

## DB Platinum IV Basso

### Investment Strategy

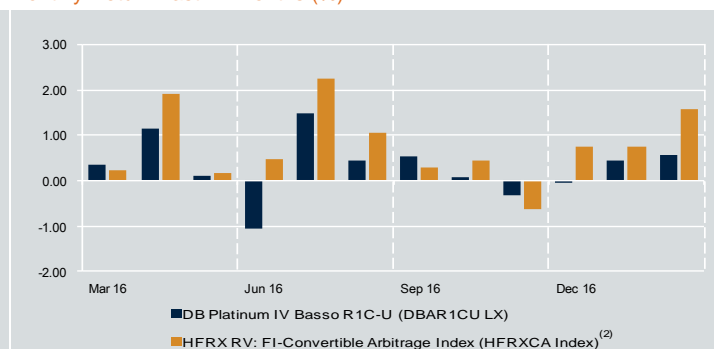

DB Platinum IV Basso (the "Fund") is an open-ended UCITS compliant fund that seeks to achieve risk adjusted returns by investing and trading in debt, equity, options, derivative contracts and securities instruments with an emphasis on convertible, exchangeable equity linked securities. This is generally bonds, preferred stock or mandatorily convertible preferred securities and related instruments that the investment manager believes are appropriate to hedge certain exposures in a portfolio. The Investment Manager of the Fund is Basso Capital Management, L.P. ("Basso"). The Fund follows a convertible arbitrage investment strategy whereby the fund will typically offset a long position in a convertible security with the short sale of the company's underlying common stock in an attempt to limit total downside risk. Although Basso from time-to-time engages in opportunistic trades as the market warrants, its core investment philosophy focuses on bottoms-up, fundamental analysis of issuers and the terms of their securities. Basso believes that its limited reliance on models and emphasis on underlying fundamentals, structures and dislocations set it apart from its peer group that trades similar strategies. It is Basso's perception that many of its peers invest in trades focusing primarily on model outputs and giving limited, if any weight to fundamentals, idiosyncratic risk and structural opportunities. Financial contracts (derivatives) may be used for investment purposes and to aim to reduce inflation, interest rate and/or foreign currency exposure in respect of the assets (hedging). Derivatives may also be used to try to increase returns by increasing the exposure to certain investments (leverage). The leverage is not expected to exceed 900% of the value of the Fund but may be higher in a low market volatility environment.

Fund Assets under Management: \$ 87,446,842

### Past Performance History (27.02.15 – 28.02.17)<sup>(1)</sup>

### Monthly Return Last 12 Months (%)<sup>(1)</sup>

### Key Benefits

- The Fund complies with UCITS restrictions for portfolio diversification and risk spreading, offering weekly liquidity at NAV with no subscription / redemption fees.
- The Fund provides access to a UCITS compliant version of Basso's flagship strategy ("Basso Investors Ltd.") managed by Howard Fischer since 1995<sup>(3)</sup>.
- Basso Investors Ltd. has generated annualised returns of 10.2% since inception, with an attractive Sharpe ratio of 1.4 (maximum drawdown: -25.00%)<sup>(4)</sup>.
- One month rolling currency hedges are effected for share classes not denominated in USD to partly protect against fluctuations of exchange rate<sup>(5)</sup>.
- An independent third party calculates NAVs and publishes these daily.

### Key Risks

- The Fund provides exposure to convertible securities and may also provide exposure to other asset classes, which may be highly volatile and result in losses.
- The Fund may enter into one or more derivatives with a number of counterparties. If any of the counterparties fail to make payments (for example, it becomes insolvent) this may result in your investment suffering a loss.
- The Fund is not guaranteed and your investment is at risk. The value of your investment may go down as well as up. The Fund has been designed for investors who are looking for long term capital growth through exposure to alternative investment strategies. As the Fund may therefore employ complex strategies (including the use of derivatives), it is intended only for knowledgeable and experienced investors who are able to understand and evaluate both the investment strategy and its inherent risks (such understanding and evaluation may be gained through advice from a professional advisor).
- The Fund relies upon the performance of the Investment Manager and the successful implementation of the Strategy. If the Investment Manager performs poorly or the Strategy is not successful, the value of your investment is likely to be adversely affected.
- The Fund may use derivatives to try to reduce the effect of currency fluctuations between the currency of its assets and the currency of the shares. This may not be effective and may prevent the Fund from benefiting from an increase in value of (or expose the Fund to the decrease in value of) a particular currency.
- The Fund may have increased exposure to particular investments known as leverage. A fall in value of such investments can result in a proportionately greater loss to the Fund.
