

DB Platinum IV Clinton Equity Strategies

Investment Strategy

DB Platinum IV Clinton Equity Strategies (the "Fund") is an open-ended UCITS compliant fund that seeks capital appreciation while minimizing risks so as to achieve a higher return. The Investment Manager of the Fund is Clinton Group, Inc. ("Clinton"). To achieve this objective, the Investment Manager will follow a systematic quantitative trading strategy that attempts to exploit pricing opportunities in equity markets based on the forecasts of its proprietary quantitative equity strategy models. Using the results produced by these models, the Investment Manager will buy shares or enter financial contracts (derivatives) in order to take long or short positions. The Fund invests generally in publicly-traded shares on a global basis, with a focus on the U.S., Canada, Europe, Asia Pacific, South Africa and Brazil. The models and computer based-programmes used by the Investment Manager seek to exploit fundamental and price history factors to maximise returns for the Fund while minimising risk, where possible. The Investment Manager seeks to generate returns primarily from individual security selection ("alpha") as opposed to overall market exposure ("beta"). Depending on market environments and subject to the investment restrictions, the Fund may, at the discretion of the Investment Manager, employ leverage in the construction of its portfolio. The gross leverage is not expected to exceed 1000% of the value of the Fund.

Performance History (30.04.15 – 28.09.18)⁽¹⁾

Monthly Return Last 12 Months (%)⁽¹⁾

Key Benefits

- The Fund complies with UCITS restrictions for portfolio diversification and risk spreading, offering daily liquidity at NAV.
- The Fund provides access to a UCITS compliant version of Clinton's flagship strategy ("Clinton Equity strategies Fund") managed by Yong Lu⁽³⁾.
- Clinton Equity Strategies Fund has generated annualised returns of 13.8% since inception, with an attractive Sharpe ratio of 0.85 (maximum drawdown: -24.77%)⁽⁴⁾.
- An independent third party will calculate NAVs and publish these daily.
- One month rolling currency hedges are effected for share classes not denominated in USD to partly protect against fluctuations of exchange rate⁽⁵⁾.

Key Risks

- The Fund provides exposure to equity markets and may also provide exposure to other asset classes, which may be highly volatile and result in losses.
- The Fund may enter into one or more derivatives with a number of counterparties. If any of the counterparties fail to make payments (for example, it becomes insolvent) this may result in your investment suffering a loss.
- The Fund is not guaranteed and your investment is at risk. The value of your investment may go down as well as up. The Fund has been designed for investors who are looking for long term capital growth through exposure to alternative investment strategies. As the Fund may therefore employ complex strategies (including the use of derivatives), it is intended only for knowledgeable and experienced investors who are able to understand and evaluate both the investment strategy and its inherent risks (such understanding and evaluation may be gained through advice from a professional advisor).
- The Fund relies upon the performance of the Investment Manager and the successful implementation of the strategy. If the Investment Manager performs poorly or the strategy is not successful, the value of your investment is likely to be adversely affected.
- Movements in exchange rates can impact the value of your investment. If the currency of your country of origin is different from the currency in which the underlying investments of the Fund are made (USD), the value of your investment may increase or decrease subject to movements in exchange rates.
- The Fund is complex and may use derivatives to take long or short positions on various markets. The use of derivatives involves a high level of risk as derivatives can be highly leveraged, highly volatile, and may magnify gains as well as losses.
