on equities and indices
- forward exchange contracts

Strategy for using derivatives to achieve the investment objective:

- General hedging of the portfolio, certain risks, securities, etc. - up to 100% of assets
- reconstitution of synthetic exposure to assets and risks - up to 100% of assets

The counterparties of OTC derivatives processed by the Sub-Fund will be selected in accordance with the Management Company's best execution policies (including the execution matrix by asset type mentioned in the Appendix). The above-mentioned policy can be accessed at the following address: <https://www.lyxor.com/politique-de-meilleure-execution-liam-janvier-2020-fr>. The counterparty to financial derivative instruments will not have discretionary power over the composition of the Sub-Fund's investment portfolio, nor over the underlying assets of the derivatives within the limits and conditions provided for by the regulations.

Situations of conflict of interest may arise between the Management Company and Societe Generale when Societe Generale acts as a counterparty to FFIs. These situations are governed by the Management Company's conflict of interest management policy.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Sub-Fund can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

The Sub-Fund may temporarily borrow up to 10% of its net assets.

7. Temporary securities acquisition and sale operations

The Sub-Fund may use various techniques to manage its portfolio efficiently in compliance with Article R214-18 of the French Monetary and Financial Code, including the temporary sale of securities.

- Maximum proportion of assets under management that may be covered by securities financing contracts: up to 25% of the Sub-Fund's assets.
- Expected proportion of assets under management that can be financed by securities transactions: 0% of the Sub-Fund's assets

In this context, the Management Company has appointed Societe Generale as an intermediary (hereinafter the "Agent"). In the event of recourse to temporary sales, the Agent may be authorised (i) to carry out, on behalf of the Sub-Fund, securities lending transactions, governed by GMSLA (Global Master Securities Lending Agreements) and/or any other internationally recognised framework agreements, and (ii) to invest, on behalf of the Sub-Fund, the cash received as collateral for these securities lending transactions, in accordance with and within the limits defined by the securities lending agreement, the rules of this prospectus and the regulations in force.

As a reminder, the Management Company is an entity of the Societe Generale Group and is therefore linked to the Agent.

Where Société Générale S.A. is appointed as Agent, it is not authorised to act as a counterparty in securities lending transactions. If such temporary sales are used:

- the Subfund will be entitled to all income from such transactions securities, net of any direct and indirect operating costs fees.
- the above operational costs/fees related to efficient portfolio management techniques will be those incurred by the Management Company, the Agent (if applicable) and/or the other intermediaries involved in these transactions in connection with their services;
- the direct or indirect operating costs/fees will be calculated as a percentage of the gross income generated by the Sub-Fund. Information on operational, direct and indirect fees/costs and the identity of the entities to which these fees/costs are paid will be mentioned in the Sub-Fund's annual report; and
- income from the lending of securities will be paid to the Sub-Fund after deduction of any direct and indirect operating costs/fees that may be borne by the Agent and the Management Company. To the extent that these fees/costs, direct and indirect, do not increase the operating costs of the Sub-Fund, they have been excluded from current expenses.

The Multi Units France Sicav annual report will include, where applicable, the following details:

- the exposure generated through effective portfolio management techniques;
- the identity of the counterparty(ies) to these effective portfolio management techniques;
- the nature and amount of any collateral received to reduce the Subfund's counterparty risk, and;
- the income generated by efficient portfolio management techniques over the relevant period, and any associated direct and indirect operating costs/fees.

8. Financial guarantees

In all cases in which the Sub-Fund is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Sub-Fund's use of temporary purchases and sales of securities, the Sub-Fund can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Sub-Fund is totally neutralised.

Any financial guarantee received by the Sub-Fund will be provided to the Sub-Fund in full ownership and listed in the Sub-Fund's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Sub-Fund's assets. Any financial guarantee received by the Sub-Fund within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) collateral must be valued at its mark-to-market price at least daily, and assets with highly volatile prices are not acceptable as collateral, unless a sufficiently prudent discount or "haircut" is applied;
- (c) they must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) they must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Sub-Fund's net asset value;

(e) The Sub-Fund's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Sub-Fund may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and
- such financial guarantees consist of at least six different issues of which none exceeds 30 % of the Sub-Fund's assets.

In compliance with the aforesaid conditions, the guarantees received by the Sub-Fund can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e)(above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (vi) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vii) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Sub-Fund's Management Company will apply a margin to the financial collateral received by the Sub-Fund in these temporary sales of securities. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee
- Maturity of the asset received as collateral (if applicable)
- Rating of the issuer of the asset received as collateral (if applicable)

Collateral received in a currency other than the euro may be subject to an additional margin. Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged. Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Sub-Fund may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Sub-Fund is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

COUNTERPARTY SELECTION POLICY

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (financial futures and temporary acquisitions and disposals of securities) on behalf of the Sub-Fund. The selection of counterparties for financial contracts and financial intermediaries is performed rigorously from among the reputable counterparties and intermediaries in the market, on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes various criteria into consideration to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating

- Quantitative criteria based on the CDS LT spread (absolute criteria, volatility and comparison with a reference group, etc.) Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information about this policy and on the relative importance of the execution criteria for each asset class, please visit our website: www.lyxor.com, “regulatory information” section.

Risk profile:

The Sub-Fund will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Equity risk

An equity price can vary upwards or downwards, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

- Risk related to the low diversification of the Benchmark

The Benchmark Index to which the investors are exposed covers a given region, sector or strategy and therefore does not necessarily allow for as broad a diversification of the assets as would be the case of an index that is exposed to several regions, sectors or strategies. The exposure to such an index with such low diversification can result in greater volatility than in more diversified markets. Nevertheless, the diversification rules resulting from the UCITS standards always apply to the Compartment's underlyings.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

If, when the Sub-Fund (or one of its counterparties for future financial instrument (“FFI”)) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase/sale price discrepancies, the value and/or liquidity of the Sub-Fund could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Risks related to the absence of perfect replication

Replicating the Benchmark by investing in all components of the Benchmark can be costly or very difficult to operate. The Sub-Fund’s manager may also use optimisation techniques, in particular the sampling technique, which consists in investing in a selection of representative securities (and not all securities) comprising the Benchmark, in proportions different from those of the Benchmark Index or even investing in securities other than the components of the index or financial futures. The use of these optimisation techniques may lead to an increase in the ex-post tracking error and will notably lead to different performances between the Sub-Fund and the Benchmark Indicator.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Sub-Fund’s units or equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) the calculation of the Benchmark is suspended or stopped, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Index, and/or
- iii) an exchange cannot obtain or calculate the Sub-Fund’s indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Sub-Fund is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as “OTC derivatives”) and/or efficient portfolio management techniques (hereinafter referred to as “EPMTs”). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Sub-Fund may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event.

In particular, the realisation of this risk may result in losses for the Sub-Fund and have an impact on the ability of the Sub-Fund to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Sub-Fund's assets per counterparty.

- Risk related to the use of effective portfolio management techniques

In the event that the counterparty to the efficient portfolio management technique (hereinafter referred to as the "EPMT") processed by the Sub-Fund fails to provide the counterparty, the Sub-Fund may be exposed to a risk in the event that the value of the guarantees received by the MF is lower than the value of the assets of the MF transferred to the counterparty under the EPMT in question. This risk could materialise in particular in the event of (i) a poor valuation of the securities subject to this transaction and/or (ii) adverse market movements and/or (iii) a deterioration in the credit rating of issuers of securities received as collateral and/or (iv) illiquidity of the market on which the collateral received is admitted to listing. Unitholders should note that (i) EPMTs may be entered into with Societe Generale (entity of the same group as the Management Company) and/or (ii) that Societe Generale may be appointed as agent of the Sub-Fund under the EPMTs.

- Risks related to collateral management

Operational risk:

The Sub-Fund may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Sub-Fund may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) and/or securities financing transactions as laid down in Regulation (EU) 2015/2365.

- Risk associated with the use of financial futures

On an ancillary basis, the Sub-Fund may use over-the-counter forward Financial Instruments or listed FFIs, in particular futures contracts and/or hedging swaps. These FFIs can result in a series of risks on the level of the contract that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Index, risk related to the tax regime, risk related to the regulations, and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI contract, which could affect the Sub-Fund's net asset value.

Investing in futures may involve a high level of risk. The amount required to trade certain FFIs is potentially much lower than the exposure obtained through these instruments, which implies a "leverage" at the level of each transaction. A relatively limited market movement would then have a proportionately very high impact, which could be favourable or unfavourable to the Fund.

The market value of forward financial instruments is highly volatile and may therefore be subject to significant fluctuations.

The Sub-Fund may use OTC futures. Over-the-counter transactions may be less liquid than transactions traded on organised markets, where trading volumes are generally higher, and their prices may be more volatile.

- Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Sub-Fund is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Sub-Fund's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Sub-Fund's underlyings can affect the Sub-Fund's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Sub-Fund (and/or to its counterparty in the FFI), the Sub-Fund's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Sub-Fund is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Sub-Fund's underlyings, the Sub-Fund's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Sub-Fund's equities. The calculation of the Sub-Fund's net asset value can also be affected.

If the event persists, the Sub-Fund's manager will decide on measures having to be adopted, which can have an impact on the Sub-Fund's net asset value.

"Events affecting the Benchmark Index" are understood to mean the following situations:

- (i) The Benchmark is deemed to be inaccurate or does not reflect the actual movements of the market;
- (ii) The Benchmark is permanently eliminated by the index provider;
- (iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,
- (iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings of this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Sub-Fund at a reasonable cost.
- (v) One or more components of the Benchmark Index becomes illiquid, with the listing on an organised market being suspended, or components traded over-the-counter (such as bonds, for example) become illiquid,
- (vi) The Benchmark Index's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Index's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Index undertake an unanticipated review of a corporate action ("CA"), that contradicts a prior and official announcement that had resulted in a valuation of the CA by the Sub-Fund (and/or in a valuation of the CA by the Sub-Fund's counterparty in a future financial instrument), the Sub-Fund's net asset value may be affected, notably should the actual treatment of the CA by the Sub-Fund differ from the CA's treatment in the methodology used by the Benchmark Index.

- Risk associated with investments in small and mid-cap companies:

The Sub-Fund is exposed to small cap companies and, more specifically, to securities from the equity markets of small and mid-sized enterprises and intermediate-sized companies (PMEs and ETIs), which may increase market and liquidity risks. Market movements are therefore more pronounced both upwards and downwards, and faster than for big caps. The net asset value of the Sub-Fund may have the same behaviour and therefore decline more quickly and significantly than a similar investment in large-cap securities.

- Sustainability risks

The Sub-Fund does not consider sustainability factors in the investment decision-making process but remains exposed to sustainability risks. The occurrence of such risks could have a negative impact on the value of the investments made by the Sub-Fund. Additional information can be found in the "Sustainability Information" section of the Prospectus.

Subscribers concerned and typical investor profile:

The Acc and Dist shares of the Sub-Fund are open to any subscriber.

Investors who subscribe to this Sub-Fund wish to gain exposure to the equity markets of small and medium-sized companies and intermediate-sized companies listed on the Euronext Paris market.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Sub-Fund's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers. The minimum recommended investment term is greater than 5 years.

U.S. Persons (as defined in the "COMMERCIAL INFORMATION" prospectus) may not invest in the Sub-Fund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

☞ The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Sub-Fund's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy-92800 Puteaux.

☞ Creation date of the Multi Units France Sicav: 04 March 2002.

☞ Compartment approval date by the AMF (Financial Markets Authority): 08 February 2018.

☞ Compartment creation date: 23 March 2018.

activity report

The fund replicates the performance of the CAC PME GR EUR index (Ticker:CACPG).

Performance trend at the closing date:

Share name	ISIN	Share curren cy	Performance from 28/02/19 to 31/10/19			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor PEA PME (DR) UCITS ETF - Dist	FR0011770775	EUR	19.90% ⁽¹⁾	20.40%		1.13%

⁽¹⁾ "The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs (for example the index rebalancing cost);
- taxation incurred in relation to the methodology used in the Benchmark;
- possible use by the manager of sampling or advanced index management techniques;

The tracking error realised is 0.1069%. The target tracking error over the period was 0.3%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

The fund complies with the PEA eligibility constraints at all times, the details of which are available on request from the management company. During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the statutory auditor) None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the SICAV that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: The method chosen is the commitment method.

This Fund is covered by Article 6 of Regulation (EU) 2019/2088 (the "SFDR Regulation"). It does not promote environmental and/or social characteristics and does not aim to invest sustainably

Transparency of environmentally sustainable investments in periodic reports under Regulation (EU) 2020/852

Regulation (EU) 2020/852 on the establishment of a framework for promoting sustainable investments (the "Taxonomy Regulation") sets out the criteria for determining whether an economic activity is environmentally sustainable in the European Union.

According to the Taxonomy Regulation, an activity can be considered "sustainable" if it contributes substantially to one of the 6 environmental objectives set out in the Taxonomy Regulation, including climate change mitigation and adaptation, pollution prevention and reduction, or the protection and restoration of biodiversity and ecosystems.

In addition, in order to be considered sustainable, this economic activity must respect the principle of "do no significant harm" along with one of the other five objectives of the Taxonomy Regulation and must also comply with basic social criteria (alignment with OECD and UN guidelines on business and human rights).

In accordance with article 7 of the Taxonomy Regulation, the management company draws investors' attention to the fact that the underlying investments of this Fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Provision of environmental, social and governance (ESG) information - in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organisation to integrate Environmental, Social, and Governance ("ESG") issues into its investment solutions. Lyxor's SRI Policy is available under the website [Lyxor.com](https://www.lyxor.com) and is revised each year. Integration of sustainability risks by Lyxor in its investment decision-making processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

- French, German & Luxembourgish Funds (Fonds Communs de Placement - FCP) and SICAV (*)
 - Securities of issuers domiciled in Europe: in order to prevent excessive costs inherent in the voting process, Lyxor participates in general meetings when the consolidated holding represents more than 0.10% of the company's capital
 - Securities of issuers domiciled in the United States: Lyxor will exercise its right to vote on its largest consolidated holdings
 - Securities of issuers domiciled in Japan: Lyxor will exercise its right to vote on its largest consolidated holdings
- (*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership.

In terms of engagement, Lyxor has defined an engagement policy that is structured around three axes: an engagement related to general meetings, an engagement related to environmental, social and/or governance issues, and an engagement related to climate. This third axis comprises four engagement campaigns:

- The first campaign related to the Climate Action 100+ initiative, committing Lyxor to ask companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosure) recommendations.
- The second campaign related to plastics and the circular economy.
- The third campaign related to localized water management.
- The fourth campaign related to responsible cleantech.

This fund is part of the following campaigns: Corporate Governance, General Meeting

B) Information used for the analysis implemented on ESG criteria

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (in connection with Lyxor's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets (PME/ETI).
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defence policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Methodology and implementation of this analysis

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the [Lyxor.com](https://www.lyxor.com) website.

Active Ownership - Operational set up:

In addition to the internal analysis carried out, Lyxor uses the services of ISS (Institutional Shareholder Services), as a proxy advisor.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies), proxy voting forms are filled out and sent to the relevant issuers by post.

Engagement policy:

To carry out its engagement campaigns, Lyxor can:

- (i) organise one-on-one meetings with management, board members, investor relations, sustainable development teams or any person within the company who can provide answers to the issue;
- (ii) partner with other management companies to gain greater leverage with targeted companies; (iii) join working groups or initiatives specialising in certain areas.

d) Presentation of the integration of analysis results in the investment policy

In terms of engagement, the details are presented below.

