KEY RISKS ASSOCIATED WITH THIS FUND

- There is no guarantee that the Fund will achieve its objectives.
- The Fund primarily invests in a single market which may have a significant impact on the value of the Fund.
- Derivatives are highly sensitive to changes in the value of the asset from which their value is derived. A small movement in the value of the underlying asset can cause a large movement in the value of the derivative. This can increase the sizes of losses and gains, causing the value of your investment to fluctuate. When using derivatives, the Fund can lose significantly more than the amount it has invested in derivatives.
- Investment in small companies may be riskier and less liquid (i.e. harder to sell) than large companies. This means that their share prices may have greater fluctuations.
- The insolvency of any institutions providing services such as custody of assets or acting as a counterparty to derivatives or other contractual arrangements, may expose the Fund to financial loss.
- Certain share classes are denominated in a different currency from the base currency (i.e. the reporting currency) of the Fund. Changes in the exchange rate between the shareclass currency and the base currency may affect the value of your investment.
- Certain share classes use techniques to try to reduce the effects of changes in the exchange rate between the share class currency and the base currency of the Fund. These techniques may not eliminate all the currency risk.
- A complete description of risk factors is set out in the Prospectus in the section entitled "Risk Factors".

Before subscribing, investors should read the most recent Prospectus, financial reports and KIID for each fund in which they want to invest. Go to www.bnymellonim.com
