WELLINGTON
MANAGEMENT®

Investment Objective and Policy

The fund places an emphasis on capital growth through significant exposure to equities. This investment objective may be achieved primarily through investment in open-ended collective investment schemes ("target funds") which gain exposure to equities, fixed income securities, real estate, commodities and currencies. Where there is no suitable target fund available, the sub funds may also seek direct exposure to equities, fixed income securities and currencies and may use derivatives (as outlined below) to gain indirect exposure to equities, fixed income securities, real estate, commodities and currencies.

Investment Manager:

The fund is managed by the Wellington Global Multi Asset Strategies team who also draw on the experience and resources of Wellington's 600+ investment experts across the globe.

Opportunities

The fund invests in a broadly diversified investment universe and seeks opportunities for returns wherever they exist. The fund gives investors easy access to the emerging markets. Many of these countries may offer attractive potential returns in various asset classes. A highly qualified and experienced management actively manages the fund on the basis of a fundamental valuation approach. The objective is to identify the potential investments that, in the Investment manager's opinion, are most attractive and to generate interesting and profitable opportunities for investors.

Risk factors

General risk: The fund invests in equities and bonds, which may be subject to significant fluctuations in value. Bonds are subject to issuer risk, credit risk and interest rate risk.

Derivatives risk: The fund may invest in derivatives, which are subject to the risks of their underlying markets or underlying instruments as well as issuer risks and often involve higher risks than direct investments.

Emerging markets risk: The fund may invest in securities from emerging markets where prices can fluctuate significantly and where, in addition to social, political and economic uncertainties, operating and supervision conditions may deviate from the standards prevailing in developed markets.

Issuer risk: The fund may invest in securities of issuers that the market does not view as having good creditworthiness. These securities are subject to above-average volatility, and the possibility that they may even lose their value completely cannot be ruled out.
