CALAMOS®

This document provides you with key investor information about this fund. It is not marketing material. The information is required by law to help you understand the nature and the risks of investing in this fund. You are advised to read it so you can make an informed decision about whether to invest.

Calamos Global High Yield Fund

A sub-fund of Calamos Global Funds plc (the "Company") Class Z EUR Accumulating IE00BKRVL689

Objectives and Investment Policy

The Fund seeks a high level of income and potential gains on the amount invested over the longer term.

The Investment Manager will aim to invest in securities offering value and the best potential for growth. The Fund will invest principally in a globally diverse range of Debt Securities, up to 20% of which may be from issuers in emerging market countries.

The Fund may invest up to 100% of its assets in Debt Securities of either investment grade or below investment grade credit rating. It may also invest in Equities, Convertibles, Rule 144A Securities and Structured Notes that are traded on a regulated market.

The Fund may use Convertibles that contain a Derivative which permits the conversion or exchange into Equities.

The Fund may use Derivatives to achieve the investment objective, to hedge against currency exposure, to reduce risk or manage the Fund more effectively.

Any income less expenses earned by the Fund will not be distributed to investors but will be accumulated in the net asset value per share of the Fund.

For full investment objective and policy details as well as subscription and redemption policies please refer to the prospectus.

Investors can redeem shares in the Fund on a weekday that is not a public holiday in Ireland or New York.

Recommendation: investment in the Fund may not be appropriate for investors planning to withdraw their money within 3 to 5 years.

Risk and Reward Profile

The Fund is in category 4 as it mostly invests in below investment grade Debt Securities which, although they may provide a higher return on investment, typically experience higher levels of price fluctuation than investment grade Debt Securities. The categorisation is based on historical data and may not be a reliable indicator of the future.

The risk profile of the Fund may change due to unusual market conditions or unpredicted events which could result in losses or fluctuations in price significantly greater than the rating may indicate.

In pursuing its investment objective, the Fund will be exposed to additional risks including without limitation:

- > investments in emerging markets may expose the Fund to more social, political, regulatory and currency risks than securities in developed markets;
- > there may be insufficient buyers or sellers to allow the Fund to sell or buy certain types of securities readily;

Convertibles: Debt Securities and preferred stock (shares that provide a higher claim on the assets and earning of the issuing company than common stock) that can be exchanged at a predetermined price for the issuing company's common stock. Some Convertibles may include an underlying Derivative, warrant (no more than 5%) or Structured Note.

Debt Securities: securities that provide money to the issuer in exchange for set terms of the timing of repayment and interest payments (which may be fixed or variable) made to the purchaser.

Equity(ies): securities that represent an ownership stake in a company (e.g. stocks).

Derivatives: instruments whose value is based on the performance of another financial asset, index or investment such as forward contracts (agreeing to buy or sell an asset at certain dates and prices) and Options.

Rule 144A Securities: securities that are not registered for retail sale with the US authorities that can only be traded between qualified institutions.

Structured Note: a security whose value on expiry or interest rate is linked to the performance of a currency, interest rate, Equity, financial index or other financial performance indicator.

Options: A Derivative that represents a contract sold by one party to another. The contract offers the buyer the right, but not the obligation to buy or sell a security or other financial asset at an agreed upon price during a certain period of time.

> Derivatives may fluctuate in value rapidly and certain derivatives may introduce leverage which may result in losses that are greater than the original amount invested;

> a party with whom the Fund contracts for securities or to safekeep the Fund's assets may fail to meet its obligations or become bankrupt which may expose the Fund to a financial loss;

> Structured Notes expose the Fund to the market risk of the underlying security and Counterparty Risk; and

> Convertibles expose the Fund to the risk the issuer of the Debt Security portion of the security may fail to meet its obligations as well as the performance of the underlying stock into which it can be converted.

For more information in relation to these other risks, please refer to the "Investment Risks" section of the prospectus.
