Risk and reward profile

1	2	3	4	5	6	7
---	---	---	---	---	---	---

- As any investment is risky by nature, the return (performance) thereof is potential only. The risk and reward profile of your investment is reflected by a synthetic indicator which ranks the fund over a risk/return scale from the lowest (1) to the highest (7) risk category.
- The computation of this risk/reward profile is based on the portfolio's net asset value fluctuations (volatility) recorded over the past 5 years (or on simulations based on an appropriate benchmark for funds or share classes of less than 5 years). It gives an indication of the fund's potential performance and of your capital risk exposure, but it does not guarantee that the risk/reward profile currently published will remain unchanged.
- Historical data, such as those used in calculating the synthetic indicator, may not be a reliable indication of the future risk profile of the fund.
- The lowest risk/return category (level 1) does not mean a risk-free investment.
- The risk/return profile mentioned herein is essentially due the presence of shares in the portfolio.
- The capital invested in this fund is neither guaranteed nor protected. You may therefore lose all or part of your investment.

Certain risks are not (or not adequately) reflected in the risk and reward profile mentioned herein. Amongst those risks, the following could have a material impact on the risk and reward profile of the fund:

- Concentration risk: since the fund's portfolio mainly consists of equity securities issued by North-American companies, it is likely to be more specifically exposed to the economical development of North America.
- Risks linked to derivatives: the derivatives in the fund's portfolio are likely to be more volatile than the underlying assets thereof.
