# General information

**The funds described in this report are sub-funds of a SICAV (Société d'Investissement à Capital Variable) incorporated under Luxembourg law.**

## Performance

The investment return, or performance, of a mutual fund investment is measured by the change in value of the fund's shares. The net asset values per share (= redemption prices), with the addition of intervening distributions, are used as the basis for calculating the value. Past performance is not a guide to future results.

The corresponding benchmarks – if available – are also presented in the report. All financial data in this publication is **as of June 30, 2024** (unless otherwise stated).

## Sales prospectuses

Fund shares are purchased on the basis of the current sales prospectus, the key investor information document and the articles of incorporation and by-laws of the SICAV, in combination with the latest audited annual report and any semiannual report that is more recent than the latest annual report.

## Issue and redemption prices

The current issue and redemption prices and all other information for shareholders may be requested at any time at the registered office of the Management Company and from the paying agents. In addition, the issue and redemption prices are published in every country of distribution through appropriate media (such as the Internet, electronic information systems, newspapers, etc.).

## Liquidations of sub-funds

---

The sub-fund **DWS Invest Emerging Markets IG Sovereign Debt** was **liquidated** effective January 10, 2024, following a resolution to that effect adopted by the Board of Directors of the SICAV and the approval of the Luxembourg supervisory authority CSSF. The issue of new shares of the sub-fund was discontinued effective January 10, 2024. Investors could redeem sub-fund shares until January 9, 2024.

## Material events after the reporting date

---

The sub-fund **DWS Invest Qi Global Climate Action** was liquidated effective August 21, 2024, following a resolution to that effect adopted by the Board of Directors of the SICAV and the approval of the Luxembourg supervisory authority CSSF. The issue of new shares of the sub-fund was discontinued effective July 30, 2024. Investors could redeem sub-fund shares until July 30, 2024.

## Obligations for cross-border distribution

---

The annual financial statements for this SICAV (Société d'Investissement à Capital Variable) contain a report by the réviseur d'entreprises agréé (independent auditor's opinion). This report refers exclusively to the German-language version of the annual financial statements as prepared for the purposes of complying with the requirements imposed by the supervisory authority of the country of origin of the SICAV ("original version"). For cross-border distribution, one of the obligations of the SICAV is to also publish annual reports in at least one of the national languages of the relevant country of distribution or in another language authorized by the competent authorities in the relevant country of distribution; where applicable, extracts may be published on a sub-fund basis. The tax information contained in the annual reports for investors who are subject, without limitation, to taxation in the Federal Republic of Germany and specific information for investors in a different country of distribution have been omitted in the national or specific language versions. National or language versions must also be published for the semiannual reports to be produced for the first half of the fiscal year. In the event of any discrepancies in content between the German original version of the report and any translation thereof, the German-language version shall prevail.

Class GBP D RD .....	Count	334.392
Class USD LC .....	Count	29 728.164

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI EFM AFRICA EUR Index

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure .....	%	61.926
Highest market risk exposure .....	%	101.200
Average market risk exposure .....	%	74.284

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

### Exchange rates (indirect quotes)

As of June 28, 2024

Egyptian pound .....	EGP	51.389705	= EUR	1
British pound .....	GBP	0.846848	= EUR	1

U.S. dollar .....	USD	1.069950	= EUR	1
South African rand .....	ZAR	19.488500	= EUR	1

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### Composition of the reference portfolio (according to CSSF circular 11/512)

50% MSCI World Information Tech Index Net Return in EUR, 35% MSCI All Country World Index, in EUR, 15% MSCI China 50 Capped Index in EUR

### Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure .....	%	94.319
Highest market risk exposure .....	%	128.564
Average market risk exposure .....	%	119.809

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### Footnotes

\* The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).

\*\* Does not include positions with a negative balance, if such exist.

Lowest market risk exposure	%	40.947
Highest market risk exposure	%	87.887
Average market risk exposure	%	59.940

## DWS Invest Asian Bonds

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled USD 9 175 156.93 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

### Market abbreviations

#### Contracting parties for forward currency transactions

Barclays Bank Ireland PLC, Citigroup Global Markets Europe AG, Deutsche Bank AG, The Bank of New York Mellon SA, Toronto Dominion Bank and UBS AG.

### Exchange rates (indirect quotes)

As of June 28, 2024

Australian dollar	AUD	1.499363	=	USD	1
Swiss franc	CHF	0.898950	=	USD	1
Chinese yuan renminbi	CNY	7.296800	=	USD	1
Euro	EUR	0.934623	=	USD	1
British pound	GBP	0.791484	=	USD	1
Hong Kong dollar	HKD	7.809200	=	USD	1
Singapore dollar	SGD	1.355500	=	USD	1

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are valued to a small extent at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### Footnotes

\* Floating interest rate.

\*\* Does not include positions with a negative balance, if such exist.

