## Lazard Emerging Markets Total Return Debt Fund B Acc USD

Lazard Emerging Markets Total Return Debt Fund is a sub-fund of Lazard Global Investment Funds Public Limited Company (the "UCITS")

### Objectives and Investment Policy

Lazard Emerging Markets Total Return Debt Fund (the "Fund") aims to maximise total return from a combination of income and capital growth.

The Fund may invest in investment grade, non-investment grade and unrated debt securities (i.e. bonds), issued by corporates, sovereigns governments, government agencies and quasi-governmental bodies that are based in or have close economic ties to emerging market countries. The securities may be denominated in local emerging markets currencies or may have emerging market collateral posted as security for debt. The Fund may hold a significant portion of its assets in cash and in investments that are deemed to be equivalent to cash.

The Fund may invest up to 10% of its value in units or shares in other investment funds (including exchange traded funds and other sub-funds of the UCITS).

The Fund may use derivatives (which are financial contracts whose value is linked to the price of an underlying investment). As a result of its use of derivatives, the Fund may be

'geared' or 'leveraged' (which can lead to a proportionately much larger movement in the value of the Fund's assets). The expected levels of the Fund's leverage will be 250% of the value of the Fund.

You can buy and sell your shares in the Fund on any day treated as a business day in Dublin, London and New York.

The Fund has discretion as to which investments it will hold within the limits of the Investment Objective and Policy.

Income and profits, if any, attributable to your shares will not be paid out as a dividend, but will be accumulated in the Fund on your behalf and reflected in an increase in the value of your shares.

Recommendation: This Fund may not be appropriate for investors who plan to withdraw their money within a short period of time.

### Risk and Reward Profile

The risk and reward categories above are calculated using historic data and may not be a reliable indicator of the Fund's future risk profile. The risk and reward category may shift over time and is not a target or guarantee. The lowest category (i.e. category 1) does not mean "risk free".

The risk rating of this Share Class is calculated on the basis of historic volatility – i.e. how much the value of the underlying assets of the Fund has fluctuated over the last 5 years. This Share Class has been placed in the risk category stated above, because based on the historic data, the underlying assets within the Fund have shown moderate volatility. Please note, there are other risks that may not be reflected in the risk and reward categories above. Some of these risks are summarised below.

- There is no capital guarantee or protection of the value of the Fund. The value of your investment and the income from it can go down as well as up and you may not get back the amount you invested.
- This Fund may invest in the securities of emerging markets. These markets may be less developed than others and so there is a greater risk that the Fund may experience greater volatility, delays in buying, selling and claiming ownership of its investments. Emerging markets may also have less developed political, economic and legal systems and there is a higher risk that the Fund may not get back its money.
- Investment in lower rated bonds increases the risk of default on repayment and the risk to capital of the Fund.

- The returns from your investment may be affected by changes in the exchange rate between the Fund's base currency, the currency of the Fund's investments, your Share Class and your home currency.
- There is a risk that the other side to certain contracts that the Fund may enter into may not be able to meet obligations. For example, this may arise in the Fund where an investment is made using a derivative (or a debt instrument), and the other side to the contract becomes insolvent, or is otherwise unable to meet its obligations. In such a case, the Fund may incur loss.
- There are additional risks relating to use of derivatives - the Fund invests in derivatives for the purposes of both reducing exposure (hedging) and also to gain greater exposure to underlying investments. The use of derivatives to gain greater exposure to investments rather than by direct investment can increase the possibility for profit but also increase the risk of loss.
- The Fund may invest in units or shares of other investment funds. Such other funds may themselves be subject to their own fees and expenses
- More than 35% of the Fund may be invested in fixed interest securities issued by a single government. If any such single government were to fail to meet its obligations, the impact on the Fund would be material.
- Performance fees may be paid on unrealised gains which may subsequently never be realised.

See "Risk Factors" in the UCITS' Prospectus and Fund Supplement for more information about risks.