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the [Lyxor.com](https://www.lyxor.com) website.

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuers in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund

Portfolio ESG Rating as of October 2021

ESG score	Environment	Social	Governance
5.1	5.5	4.6	5.4

Portfolio rated 93%
Nb Securities rated 35

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The ESG score calculated at the portfolio level measures the capacity of the underlying issuers to manage the risks and key opportunities associated with environmental, social and governance factors. The risk scale ranges from 0 (high risk) to 10 (low risk). Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For sectors and themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For companies, exposure to measures and management of ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: employment, social relations, health and safety, training, compliance with ILO conventions
- Governance: Board of Directors or Supervisory Board, Audit and Internal Control, Executive Compensation

For governments, exposure to measures and management of ESG issues cover the following themes:

- Environment: Environmental Externalities Natural Resource
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source: The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Measures the portfolio's exposure to companies experiencing controversies relating to their compliance with international standards as a function of their degree of severity:

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: indicates that the company is not involved in any major controversies
- None: Sovereign and/or Company not covered

Red Flag 0%
Orange Flag 0%
Yellow Flag 0%
Green Flag 71%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2021

Carbon Emissions (tons CO2e/\$M invested)	Carbon Intensity (tons CO2e/\$M sales)	Weighted Average Carbon Intensity (tons CO2e/\$M sales)	Portfolio rated by weight	66%
28	156	214	Scope 1 reported (vs estimated)	86%
			Scope 2 reported (vs estimated)	2%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GreenHouse Gas Protocol (GHG Protocol) was launched in 2001 by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on reported data and/or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

☞ Scope 1: direct emissions resulting from the burning of fossil fuel resources owned or controlled by the company.

☞ Scope 2: indirect emissions related to the purchase or production of electricity.

☞ Scope 3: other indirect emissions from the extended supply chain to the transport of goods and persons.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

☞ Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested

☞ Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales

☞ Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions standardised by revenue), and these intensities are weighted by the weight of the companies in the portfolio.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the enterprise value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of enterprise value as the most recent available fiscal year-end enterprise value including cash (USD)*. Moreover only the use of the Enterprise Value enables the analysis of a portfolio invested in both equities and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest - total debt.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage or MWh generated from fossil fuels or the portion of the company's revenues earned from fossil fuels or the portion of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon:	
Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gas	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio. Based on investment of : \$ 1,000,000

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilised.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum of high-impact fossil fuel reserves	0.0
Other	0.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorise them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Management of Energy Consumption and Operational Efficiency	Target Effort
Aggressive efforts	4.7%	0.0%	0.0%
Some efforts	63.3%	56.2%	10.9%
Limited efforts/Information	10.2%	22.7%	0.0%
No effort/No evidence	21.8%	21.1%	89.1%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

•Asset stranding: risk of holding assets which may become stranded

•Operational Transition: risk of increase in operational costs

•Product Transition: risk of a decrease in demand for high-carbon products and services

•Neutral: low exposure to transition risks

•Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low- carbon products.

Low carbon transition score	6.5
Low carbon transition management Score	3.9
Operational Transition	13.6%
Product Transition	13.6%
Neutral	55.8%
Solutions	25.8%

(1) Metric developed by MSCI

Energy Mix of energy producers within the portfolio

A company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The issuer data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source: MSCI ESG Research

Share of issuers in terms of power generation in portfolio	3.1%
--	------

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	0.0%	Liquid Fuel	Natural Gas	Nuclear
Renewables	69.1%	Thermal Coal	30.9%	

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. Those issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

0-19.9%	23%
20-49.9%	10%
50-100%	5%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	14.9%	Energy Efficiency	30.6%	Green Building	2.8%
Pollution Prevention	0.0%	Sustainable Water	0.0%	Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	8.3%	Energy Efficiency	2.8%	Green Building	0.3%
Pollution Prevention	0.0%	Sustainable Water	0.0%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the "Do No Significant Harm" and "Minimum Social Safeguards criteria" of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

SeaLevelRise	1%
Coldwave	32%
Flood	3%
Heatwave	9%
Hurricane	2%
Water Stress	41%
Wildfire	13%

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.).

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure - analyses the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	4.4%	85.2%	10.5%	89.1%	10.9%	
Carbon Emissions	2.5%	39.8%	57.8%	71.6%	27.0%	1.5%
Electronic Waste	3.1%	0.9%	96.1%	100.0%		
Opportunities in Green Building	2.4%	37.9%	59.7%	97.2%	2.8%	
Opp's in Renewable Energy	3.1%	68.6%	28.3%	95.3%		4.7%
Packaging Material & Waste	4.1%	29.5%	66.4%	98.6%		1.4%
Water Stress	5.8%	91.6%	2.5%	39.3%	58.0%	2.8%
Toxic Emissions & Waste				28.5%	68.9%	2.6%

Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigating the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

Meeting overview

This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	47
Number of Voted Meetings	21
Participation rate at General Meetings	44.7%

Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
Board of Directors	48.4%	51.6%	0.0%
Capitalization	46.9%	53.1%	0.0%
Routine/Business	89.0%	9.2%	1.8%
Non-Salary Comp.	48.5%	51.5%	0.0%
Antitakeover	100.0%	0.0%	0.0%
Reorg. and Mergers	37.5%	62.5%	0.0%

Breakdown by country

In 2021, Lyxor's voting scope was issuers domiciled in Europe, in United States and in Japan.

The data details the geographical distribution of the General Meetings at which the Lyxor PEA PME (DR) UCITS ETF fund participated during the financial year.

France	90.5%
Luxembourg	9.5%

Engagement

This fund is part of the following campaigns: Corporate Governance, General Meeting

Corporate Governance: Outside the general meeting period, Lyxor promotes regular dialogue with companies on corporate governance issues such as changes in the composition of the Board and its committees, succession plans, the role and functions of the lead director, changes in the remuneration policy, etc.

Engagement overview over the year

The table shows the number of engagement campaigns conducted by Lyxor during the year compared to the number of issuers present in the fund.

Number of companies under engagement	0
Number of engagement	0
Number of companies under engagement /	
Number of companies in the fund	0%

Breakdown by country

The data present the geographical breakdown of the issuers concerned by an engagement campaign over the financial year by the fund.

Breakdown by engagement campaigns carried out by the fund over the year

For the year, the fund participated in the various engagement campaigns presented below and conducted by Lyxor.

For more details on Lyxor's engagement activities, an annual report is available on the Lyxor website:

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des marchés financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter "AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter "UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors. The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the French Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual remuneration review campaign that was carried out during the course of the year, on the basis of the perimeter of the staff as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable remuneration are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable remuneration deferred from a previous financial year. No "carried interest" was paid during the financial year.

Lyxor's best selection and execution policy

Information on best selection and execution policies is available at www.lyxor.com.

Transparency of securities financing operations and reuse of financial instruments SFTR regulation

(Accounting currency of the CIU)

During the fiscal year, the UCI did not carry out any transactions subject to the SFTR, namely no repurchase transactions, securities or commodities lending/borrowing, buy/sell back or sell/buy back transactions, margin lending transactions or total return swaps (TRS).

Effective portfolio management techniques and derivative financial instruments

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information in the evolving context of the Covid-19 crisis.

Assessment rules

The Sub-Fund's assets are valued according to the applicable laws and regulations, and more particularly the rules defined in Regulation No. 2014-01 of the French regulatory accounting committee (CRC) dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded. However, in the absence of significant transactions on a regulated market, the following financial instruments are valued using the following specific methods:

- Negotiable debt securities ("NDS") with a residual maturity upon acquisition that of 3 months or less are assessed with a straight-line extension over the residual maturity of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- Negotiable debt securities with a residual maturity of more than 3 months at the net asset value date are measured at the present value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Futures traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable trading value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities in French UCITS are assessed at the last net asset value known on the calculation date of the Sub-Fund's net asset value.
- Units and equities in foreign AIFs are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

The exchange rates used for the assessment of financial instruments listed in a currency other than the Sub-Fund's reference currency are the exchange rates published the fixing WM Reuters on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under "Financial instruments" according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under "Other temporary operations".

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the CIS) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Sub-Fund) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Sub-Fund).

Operation and management fees

These fees include all of the fees invoiced directly to the Sub-Fund, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Sub-Fund, the following fees can be added to the operation and management fees (see summary table hereinafter):

- outperformance commissions: these commissions reward the management company when the Sub-Fund has exceeded its objectives and are invoiced to the Sub-Fund;
- activity fees charged to the Subfund;
- Direct and indirect operating costs/fees related to temporary acquisitions and disposals of securities.

For more details on the fees actually charged to the Sub-Fund, refer to the Statistics section of the Key Investor Information Document (KIID).

Fees invoiced to the Sub-Fund	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	Maximum 0.5 % per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commission	Net assets	None
Direct and indirect operating costs/fees related to temporary acquisitions and disposals of securities	Amount of income generated by these operations	20% maximum for the Management Company; 15% maximum for the Agent

⁽¹⁾ including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Accounting currency

The Compartment accounting is carried out in Euro.

3.4. Breakdown by listing or assessment currency of the asset, liability and off-balance sheet items

This breakdown is given for the main listing or assessment currencies, with the exception of the currency for the keeping of the accounts.

By main currency	-	-	-	Other currencies
Assets				
Deposits	-	-	-	-
Equities and similar securities	-	-	-	-
Bonds and similar securities	-	-	-	-
Debt securities	-	-	-	-
CIU	-	-	-	-
Temporary financial securities operations	-	-	-	-
Receivables	-	-	-	-
Financial accounts	-	-	-	-
Other assets	-	-	-	-
Liabilities				
Sale operations on financial instruments	-	-	-	-
Temporary financial securities operations	-	-	-	-
Debts	-	-	-	-
Financial accounts	-	-	-	-
Off-balance sheet				
Hedging	-	-	-	-
Other operations	-	-	-	-

3.5. Receivables and Debts: breakdown by type

Breakdown of items comprising "other receivables" and "other debts", in particular the breakdown of forward foreign exchange transactions by type of transaction (buy/sell).

Receivables	
Future currency exchange operations:	-
Future purchases of currency	-
Total traded amount of future Sales of currencies	-
Other receivables:	-
-	-
-	-
-	-
-	-
Other operations	-
Debts	
Future currency exchange operations:	6,694.87
Future sales of currencies	-
Total traded amount of future Purchases of currencies	-
Other debts:	
Accrued expenses	6,426.15
Sundry Debtors and Creditors	268.72
-	-
-	-
-	-
Other operations	-

3.6. Shareholders' equities

	Subscriptions		Redemptions	
	Number of equities	Amount	Number of equities	Amount
Equity category issued/redeemed during the fiscal year:	236,179	2,263,015.56	304,076	2,873,539.07
Subscription / redemption commission		2,640.78		862.06
Retrocessions		-		-
Fees paid to the sub-fund		2,640.78		862.06

3.7. Management fees

Operating and management fees (fixed fees) as % of the average net assets	0.50
Performance commissions (variable fees): amount of costs for the year	-
Retrocession of management fees:	
- Total amount of fees retroceded to the Compartment	-
- Breakdown by "target" CIU:	
- CIU 1	-
- CIU 2	-

3.8. Commitments given and received

3.8.1. Description of guarantees received by the Sub-Fund with indication of the capital guarantees.....	none
3.8.2. Description of the other commitments received and/or given	none

3.9. Other information

3.9.1. Current value of the financial instruments that are the subject of temporary acquisition:	
- Financial instruments sold under forward repurchase agreements	-
- Other temporary operations	-
3.9.2. Current value of the financial instruments comprising security deposits:	
Financial instruments received as guarantees and not included in the balance sheet:	
- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-
Financial estimates given as guarantees and maintained in their original item:	
- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-
3.9.3. Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (Sicav) and CIU managed by these entities:	
- CIU securities	-
- Swaps	-

3.10. Allocation of the profit and loss table *(in the Compartment's accounting currency)*

Advances paid during the fiscal year

Date	Overall amount	Unit amount	Total tax credits	Unit tax credits

Number of equities	-	-
Unit distribution	-	-

3.12. Table of the profit and loss and other characteristic elements of the Sub-Fund during the last 5 financial years

Currency

EUR	29.10.2021	30.10.2020	31.10.2019	31.10.2018	29.12.2017
Net assets	16,630,118.75	14,410,288.77	9,729,061.37	8,328,710.06	13,320,932.12
Number of outstanding equities	1,742,360	1,810,257	1,222,038	990,332	1,380,332
Net asset value	9.5445	7.9603	7.9613	8.41	9.6505
Unit distribution on net capital gains and losses (including advances)	-	-	-	-	-
Unit distribution (including advances)	-	0.01	0.06	0.01	0.01
Unit tax credit transferred to holders (natural persons) ⁽¹⁾	-	-	-	-	-
Unit capitalisation ⁽²⁾	0.008	-0.73	-1.00	0.26	0.22

⁽¹⁾ Pursuant to the Fiscal Instruction of 4 March 1993 of the French Tax Department, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits among the outstanding shares on that date.

⁽²⁾ The unit capitalisation corresponds to the sum of profit and loss and net capital gains or losses on the number of circulating units. This calculation method is applied from 1 January 2013.

Compartment creation date: 23 March 2018.

29.10.2021*

Compartments / feeder	LYXOR RUSSELL 1000 GROWTH UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
Management Company	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy – 92987 Paris La Défense Cedex.
Depository and Custodian	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

Information about investments and management

Classification

International equities

The Fund is a passively managed index-based UCITS.

At least 60% of the Lyxor Russell 1000 Growth UCITS ETF (the “Sub-Fund”) is permanently exposed in a foreign equity market or in equity markets of several countries, possibly including the French market. The Compartment is an index-based fund of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution

Acc share class: accumulation of all distributable amounts.

Dist share class: the Board of Directors reserves the right to distribute, one or more times a year, all or part of the income and/or to accumulate it.

Net realised capital gains will be capitalised.

Management objective

The management objective of this Sub-Fund is to replicate the upward or downward evolution of the Russell 1000® Growth Net Total Return (the “Benchmark Index”), listed in US Dollars (USD), while insofar as possible minimising the tracking error between the Sub-Fund’s performances and those of the Benchmark Index.

The anticipated level of the ex-post tracking error under normal market conditions is 0.05%.

Benchmark indicator

Benchmark Index description

The Benchmark Index is the Russell 1000® Growth Net Total Return index (net dividends reinvested which means that the Benchmark Index’s performance includes the net dividends paid by its underlying equities).

The Benchmark Index measures the performance of the large cap segment with growth potential on the US market. It includes the Russell 1000 companies with the highest price-to-book ratio and the highest growth potential.

The Benchmark Index is constructed with the aim of providing a reliable market indicator for large-cap companies with growth potential.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator's components are available on the website: www.russell.com

The monitored performance is that of the Benchmark Index closing prices in US dollars.

Benchmark Index methodology

FTSE International Limited provides a market-cap weighted US equity index family. All US indices are sub-sets of the Russell 3000E™ Index, which represents approximately 99% of the US equity market.

The Benchmark Index is a subset of the Russell 1000® Index, representing the so-called “value” stocks of the Russell 1000® Index selected according to variables such as price-to-book ratio, medium-term growth in the I/B/E/S database and growth in historical sales per share. In order to determine the values eligible for the Benchmark, Russell Investments considers the following methodology each year:

- Ranking by market capitalisation, as at 31 May;
- The top 3000 stocks make up the Russell 3000® Index;
- The top 1000 stocks make up the Russell 1000® Index. The following are excluded:
 - Securities trading below 1 USD;
 - Securities traded on the OTC Bulletin Board and on the Pink Quote market;
 - Closed-end funds, SCS, royalty trusts, etc.;
 - Non-US equities and American Depositary Receipts (ADRs). Dividends are reinvested on the ex-dividend date.

