##### Investment objective:

The investment objective of Loomis Sayles Institutional High Income Fund (the "Fund") is high total investment return through a combination of income and capital appreciation.

##### Investment policy:

The Fund invests primarily in fixed income securities of corporate issuers worldwide.

The Fund invests at least 51% of its total assets in bonds and other related fixed income securities including Regulation S Securities (securities initially offered only outside the US and only to non US persons. The initial offering is exempt from US securities laws, including US registration requirements), Rule 144A securities (US private offered securities) and convertible securities. The Fund may invest in closed-end Real Estate Investment Trusts ("REITS"). The Fund may also invest any portion of its assets in fixed income securities rated below investment grade.

The Fund may invest up to 49% of its total assets in shortterm debt securities, money market instruments or time deposit, or other securities than those described above.

The Fund may not invest more than 20% of its total assets in preferred stocks and no more than 10% of its total assets in equities and other equity-type securities and no more than 10% in bank loans that qualify as money market instruments.

#### Risk and Reward Profile

The Fund is ranked 4 on the synthetic risk and reward indicator scale, which is based on historical data. Due to its exposure to fixed income markets, the Fund may experience important volatility, as expressed by its rank on the above scale. Historical data may not be a reliable indication for the future. The risk category shown is not guaranteed and may shift over time. There is no capital guarantee or protection on the value of the Fund. The lowest category does not mean "risk free".

##### Special Risk Considerations

**Below Investment Grade securities risk:** If funds invest in higher risk securities issued by company, financial or sovereign issuers, funds have greater exposure to and are at a greater risk that this issuer will not be able to reimburse debt holders (principal and interest payment). In addition, if after acquisition the perceived risk of failure increases, the value of such securities is likely to decrease.

Funds may also not be able to sell below investment grade securities quickly and easily. Finally, such securities may be subject to important price fluctuation.

**Geographic concentration risk:** Funds that concentrate investments in certain geographic regions may suffer losses, particularly when the economies of those regions experience difficulties or when investing in those regions become less attractive. Moreover, the markets in which the funds' invest may be significantly affected by adverse political, economic or regulatory developments.

**Changing Interest rate risk:** The value of fixed income securities held by a fund will rise or fall inversely with changes in interest rates. When interest rates decline, the market value of fixed income securities tends to increase. Interest rates typically vary from one country to the next for reasons including rapid fluctuations of a country's money supply, changes in demand by businesses and consumers to borrow money, and actual or anticipated changes in the rate of inflation.

Please refer to the section entitled "Specific Risks" of the Prospectus for additional details on risks.
