JPM US Equity Plus C (dist) - USD

a Share Class of JPMorgan Funds – US Equity Plus Fund

a Sub-Fund of JPMorgan Funds LU0847331302

The management company is JPMorgan Asset Management (Europe) S.à r.l.

Objectives and Investment Policy

Investment Objective: The Sub-Fund aims to provide long-term capital growth through exposure to US companies by direct investments in securities of such companies and through the use of financial derivative instruments. The portfolio will be managed aggressively.

Investment Policy: At least 67% of the Sub-Fund's assets (excluding cash and cash equivalents) will be invested, either directly or through the use of financial derivative instruments, in equity securities of companies that are domiciled in, or carrying out the main part of their economic activity in, the US.

The Sub-Fund may also invest in Canadian companies.

To enhance investment returns, the Sub-Fund uses a 130/30 strategy, buying securities considered undervalued or attractive and selling short securities considered overvalued or less attractive, using financial derivative instruments where appropriate.

The Sub-Fund will normally hold long positions of approximately 130% of its net assets and short positions (achieved through the use of financial derivative instruments) of approximately 30% of its net assets but may vary from these targets depending on market conditions.

The Sub-Fund uses an investment process that is based on systematic investments in equity securities with specific style characteristics, such as value, quality and momentum in price and earnings trends. Historical research has demonstrated that such securities can outperform over a market cycle as they exploit psychological factors (the behavioural and cognitive biases of investors) in stock markets. For example, investor overconfidence, the expectation that a security's earnings will continue to grow in perpetuity, or loss aversion, the reluctance of an investor to sell a security that is decreasing in price.

The Sub-Fund will invest in financial derivative instruments to achieve its investment objective. Such instruments may also be used for the purposes of hedging.

USD is the reference currency of the Sub-Fund but assets may be denominated in other currencies and currency exposure may be hedged.

Redemption and Dealing: Shares of the Sub-Fund may be redeemed on demand, with dealing normally on a daily basis.

Management Discretion: The Investment Manager has the discretion to buy and sell investments on behalf of the Sub-Fund within the limits of the Objective and Investment Policy.

Benchmark: The benchmark of the Share Class is S&P 500 Index (Total Return Net of 30% withholding tax).

The benchmark is a point of reference against which the performance of the Share Class may be measured. The portfolio of the Sub-Fund may bear little resemblance to its benchmark.

Distribution Policy: This Share Class will normally pay dividends.

Risk and Reward Profile

Lower risk **Higher risk**

Potentially lower reward Potentially higher reward

1	2	3	4	**5**	6	7

The above rating is based on the historic volatility of the simulated Net Asset Value of this Share Class over the last five years and may not be a reliable indication of the future risk profile of this Share Class.

The risk and reward category shown above is not guaranteed to remain unchanged and may change over time.

A Share Class with the lowest risk rating does not mean a risk-free investment.

Why is this Share Class in this category? This Share Class is classified in category 5 because its simulated Net Asset Value has shown medium to high fluctuations historically.

Other material risks:

- The value of your investment may fall as well as rise and you may get back less than you originally invested.
- There is no guarantee that the use of long and short positions will succeed in enhancing investment returns.
- Because the Sub-Fund is aggressively managed, volatility may be high as the Sub-Fund may take larger position sizes, may have high turnover of holdings and at times may have a significant exposure to certain areas of the market.
- The value of equity securities may go down as well as up in response to the performance of individual companies and general market conditions.
- The single market in which the Sub-Fund invests may be subject to particular political and economic risks, and as a result, the Sub-Fund may be more volatile than more broadly diversified funds.
- The Sub-Fund uses financial derivative instruments for investment purposes. The value of financial derivative instruments can be volatile and may result in gains or losses in excess of the amount required initially to establish a position in the derivative. The Management Company is required to disclose in Appendix III of the Prospectus the sum of the gross notional exposure of the financial derivative instruments used (including those used for hedging or efficient portfolio management) as the expected level of leverage. However, this figure does not take into account whether the instrument increases or decreases investment risk and so may not be representative of the overall level of investment risk in the Sub-Fund.
- Short selling may be subject to changes in regulations and losses from short positions may be unlimited.
- Movements in currency exchange rates can adversely affect the return of your investment. The currency hedging that may be used to minimise the effect of currency fluctuations may not always be successful.
- Further information about risks can be found in "Appendix IV - Risk Factors" of the Prospectus.