Benchmark Index publication

The closing price of the Benchmark Index is available on the website: www.ftserussell.com

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the administrator FTSE International Limited of the Benchmark has until 31 December 2023 to request authorisation or registration, where applicable, from the competent authority.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmarks used which describes the measures to be implemented in the event of substantial changes to an index or the cessation of provision of that index.

Benchmark Index revision and composition

The revision of the composition of the Benchmark Index takes place annually.

The exact composition and revision rules of the Benchmark Index published by Russell are available on the website: www.russell.com
The above-mentioned frequency of rebalancing has no effect on costs in the implementation of the investment strategy.

Investment strategy

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Index, the Sub-Fund will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Sub-Fund's assets, which will consist of balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Sub-Fund may notably be securities that make up the Benchmark Index, as well as other international equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralised.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Sub-Fund's portfolio and (ii) the market value of the future exchange operation entered into by the Sub-Fund are available on the page dedicated to the Sub-Fund on the website www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

As part of the management of its exposure, the Sub-Fund may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Index, in particular in the event of a public offering affecting one of the securities making up the Benchmark Index or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Index.

2. Balance sheet assets (excluding integrated derivatives)

The Sub-Fund may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets.

The aforementioned equities will be chosen on the basis of criteria

Of eligibility, in particular:

- Their inclusion in a major stock exchange index;
- Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation);
- Rating of the country of the issuer's head office (requirement of a minimum threshold of S&P rating or equivalent);

Of diversification, notably:

- Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the French Monetary and Financial Code);
- Geographical area;
- Sector.

The Sub-Fund will permanently invest a minimum of 75% of its assets in companies that have their registered office in a Member State of the European Union, or in another State party to the Treaty on the European Economic Area that has entered into a tax agreement with France containing an administrative assistance clause with a view to combating fraud or tax evasion. This minimum holding level allows eligibility for the Equity Savings Plan.

For more information on the above eligibility and diversification criteria, investors can visit the website www.lyxoretff.com.

The investment in undertaking for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Sub-Fund.

The manager shall not invest in units or shares of AIFs referred to in Article R214-13 of the French Monetary and Financial Code. As part of these investments, the Sub-Fund may subscribe for units or shares of UCITS managed by the management company or a company to which it is linked.

As part of the future optimisation of the Sub-Fund's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Sub-Fund will use index-linked swaps negotiated over-the-counter exchanging the value of the shares in the assets of the Sub-Fund (or of any other financial instrument in the assets of the Sub-Fund if applicable) against the value of the Benchmark Index.

Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.

Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

As part of a future optimisation of the Sub-Fund management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including future financial instruments other than index-linked swaps.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Sub-Fund's portfolio, nor regarding the underlying assets of the future financial instruments. When Societe Generale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Societe Generale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Sub-Fund may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Sub-Fund may suffer losses and/or incur fees/costs and its ability to achieve its management objective may also be negatively impacted. Where the Sub-Fund enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Sub-Fund can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

None.

8. Financial guarantees

In all cases in which the Sub-Fund is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Sub-Fund's use of forward swap contracts traded over the counter, the Sub-Fund can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Sub-Fund is totally neutralised.

Any financial guarantee received by the Sub-Fund will be provided to the Sub-Fund in full ownership and listed in the Sub-Fund's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Sub-Fund's assets.

Any financial guarantee received by the Sub-Fund within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) Collateral must be valued at its mark-to-market price at least daily, and assets with highly volatile prices are not acceptable as collateral, unless a sufficiently prudent discount or "haircut" is applied;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Sub-Fund's net asset value;
- (e) The Sub-Fund's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Sub-Fund may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- Such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and
- Such financial guarantees consist of at least six different issues of which none exceeds 30% of the Sub-Fund's assets.

In compliance with the aforesaid conditions, the guarantees received by the Sub-Fund can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State or by its local government entities, or by an EU, regional, or global supranational institution or organisation, or by any country provided that conditions (a) to (e) above are fully complied with;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Sub-Fund's management company will apply a margin to the financial guarantees received by the Sub-Fund. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged.

Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) Deposited with an enabled institution;
- (ii) Invested in high-quality State bonds;
- (iii) Used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) Invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees. In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Sub-Fund may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Sub-Fund is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

Counterparty selection policy

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Sub-Fund. The selection of counterparties for financial contracts and financial intermediaries is performed rigorously from among the reputable counterparties and intermediaries in the market, on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes various criteria into consideration to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating;
- Quantitative criteria based on the LT CDS spread (absolute criteria, volatility and comparison with a reference group, etc.).

Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information about this policy and on the relative importance of the execution criteria for each asset class, please visit our website: www.lyxor.com, "regulatory information" section.

Risk profile

The Sub-Fund will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

Equity risk

An equity price can vary upwards or downwards, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

Liquidity risk (primary market)

If, when the Sub-Fund (or one of its counterparties for future financial instrument (“FFI”)) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase/sale price discrepancies, the value and/or liquidity of the Sub-Fund could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Sub-Fund's equities on a place of listing can be affected by any suspension, that could notably be due to:

- (i) Suspension or stoppage of the calculation of the Benchmark Index, and/or;
- (ii) Suspension of the market(s) of the underlyings used by the Benchmark Index, and/or;
- (iii) The impossibility for a given place of listing to obtain or calculate the Sub-Fund's indicative net asset value, and/or;
- (iv) A market maker's violation of the rules applicable to this marketplace, and/or;
- (v) A failure of this marketplace's IT or electronic systems.

Counterparty risk

The Sub-Fund is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as “OTC derivatives”) and/or efficient portfolio management techniques (hereinafter referred to as “EPMTs”). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Sub-Fund may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realisation of this risk may result in losses for the Sub-Fund and have an impact on the ability of the Sub-Fund to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Sub-Fund's assets per counterparty.

Risks related to collateral management

Operational risk:

The Sub-Fund may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk

The Sub-Fund may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

Risk related to the use of derivative instruments

In order to achieve its investment objective, the Sub-Fund uses FFIs traded over-the-counter, which can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Index. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Index, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect an FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Sub-Fund's net asset value.

Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Sub-Fund is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Sub-Fund's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Sub-Fund's underlyings can affect the Sub-Fund's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Sub-Fund (and/or to its counterparty in the FFI), the Sub-Fund's net asset value may be affected.

Risk related to regulations

In case of change of the regulations in any country in which the Sub-Fund is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Sub-Fund's underlyings, the Sub-Fund's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Sub-Fund's equities. The calculation of the Sub-Fund's net asset value can also be affected. If the event persists, the Sub-Fund's manager will decide on measures having to be adopted, which can have an impact on the Sub-Fund's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

- (i) The Benchmark Index is considered to be incorrect or not reflective of the market's actual evolution;
- (ii) The Benchmark Index is definitively discontinued by its supplier;
- (iii) The supplier of the index is incapable of providing the level or value of the said Benchmark;
- (iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings of this Benchmark Indicator or of the respective weightings between its various components), which cannot be effectively replicated by the Sub-Fund at a reasonable cost;
- (v) One or more components of the Benchmark Index becomes illiquid, with the listing on an organised market being suspended, or components traded over-the-counter (such as bonds, for example) become illiquid;
- (vi) The Benchmark Index's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Index's performance.

Securities transaction risk

Should the issuer of a security underlying the Benchmark Index undertake an unanticipated review of a corporate action ("CA"), that contradicts a prior and official announcement that had resulted in a valuation of the CA by the Sub-Fund (and/or in a valuation of the CA by the Sub-Fund's counterparty in a future financial instrument), the Sub-Fund's net asset value may be affected, notably should the actual treatment of the CA by the Sub-Fund differ from the CA's treatment in the methodology used by the Benchmark Index.

Sustainability risks

The Sub-Fund does not consider sustainability factors in the investment decision-making process but remains exposed to sustainability risks. The occurrence of such risks could have a negative impact on the value of the investments made by the Sub-Fund. Additional information can be found in the "Sustainability Information" section of the Prospectus.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

The investor who subscribes to this Sub-Fund wishes to gain exposure to the performance of the large cap segment with growth potential of the US market by replicating the performance of the Benchmark Index. The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Sub-Fund's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment term is greater than 5 years.

"U.S. Persons" (as defined below - see "COMMERCIAL INFORMATION") may not invest in the Sub-Fund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Sub-Fund's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy-92800 Puteaux.*
- *Creation date of the Multi Units France Sicav: 04 March 2002.*

activity report

The fund replicates the performance of the Russell 1000 Growth Net USD Index (Ticker: RU1GN30U)

Performance trend at the closing date:

Share name	ISIN	Share currency	Performance from 28/02/19 to 31/10/19			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor Russell 1000 Growth UCITS ETF - Dist	FR0011119155	USD	42.88% ⁽¹⁾	42.88%	-	215.54%
Lyxor Russell 1000 Growth UCITS ETF - Acc	FR0011119171	USD	42.87% ⁽²⁾	42.88%	-	266.96%

⁽¹⁾ "There is no difference between the annual performance of the class and that of its Benchmark".

⁽²⁾ "The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index»

The tracking error realised is 0.0006%. The target tracking error over the period was 0.05%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams. This difference is considered insignificant.

The fund complies with the PEA eligibility constraints at all times, the details of which are available on request from the management company. Index Linked Swap's counterparty is: Société Générale.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the SICAV that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: The method chosen is the commitment method.

This Fund is covered by Article 6 of Regulation (EU) 2019/2088 (the "SFDR Regulation"). It does not promote environmental and/or social characteristics and does not aim to invest sustainably

Transparency of environmentally sustainable investments in periodic reports under Regulation (EU) 2020/8521

Regulation (EU) 2020/852 on the establishment of a framework for promoting sustainable investments (the "Taxonomy Regulation") sets out the criteria for determining whether an economic activity is environmentally sustainable in the European Union.

According to the Taxonomy Regulation, an activity can be considered "sustainable" if it contributes substantially to one of the 6 environmental objectives set out in the Taxonomy Regulation, including climate change mitigation and adaptation, pollution prevention and reduction, or the protection and restoration of biodiversity and ecosystems.

In addition, in order to be considered sustainable, this economic activity must respect the principle of "do no significant harm" along with one of the other five objectives of the Taxonomy Regulation and must also comply with basic social criteria (alignment with OECD and UN guidelines on business and human rights).

In accordance with article 7 of the Taxonomy Regulation, the management company draws investors' attention to the fact that the underlying investments of this Fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Provision of environmental, social and governance (ESG) information - in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organisation to integrate Environmental, Social, and Governance ("ESG") issues into our investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each

Integration of sustainability risks by Lyxor in its investment decision-making processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

(a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

To the basket of assets held by the fund, the fund applies an exclusion of issuers associated with serious and repeated violations of the Principles of the United Nations Global Compact and regulatory requirements related to controversial sectors and products. This list is supplemented by a list of companies to be excluded due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological chemical, nuclear or radiological weapons, etc.).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (in connection with Lyxor's voting policy). • Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets (PME/ETI).
- In the global context of the Societe Generale Group's Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defence policy,
- In the global context of the Societe Generale Group's Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products, Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Lyxor.com website. The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor is gradually expanding its ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:
 - Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.
- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:
 - The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
 - Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
 - A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).
- With regard to carbon risk management:
 - Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).
- In regards with the portfolio's exposure to issuers offering environmental solutions :
- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).
- In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :
- For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :
 - the Germanwatch climate performance index score
 - the environment performance score
 - the Environmental Vulnerability index

For corporate issuers in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the Key Issue:

LYXOR RUSSELL 1000 GROWTH UCITS ETF (Sub-Fund of the Multi Units France SICAV)

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
 - Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations
- In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund

LYXOR RUSSELL 1000 GROWTH UCITS ETF (Sub-Fund of the Multi Units France SICAV)

For each issuer (Corporate & Government), ESG Industry sector classification is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The ESG score calculated at the portfolio level measures the capacity of the underlying issuers to manage the risks and key opportunities associated with environmental, social and governance factors. The risk scale ranges from 0 (high risk) to 10 (low risk). Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: employment, social relations, health and safety, training, compliance with ILO conventions
- Governance: Board of Directors or Supervisory Board, Audit and Internal Control, Executive Compensation

Source: The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Portfolio Exposure to ESG Controversies

Measures the portfolio's exposure to companies experiencing controversies relating to their compliance with international standards as a function of their degree of severity:

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: indicates that the company is not involved in any major controversies
- None: Sovereign and/or Company not covered

Red Flag 0%
Orange Flag 37%
Yellow Flag 27%
Green Flag 35%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2021

Carbon Emissions (tons CO2e/\$M invested)	Carbon Intensity (tons CO2e/\$M sales)	Weighted Average Carbon Intensity (tons CO2e/\$M sales)	Portfolio rated by weight	99%
7	43	32	Scope 1 reported (vs estimated)	92%
			Scope 2 reported (vs estimated)	81%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GreenHouse Gas Protocol (GHG Protocol) was launched in 2001 by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on reported data and/or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: direct emissions resulting from the burning of fossil fuel resources owned or controlled by the company.
- Scope 2: indirect emissions related to the purchase or production of electricity.
- Scope 3: other indirect emissions from the extended supply chain to the transport of goods and persons.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions standardised by revenue), and these intensities are weighted by the weight of the companies in the portfolio.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalisation as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD)*. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equities and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest - total debt.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be Weight of the portfolio rated in Carbon: stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at Fossil Fuel Reserves 0%

The brown area is defined as the percentage or MWh generated from fossil fuels or the portion of the company's revenues earned Thermal Coal 0%
from fossil fuels or the portion of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil Natural Gaz 0%
fuels).

These metrics include only corporate issuers rated in Carbon. Oil 0%

Stranded Assets: Fossil Fuel Reserves

Based on investment of : \$1,000,000	
The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.	Thermal Coal (Tons) 0
MMBOE stands for Million Barrels of Oil Equivalents.	Gas (MMBOE) 0.0001
These metrics include only corporate issuers rated in Carbon.	Oil (MMBOE) 0.0001

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. I o make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express tCO2e/\$M invested these as tons of CO2 using the Potsdam Institute methodology.

	Metallurgical Coal	0.9
In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific Thermal Coal		0.0
consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, Oil		36.8
the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilised.	Gas	0.6
These metrics include only corporate issuers rated in Carbon.	Total	58.2

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges - this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	55.5
Sum High Impact Reserves	55.5
Other	2.7

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	10.0%	6.6%	1.1%
Some efforts	73.8%	82.8%	66.0%
Limited efforts/Information	3.9%	2.5%	0.1%
No effort/No evidence	12.4%	8.1%	32.8%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

•Asset stranding: risk of holding assets which may become stranded

•Operational Transition: risk of increase in operational costs

•Product Transition: risk of a decrease in demand for high-carbon products and services

•Neutral: low exposure to transition risks

•Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low- carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.5
Low carbon transition management Score	5.1
Operational Transition	0.6%
Product Transition	0.6%
Neutral	78.8%
Solutions	16.9%

Energy Mix of energy producers within the portfolio

A company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume. Share of issuers in terms of power generation in portfolio 0.0%

The issuer data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source: MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)					
Hydro	4.4%	Liquid Fuel	0.7%	Natural Gas	39.0%
Nuclear	19.6%	Renewables	0.6%	Thermal Coal	35.7%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. Those issuers are likely to benefit from a low carbon transition

Issuer with a revenue dedicated to environmental solutions between:

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

0-19.9%	22%
20-49.9%	15%
50-100%	4%

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	5.8%	Energy Efficiency	41.5%	Green Building	0.3%
Pollution Prevention	1.8%	Sustainable Water	1.5%	Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	0.3%	Energy Efficiency	8.2%	Green Building	0.0%
Pollution Prevention	0.2%	Sustainable Water	0.1%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

% estimated EU Taxo **8.8%**

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	1%
Coldwave	22%
Flood	2%
Heatwave	7%
Hurricane	4%
Water Stress	47%
Wildfire	18%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.).