### Composition of the reference portfolio (according to CSSF circular 11/512)

100% MSCI Brazil 10-40

### Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	98.957
Highest market risk exposure	%	118.670
Average market risk exposure	%	107.853

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 7 882.77 as of the reporting date.

British pound	GBP	0.846848	= EUR	1
U.S. dollar	USD	1.069950	= EUR	1

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are valued to a minor extent at derived market values.

**Presentation of the maximum limit** (according to CSSF circular 11/512)  
14.14% of portfolio value

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure	%	0.235
Highest market risk exposure	%	0.730
Average market risk exposure	%	0.394

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **absolute value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled USD 0.00 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

# DWS Invest China Bonds

## Market abbreviations

### Contracting parties for forward currency transactions

Barclays Bank Ireland PLC, BNP Paribas S.A., Bofa Securities Europe S.A., Citigroup Global Markets Europe AG, Deutsche Bank AG, Nomura Financial Products Europe GmbH, Société Générale and UBS AG.

## Exchange rates (indirect quotes)

As of June 28, 2024

Swiss franc	CHF	0.898950	=	USD	1
Chinese yuan renminbi	CNY	7.296800	=	USD	1
Euro	EUR	0.934623	=	USD	1
Swedish krona	SEK	10.616850	=	USD	1

## Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are valued to a small extent at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

## Footnotes

\* Floating interest rate.

\*\* The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).

\*\*\* Does not include positions with a negative balance, if such exist.

MSCI EM China 10/40 NET EUR Index

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure	%	89.149
Highest market risk exposure	%	114.186
Average market risk exposure	%	105.641

## DWS Invest Chinese Equities

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are valued to a minor extent at derived market values.

Class ND .....	Count	6 145.000

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
70% iBoxx Euro Overall Index, 30% MSCI All Country World Index, in EUR

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure .....	%	62.980
Highest market risk exposure .....	%	119.111
Average market risk exposure .....	%	101.660

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.2, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 162 843 902.99 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are valued to a small extent at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### Footnotes

\* Floating interest rate.

\*\* Does not include positions with a negative balance, if such exist.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
14.14% of portfolio value

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure .....	%	0.976
Highest market risk exposure .....	%	1.984
Average market risk exposure .....	%	1.643

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **absolute value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.1, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 505 460.00 as of the reporting date.

DB = Deutsche Bank AG Frankfurt

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are valued to a small extent at derived market values.

### Footnotes

\* Floating interest rate.

\*\* Does not include positions with a negative balance, if such exist.

**Presentation of the maximum limit** (according to CSSF circular 11/512)  
14.14% of portfolio value

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure	%	2.571
Highest market risk exposure	%	3.028
Average market risk exposure	%	2.778

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **absolute value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 1.4, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 249 999 262.39 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

### Market abbreviations

#### Contracting party for derivatives (with the exception of forward currency transactions)

DB = Deutsche Bank AG Frankfurt

#### Contracting parties for forward currency transactions

Barclays Bank Ireland PLC, BNP Paribas S.A., Bofa Securities Europe S.A., Citigroup Global Markets Europe AG, Deutsche Bank AG, Morgan Stanley Europe SE, Nomura Financial Products Europe GmbH, Royal Bank of Canada (UK), State Street Bank International GmbH, Toronto Dominion Bank and UBS AG.

### Securities loans

The following securities were transferred under securities loans at the reporting date:

Security name	Currency/ quantity/ principal amount	Quantity/ principal amount	Securities loans Total market value in EUR No fixed maturity	Total
0.00 % Citigroup Global Markets Funding Luxembourg SCA (MTN) 2023/2028	EUR	100 000	10 651 600.00

U.S. dollar	USD	1.069950	=	EUR	1

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### Footnotes

- \* Some or all of these securities are lent.
- \*\* The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).
- \*\*\* Does not include positions with a negative balance, if such exist.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
BBG MSCI Euro Corporate Green Bond 5% Capped

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure .....	%	78.694
Highest market risk exposure .....	%	116.389
Average market risk exposure .....	%	102.417

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.18, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 35 199 423.20 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

### Market abbreviations

#### Futures exchanges

### Exchange rates (indirect quotes)

As of June 28, 2024

British pound .....	GBP	0.846848	= EUR	1
U.S. dollar .....	USD	1.069950	= EUR	1

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### Footnotes

\* Floating interest rate.

\*\* Does not include positions with a negative balance, if such exist.

## DWS Invest Corporate Hybrid Bonds

**Presentation of the maximum limit** (according to CSSF circular 11/512)  
14.14% of portfolio value

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure	%	1.075
Highest market risk exposure	%	1.344
Average market risk exposure	%	1.240

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **absolute value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.2, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 23 959 797.37 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

### Market abbreviations

#### Contracting parties for forward currency transactions

Barclays Bank Ireland PLC, Morgan Stanley Europe SE, State Street Bank International GmbH and The Bank of New York Mellon SA.

