Risk and Reward Profile

◆ Lower risk			Higher risk ◆			
◆ Typically lower rewards			Typically higher rewards ◆			
1	2	3	4	5	6	7

The Risk and Reward Indicator table shows where the Class ranks in terms of its potential risk and return. The higher the rank the greater the potential reward but the greater the risk of losing money. The table uses a standard calculation method that is used by all companies who offer such funds within the European Union. Please note that the lowest category does not mean a risk-free investment.

The shaded area in the table above shows the Class's ranking based on the Synthetic Risk and Reward Indicator. It is based upon how much the price of the Class has moved up and down in the past.

The Class is ranked at 3, because it invests in bonds whose returns tend to fluctuate more than those of cash funds but less than those of funds which invest in the shares of

companies. Please note that the calculation is based on past information and may not reliably predict how the Class will perform in the future. Its ranking may shift over time and therefore is not guaranteed to remain unchanged.

The Risk and Reward Indicator does not take into account the following:

- There may be a significant influence on the Fund's value if there are changes in the general level of short-term interest rates. If interest rates fall, the value of the Fund's shares will tend to rise. If interest rates rise, the value of shares will tend to fall.
- Prices of a debt security may fall if there is a downgrade in the issuer's credit rating or any other adverse news regarding an issuer.
- There can be no guarantee that the Fund can prevent currency risks. The Fund may use derivatives to reduce or manage the risk.
