Fund description

Investment objective: The fund invests worldwide in bonds of the most various maturities, credit ratings, countries and currencies, as well as in derivative financial instruments, in accordance with the absolute return approach. The fund allows investors to delegate investment decisions to experienced specialists. The investment aim is to achieve positive returns independently of market developments.

Opportunities: The fund invests in a broadly diversified bond universe and seeks various opportunities for returns. The fund gives investors easy access to the emerging markets. Many of these countries may offer attractive potential returns in various asset classes. A highly qualified and experienced management actively manages the fund on the basis of a fundamental valuation approach. The objective is to identify the potential investments that, in the Investment manager's opinion, are most attractive and to generate interesting and profitable opportunities for investors. The fund aims to generate long-term positive (absolute) returns in both rising and falling financial markets, coupled with risk diversification. The fund invests broadly across various bond categories, currencies and countries, in accordance with its flexible investment strategy.

Risk factors: **Counterparty Risk / Derivatives:** If a counterparty to a financial derivative contract were to default, the value of the contract, the cost to replace it and any cash or securities held by the counterparty to facilitate it, may be lost. **Leverage Risk:** Derivatives may multiply the exposure to underlying assets and expose the Fund to the risk of substantial losses. **Credit Risk / Debt Securities:** Bonds may be subject to significant fluctuations in value. Bonds are subject to credit risk and interest rate risk. **Credit Risk / Non-Investment Grade:** Non-investment grade securities, which will generally pay higher yields than more highly rated securities, will be subject to greater market and credit risk, affecting the performance of the Fund. **Interest Rate Risk:** A rise or fall in interest rates causes fluctuations in the value of fixed income securities, which may result in a decline or an increase in the value of such investments. **Currency Risk:** The value of investments in assets that are denominated in currencies other than the base currency will be affected by changes in the relevant exchange rates which may cause a decline. **Capital at risk:** All financial investments involve an element of risk. Therefore, the value of the investment and the income from it will vary and the initial investment amount cannot be guaranteed.

Fund: GAM Absolute Return Bond Plus - Share class Cm / Currency GBP; Benchmark: ICE LIBOR GBP 3 Months

Change of name: Julius Baer Multibond - Absolute Return Bond Fund Plus, as of 30.06.17 GAM Multibond - Absolute Return Bond Plus. SWING PRICING
For this sub-fund an adjusted pricing mechanism in line with chapter 17 and 20 of the prospectus may be applied ('swing pricing').

Past performance is not an indicator of current or future trends. The performance values refer to the net asset value and are calculated without the commission and costs incurred on issue, redemption or swapping (e.g. transaction and custody costs of the investor). The fund does not include the security of capital which is characteristic of a deposit with a bank or building society. The indications are based on figures denominated in GBP. If this currency is different from the currency of the country in which the investor is resident, the return may increase or decrease as a result of currency fluctuations.

Glossary

Benchmark (BM): an index that can be used by an investment fund as the basis of comparison for assessing the performance achieved.

High water mark: the high water mark principle establishes a cap on or allows for a potential rise in performance fees. According to this principle, the investment fund manager only receives the relevant remuneration when the fund exceeds the highest level of return that it has ever achieved.

Modified duration: a risk indicator that measures the effect of price fluctuations on a bond issue or a portfolio of bond issues.

Ongoing charge (OCF): the ongoing charge is a measure of the annual expenses incurred by a fund and is expressed as a percentage. It allows an accurate comparison of the costs of funds from different companies to be made.

Risk rating: the risk indicator is based on the volatility of the Fund's performance over the last 5 years. Where 5 years' performance history is not available the data is supplemented by proxy fund, benchmark data or a simulated historical series as appropriate. This profile is determined using historical data, as such may not be a reliable indication for the future risk profile. It is not guaranteed and may shift over time. The lowest category does not mean 'risk free'.

Yield to maturity: the yield to maturity is the average yield generated by an investment each year if it is held until expiry.