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	0.6%	29.0%	70.4%	95.3%	4.3%	0.4%
Carbon Emissions	0.3%	24.7%	75.0%	84.2%	15.3%	0.5%
Electronic Waste	0.5%	7.0%	92.6%	90.5%	0.4%	9.1%
Opportunities in Green Building	0.3%	41.8%	57.9%	99.6%	0.3%	0.2%
Opp's in Renewable Energy	1.8%	92.1%	6.0%	100.0%		0.0%

Water Stress	3.6%	94.9%	1.5%	73.6%	23.2%	3.1%
Toxic Emissions & Waste				67.4%	27.8%	4.8%

Temperature - Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

- A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,
- An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates a carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des marchés financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter "AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter "UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the French Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual remuneration review campaign that was carried out during the course of the year, on the basis of the perimeter of the staff as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable remuneration are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable remuneration deferred from a previous financial year. No "carried interest" was paid during the financial year.

Lyxor's best selection and execution policy

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information in the evolving context of the Covid-19 crisis.

Assessment rules

The Sub-Fund's assets are valued according to the applicable laws and regulations, and more particularly the rules defined in Regulation No. 2014-01 of the French regulatory accounting committee (CRC) dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded. However, in the absence of significant transactions on a regulated market, the following financial instruments are valued using the following specific methods:

- Negotiable debt securities ("NDS") with a residual maturity upon acquisition that of 3 months or less are assessed with a straight-line extension over the residual maturity of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- Negotiable debt securities with a residual maturity of more than 3 months at the net asset value date are measured at the present value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued;
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable trading value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities of UCITS operating under French law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.
- Units and shares of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.
- The exchange rates used for the assessment of financial instruments listed in a currency other than the Sub-Fund's reference currency are the WM Reuters fixing rates on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under “Financial instruments” according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under “Other temporary operations”.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment)

multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta

multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Sub-Fund).

Operation and management fees

These fees include all of the fees invoiced directly to the Sub-Fund, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Sub-Fund, the following fees can be added to the operation and management fees (see summary table hereinafter):

- Outperformance commissions: These commissions reward the management company when the Sub-Fund has exceeded its objectives and are invoiced to the Sub-Fund;
- Transfer commissions invoiced to the Sub-Fund.

For more details on the fees actually charged to the Sub-Fund, refer to the Statistics section of the Key Investor Information Document (KIID).

Fees invoiced to the Sub-Fund	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	Maximum 0.19% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Net assets	None
Outperformance commission	Net assets	None

⁽¹⁾ including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Accounting currency

The Sub-Fund accounting is carried out in Euro.

Indication of accountancy changes declared to each of the shareholders individually

- - Occurred change: None.
- - Future change: None.

Other changes declared to each of the shareholders individually (*Not certified by the auditor*)

- - Occurred change: None.
- - Future change: None.

Indication and justification of the changes to estimates and application provisions
None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Acc share class: accumulation of all distributable amounts.

Dist share class: the Board of Directors reserves the right to distribute, one or more times a year, all or part of the income and/or to accumulate it.
Net realised capital gains will be capitalised.

activity
report

SUB-FUND OF THE MULTI UNITS FRANCE SICAV

Compartments / feeder	LYXOR CAC 40 DAILY (2X) LEVERAGED UCITS ETF is a sub-fund of the MULTI UNITS FRANCE SICAV.
Management Company	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy – 92987 Paris La Défense Cedex.
Depository and Custodian	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

Information about investments and management

Classification:

Equities of eurozone countries.

At all times, the Lyxor CAC 40 Daily (2x) Leveraged UCITS ETF subfund (“Subfund”) has at least 60% exposure in one or more markets for equities issued in one or more eurozone countries, possibly including the French market.

The Compartment is an index-based fund of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution:

Acc share class: accumulation of all distributable amounts.

Management objective:

The investment objective of this Sub-Fund is to track both upward and downward movements of the CAC 40® LEVERAGE GROSS RETURN (“Benchmark”), regardless of its evolution, while minimising the tracking error between the Sub-Fund’s performance and the Benchmark’s performance as much as possible.

The Benchmark reflects the evolution of the CAC 40® Gross Return Index (“Parent Index”) with daily leverage x2, meaning that if the underlying index grows 2% over the same day, the leverage index increases 4%, minus borrowing costs over the same day and vice versa.

The anticipated level of the ex-post tracking error under normal market conditions is 0.12%.

Benchmark indicator:

The Benchmark is the CAC 40® LEVERAGE GROSS RETURN strategy index (gross dividends reinvested, which means that the Benchmark’s performance includes the net dividends paid by its underlying shares), listed in EUR.

The Benchmark is a strategy index defined by the supplier of international indices Euronext. It is calculated by Euronext.

The Benchmark is a strategy index that reflects the evolution of the Parent Index with daily leverage x2, meaning that if the underlying index grows 2% over the same day, the leverage index increases 4%, minus borrowing costs over the same day and vice versa. The double performance is achieved by doubling the investment, via a loan, in the basket of equities of the index. The cost of borrowing is taken into account in the calculation of the strategy index. The Parent Index is an index weighted by free-float market capitalisation measuring the performance of 40 stocks listed on Euronext Paris regulated markets. Eligible stocks are chosen for their large market capitalisation, their sector representativeness and the large volume of transactions concerning them.

A full description of the Benchmark and its construction methodology and information on the composition and respective weightings of the Benchmark components are available on the website: <https://www.euronext.com/en>.

The monitored performance is that of the Benchmark Index closing prices in Euros.

Benchmark indicator publication

The Benchmark Indicator is calculated on a daily basis at closing prices using the official closing stock market prices for the constituent stocks.

The Benchmark Indicator is also calculated in real time every day that the Benchmark Indicator is published.

The closing price of the Benchmark is available on the website: <https://www.euronext.com/en>.

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Euronext administrator of the Benchmark Indicator is included in the register of administrators and benchmark indices maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmarks used which describes the measures to be implemented in the event of substantial changes to an index or the cessation of provision of that index.

Benchmark indicator revision and composition

The revision of the composition of the Benchmark depends on the revision of the composition of its Parent Index.

The revision of the composition of the Parent Index takes place quarterly.

The leverage introduced in the Benchmark Index calculation formula is subject to daily readjustment. The consequences of daily readjustment of leverage are explained in particular in the Reference Indicator and Risk Profile sections of this prospectus.

The exact composition and rules for revising the composition of the Parent Index and, incidentally, those of the Benchmark Index published by Euronext are available on the website: <https://www.euronext.com/en>

Interest in the Leverage Strategy

The "Leverage" strategy (with daily leverage) is a dynamic strategy applied at the Benchmark level. It allows all investors to double their investment on a daily basis compared to a "simple" investment in the Parent Index, thanks to the loan taken out to achieve the strategy. In the event of an increase in the Benchmark Index, the gains over one day are 2 times greater than for a "simple" investment in the Parent Index. Conversely, in the case of a bear market, losses are also doubled daily due to the multiplier effect of leverage. The strategy's risks are thus subject to a daily multiplier effect.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Index, the Sub-Fund will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Sub-Fund may notably be securities that make up the Benchmark Index, as well as other European equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the future exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the website: www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

The Sub-Fund will permanently invest a minimum of 75% of its assets in companies that have their registered office in a Member State of the European Union, or in another State party to the Treaty on the European Economic Area that has entered into a tax agreement with France containing an administrative assistance clause with a view to combating fraud or tax evasion. This minimum holding level allows eligibility for the Equity Savings Plan.

As part of the management of its exposure, the Compartment may be exposed up to 20 % of its assets in equities from a single issuing entity. This limit of 20% will be verified, on each rebalancing date of the Benchmark, in accordance with the Benchmark Index calculation method, which limits the exposure of each of the shares of the same issuing entity to 20%, the calculation of which is provided by the Benchmark's sponsor or calculation agent.

This 20% limit may be increased to 35% for a single issuing entity, when this proves to be justified by exceptional market conditions, particularly when certain securities are largely dominant and/or in the event of high volatility of a financial instrument or securities linked to an economic sector represented in the Benchmark Index, in particular in the event of a public offering affecting one of the securities making up the Benchmark Index or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Index.

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets. The aforementioned equities will be chosen on the basis of criteria:

- Of eligibility, in particular:

Subordination to the main market indices or to the Benchmark Index;

o Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation)

Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent).

- Of diversification, notably:

Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Article Art. R214-21 of the [French] Monetary and Financial Code);

o geographical

o Sector

For more information on the abovementioned eligibility and diversification criteria, investors can visit the website: www.lyxoretf.com

The investment in undertaking for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Compartment. As part of these investments, the Sub-Fund may subscribe for units or shares of UCITS managed by the management company or a company to which it is linked. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of the future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Sub-Fund will have recourse to index-linked swaps traded over-the-counter, exchanging the value of the equities in the Sub-Fund's assets (or of any other asset held by the Sub-Fund, where appropriate) against the value of the Benchmark Index (in compliance with the description contained in this section's paragraph 1 above).

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.

- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including future financial instruments other than index-linked swaps.

Any counterparty selected by the Subfund as a counterparty to a futures contract must be a first-class financial institution approved for proprietary trading.

A counterparty to the derivatives ("Counterparty") will have no discretion over the composition of the Sub-Fund's portfolio or over the underlying assets of the derivatives. Situations of conflict of interest may arise between the Management Company and Société Générale when Société Générale acts as a counterparty to FFIs. These situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs and its ability to achieve its management objective may also be negatively impacted. When the Subfund enters into two or more TRS with one or more counterparties above risks mentioned above apply to the portion of assets that are committed under the swap that is prematurely terminated and/or to which the counterparty has defaulted.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Sub-Fund can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

The Subfund may temporarily borrow up to 10% of its net assets.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Sub-Fund is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Sub-Fund's use of forward swap contracts traded over the counter, the Sub-Fund can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) they must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;
- (c) they must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) they must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20 % of the Sub-Fund's net asset value;
- (e) the Subfund's Management Company must be able to enforce this collateral in full and at any time without having to consult with the counterparty or obtain its approval.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and
- Such financial guarantees consist of at least six different issues of which none exceeds 30% of the Sub-Fund's assets.

In compliance with the aforesaid conditions, the guarantees received by the Sub-Fund can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e)(above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points
- (v) and (vi) below;
- (vi) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vii) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Sub-Fund's management company will apply a margin to the financial guarantees received by the Sub-Fund. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged.

Guarantees received in cash shall, at the discretion of the manager, be either:

deposited with an enabled institution;

- (i) invested in high-quality State bonds;
- (ii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iii) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European collective investment schemes.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees. In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Compartment may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

COUNTERPARTY SELECTION POLICY

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Compartment. The selection of counterparties for financial contracts and financial intermediaries is performed rigorously from among the reputable counterparties and intermediaries in the market, on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes various criteria into consideration to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating
- Quantitative criteria based on the CDS LT spread (absolute criteria, volatility and comparison with a reference group, etc.) Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: www.lyxor.com, section "regulatory information".

Risk profile:

The shareholder's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Equity risk

An equity price can vary upwards or downwards, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

The Sub-Fund's liquidity and/or value may be adversely affected if, when the Sub-Fund or a counterparty to a futures contract is rebalancing its exposure, the underlying financial markets are restricted, closed, or subject to large bid/offer spreads. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Sub-Fund's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Index, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Index, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Sub-Fund's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

- Risks related to the management of guarantees

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

- Risk related to daily readjustment of leverage

Investors are twice exposed to fluctuations that affect the price or level of the Parent Index on a day-to-day basis. In particular, any decline in the underlying market will be amplified and will imply an even greater depreciation in the net asset value of the Sub-Fund. Since the leverage in the Benchmark formula is reset daily, the Sub-Fund will not return twice as much as the Parent Index over a period of more than one trading day.

For example, if the Parent Index appreciates 10% on a given business day, then depreciated by 5% on the next business day, the ETF will have appreciated in total by 8% after these two days (and before deduction of applicable fees), while the Parent Index has appreciated by 4.5% over the same period.

If the Parent Index depreciates by 5% per day for 2 consecutive business days, it will have depreciated a total of 9.75%, while the ETF has depreciated (before deduction of applicable fees) by 19% over the same period.

Negative scenario 1: Case where the leverage induced is greater than 2 in a scenario of a decline in the Parent Index.					
	Parent Index		strategy index		leverage induced
	day i performance	day i value	day i performance	day i value	
		100		100	
day 1	10%	110	20%	120	x2
day 2	-11%	97.9	-22%	93.6	x2
total period	-2.10%		-6.40%		x3.05

Negative scenario 2: Case where the leverage induced is less than 2 in a scenario of a rise in the Parent Index					
	Parent Index		strategy index		leverage induced
	day i performance	day i value	day i performance	day i value	
		100		100	
day 1	-5%	95	-10%	90	x2
day 2	6%	100.7	12%	100.8	x2
total period	0.70%		0.80%		x1.14

In addition, it is possible that over an observation period greater than one day and in the event of high volatility of the Parent Index over that period, the net asset value of the Sub-Fund may fall even though the Parent Index also posted a rise over the same period.

Reverse induced leverage scenario: Case where the leverage generated is negative over the period					
	Parent Index		strategy index		leverage induced
	day i performance	day i value	day i performance	day i value	
		100		100	
day 1	20%	120	40%	140	x2
day 2	-16%	100.8	-32%	95.2	x2
total period	0.80%		-4.80%		x-6

- Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to achieve its investment objective, the Sub-Fund uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Index. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Index, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Index

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Index" are understood to mean the following situations:

- i) the Benchmark is considered to be incorrect or not reflective of the market's actual trend;

- i) the Benchmark is permanently eliminated by the index provider;
- ii) the index provider is unable to provide the level or value of said Benchmark Index;
- iii) the index provider makes a material change in the Benchmark calculation formula or method (other than a minor modification such as an adjustment to the Benchmark's underlying components or their respective weightings) that the Sub-Fund cannot effectively replicate at a reasonable cost.
- iv) one or more Benchmark components become illiquid because they are no longer traded on a regulated market or because their over-the-counter trading (e.g. bonds) is disrupted;
- v) the components of the Benchmark Index are impacted by transaction fees relating to execution, delivery-settlement or specific tax constraints, without these fees being reflected in the performance of the Benchmark Index.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Index undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Sub-Fund (and/or in a valuation of the ST by the Sub-Fund's counterparty in a future financial instrument), the Sub-Fund's net asset value may be affected, notably should the actual treatment of the ST by the Sub-Fund differ from the ST's treatment in the methodology used by the Benchmark Index.

- Sustainability risks

The Sub-Fund does not consider sustainability factors in the investment decision-making process but remains exposed to sustainability risks. The occurrence of such risks could have a negative impact on the value of the investments made by the Sub-Fund. Additional information can be found in the "Sustainability Information" section of the Prospectus.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

The investor who subscribes to this Sub-Fund wishes to gain exposure to the securities market of large companies in the eurozone.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment term is greater than 5 years.

