

# DB Platinum Chilton Diversified

## Investment Strategy

Fund Assets under Management: \$ 125,589,083

DB Platinum Chilton Diversified (the "Fund") is an open-ended UCITS\* compliant fund that seeks capital growth\* by aiming to generate investment returns throughout various market cycles (i.e. in rising as well as declining markets) through a long and short investment strategy\*. The Investment Manager of the Fund is Chilton Investment Company, LLC ("Chilton"). The Fund invests generally in publicly-traded U.S. shares\*. The strategy is based on fundamental bottom-up\* research and focuses on buying interests in those companies that Chilton believes to have good business models at attractive entry points and shorting\* business models that have poor fundamentals or whose values are linked to external factors which may lead to declines. The investment universe includes both growth\* and value\* companies across various sectors, market capitalisation ranges and regions. The rigorous research process combines analysis of long-term fundamental factors such as competitive advantages, quality of management and growth opportunities, with short-term factors like quality of earnings, likelihood of estimate revisions\* and technical analysis\*. The portfolio is then constructed by Chilton to include the highest expected return securities, with typical net\* and gross exposures\* of 40-60% and 150-200% respectively. Financial contracts (derivatives\*) may be used for investment purposes and to aim to reduce inflation\*, interest rate and/or foreign currency exposure in respect of the assets (hedging\*). Derivatives\* may also be used to try to increase returns by increasing the exposure to certain investments (leverage\*). The leverage\* is not expected to exceed 250% of the value of the Fund.

## Net Past Performance / based on discreet 12 month rolling periods<sup>(1)</sup> Monthly Return Last 12 Months (%)<sup>(1)</sup>

## Key Benefits

- The Fund complies with UCITS\* restrictions for portfolio diversification\* and risk spreading.
- Independent valuation: NAVs\* are calculated by an independent third party. Chilton only acts as Investment Manager.
- The Fund provides access to Chilton's Flagship strategy managed by Richard L. Chilton, Jr for over 20 years.
- Chilton Flagship Strategy has over 13.20% p.a. compounded return since inception, from July 1992 to May 2016 (maximum drawdown: -28.30%)<sup>(2)</sup>.
- One month rolling currency hedges are effected for share classes not denominated in USD to partly protect against fluctuations of exchange rate.<sup>(3)</sup>

## Key Risks

- The value of an investment in the Fund may go down as well as up and can result in losses, up and including a total loss of the amount initially invested. **Past performance is not a reliable indicator for future results.**
- The Fund offers weekly liquidity\* only. Due to the limited liquidity further losses may be incurred until the execution of a redemption order.
- The Fund provides exposure to equity markets and may also provide exposure to other asset classes, which may be highly volatile and result in losses
- The Fund may enter into one or more derivatives\* with a number of counterparties\*. If any of the counterparties fail to make payments (for example, it becomes insolvent) this may result in your investment suffering a loss.
- The Fund relies upon the performance of the Investment Manager and the successful implementation of the Strategy. If the Investment Manager performs poorly or the Strategy is not successful, the value of your investment is likely to be adversely affected.
- Movements in exchange rates can impact the value of your investment. If the currency of your country of origin is different from the currency in which the underlying investments of the Fund are made (USD), the value of your investment may increase or decrease subject to movements in exchange rates.
- Currency hedges are effected for share classes not denominated in USD\* to protect against fluctuations of exchange rate. These currency hedges may have a positive or negative impact on the Fund's performance<sup>(3)</sup>.
- The strategy followed by the Fund is complex and involves a high degree of risk, including, but not limited to, the potential for higher fees and a lack of strategy transparency. The strategy may also use leverage\* or derivatives\* to take long or short positions\* in various markets, which may increase profits, but may also magnify losses.
- The Fund is not guaranteed and your investment is at risk. The value of your investment may go down as well as up. The Fund has been designed for investors who are looking for long term capital growth through exposure to alternative investment strategies. As the Fund may therefore employ complex strategies (including the use of derivatives\*), it is intended only for knowledgeable and experienced investors who are able to understand and evaluate both the investment strategy and its inherent risks (such understanding and evaluation may be gained through advice from a professional advisor).

### Past performance is not a reliable indicator of future results.

All information as of 31 May 2016 unless otherwise specified.

(1) Source: Deutsche Bank AG. The Fund's performance is shown net of all fund fees but excludes the effect of any subscription charges. Past performance is not a reliable indicator of future results. (2) Source: Chilton Investment Company, LLC. Net of 1.5% management fee, expenses and 20% performance allocation, includes new issues and reinvestment of dividends, capital gains and other earnings and reflects an investment in Chilton Investment Partners, L.P. since inception of the period indicated, without additions, withdrawals or redemptions. Past performance is not a reliable indicator of future results. Please refer to the Disclaimer on the last page of this factsheet. (3) There may be differences between the performances of share classes denominated in different currencies; any gain or loss during the calendar month is not hedged and is exposed to FX risks.

