#### Significant risks not taken into account in this indicator:

**Credit Risk:** When a significant level of investment is made in debt securities.

**Impact of techniques such as derivative contracts:** The use of derivatives instruments can infer a decrease of the asset more significant than the decrease of the invested underlying assets or markets.

**Counterparty risk:** where a fund is backed by collateral or has significant investment exposure through contracts with a third party.

**Operational risk:** The Sub-Fund may suffer losses due to the failure of operational processes, including those related to the safekeeping of assets.

Owing to their high leverage, investments in warrants generally provide higher returns than shares, although they may be subject to some volatility with the higher risk of loss that this entails. Moreover, these instruments can lose their entire value.

The occurrence of any of these risks may negatively impact the net asset value.