U.S. Persons (as defined in the prospectus - see "COMMERCIAL INFORMATION") may not invest in the Sub-Fund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy-92800 Puteaux.
- Creation date of the Multi Units France Sicav: 04 March 2002.
- Compartment approval date by the AMF (Financial Markets Authority): 15 February 2018.
- Compartment creation date: 19 April 2018.

activity report

The fund tracks the performance of the CAC 40® LEVERAGE GROSS RETURN EUR index (Ticker:CACGL).

Performance trend at the closing date:

Share name	ISIN	Share currency	Performance from 28/02/19 to 31/10/19			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor CAC 40 Daily (2x) Leveraged UCITS ETF - Acc	FR0010592014	EUR	125.54%®	127.20%		81.56%

⁽¹⁾ "The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs (for example the index rebalancing cost);
- taxation incurred in relation to the methodology used in the Benchmark Index»

The tracking error realised is 0.0362%. The target tracking error over the period was 0.12%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams. This difference is considered insignificant.

The fund complies with the PEA eligibility constraints at all times, the details of which are available on request from the management company.

Index Linked Swap's counterparty is: Société Générale.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission *(not audited by the auditor)*

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

This Fund is covered by Article 6 of Regulation (EU) 2019/2088 (the "SFDR Regulation"). It does not promote environmental and/or social characteristics and does not aim to invest sustainably

Transparency of environmentally sustainable investments in periodic reports under Regulation (EU) 2020/852

Regulation (EU) 2020/852 on the establishment of a framework for promoting sustainable investments (the "Taxonomy Regulation") sets out the criteria for determining whether an economic activity is environmentally sustainable in the European Union.

According to the Taxonomy Regulation, an activity can be considered "sustainable" if it contributes substantially to one of the 6 environmental objectives set out in the Taxonomy Regulation, including climate change mitigation and adaptation, pollution prevention and reduction, or the protection and restoration of biodiversity and ecosystems.

In addition, in order to be considered to be sustainable, this economic activity must respect the principle of "not to cause significant harm" to one of the other five objectives of the Taxonomy Regulation and must also comply with basic social criteria (alignment to OECD and UN guidelines on business and human rights).

In accordance with article 7 of the Taxonomy Regulation, the management company draws investors' attention to the fact that the underlying investments of this Fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Provision of environmental, social and governance (ESG) information - in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website [Lyxor.com](https://www.lyxor.com) and is revised each

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

(a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

To the basket of assets held by the fund, the fund applies an exclusion of issuers associated with serious and repeated violations of the Principles of the United Nations Global Compact and regulatory requirements related to controversial sectors and products. This list is supplemented by a list of companies to be excluded due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological chemical, nuclear or radiological weapons, etc.).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (in connection with Lyxor's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group's Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defence policy.
- In the global context of the Societe Generale Group's Environmental and Social Policies, Lyxor uses the Global Compact List produced by the Group based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products.

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution.

The post trade control is on NAV frequency basis.

Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the [Lyxor.com](https://www.lyxor.com) website.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor is gradually expanding its ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint
 - Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.
- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:
 - The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
 - Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
 - A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).
- With regard to carbon risk management:
 - Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).
- In regards with the portfolio's exposure to issuers offering environmental solutions:
 - Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).
- In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

 - the Germanwatch climate performance index score
 - the environment performance score
 - the Environmental Vulnerability index

For corporate issuers in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

LYXOR CAC 40 DAILY (2X) LEVERAGED UCITS ETF (Sub-Fund of the Multi Units France SICAV)

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations

- Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

LYXOR CAC 40 DAILY (2X) LEVERAGED UCITS ETF
(Sub-Fund of the Multi Units France SICAV)

Portfolio ESG Rating as of October 2021

For each issuer (Corporate & Government), ESG Industry sector classification is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The ESG score calculated at the portfolio level measures the capacity of the underlying issuers to manage the risks and key opportunities associated with environmental, social and governance factors. The risk scale ranges from 0 (high risk) to 10 (low risk). Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: employment, social relations, health and safety, training, compliance with ILO conventions
- Governance: Board of Directors or Supervisory Board, Audit and Internal Control, Executive Compensation

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source: The Company carbon footprint data are provided by the MSCI agency. All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Measures the portfolio's exposure to companies experiencing controversies relating to their compliance with international standards as a function of their degree of severity:

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: indicates that the company is not involved in any major controversies
- None: Sovereign and/or Companies not covered

Red Flag	0%
Orange Flag	18%
Yellow Flag	61%
Green Flag	21%

			Scope 1 reported (vs estimated)	99%
			Scope 2 reported (vs estimated)	97%
			Scope 1 & 2 estimations are based on MSCI methodology	
208	238	144		

Carbon Measurement methodology

The GreenHouse Gas Protocol (GHG Protocol) was launched in 2001 by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: direct emissions resulting from the burning of fossil fuel resources owned or controlled by the company.
- Scope 2: indirect emissions related to the purchase or production of electricity.
- Scope 3: other indirect emissions from the extended supply chain to the transport of goods and persons.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio invested in both equities and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest - total debt.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage or MWh generated from fossil fuels or the portion of the company's revenues earned from fossil fuels or the portion of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon:	
Fossil Fuel Reserves	10%
Thermal Coal	0%
Natural Gas	8%
Oil	8%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio. MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of : \$ 1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0048
Oil (MMBOE)	0.0043

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	337.2
Thermal Coal	0.0
Oil	1,931.0
Gas	1,559.0
Total	3,827.2

LYXOR CAC 40 DAILY (2X) LEVERAGED UCITS ETF (Sub-Fund of the Multi Units France SICAV)

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges - this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	355.3
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	355.3
Other	3,471.9

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Ennergy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	0.8%	11.2%	4.3%
Some efforts	99.2%	88.8%	91.8%
Limited efforts/Information	0.0%	0.0%	2.6%
No effort/No evidence	0.0%	0.0%	1.3%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

•Asset stranding: risk of holding assets which may become stranded

•Operational Transition: risk of increase in operational costs

•Product Transition: risk of a decrease in demand for high-carbon products and services

•Neutral: low exposure to transition risks

•Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low- carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.1
Low carbon transition management Score	6.8
Operational Transition	9.0%
Product Transition	9.0%
Neutral	72.0%
Solutions	8.1%

Energy Mix of energy producers within the portfolio

A company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The issuer data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source: MSCI ESG Research

Share of issuers in terms of power generation in portfolio	9.5%
--	------

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	14.1%	Liquid Fuel	0.7%	Natural Gas	57.5%
Nuclear	8.7%	Renewables	13.8%	Thermal Coal	5.3%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. Those issuers are likely to benefit from a low carbon transition

Issuer with a revenue dedicated to environmental solutions between:

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

0-19.9%	22%
20-49.9%	9%
50-100%	1%

These metrics include only corporate issuers rated in Carbon.

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	22.7%	Energy Efficiency	22.7%	Green Building	4.1%
Pollution Prevention	6.1%	Sustainable Water	6.1%	Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	0.7%	Energy Efficiency	3.7%	Green Building	0.6%
Pollution Prevention	0.1%	Sustainable Water	0.3%	Sustainable Agriculture	0.0%

LYXOR CAC 40 DAILY (2X) LEVERAGED UCITS ETF (Sub-Fund of the Multi Units France SICAV)

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	4%
Coldwave	32%
Flood	4%
Heatwave	8%
Hurricane	2%
Water Stress	42%
Wildfire	8%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.).

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	2.5%	85.9%	11.5%	87.9%	7.2%	4.8%
Carbon Emissions	2.9%	47.6%	49.5%	78.2%	12.0%	9.9%
Electronic Waste	5.0%	5.4%	89.7%	99.5%		0.5%
Opportunities in Green Building	3.1%	55.3%	41.6%	99.5%	0.1%	0.4%
Opp's in Renewable Energy	7.2%	76.6%	16.2%	97.4%		2.6%
Packaging Material & Waste	10.0%	47.7%	42.3%	79.4%		20.6%
Water Stress	6.7%	90.4%	3.0%	33.7%	45.9%	20.3%
Toxic Emissions & Waste				38.7%	40.1%	21.2%

Temperature - Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

- A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,
- An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates a carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des marchés financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 ("AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 ("UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management compensation policy notably ensures appropriate risk management and adherence to compliance on the part of its employees.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No "carried interest" was paid during the financial year.

Lyxor's best selection and execution policy

Transparency of securities financing operations and reuse of financial instruments SFTR regulation

(Accounting currency of the CIU)

1. General information.

1.1. Amount of securities and raw materials loaned in proportion with the total assets that can be loaned, defined as excluding the cash and cash equivalents.

	Securities lending
% of assets that can be loaned	-

1.2. Amount of the assets committed to each type of securities financing operation and total return swap, expressed in absolute value (in the currency of the collective investment undertaking) and in proportion with the assets under management of the collective investment undertaking.

	Securities lending ⁽¹⁾	Securities borrowing ⁽²⁾	Repo operations ⁽³⁾	Reverse repo operations ⁽⁴⁾	TRS ⁽⁵⁾
Absolute value	-	-	-	-	167,784,120.11
% of assets under management	-	-	-	-	100.00

⁽¹⁾ The amount of assets engaged in securities lending transactions corresponds to the market value of the securities lent at the balance sheet date.

⁽²⁾ The amount of assets engaged in securities borrowing transactions corresponds to the market value of the guarantees (cash or securities) delivered by the fund as part of the securities borrowing on the balance sheet date.

⁽³⁾ The amount of assets engaged in repurchase transactions corresponds to the market value of the securities repurchased on the balance sheet date.

⁽⁴⁾ The amount of assets engaged in reverse repurchase transactions corresponds to the market value of securities purchased under repurchase agreements at the balance sheet date.

⁽⁵⁾ The amount of assets committed in the TRS corresponds (i) for the TRS for which the management company has undertaken to deliver a basket of securities to the TRS counterparty, to the market value of the basket of securities committed in the TRS, increased by the market value of the TRS on the accounting date and/or (ii) for the TRS for which the management company does not deliver a basket of securities, to the value of the nominal value of the TRS on the balance sheet date.

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information, in the evolving context of the Covid-19 crisis.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded. However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities in undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Sub-Fund's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Sub-Fund's reference currency are the exchange rates published WM Reuters on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the CIS) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Sub-Fund) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Sub-Fund has exceeded its objectives and are invoiced to the Sub-Fund;
- Transfer commissions invoiced to the Sub-Fund.

For more details on the fees actually charged to the Subfund, refer to the Statistics section of the Key Investor Information Document (KIID)

Fees invoiced to the Sub-Fund	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	Maximum 0.40 % per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commission	Net assets	None

⁽¹⁾ including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Accounting currency

The Compartment accounting is carried out in Euro.

3.5. Receivables and Debts: breakdown by type

Breakdown of items comprising "other receivables" and "other debts," in particular the breakdown of forward foreign exchange transactions by type of transaction (buy/sell).

Receivables	
Future currency exchange operations:	5,533,236.96
Future purchases of currency	-
Total traded amount of future Sales of currencies	-
Other receivables:	
Deferred settlement sales	5,533,236.96
-	-
-	-
-	-
-	-
Other operations	-
Debts	
Future currency exchange operations:	5,586,665.61
Future sales of currencies	-
Total traded amount of future Purchases of currencies	-
Other debts:	
Deferred settlement purchases	5,290,540.03
Account payable	242,696.93
Accrued expenses	53,428.65
-	-
-	-
Other operations	-

3.6. Shareholders' equities

	Subscriptions		Redemptions	
	Number of equities	Amount	Number of equities	Amount
Number of equities issued/redeemed during the fiscal year	8,211,173	192,613,203.18	18,074,628	401,845,992.71
Subscription / redemption commission		-		-
Retrocessions		-		-
Fees paid to the sub-fund		-		-

3.7. Management fees

Operating and management fees (fixed fees) as % of the average net assets	0.40
Performance commissions (variable fees): amount of costs for the year	-
Retrocession of management fees:	
- Total amount of fees retroceded to the Compartment	-
- Breakdown by "target" CIU:	
- CIU 1	-
- CIU 2	-

3.8. Commitments given and received

3.8.1. Description of guarantees received by the Sub-Fund with indication of the capital guarantees	none
3.8.2. Description of the other commitments received and/or given	none

3.9. Other information

3.9.1. Current value of the financial instruments that are the subject of temporary acquisition:	
- Financial instruments sold under forward repurchase agreements	-
- Other temporary operations	-
3.9.2. Current value of the financial instruments comprising security deposits:	
Financial instruments received as guarantees and not included in the balance sheet:	
- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-
Financial estimates given as guarantees and maintained in their original item:	
- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-
3.9.3. Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (Sicav) and CIU managed by these entities:	
- CIU securities	-
- Swaps	1,532,453.05

3.10. Allocation of the profit and loss table *(in the Compartment's accounting currency)*

Advances paid during the fiscal year

Date	Overall amount	Unit amount	Total tax credits	Unit tax credits
-	-	-	-	-

Advances paid on net capital gains and losses of the fiscal year	-	-
Total	83,525,423.67	-54,345,878.67
Allocation		
Distribution	-	-
Non-distributed net capital gains and losses	-	-
Capitalisation	83,525,423.67	-54,345,878.67
Total	83,525,423.67	-54,345,878.67
Information relative to the equities and resulting in a distribution right		
Number of equities	-	-
Unit distribution	-	-

3.12. Table of the profit and loss and other characteristic elements of the Compartment during the last 5 fiscal years

Currency EUR	29.10.2021	30.10.2020	31.10.2019	31.10.2018	31.07.2017
Net assets	167,784,120.11	208,252,408.30	101,813,027.79	252,631,338.57	226,203,514.46
Number of outstanding equities	5,481,510	15,344,965	4,520,317	14,733,982	13,704,755
Net asset value	30.6091	13.5713	22.5234	17.1461	16.5054
Unit distribution on net capital gains and losses (including advances)	-	-	-	-	-
Unit distribution (including advances)	-	-	-	-	-
Unit tax credit transferred to holders (natural persons) ⁽¹⁾	-	-	-	-	-
Unit capitalisation ⁽²⁾	15.49	-3.46	7.71	3.30	3.17

⁽¹⁾ Pursuant to the Fiscal Instruction of 4 March 1993 of the French Tax Department, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits among the outstanding shares on that date.

⁽²⁾ The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of outstanding units. This calculation method is applied from 1 January 2013. Compartment creation date: 19 April 2018.

4 Inventory at 29.10.2021

report

SUB-FUND OF THE MULTI UNITS FRANCE SICAV

Compartments / feeder	LYXOR CAC 40 DAILY (-2X) INVERSE UCITS ETF is a sub-fund of the MULTI UNITS FRANCE Sicav.
Management Company	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
Depository and Custodian	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

Information about investments and management

Classification

The Lyxor CAC 40 Daily (-2x) Inverse UCITS ETF Sub-Fund (the "Sub-Fund") is an strategy index-based UCITS ETF.

Terms of determination and allocation of amounts available for distribution

Acc share class: accumulation of all distributable amounts.

Management objective

The Compartment is a passively managed index-based UCITS.

The Sub-fund's management objective is to expose itself inversely and with daily leverage x2 to the upside and downside to the French equity market by replicating the CAC 40 Double Short GR strategy index denominated in euros (the "Benchmark Index") regardless of its evolution, by minimising as much as possible the tracking error between the performance of the Sub-fund and that of the CAC 40 Double Short GR.

