

MFS Meridian® Funds

U.S. Equity Opportunities Fund

30 APRIL 2019

A diversified US equity fund that seeks to provide both income and capital appreciation

The fund's investment objective is to seek capital appreciation, measured in US dollars.

Key points:

- Multi-cap US equity fund focused on capital appreciation
- Concentrated portfolio reflecting high conviction ideas from MFS fundamental research and MFS quantitative research
- Systematic approach of integrating fundamental and quantitative research in a disciplined portfolio construction process

PORTFOLIO MANAGEMENT

Matthew Krummell, Lead Portfolio Manager

26 years in industry

James C. Fallon

20 years in industry

Jonathan W. Sage

23 years in industry

John E. Stocks

20 years in industry

Portfolio characteristics data are based on the equivalent exposure of unaudited net assets as of 30-Apr-19. Equivalent exposure measures how a portfolio's value would change due to price changes in an asset held either directly or, in the case of a derivative contract, indirectly. The market value of the holding may differ. The portfolio is actively managed, and current holdings may be different.

Top ten holdings, portfolio characteristics and weightings do not reflect the effect of exposure/weightings for hedging of hedged share classes. Full holdings and net assets do reflect this hedging.

Growth of a \$100,000 investment and 12-month returns at NAV

Class A1USD shares 30-APR-15 — 30-APR-19

Fund returns for the representative share class shown assume the reinvestment of dividends and capital gain distributions but do not include a sales charge. Results would have been less favorable if the sales charge were included. This example is for illustrative purposes only and is not intended to represent the future performance of any MFS product. **Past performance is not a reliable indicator for future results.**

The source for all fund data is MFS. Source: Benchmark performance from SPAR, FactSet Research Systems Inc.

Fund inception date: 19 February 2015

^ Results represent the percent change in NAV.

^^ Periods less than one year are actual not annualized.

† Ongoing charges are expressed at an annual rate as a percentage of net assets. They are based on annualized expenses for the six months ended 31 July 2017. For a Class with less than the full period of data available, or where adjustment is necessary to reflect current charges, the ongoing charges figure is an estimate. Please see the KIID of the relevant Class for the most recent expense information.

1 Hedged share classes aim to reduce exchange rate and return fluctuations between the applicable non-base currency hedged share class and the unhedged base currency class of the fund. From time to time shareholder transactions in the share class could result in a gain or a loss, which could be significant, in the share class value that is attributable to the adviser's hedging activities rather than to its investment management activities. Other share classes will not share in these gains or losses.

Returns would have been lower had sales charges, of up to 6% of the net asset value (NAV), or any commissions, fees or other charges that your financial intermediary may charge been reflected.

Class I shares are only available to certain qualifying institutional investors.

Russell 1000® Index measures large-cap U.S. stocks

It is not possible to invest directly in an index.

TRAILING 3 YR RISK MEASURES VS. BENCHMARK (A1USD)	
Beta	1.02
Standard Deviation	11.60 vs 10.99

Beta is a measure of the volatility of a portfolio relative to the overall market. A beta less than 1.0 indicates lower risk than the market; a beta greater than 1.0 indicates higher risk than the market. It is most reliable as a risk measure when the return fluctuations of the portfolio are highly correlated with the return fluctuations of the index chosen to represent the market.

Standard deviation is an indicator of the portfolio's total return volatility, which is based on a minimum of 36 monthly returns. The larger the portfolio's standard deviation, the greater the portfolio's volatility.

RISK AND REWARD PROFILE CLASS A1USD						
< Lower risk (typically lower rewards)			Higher risk (typically higher rewards) >			
1	2	3	4	5	6	7

The rating is based on past volatility of returns and may be different in the future or for other classes of the fund.

IMPORTANT RISK CONSIDERATIONS
The fund may not achieve its objective and/or you could lose money on your investment in the fund. Stock markets and investments in individual stocks are volatile and can decline significantly in response to or investor perception of, issuer, market, economic, industry, political, regulatory, geopolitical, and other conditions. The fund's performance may be closely tied to the performance of companies in a limited number of sectors and could be more volatile than the performance of less focused funds. Because the portfolio may invest a substantial amount of its assets in issuers located in a single country or in a limited number of countries, it may be more volatile than a portfolio that is more geographically diversified. The fund's strategy to use both fundamental and quantitative research may not produce the intended results. MFS' investment analysis, its development and use of quantitative models, and its selection of investments may not produce the intended results and/or can lead to an investment focus that results in the fund underperforming other funds with similar investment strategies and/or underperforming the markets in which the fund invests. Investments selected using quantitative models may not produce the intended results due to the factors used in the models, the weight placed on each factor in the models, changing sources of market return, and technical issues in the design, development, implementation, and maintenance of the models (e.g., incomplete or inaccurate data, programming or other software issues, and technology failures). Please see the prospectus for further information on these and other risk considerations.
