RISKS

An investment in the Fund is subject to credit, interest rate and currency risks. Credit risk is the change in the value of debt securities reflecting the ability and willingness of issuers to make principal and interest payments. Interest rate risk is the possibility that a Fund's yield will decline due to falling interest rates and the potential for bond prices to fall as interest rates rise. Currency risk is a decline in value of a foreign currency relative to the Fund's base currency which reduces the value of the foreign currency and investments denominated in that currency. Where a Class of Shares is denominated in a currency other than the Fund's base currency, additional currency risk may exist. The Fund may invest in the following: derivatives which can be volatile and affect Fund performance; high yield bonds (junk bonds) which can subject the Fund to substantial risk of loss; and structured investments which can change the risk or return, or replicate the risk or return of an underlying asset.

All performance quoted represents past performance and is no guarantee of future results. Investment return and principal value will fluctuate with market conditions so that when redeemed, shares may be worth more or less than the original cost. Current performance may be lower or higher than performance shown. Investors investing in Funds denominated in non-local currency should be aware of the risk of currency exchange fluctuations that may cause a loss of principal.

- Modified duration measures the percent change in value of the fixed income portion of the portfolio in response to a 1% change in interest rates. In a multi-currency denominated portfolio with sensitivities to different interest rate regimes, modified duration will not accurately reflect the change in value of the overall portfolio from a change in any one interest rate regime. Source: FactSet Research Systems, Bloomberg. For detailed modified duration exposures by currency, please see the next page.
- Yield to worst is the lowest potential yield that can be received on a bond without the issuer actually defaulting. Yield to worst is for the bond-only portion of the portfolio and is calculated by making worst-case scenario assumptions on the issue by calculating the returns that would be received if provisions, including prepayment, call or sinking fund, are used by the issuer. It does not represent the yield that an investor should expect to receive. Source: FactSet Research Systems
- For the Matthews Asia Strategic Income Fund, the Index Performance reflects the returns of the discontinued predecessor HSBC Asian Local Bond Index up to December 31, 2012 and the returns of the successor Markit iBoxx Asian Local Bond Index thereafter.

4 Percentage values in data are rounded to the nearest tenth of one percent; the values may not sum to 100% due to rounding.

5 Cash and Other Assets may include the mark-to-market value of forward currency exchange contracts and certain derivative instruments.

6 Credit quality is provided for the bond holdings of the Fund and percentage values will not total 100%. Generally credit ratings range from AAA (highest) to D (lowest). When ratings from Moody's, S&P and Fitch are available for a bond in the Fund, the middle rating of the three is used. When two ratings are available, the lowest rating is used. When only one rating is provided, that one is used. Securities that are not rated by any one of the three agencies are reflected as such.