The anticipated level of the ex-post tracking error under normal market conditions is 0.15%.

Benchmark indicator

The Benchmark Index is the CAC40 Double Short GR strategy index, which means that the Benchmark Index's performance includes the gross dividends paid by its underlying equities. The Benchmark Index is a strategy index defined and maintained by Euronext.

The Benchmark Index offers an inverse exposure, readjusted daily, to the upward or downward movement of the CAC40 Gross Total Return index (the "Parent Index"), with leverage effect x2. Thus, in the event of a decline on a trading day of the Parent Index, the net asset value of the Sub-Fund will increase twice on the same trading day and, in the event of a rise in the Parent Index on a trading day, the Sub-Fund's net asset value will fall twice on the same trading day and shareholders will not benefit from the increase in the Parent Index.

Taking a short position on the Parent Index involves borrowing costs that are included in the Benchmark Index calculation methodology. Thus, the performance calculated on a trading day of the Benchmark Index is equal to twice the reverse performance of the Parent Index on that same trading day, accrued interest (EONIA) received daily over 3 times the valuation of the previous closing price of the Benchmark Index less the cost of the short position strategy compared to that trading day on 2 times the basket of the CAC 40 index.

The Parent Index is a free float-weighted index measuring the evolution of the 40 largest stocks listed on the regulated markets of Euronext Paris.

A full description and full methodology for the construction of the Benchmark Index as well as information on the composition and respective weights of the components of the Benchmark Index are available on the website: <http://indices.nyx.com/sites/indices.nyx.com>
The monitored performance is that of the Benchmark Index stock closing prices.

Benchmark Index publication

The Benchmark Indicator is calculated on a daily basis at closing prices using the official closing stock market prices for the constituent stocks. The Benchmark Indicator is also calculated in real time every day that the Benchmark Indicator is published.

The closing price of the Benchmark Index is available on the website: <https://www.euronext.com/en>

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Euronext administrator of the Benchmark Indicator is included in the register of administrators and benchmark indices maintained by ESMA. In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmarks used which describes the measures to be implemented in the event of substantial changes to an index or the cessation of provision of that index.

Revision and composition of the Benchmark Index

The revision of the composition of the Benchmark depends on the revision of the composition of its Parent Index. The revision of the composition of the Parent Index takes place quarterly.

The leverage introduced in the Benchmark Index calculation formula is subject to daily readjustment. The consequences of daily readjustment of leverage are explained in particular in the Reference Indicator and Risk Profile sections of this prospectus.

The exact composition and rules for revising the composition of the Parent Index and, incidentally, those of the Benchmark Index published by Euronext are available on the website: <https://www.euronext.com/en>

The above-mentioned frequency of rebalancing has no effect on costs in the implementation of the investment strategy.

Investment strategy

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Index, the Sub-Fund will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Sub-Fund may notably be securities that make up the Benchmark Index, as well as other European equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

The Sub-Fund will permanently invest a minimum of 75% of its assets in companies that have their registered office in a Member State of the European Union, or in another State party to the Treaty on the European Economic Area that has entered into a tax agreement with France containing an administrative assistance clause with a view to combating fraud or tax evasion. This minimum holding level allows eligibility for the Equity Savings Plan.

As part of the management of its exposure, the Compartment may be exposed up to 20 % of its assets in equities from a single issuing entity. This limit of 20% will be verified, on each rebalancing date of the Benchmark, in accordance with the Benchmark Index calculation method, which limits the exposure of each of the shares of the same issuing entity to 20%, the calculation of which is provided by the Benchmark's sponsor or calculation agent. This 20% limit may be increased to 35% for a single issuing entity, when this proves to be justified by exceptional market conditions, particularly when certain securities are largely dominant and/or in the event of high volatility of a financial instrument or securities linked to an economic sector represented in the Benchmark Index, in particular in the event of a public offering affecting one of the securities making up the Benchmark Index or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Index.

2. Balance sheet assets (excluding integrated derivatives)

The Sub-Fund may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets.

The aforementioned equities will be chosen on the basis of criteria:

Of eligibility, in particular:

- Subordination to the main market indices or to the Benchmark Index;
- Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation);
- Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent).

Of diversification, notably:

- Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code);
- Geographical area;
- Sector.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the future exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the website: www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

The investment in undertaking for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Compartment. As part of these investments, the Sub-Fund may subscribe for units or shares of UCITS managed by the management company or a company to which it is linked. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of the future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Sub-Fund will have recourse to index-linked swaps traded over-the-counter, exchanging the value of the equities in the Sub-Fund's assets (or of any other asset held by the Sub-Fund, where appropriate) against the value of the Benchmark Index (in compliance with the description contained in this section's paragraph 1 above).

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including future financial instruments other than index-linked swaps.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Sub-Fund's portfolio, nor regarding the underlying assets of the future financial instruments.

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

Situations of conflict of interest may arise between the Management Company and Société Générale when Société Générale acts as a counterparty to FFIs. These situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted. Where the Sub-Fund enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Sub-Fund can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10 % of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Sub-Fund is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Sub-Fund's use of forward swap contracts traded over the counter, the Sub-Fund can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depository. As such, the received financial guarantees will be listed amongst the Compartment's assets. Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) they must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;
- (c) they must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) they must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20 % of the Sub-Fund's net asset value;
- (e) the Sub-Fund's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

By way of derogation from the condition set out in (d) (above), the Sub-Fund may receive a basket of financial guarantees with exposure to a given issuer greater than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organisation to which one or more Member States belong; and
- Such financial guarantees consist of at least six different issues of which none exceeds 30% of the Sub-Fund's assets.

In compliance with the aforesaid conditions, the guarantees received by the Sub-Fund can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e)(above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Sub-Fund's management company will apply a margin to the financial guarantees received by the Sub-Fund. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged.

Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European collective investment schemes.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees. In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Compartment may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

Counterparty selection policy

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (financial futures and temporary acquisitions and disposals of securities) on behalf of the Mutual Fund. The selection of counterparties for financial contracts and financial intermediaries is performed rigorously from among the reputable counterparties and intermediaries in the market, on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes various criteria into consideration to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating
- Quantitative criteria based on the CDS LT spread (absolute criteria, volatility and comparison with a reference group, etc.) Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: www.lyxor.com, section "regulatory information".

Risk profile

The shareholder's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

Equity risk

An equity price can vary upwards or downwards, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

Liquidity risk (primary market)

If, when the Sub-Fund (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Sub-Fund could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Sub-Fund's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Index, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Index, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Sub-Fund's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

Counterparty risk

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

Risks related to collateral management

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

Risk related to daily readjustment of leverage

Investors are inversely and twice exposed to fluctuations that affect the price or level of the Parent Index on a daily basis. In particular, any appreciation of the underlying market will be inversely amplified and will imply an even greater depreciation in the net asset value of the Sub-Fund. The daily readjustment of the exposure contained in the formula of the underlying double-short strategy index implies that, over a period greater than one business day, the Sub-fund's performance will not be equal to twice the inverse of the performance of the Parent Index.

For example, if the Parent Index appreciates 10% on a given business day and then depreciates by 5% on the next business day, the ETF will have depreciated in total by 12% after these two days (and before deduction of applicable fees), while the Parent Index has appreciated by 4,5% over the same period.

If the Parent Index depreciates by 5% per day for 2 consecutive business days, it will have depreciated a total of 9,75%, while the ETF will have appreciated (before deduction of applicable fees) by 21% over the same period.

Negative scenario 1	Case where the negative leverage induced is greater than 2 in a scenario of a rise in the Parent Index				
	Parent Index		strategy index		
	day i performance	day i value	day i performance	day i value	leverage induced
		100		100	
day 1	10%	110	-20%	80	x-2
day 2	-5%	104.5	10%	88	x-2
total period	4.50%		-12.00%		x-2.67

Negative scenario 2	Case where the negative leverage induced is less than 2 in a scenario of a decline in the Parent Index				
	Parent Index		strategy index		
	day i performance	day i value	day i performance	day i value	leverage induced
		100		100	
day 1	-10%	90	20%	120	x-2
day 2	6%	95.4	-12%	105.6	x-2
total period	-4.60%		5.60%		x-1.22

In addition, it is possible that over a observation period greater than one day and in the event of high volatility of the Parent Index over that period, the net asset value of the Sub-Fund may fall even though the Parent Index also posted a decline over the same period.

Reverse leverage scenario:	Case where the leverage generated is positive over the period				
	Parent Index		strategy index		
	day i performance	day i value	day i performance	day i value	leverage induced
		100		100	
day 1	5%	105	-10%	90	x-2
day 2	-5%	99.75	10%	99	x-2
total period	-0.25%		-1.00%		x4

Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

Risk related to the use of derivative instruments

In order to achieve its investment objective, the Sub-Fund uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Index. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Index, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Index" are understood to mean the following situations:

- i) The Benchmark Index is considered to be incorrect or not reflective of the market's actual evolution;
- ii) The Benchmark Index is definitively discontinued by its supplier;
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator;
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Index (other than a minor modification such as the adjustment of the underlyings of this Benchmark Index or of the respective weightings between its various components), that cannot be effectively replicated by the Sub-Fund at a reasonable cost.
- v) One or more components of the Benchmark Index becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The components of the Benchmark Index are impacted by transaction fees relating to execution, delivery-settlement or specific tax constraints, without these fees being reflected in the performance of the Benchmark Index.

Securities transaction risk

Should the issuer of a security underlying the Benchmark Index undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Sub-Fund (and/or in a valuation of the ST by the Sub-Fund's counterparty in a future financial instrument), the Sub-Fund's net asset value may be affected, notably should the actual treatment of the ST by the Sub-Fund differ from the ST's treatment in the methodology used by the Benchmark Index.

Sustainability risks

The Sub-Fund does not consider sustainability factors in the investment decision-making process but remains exposed to sustainability risks. The occurrence of such risks could have a negative impact on the value of the investments made by the Sub-Fund. Additional information can be found in the "Sustainability Information" section of the Prospectus.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

Investors who subscribe to this Sub-fund are exposed in the opposite direction with x2 leverage to the upward and downward evolution of the French equity market.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify your investments so as to avoid an exposure only to this Sub-Fund's risks. Investors are therefore recommended to study their individual situations with their usual estate management advisers.

As an arbitrage product, this Sub-Fund may not be suitable for investors wishing to make a medium or long-term investment. U.S. Persons (as defined in the prospectus - see "COMMERCIAL INFORMATION") may not invest in the Sub-Fund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy-92800 Puteaux.
- Creation date of the Multi Units France Sicav: 04 March 2002.
- Compartment approval date by the AMF (Financial Markets Authority): 15 February 2018.
- Compartment creation date: 19 April 2018.

activity report

The fund replicates the performance of the CAC 40 Double Short GR EUR index (Ticker: CACDSH).

Performance trend at the closing date:

Share name	ISIN	Share curren cy	Performance from 28/02/19 to 31/10/19			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor CAC 40 Daily (-2x) Inverse UCITS ETF - Acc	FR0010411884	EUR	-61.06% ^d	-60.73%		-97.59%

⁽¹⁾ "The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs (for example the index rebalancing cost);
- taxation incurred in relation to the methodology used in the Benchmark Index»

The tracking error realised is 0.0494%. The target tracking error over the period was 0.15%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

The fund complies with the PEA eligibility constraints at all times, the details of which are available on request from the management company. Index Linked Swap's counterparty is: Société Générale.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

This Fund is covered by Article 6 of Regulation (EU) 2019/2088 (the "SFDR Regulation"). It does not promote environmental and/or social characteristics and does not aim to invest sustainably

Transparency of environmentally sustainable investments in periodic reports under Regulation (EU) 2020/852

Regulation (EU) 2020/852 on the establishment of a framework for promoting sustainable investments (the "Taxonomy Regulation") sets out the criteria for determining whether an economic activity is environmentally sustainable in the European Union.

According to the Taxonomy Regulation, an activity can be considered "sustainable" if it contributes substantially to one of the 6 environmental objectives set out in the Taxonomy Regulation, including climate change mitigation and adaptation, pollution prevention and reduction, or the protection and restoration of biodiversity and ecosystems.

In addition, in order to be considered to be sustainable, this economic activity must respect the principle of "not to cause significant harm" to one of the other five objectives of the Taxonomy Regulation and must also comply with basic social criteria (alignment to OECD and UN guidelines on business and human rights).

In accordance with article 7 of the Taxonomy Regulation, the management company draws investors' attention to the fact that the underlying investments of this Fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Provision of environmental, social and governance (ESG) information - in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website [Lyxor.com](https://www.lyxor.com) and is revised each

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues

To the basket of assets held by the fund, the fund applies an exclusion of issuers associated with serious and repeated violations of the Principles of the United Nations Global Compact and regulatory requirements related to controversial sectors and products. This list is supplemented by a list of companies to be excluded due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological chemical, nuclear or radiological weapons, etc.).

B) Information used for the analysis implemented on ESG criteria

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (in connection with Lyxor's voting policy).
 - Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
 - Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
 - Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
 - Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
 - In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defence policy.
 - In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products.
- Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Methodology and implementation of this analysis

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Presentation of the integration of analysis results in the investment policy

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the [Lyxor.com](https://www.lyxor.com) website.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor is gradually expanding its ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint
- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.
- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:
- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).
- With regard to carbon risk management:
- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).
- In regards with the portfolio's exposure to issuers offering environmental solutions:
- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs). - In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :
- For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :
- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuers in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

LYXOR CAC 40 DAILY (-2X) INVERSE UCITS ETF (Sub-Fund of the Multi Units France SICAV)

•Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations

•Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Sector	AAA	AA	A	BBB	BB	B	CCC	Not Rated	Leaders (AAA, AA)	46%
Communication Services		2.5%							Average (A, BBB, BB)	54%
Consumer Discretionary	3.1%	4.9%	14.6%	0.4%	2.2%				Industrials	0%
Consumer Staples	8.6%	2.6%	0.6%							
Energy			6.9%							
Financials	4.7%	4.1%	1.1%							
Health Care				7.0%						
Industrials	5.3%	4.0%	5.5%	2.5%	4.1%					
Information Technology		5.8%	0.8%							
Materials			4.3%		1.2%					
Real Estate	0.5%									
Utilities			2.6%							

For each issuer (Corporate & Government), ESG Industry sector classification is provided by MSCI ESG Ratings.
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The ESG score calculated at the portfolio level measures the capacity of the underlying issuers to manage the risks and key opportunities associated with environmental, social and governance factors. The risk scale ranges from 0 (high risk) to 10 (low risk). Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: employment, social relations, health and safety, training, compliance with ILO conventions
- Governance: Board of Directors or Supervisory Board, Audit and Internal Control, Executive Compensation

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source: The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Measures the portfolio's exposure to companies experiencing controversies relating to their compliance with international standards as a function of their degree of severity:

Red Flag	0%
Orange Flag	18%
Yellow Flag	61%
Green Flag	21%

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: indicates that the company is not involved in any major controversies
- None: Sovereign and/or Company not covered

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2021

0	0	0	Scope 1 reported (vs estimated)	0%
			Scope 2 reported (vs estimated)	0%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GreenHouse Gas Protocol (GHG Protocol) was launched in 2001 by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- ☞ Scope 1: direct emissions resulting from the burning of fossil fuel resources owned or controlled by the company.
- ☞ Scope 2: indirect emissions related to the purchase or production of electricity.
- ☞ Scope 3: other indirect emissions from the extended supply chain to the transport of goods and persons.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- ☞ Carbon emissions financed (tons CO2e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- ☞ Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- ☞ Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD)*. Moreover only the use of the Enterprise Value enables the analysis of a portfolio invested in both equities and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest - total debt.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage or MWh generated from fossil fuels or the portion of the company's revenues earned from fossil fuels or the portion of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon:	
Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gas	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio. MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of : \$ 1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

