- The risk category has been determined on the basis of historical data and may not be a reliable indication of the future risk profile. The risk and reward category shown does not necessarily remain unchanged and the categorisation of the share class may shift over time.

- Repayment of the initial investment is not guaranteed.

Which materially relevant risks are not adequately captured by the synthetic indicator?

- Derivative risk: derivative financial instruments can rise and fall at a greater rate than equities and debt securities. Losses may be greater than the initial investment. This risk is minimised by holding a diverse selection of non-derivative investments.