## Glossary

### **B**

#### **Bottom Up Approach**

An investment approach where the focus is on specific company fundamentals and its underlying industry, rather than the macro economy as a whole [see Macroeconomics].

### **C**

#### **Capital Growth**

An increase in the market price of an asset.

#### **Counterparty**

When trading OTC [see OTC], the counterparty refers to the institution to which exposure to credit risk (risk of default) is borne. It is the institution taking the offsetting position of the trade.

### **D**

#### **Derivatives**

Financial contracts such as options [see Equity Option] and various securities that offer 'synthetic' access to an underlying asset such as a commodity, stock market or fixed income security. The price movements of a derivative generally follow the price movements of the underlying asset but derivatives generally require only small amounts of capital (margin) to gain exposure to the underlying asset.

#### **Diversified Portfolio**

A risk management technique that mixes a wide variety of investments within a portfolio. The rationale behind this technique contends that a portfolio of different kinds of investments will, on average, yield higher returns and pose a lower risk than any individual investment found within the portfolio.

### **E**

#### **Equity Option**

A derivative instrument [see Derivatives] that gives the holder the right, without obligation, to buy (call) or sell (put) a security or asset at a fixed price within a specified period or at a particular future date.

#### **Estimate Revision**

The act of actual data being released which is out of line with that estimated by consensus. For example, earnings estimated are reflected in stock prices and changes or revisions to such estimates can cause material changes in the price.

#### **EUR**

The currency abbreviation of the Euro.

### **F**

#### **Fundamental Value Strategy**

An investment approach where undervalued assets are bought and overvalued assets are sold, with the anticipation that assets will revert to their theoretical intrinsic value.

### **G**

#### **GBP**

The currency abbreviation of the Great British Pound.

#### **Gross Exposure**

The sum of the fund's long and short exposure. For a long only fund [see Long Only Fund], with no short exposure, the fund's gross exposure will equal its net exposure [see Net Exposure].

#### **Growth Companies**

A company which generally has profitable reinvestment opportunities which generates increasing and significant cash flows. Growth companies often pay little dividends but instead reinvest their earnings to expand the business.

### **H**

#### **Hedging**

The act of reducing downside risk by placing a trade which provides offsetting exposure to the underlying. In the process, upside potential is also reduced as a result of reducing potential profits.

### **I**

#### **Inflation**

The continuous rise in the price of a fixed basket of goods/services over a period of time.

### **L**

#### **Leverage**

Leverage and gearing effectively mean the same thing: the process or effect of 'gearing up' or minifying exposure to an investment strategy, manager or asset. Leverage can be achieved by borrowing capital or using derivatives [see Derivatives]. A leveraged investment is subject to a multiplied effect in the profit or loss resulting from a comparatively small change in price.

#### **Liquidity**

A measure of time required to redeem capital from the fund, typically being intraday, daily, weekly or monthly.

#### **Long Only Fund**

A fund which invests with the view that the underlying assets will rise in value over time.

#### **Long/Short Strategy**

An investment strategy which involves taking long positions in assets that are expected to rise and short positions in assets that are expected to fall.

### **M**

#### **Macroeconomic**

A branch of economics studying aggregate behaviour concerning large-scale factors including productivity, growth, global rates, inflation and unemployment.

### **N**

#### **NAV**

A fund's per-share value. The per-share dollar amount of the fund is calculated by dividing the total value of all the securities in its portfolio, less any liabilities, by the number of fund shares outstanding.

#### **Net Exposure**

The percentage difference between the fund's long and short exposures. For a long only fund [see Long Only Fund], with no short exposure, the net exposure will equal the gross exposure [see Gross Exposure].

### **P**

#### **Publically-traded U.S. Shares**

A company whose shares trade on a US based stock exchange (e.g. NASDAQ or NYSE).

### **S**

#### **Selling Short**

An investment strategy which allows an investor to benefit from declines in a stock price. The stock is not owned, but borrowed, by the investor and in return a fee is paid to the lender of the stock.

#### **Subscription/Redemption Fees**

Fees relating to entering/exiting an investment into a fund.

## T

### Technical Analysis

A method of forecasting in which past performance is used as a proxy to predict future performance. Historical price data is said to reflect all fundamental events and such price movements are assumed to be repetitive, thereby providing opportunity to capture future potential behaviour.

## U

### UCITS

UCITS, or 'Undertakings for Collective Investment in Transferable Securities', can refer to funds which comply with a set of European directives which aim to establish a single market for financial services within the European Union. The funds are designed to offer investors low minimum investments, liquidity, transparency and onshore regulation.

### USD

The currency abbreviation of the US Dollar.

## V

### Value Companies

A company which is thought to trade at a discount in comparison to its peers on in comparison to its intrinsic value. Theory indicates that these companies should revert back to their intrinsic value over the long run.