LYXOR CAC 40 DAILY (-2X) INVERSE UCITS ETF (Sub-Fund of the Multi Units France SICAV)

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges - this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	0.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	0.0%	0.0%	0.0%
Some efforts	0.0%	0.0%	0.0%
Limited efforts/Information	0.0%	0.0%	0.0%
No effort/No evidence	0.0%	0.0%	0.0%

Low Carbon Transition Score

The Low Carbon Transition Score⁽¹⁾ uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

•Asset stranding: risk of holding assets which may become stranded

•Operational Transition: risk of increase in operational costs

•Product Transition: risk of a decrease in demand for high-carbon products and services

•Neutral: low exposure to transition risks

•Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	0.0
Low carbon transition management Score	0.0
Operational Transition	0.0%
Product Transition	0.0%
Neutral	0.0%
Solutions	0.0%

Energy Mix of energy producers within the portfolio

A company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The issuer data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source: MSCI ESG Research

Share of issuers in terms of power generation in portfolio	9.5%
--	------

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	Liquid Fuel	Natural Gas	Nuclear	Renewables
	Thermal coal			

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. Those issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	0%
20-49.9%	0%
50-100%	0%

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.	SeaLevelRise	4%
The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.	Coldwave	32%
The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.	Flood	4%
	Heatwave	8%
	Hurricane	2%
	Water Stress	42%
	Wildfire	8%

To allow comparison with a benchmark, we have rebased to 100

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.). Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	2.5%	85.9%	11.5%	87.9%	7.2%	4.8%
Carbon Emissions	2.9%	47.6%	49.5%	78.2%	12.0%	9.9%
Electronic Waste	5.0%	5.4%	89.7%	99.5%		0.5%
Opportunities in Green Building	3.1%	55.3%	41.6%	99.5%	0.1%	0.4%
Opp's in Renewable Energy	7.2%	76.6%	16.2%	97.4%		2.6%
Packaging Material & Waste	10.0%	47.7%	42.3%	79.4%		20.6%
Water Stress	6.7%	90.4%	3.0%	33.7%	45.9%	20.3%
Toxic Emissions & Waste				38.7%	40.1%	21.2%

Temperature - Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

- A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,	Alignment Degree	null
- An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.	Coverage	97.9%
Each approach allocates a carbon budget from global to company level over a chosen time horizon.	Alignment Trajectory in % Weight	
Alignment is measured using a temperature indicator.	<1.5°C	6.7%
For more information on the methodology applied by LYXOR:	1.5-2°C	28.0%

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des marchés financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 ("AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 ("UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors. The Lyxor International Asset Management compensation policy notably ensures appropriate risk management and adherence to compliance on the part of its employees.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No "carried interest" was paid during the financial year.

Lyxor's best selection and execution policy

Information on best selection and execution policies is available at: www.lyxor.com.

Transparency of securities financing operations and reuse of financial instruments SFTR regulation

(Accounting currency of the CIU)

1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information, in the evolving context of the Covid-19 crisis.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities in undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Sub-Fund's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Sub-Fund's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Sub-Fund's reference currency are the exchange rates published the fixing WM Reuters on the same day of the Sub-Fund's net asset value date.

Posting method for the trading fees

The chosen method is that of excluded fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the CIS) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Sub-fund has exceeded its objectives and are invoiced to the Sub-fund;
- Transfer commissions invoiced to the Sub-Fund;

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Sub-Fund	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company ⁽¹⁾	Net assets	Maximum 0.60% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commission	Net assets	None

⁽¹⁾ including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

Accounting currency

The Subfund accounting is carried out in USD.

Indication of accountancy changes declared to each of the shareholders individually

- - Occurred change: None.
- - Future change: None.

Other changes declared to each of the shareholders individually *(Not certified by the auditor)*

- - Occurred change: None.
- - Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Acc share class: accumulation of all distributable amounts.

The Sub-Fund does not benefit in any way from sponsorship, support or promotion and is not sold by Euronext N.V or its subsidiaries (hereinafter referred to as "Euronext") (collectively referred to as the "Holders").

The Holders make no warranties or undertakings, whether expressly or implicitly, or as to the results to be obtained by the use of the CAC 40 DOUBLE SHORT GR INDEX Index (hereinafter the "Index") and/or the level at which the said Index is located at any time and on a given day or any other type. The Index is calculated by or on behalf of Euronext. The Holders shall not (whether as a result of negligence or otherwise) be liable for any error affecting the Index in respect of anyone and they shall not be obliged to inform any person of any error affecting the Index.

activity
report

SUB-FUND OF THE MULTI UNITS FRANCE SICAV

Compartments / feeder	LYXOR CAC 40 DAILY (-1X) INVERSE UCITS ETF is a sub-fund of the MULTI UNITS FRANCE Sicav.
Management Company	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
Depository and Custodian	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

Information about investments and management

Classification:

The Lyxor CAC 40 Daily (-1x) Inverse UCITS ETF sub-fund (the “Sub-Fund”) is an index UCITS ETF.

Terms of determination and allocation of amounts available for distribution:

Acc share class: accumulation of all distributable amounts.

Management objective:

The Compartment is a passively managed index-based UCITS.

The Sub-Fund's objective is to gain exposure, both upwards and downwards, to the French equity market, by replicating the benchmark index (gross dividends reinvested) (the “Benchmark”), while minimising as much as possible the tracking error between the performance of the Sub-Fund and that of the strategy index CAC 40®.

The anticipated level of the ex-post tracking error under normal market conditions is 0.08%.

Benchmark indicator

The benchmark index is the CAC 40® Short strategy index (gross dividends reinvested, meaning that the Benchmark's performance includes the gross dividends detached from the shares that compose it), denominated in euros.

The Benchmark Index offers daily inverse exposure to the CAC 40® dividends reinvested (the “Parent Index”). Therefore, in the event of a decline in the Parent Index over one day, the net asset value of the Sub-fund will increase on the same day and, in the event of a rise in the Parent Index over one day, the net asset value of the Sub-fund will fall on the same day, and unitholders will not benefit from the increase of the Parent Index.

The Parent Index is the main benchmark of the Paris Stock Exchange. It measures the trend of 40 companies chosen for their large market capitalisation, their sector representation and the high volume of transactions in their shares.

The Benchmark's performance is equal to the inverted daily performance of the Parent Index, compounded by the interest received daily on 2 times the valuation of the closing price of the Benchmark (less the cost of short selling over one day on the basket of the Parent Index).

It is therefore an index representative of a short sale strategy on the Parent Index with daily rebalancing. The Benchmark is an equity index calculated, maintained and published by Euronext.

The monitored performance is that of the Benchmark Indicator closing prices.

A full description and full methodology for the construction of the Benchmark Index as well as information on the composition and respective weights of the components of the Benchmark Index are available on the website: <https://www.euronext.com/en>

Benchmark Index publication

The Benchmark Index is calculated on a daily basis at closing prices using the official closing stock market prices for the constituent stocks.

The closing price of the Benchmark Index is available on the website: <https://www.euronext.com/en>

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Euronext administrator of the Benchmark Indicator is included in the register of administrators and benchmark indices maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmarks used which describes the measures to be implemented in the event of substantial changes to an index or the cessation of provision of that index.

Revision and composition of the Benchmark Index

The composition of the Benchmark is not revised because it depends on the revision of the Parent Index. The Parent Index is revised quarterly.

The exact composition and revision rules of the Benchmark published by Euronext are available on the website: <https://www.euronext.com/en>

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Index, the Sub-Fund will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Sub-Fund may notably be securities that make up the Parent Index, as well as other international equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Sub-Fund's portfolio and (ii) the market value of the swap transaction entered into by the Sub-Fund is available on the page dedicated to the Sub-Fund on the website: www.lyxoretf.com

The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

The Sub-Fund will permanently invest a minimum of 75% of its assets in companies that have their registered office in a Member State of the European Union, or in another State party to the Treaty on the European Economic Area that has entered into a tax agreement with France containing an administrative assistance clause with a view to combating fraud or tax evasion. This minimum holding level allows eligibility for the Equity Savings Plan.

As part of the management of its exposure, the Compartment may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit may be increased to 35% for a single issuing entity, when this proves to be justified by exceptional market conditions, particularly when certain securities are largely dominant and/or in the event of high volatility of a financial instrument or securities linked to an economic sector represented in the Benchmark Index,

in particular in the event of a public offering affecting one of the securities making up the Benchmark Index or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Index.

In this case, the manager intends to use mainly the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Sub-Fund may hold, in compliance with the ratios provided for in the rules, international equities (from all economic sectors, listed on all markets), including small cap markets.

The aforementioned equities will be chosen on the basis of criteria

Of eligibility, in particular:

- Subordination to the main market indices or to the Benchmark Indicator;
- Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation);
- Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent).

Of diversification, notably:

- Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code);
- Geographical area;
- Sector.

For more information on the abovementioned eligibility and diversification criteria, investors can visit the website: www.lyxoret.f.com
Investment in undertakings for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the net assets.

As part of these investments, the Sub-Fund may subscribe for units or shares of UCITS managed by the Management Company or a company to which it is related. The manager will not invest in units or shares of AIFs or other investment funds incorporated under a foreign law.

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of the future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Sub-fund will have recourse to index-linked swaps traded over-the-counter, exchanging the value of the equities in the Sub-Fund's assets against the value of the Benchmark Index (in compliance with the description contained in this section's paragraph 1 above).

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including future financial instruments other than index-linked swaps.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Sub-Fund's portfolio, nor regarding the underlying assets of the future financial instruments. When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs and its ability to achieve its management objective may also be negatively impacted. Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of temporary purchases and sales of securities, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Sub-Fund in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depository. As such, the received financial guarantees will be listed amongst the Compartment's assets. In the event of default by the counterparty, the Compartment may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt towards the Compartment as part of the guaranteed transaction.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20 % of the Compartment's net asset value;
- (e) The Sub-Fund's Management Company must be able to enforce this collateral in full and at any time without having to consult with the counterparty or obtain its approval.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- Such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State or (iv) a public international organization to which one or more Member States belong; and
- Such financial guarantees consist of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Subfund can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e)(above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged. Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) Deposited with an enabled institution;
- (ii) Invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;

(iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Compartment may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

Counterparty selection policy

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Compartment. The selection of counterparties for financial contracts and financial intermediaries is performed rigorously from among the reputable counterparties and intermediaries in the market, on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes various criteria into consideration to define the initial universe of authorised counterparties:

-- Qualitative criteria based on the Standard and Poors LT rating;

-- Quantitative criteria based on the LT CDS spread (absolute criteria, volatility and comparison with a reference group, etc.).

Any new counterparty must then be validated by the Counterparty Committee, which is composed of the heads of Management, Middle Office, compliance and internal control officer and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: www.lyxor.com, section "regulatory information".

Risk profile

The Sub-Fund will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

Equity risk

Share prices can vary upwards or downwards, and notably reflect the changing risks related to the issuing company or the economic situation of the

corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

Liquidity risk (primary market)

If, when the Sub-Fund (or one of its counterparties to a Financial Derivative Instrument ("FDI") adjusts its exposure, the markets corresponding to this exposure are limited, closed or subject to significant buy/sell spreads, the value and/or liquidity of the Sub-Fund could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Index, this can also have consequences on the processes related to the subscription, conversion or redemption of units.

Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Index, and/or;
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Index, and/or;
- iii) The impossibility for a given place of listing to obtain or calculate the Sub-Fund's indicative net asset value, and/or;
- iv) A market maker's violation of the rules applicable to this marketplace, and/or;
- v) A failure of this marketplace's IT or electronic systems.

Counterparty risk

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

Risks related to collateral management

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

Risk of daily readjustment of leverage

Investors are inversely exposed to fluctuations that affect the price or level of the Parent Index on a daily basis. The daily readjustment contained in the formula of the underlying short strategy index implies that, over a period greater than one business day, the Sub-fund's performance will not be equal to the inverse of the performance of the Parent Index. Investors are underexposed to volatility.

For example, if the Parent Index appreciates by 10% on a given business day, then depreciates by 5% on the next business day, the ETF will depreciate by 5.5% in total after these two days (and before deduction of applicable fees), while the Parent Index will have gained 4.5% over the same period.

If the Parent Index depreciates by 5% per day for 2 consecutive business days, it will have depreciated in total 9.75%, while the ETF will have appreciated (before deduction of applicable fees) by 10.25% over the same period.

Negative scenario 1

Case where the negative leverage induced is greater than 1 in a scenario of a rise in the Parent Index

	Parent Index		strategy index		
	day i performance	day i value	day i performance	day i value	leverage induced
day 1		100		100	x-1
	10%	110	-10%	90	
day 2	-8%	101.2	8%	97.2	x-1
total period	1.20%		-2.80%		x-2.33

Negative scenario 2

Case where the negative leverage induced is less than 1 in a scenario of a decline in the Parent Index

	Parent Index		strategy index		
	day i performance	day i value	day i performance	day i value	leverage induced
day 1		100		100	x-1
	-10%	90	10%	110	
day 2	6%	95.4	-6%	103.4	x-1
total period	-4.60%		3.40%		x-0.74

In addition, it is possible that over a observation period greater than one day and in the event of high volatility of the Parent Index over that period, the net asset value of the Sub-Fund may fall even though the Parent Index also posted a decline over the same period.

Inverted leverage scenario

Case where the leverage generated is positive over the period

	Parent Index		strategy index		
	day i performance	day i value	day i performance	day i value	leverage induced
day 1		100		100	x-1
	5%	105	-5%	95	
day 2	-5%	99.75	5%	99.75	x-1
total period	-0.25%		-0.25%		x1

Risk that the management objective may only be partially achieved

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

Risk related to the use of derivative instruments

In order to achieve its investment objective, the Sub-Fund uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Index. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Sub-Fund's manager will decide on measures to be adopted, which can have an impact on the Sub-Fund's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Index is considered to be incorrect or not reflective of the market's actual evolution;
- ii) The Benchmark Index is definitively discontinued by its supplier;
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator;
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Index (other than a minor modification such as the adjustment of the underlyings of the Index or of the respective weightings between its various components) that cannot be effectively replicated by the Sub-fund at a reasonable cost;
- v) One or more Benchmark components become illiquid because they are no longer traded on a regulated market or because their over-the-counter trading (e.g. bonds) is disrupted;
- vi) The components of the Benchmark Index are impacted by transaction fees relating to execution, delivery-settlement or specific tax constraints, without these fees being reflected in the performance of the Benchmark Index.

Securities transaction risk

Should the issuer of a security underlying the Benchmark Index undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Sub-Fund (and/or in a valuation of the ST by the Sub-Fund's counterparty in a future financial instrument), the Sub-Fund's net asset value may be affected, notably should the actual treatment of the ST by the Sub-Fund differ from the ST's treatment in the methodology used by the Benchmark Index.

- Sustainability risks

The Sub-Fund does not incorporate sustainability factors in the investment decision process, but is exposed to risks. The occurrence of such risks could have a negative impact on the value of the investments made by the Sub-Fund. Additional information is available in the "Sustainability Information" section of the Prospectus.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

Investors who subscribe to this Sub-Fund wish to gain inverse exposure, both upwards and downwards, to the eurozone equity markets.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

As an arbitrage product, this Sub-Fund may not be suitable for investors wishing to make a medium or long-term investment.

