Objectives and Investment Policy

Objectives and Investment Policy

The Sub-Fund is actively managed. The SPI TR index is used to define the initial investment universe for individual security selection, for performance comparison as well as for internal risk monitoring purposes, without implying any particular constraints to the Sub-Fund's investments. The Sub-Fund's securities will generally be similar to those of the above-mentioned index but the security weightings are expected to differ materially. The Investment Manager may also select securities not included in the above-mentioned index in order to take advantage of investment opportunities. The Sub-Fund aims to generate capital growth by investing mainly in equity securities issued by companies incorporated or exercising a prominent part of their business activities in Switzerland, including equity securities issued small, mid and large capitalization companies. The Investment Management team focuses on identifying leading companies with clear competitive advantages in terms of business strategy, quality of management, core competencies and visible profit growth. The selection process, which relies heavily on the bottom-up approach, employs rigorous fundamental research and involves close

contact with companies. The result is a portfolio of around 35 stocks. The Investment Manager is authorized to use financial derivative instruments for hedging purposes or for EPM but not as part of the investment strategy. The Sub-Fund is a product which promotes environmental or social characteristics or a combination of those characteristics for the purposes of article 8 of the Sustainable Finance Disclosure Regulation. The Investment Manager adopts a multifaceted approach to the way it analyses the sustainable profile of the Sub-Fund's investments (including sustainability focused screening & scoring, exclusions, restrictions and qualitative and quantitative reviews).

Risk and Reward Profile

What does it mean?

This indicator (SRRRI) represents the annualized historical volatility of the Sub-Fund over a 5-year period. Where there are less than 5 years worth of data, missing returns are simulated using an appropriate benchmark. The SRRRI may change over time and should not be used as an indicator of future risk or returns. Even the lowest risk classification does not imply that the Sub-Fund is risk-free or that capital is necessarily guaranteed or protected.

Category

The classification of this Sub-Fund in this category is based on the volatility of the Sub-Fund's weekly returns over the last 5 years. A Risk-Reward indicator of 5 is associated with a volatility level of approximately 11%.

Are there any other particular risks?

The following risks may be materially relevant but may not always be adequately captured by the synthetic risk indicator and may cause additional loss:

- Liquidity risk: Where a significant level of investment is made in financial instruments that may under certain circumstances have a relatively low level of liquidity, there is a material risk that the fund will not be able to transact at advantageous times or prices. This could reduce the fund's returns.
- Operational risk and risks related to asset safekeeping: In specific circumstances, there may be a material risk of loss resulting from human error, inadequate or failed internal systems, processes or controls, or from external events.
- Concentration risk: To the extent that the fund's investments are concentrated in a particular country, market, industry, sector or asset class, the fund may be susceptible to loss due to adverse occurrences affecting that country, market, industry, sector or asset class.

For more details about risk, see appendix B "Risk Factors" of the prospectus.
