## Investment Objective

The objective of the Sub-Fund is to outperform the reference indicator by more than 2% per year after taking into account charges over a minimum investment horizon of 3 years.

To achieve this objective, the Sub-Fund invests at least two thirds of its assets in debt instruments whose issuer is represented in the reference indicator and selected through a process based on an analysis of the strengths and weaknesses of different markets through macroeconomic, technical approaches, fundamental valuation and risk appetite.

**Philip Chow**Chief Investment Officer, Global Fixed  
Income & Forex Asia**Management commentary**

December was a relatively quiet month as the European and US markets prepared for the holiday season and year end period as such, market activities were relatively muted. In December, the US Federal Reserve revealed the minutes of their December FOMC meeting, during which they hiked by another 25 bps, moving the target rate to 1.25% to 1.5% from between 1.0% and 1.25%, the bank cited continuing improvements in the labour market and a general recovery to economic activities following the disruption caused by hurricanes. In Europe, shortly after the Fed announcement, the European Central Bank (ECB) revealed their own monetary policy decision, which as widely expected, was to leave the main refinancing rates unchanged, the ECB also confirmed that from January 2018, the size of the bond purchases would be reduced to €30bn per month, from the current level of €60bn per month. In non-central bank news, on the 22nd of December, president Trump signed the "Tax Cuts and Jobs Act" into law. The new tax bill cuts corporate taxes and provides individuals with temporary tax relief, the new bill also removes the individual contribution that was a requirement under the Affordable Care Act – which could see health insurance premiums rise. In south Africa, President Zuma survived a motion to impeach him for potential misuse of public funds after the high court ruled that parliament had failed to hold the president accountable. Most currencies rose against the dollar in December despite the tax cuts as markets corrected.

China manufacturing PMI fell in Dec below market expectations while remaining in expansionary territory. PBOC raised OMO and MLF rate by 5bp after the Fed rate hike, less than the 10bp in the previous two times. The PBOC has shown its preference of higher rates for deleveraging and not deviate too far from the global monetary policy normalization trend. While PBOC allowed the temporary use of cash reserves ahead of Lunar New Year which basically removes the potential liquidity shock before LNY, PBOC also signalled no imminent across the board RRR cut. Singapore's economy likely came in at 3.5% according to government officials, at the top end of the trade ministry's prediction of 3-3.5%. Korean exports growth moderated to 8.9% yoy (vs Nov 9.5%) below market expectations while CPI inflation rebounded to 0.3% mom and 1.5% yoy (vs Nov -0.7% mom and 1.3% yoy).