"U.S. Persons" (as defined below - see "COMMERCIAL INFORMATION") may not invest in the Sub-Fund.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy-92800 Puteaux.*
- *Creation date of the Multi Units France Sicav: 04 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 15 February 2018.*
- *Compartment creation date: 19 April 2018.*

activity report

The fund replicates the performance of the CAC40 Short Index EUR (Ticker:CACSH).

Performance trend at the closing date:

Share name	ISIN	Share curren cy	Performance from 28/02/19 to 31/10/19			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor CAC 40 Daily (-1x) Inverse UCITS ETF - Acc	FR0010591362	EUR	-37.00% ⁽¹⁾	-36.66%		-79.71%

⁽¹⁾ "The difference between the yearly performance of the fund and that of its Benchmark Index is due to:

- the management and the administrative fees;
- index replication costs (for example the index rebalancing cost);
- taxation incurred in relation to the methodology used in the Benchmark Index»

The tracking error realised is 0.0187%. The target tracking error over the period was 0.08%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams. This difference is considered insignificant.

Index Linked Swap's counterparty is: Société Générale.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction.

Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

The figures referring to past performance relate to past periods and are not a reliable indicator of future results.

Regulatory information

Transfer commission (not audited by the auditor)

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

This Fund is covered by Article 6 of Regulation (EU) 2019/2088 (the "SFDR Regulation"). It does not promote environmental and/or social characteristics and does not aim to invest sustainably

Transparency of environmentally sustainable investments in periodic reports under Regulation (EU) 2020/852

Regulation (EU) 2020/852 on the establishment of a framework for promoting sustainable investments (the "Taxonomy Regulation") sets out the criteria for determining whether an economic activity is environmentally sustainable in the European Union.

According to the Taxonomy Regulation, an activity can be considered "sustainable" if it contributes substantially to one of the 6 environmental objectives set out in the Taxonomy Regulation, including climate change mitigation and adaptation, pollution prevention and reduction, or the protection and restoration of biodiversity and ecosystems.

In addition, in order to be considered sustainable, this economic activity must respect the principle of "not causing significant harm" to one of the other five objectives of the Taxonomy Regulation and must also comply with basic social criteria (alignment with OECD and UN guidelines on business and human rights).

In accordance with article 7 of the Taxonomy Regulation, the management company draws investors' attention to the fact that the underlying investments of this Fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Provision of environmental, social and governance (ESG) information - in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organisation to integrate Environmental, Social, and Governance ("ESG") issues into our investment solutions. Lyxor's SRI Policy is available under the website [Lyxor.com](https://www.lyxor.com) and is revised each

Integration of sustainability risks by Lyxor in its investment decision-making processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

(a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

To the basket of assets held by the fund, the fund applies an exclusion of issuers associated with serious and repeated violations of the Principles of the United Nations Global Compact and regulatory requirements related to controversial sectors and products. This list is supplemented by a list of companies to be excluded due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological chemical, nuclear or radiological weapons, etc.).

b) Information used for the analysis implemented on ESG criteria

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (in connection with Lyxor's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets (PME/ETI).
- In the global context of the Societe Generale Group's Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defence policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution.

The post trade control is on NAV frequency basis.

Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the [Lyxor.com](https://www.lyxor.com) website.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor is gradually expanding its ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:
 - Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.
 - In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:
 - The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
 - Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
 - A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).
 - With regard to carbon risk management:
 - Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).
 - In regards with the portfolio's exposure to issuers offering environmental solutions :
 - Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).
 - In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :
- For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :
- the Germanwatch climate performance index score
 - the environment performance score
 - the Environmental Vulnerability index

For corporate issuers, based on the MSCI ESG raw research data, the assessment of risk exposure for a company may be comprised of two different areas of analysis, depending on the key issue:

LYXOR CAC 40 DAILY (-1X) INVERSE UCITS ETF (Sub-Fund of the Multi Units France SICAV)

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations

- Geographic Segment Risk Exposure - analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund

LYXOR CAC 40 DAILY (-1X) INVERSE UCITS ETF
(Sub-Fund of the Multi Units France SICAV)

Portfolio ESG Rating as of October 2021

For each issuer (Corporate & Government), ESG Industry sector classification is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The ESG score calculated at the portfolio level measures the capacity of the underlying issuers to manage the risks and key opportunities associated with environmental, social and governance factors. The risk scale ranges from 0 (high risk) to 10 (low risk). Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For sectors and themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For companies, exposure to measures and management of ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: employment, social relations, health and safety, training, compliance with ILO conventions
- Governance: Board of Directors or Supervisory Board, Audit and Internal Control, Executive Compensation

For governments, exposure to measures and management of ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source: The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Measures the portfolio's exposure to companies experiencing controversies relating to their compliance with international standards as a function of their degree of severity:

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: indicates that the company is not involved in any major controversies
- None: Sovereign and/or Companies not covered

Red Flag 0%
Orange Flag 18%
Yellow Flag 61%
Green Flag 21%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2021

Carbon Emissions (tons CO2e/\$M invested)	Carbon Intensity (tons CO2e/\$M sales)	Weighted Average Carbon Intensity (tons CO2e/\$M sales)	Portfolio rated by weight	
0	0	0	Scope 1 reported (vs estimated)	100%
			Scope 2 reported (vs estimated)	0%
			Scope 2 reported (vs estimated)	0%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GreenHouse Gas Protocol (GHG Protocol) was launched in 2001 by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on reported data and/or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: direct emissions resulting from the burning of fossil fuel resources owned or controlled by the company.

- Scope 2: indirect emissions related to the purchase or production of electricity.

- Scope 3: other indirect emissions from the extended supply chain to the transport of goods and persons.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested

- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales

- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions standardised by revenue), and these intensities are weighted by the weight of the companies in the portfolio.

These measures do not take into account all emissions induced by the company particularly, those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalisation as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions and fossil fuel reserves induced by its investments. Lyxor has decided to use the enterprise value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of enterprise value as the most recent available fiscal year-end enterprise value including cash (USD)*. Moreover only the use of the enterprise value enables the analysis of a portfolio invested in both equity and bond.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest - total debt.

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage or MWh generated from fossil fuels or the portion of the company's revenues earned from fossil fuels or the portion of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon:

Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gas	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of : \$ 1,000,000

Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilised.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum of high-impact fossil fuel reserves	0.0
Other	0.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorise them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Management of Energy Consumption and Operational Efficiency	Target Effort
Aggressive efforts	0.0%	0.0%	0.0%
Some efforts	0.0%	0.0%	0.0%
Limited efforts/Information	0.0%	0.0%	0.0%
No effort/No evidence	0.0%	0.0%	0.0%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

•Asset stranding: risk of holding assets which may become stranded

•Operational Transition: risk of increase in operational costs

•Product Transition: risk of a decrease in demand for high-carbon products and services •Neutral: low exposure to transition risks

•Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low- carbon product.

(1) Metric developed by MSCI

Low carbon transition score	0.0
Low carbon transition management Score	0.0
Operational Transition	0.0%
Product Transition	0.0%
Neutral	0.0%
Solutions	0.0%

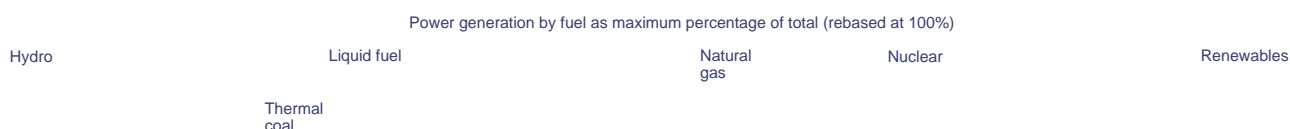

Energy Mix of energy producers within the portfolio

A company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The issuer data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source: MSCI ESG Research

Share of issuers in terms of power generation in portfolio	9.5%
--	------

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. Those issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuers with revenue dedicated to environmental solutions between:	
0-19.9%	0%
20-49.9%	0%
50-100%	0%

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	0.0%	Energy Efficiency	0.0%	Green Building	0.0%
Pollution Prevention	0.0%	Sustainable Water	0.0%	Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	0.0%	Energy Efficiency	0.0%	Green Building	0.0%

LYXOR CAC 40 DAILY (-1X) INVERSE UCITS ETF (Sub-Fund of the Multi Units France SICAV)

Pollution Prevention 0.0% Sustainable Water 0.0% Sustainable Agriculture 0.0%

Estimated EU Taxonomy Alignment

The maximum percentage of revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the "Do No Significant Harm" and "Minimum Social Safeguards criteria" of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

% estimated EU Taxo 0.0%

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	4%
Coldwave	32%
Flood	4%
Heatwave	8%
Hurricane	2%
Water Stress	42%
Wildfire	8%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.).

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised of two different areas of analysis, depending on the key issue:

- Business Segment Risk Exposure - analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure - analyses the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	2.5%	85.9%	11.5%	87.9%	7.2%	4.8%
Carbon Emissions	2.9%	47.6%	49.5%	78.2%	12.0%	9.9%

Temperature - Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

- A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,
- An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates a carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Level of alignment	null
Hedging	97.9%
Alignment Trajectory in % Weight	
<1.5°C	6.7%
1.5-2°C	28.0%
2-3°C	27.4%
>3°C	37.9%

Lyxor International Asset Management (LIAM) is a portfolio management company authorised by the Autorité des marchés financiers in compliance with provisions of the UCITS (2009/65/EC) and AIFM (2011/61/EU) Directives.

Compensation of Lyxor International Asset Management's staff (2020 fiscal year)

1.1 Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 ("AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 ("UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management compensation policy notably ensures appropriate risk management and adherence to compliance on the part of its employees.

The details of the remuneration policy are available on the following Internet site: <https://www.lyxor.com/politiques>

1.2 Breakdown of fixed and variable compensation

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	146	136.69	12,288,307	5,856,504	18,144,812

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregate Remuneration (Fixed and Variable) (EUR)
Identified personnel*	43	39.66	6,780,917
Of which managers	37	35.56	5,049,717
Of which other identified persons	6	4.10	1,731,200

(*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No "carried interest" was paid during the financial year.

Lyxor's best selection and execution policy

Transparency of securities financing operations and reuse of financial instruments SFTR regulation

(Accounting currency of the CIU)

1. General information.

1.1. Amount of securities and raw materials loaned in proportion with the total assets that can be loaned, defined as excluding the cash and cash equivalents.

Securities lending	
% of assets that can be loaned	-

1.2. Amount of the assets committed to each type of securities financing operation and total return swap, expressed in absolute value (in the currency of the collective investment undertaking) and in proportion with the assets under management of the collective investment undertaking.

	Securities lending ⁽¹⁾	Securities borrowing ⁽²⁾	Repo operations ⁽³⁾	Reverse repo operations ⁽⁴⁾	TRS ⁽⁵⁾
Absolute value	-	-	-	-	71,132,219.94
% of assets under management	-	-	-	-	100.00

⁽¹⁾ The amount of assets engaged in securities lending transactions corresponds to the market value of the securities lent at the balance sheet date.

⁽²⁾ The amount of assets engaged in securities borrowing transactions corresponds to the market value of the guarantees (cash or securities) delivered by the fund as part of the securities borrowing on the balance sheet date.

⁽³⁾ The amount of assets engaged in repurchase transactions corresponds to the market value of the securities repurchased on the balance sheet date.

⁽⁴⁾ The amount of assets engaged in reverse repurchase transactions corresponds to the market value of securities purchased under repurchase agreements at the balance sheet date.

⁽⁵⁾ The amount of assets committed in the TRS corresponds (i) for the TRS for which the management company has undertaken to deliver a basket of securities to the TRS counterparty, to the market value of the basket of securities committed in the TRS, increased by the market value of the TRS on the accounting date and/or (ii) for the TRS for which the management company does not deliver a basket of securities, to the value of the nominal value of the TRS on the balance sheet date.

2. Concentration data

2.1. The ten biggest issuers of guarantees for all types of securities financing operations and total return swaps (breakdown of the volumes of guarantees and raw materials received, with the names of the issuers).

1	Name	-
	Amount	-

2.2. The ten main counterparties for each type of securities financing operation and total return swap separately (name of the counterparty and gross volume of operations in progress).

		Securities lending	Securities borrowing	Repo operations	Reverse repo operations	TRS
1	Name	-	-	-	-	SOCIÉTÉ GÉNÉRALE
	Amount	-	-	-	-	71,132,219.94

3. Aggregated operation data for each type of securities financing operation and total return swap separately, broken down according to the following categories.

3.1. Type and quality of the guarantees.

	Securities lending	Securities borrowing	Repo operations	Reverse repo operations	TRS
Cash	-	-	-	-	-
Security	-	-	-	-	-

LIAM ensures a good diversification of the securities received as collateral and also seeks to enhance the value of its guarantees by applying valuation discounts to the securities received.

3.2. Guarantee maturity.

	Securities lending	Securities borrowing	Repo operations	Reverse repo operations	TRS
Under 1 day	-	-	-	-	-
1 day to 1 week	-	-	-	-	-
1 week to 1 month	-	-	-	-	-
1 to 3 months	-	-	-	-	-
3 months to 1 year	-	-	-	-	-
More than 1 year	-	-	-	-	-
Open	-	-	-	-	-

3.3. Guarantee currency.

		Securities lending	Securities borrowing	Repo operations	Reverse repo operations	TRS
1	Currency	-	-	-	-	-
	Amount	-	-	-	-	-

3.4. Maturity of the securities financing operations and total return swaps.

	Securities lending	Securities borrowing	Repo operations	Reverse repo operations	TRS
Under 1 day	-	-	-	-	-
1 day to 1 week	-	-	-	-	-
1 week to 1 month	-	-	-	-	-
1 to 3 months	-	-	-	-	-
3 months to 1 year	-	-	-	-	71,132,219.94
More than 1 year	-	-	-	-	-
Open	-	-	-	-	-

3.5. Countries where the counterparties are established.

		Securities lending	Securities borrowing	Repo operations	Reverse repo operations	TRS
1	Country	-	-	-	-	FRANCE
	Amount	-	-	-	-	71,132,219.94

3.6. Settlement and clearing.

	Securities lending	Securities borrowing	Repo operations	Reverse repo operations	TRS
Tripartite	-	-	-	-	-
Central counterparty	-	-	-	-	-
Bilateral	-	-	-	-	71,132,219.94

4. Data on the reuse of guarantees (collateral).

This fund is not collateralised.

5. Retention of the guarantees provided by the collective investment undertaking in connection with securities financing operations and total return swaps.

Number of custodians		-
1	Name	-
	Amount	-

6. Retention of the guarantees provided by the collective investment undertaking in connection with securities financing operations and total return swaps.

Not applicable.

7. Data on the earnings and costs for each type of securities financing operation and total return swap.

The CIU will use over-the-counter Total Return Swaps.

Revenues and costs related to total return swaps are included in the valuation of these contracts.

effective portfolio management techniques and derivatives

a) Exposure obtained through effective portfolio management techniques and derivative financial instruments

• Exposure obtained through effective management techniques: -

- Securities lending:	-
- Securities borrowing:	-
- Reverse repurchase agreements:	-
- Repurchase agreements:	-

Underlying exposure achieved through derivative financial instruments:

71,132,219.94

- Forward exchange contracts:	-
- Futures:	-
- Options:	-
- Swaps:	71,132,219.94

b) Identity of counterparty(ies) to effective portfolio management techniques and derivative financial instruments
