Glossary

Price to Book Value (P/BV): The price per share of a stock divided by its book value (i.e., net worth) per share. For a portfolio, the ratio is the weighted average price/book ratio of the stocks it holds

<u>Price to Cash Flow (P/CF)</u>: Supplements price/earnings ratio as a measure of relative value; represents a weighted average of the price/cash flow ratios for the underlying fund holdings.

<u>Price to Earnings (P/E)</u>: The share price of a stock, divided by its per-share earnings over the past year. For a portfolio, the weighted average P/E ratio of the stocks in the portfolio. P/E is a good indicator of market expectations about a company's prospects; the higher the P/E, the greater the expectations for a company's future growth in earnings.

<u>Standard Deviation</u>: A measure of the degree to which a fund's return varies from its previous returns from the average of all similar funds. The larger the standard deviation, the greater the likelihood (and risk) that a fund's performance will fluctuate from the average return.
