The main risks of this UCITS are:

- Equity risk
- Currency risk
- Credit risk
- Liquidity risk
- Interest rate risk

## GENERAL INFORMATION

### Investment objective

The Sub-Fund follows a clearly defined strategy for the placement of assets based on controlling the portfolios risk from annual volatility. Purchase and sale decisions are based upon directional quantitative systems over the medium term. The investment of assets is adjusted to the prevailing market conditions and has the objective of not exceeding a mean annual volatility of 10%. This objective does not constitute a guarantee of any sort that the mean annual volatility will never exceed 10%. The Sub-Fund is actively managed.

## GLOSSARY

The VOLATILITY of a security is the difference between performance and average performance and therefore makes it possible to gauge the consistency of performance obtained. It comprises a measure of risk. If this is zero, the individual performances are identical. The higher it is, the greater the difference between individual performances.

The TRACKING ERROR shows the volatility of a funds relative performance against that of its benchmark. It shows the difference between performances and their average and so makes it possible to gauge the consistency of relative performance. The lower the tracking error, the closer the funds performance is to that of its benchmark.

The ALPHA corresponds to the funds average performance. More specifically, it measures the fund managers added value while cancelling out market influence, which cannot be controlled. This measure is expressed as a percentage.

The SHARPE RATIO shows the funds outperformance against a zero-risk interest rate, adjusted for fund volatility.

Other definitions and methodologies are available in our fund center at [www.edmond-de-rothschild.com](http://www.edmond-de-rothschild.com), under the heading "Funds".