### Securities loans

The following securities were transferred under securities loans at the reporting date:

Security name	Currency/ quantity/ principal amount	Quantity/ principal amount	Securities loans Total market value in EUR No fixed maturity	Total
6.75 % Eurofins Scientific SE 2023/perpetual*	EUR	800 000	807 240.00	
1.50 % Stedin Holding NV 2021/perpetual*	EUR	4 000 000	3 706 800.00	
<b>Total receivables from securities loans</b>			<b>4 514 040.00</b>	<b>4 514 040.00</b>

#### Contracting party for securities loans

Goldman Sachs Bank Europe SE EQ

#### Total collateral pledged by third parties for securities loans

thereof:			<b>EUR</b>	<b>4 767 691.08</b>
Bonds			EUR	1 300 935.79
Equities			EUR	3 466 755.29

### Exchange rates (indirect quotes)

As of June 28, 2024				
Swiss franc	CHF	0.961832	= EUR	1
British pound	GBP	0.846848	= EUR	1
Swedish krona	SEK	11.359500	= EUR	1
Singapore dollar	SGD	1.450317	= EUR	1
U.S. dollar	USD	1.069950	= EUR	1

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### Footnotes

- \* Floating interest rate
- \*\* Some or all of these securities are lent.
- \*\*\* Does not include positions with a negative balance, if such exist.

**Presentation of the maximum limit** (according to CSSF circular 11/512)  
14.14% of portfolio value

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure .....	%	1.146
Highest market risk exposure .....	%	1.544
Average market risk exposure .....	%	1.346

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **absolute value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.3, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 25 607 862.76 as of the reporting date.

### Market abbreviations

#### Futures exchanges

MS = Morgan Stanley Bank AG

#### Contracting party for derivatives (with the exception of forward currency transactions)

DB = Deutsche Bank AG Frankfurt

#### Contracting parties for forward currency transactions

Barclays Bank Ireland PLC and Morgan Stanley Bank AG.

### Exchange rates (indirect quotes)

Swiss franc .....	CHF	0.961832	= EUR 1
British pound .....	GBP	0.846848	= EUR 1
U.S. dollar .....	USD	1.069950	= EUR 1

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are valued to a minor extent at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### Footnotes

\* Floating interest rate.

\*\* Does not include positions with a negative balance, if such exist.

### Composition of the reference portfolio (according to CSSF circular 11/512)

STOXX Eurozone 50 (Net Return)

### Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	80.648
Highest market risk exposure	%	96.704
Average market risk exposure	%	89.589

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.00, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 195 760.96 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

---

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### Footnote

\* Does not include positions with a negative balance, if such exist.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

A small portion of the assets reported in this report is valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### Footnote

\* The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI World Net TR Index in EUR

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure	%	91.212
Highest market risk exposure	%	108.500
Average market risk exposure	%	102.206

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 6 935.80 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are valued at derived market values.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
TOPIX 100 Index

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure .....	%	81.591
Highest market risk exposure .....	%	103.139
Average market risk exposure .....	%	85.268

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled JPY 0.00 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

## DWS Invest CROCI Sectors Plus

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI World Net TR Index in EUR

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure	%	105.029
Highest market risk exposure	%	148.253
Average market risk exposure	%	118.033

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

### Market abbreviations

#### Contracting parties for forward currency transactions

Nomura Financial Products Europe GmbH, Société Générale, State Street Bank International GmbH, Toronto Dominion Bank and UBS AG.

### Exchange rates (indirect quotes)

As of June 28, 2024

Australian dollar	AUD	1.604244	=	EUR	1
Swiss franc	CHF	0.961832	=	EUR	1
Danish krone	DKK	7.457552	=	EUR	1
British pound	GBP	0.846848	=	EUR	1
Japanese yen	JPY	171.673498	=	EUR	1
Norwegian krone	NOK	11.402031	=	EUR	1
Swedish krona	SEK	11.359500	=	EUR	1
U.S. dollar	USD	1.069950	=	EUR	1

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### Footnotes

\* The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).

\*\* Does not include positions with a negative balance, if such exist.

## Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are valued to a minor extent at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

## Footnote

\* Does not include positions with a negative balance, if such exist.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
S&P 500 Net Dividends Reinvested Index (Net USD)

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure . . . . .	%	89.618
Highest market risk exposure . . . . .	%	104.929
Average market risk exposure . . . . .	%	94.693

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled USD 0.00 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are valued to a minor extent at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI World Net TR Index in EUR

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure	%	111.504
Highest market risk exposure	%	134.561
Average market risk exposure	%	118.069

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 103 070.66 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
JP Morgan EMBI Global Diversified Index

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure .....	%	86.966
Highest market risk exposure .....	%	94.152
Average market risk exposure .....	%	89.822

The values-at-risk were calculated for the period from January 1, 2024, through January 10, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.9, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled USD 13.796.648.39 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

Russian equities, bonds and depositary receipts such as ADRs/GDRs were written down in full to a memo value of EUR 0.0001 as of March 3, 2022, because these were either prohibited from exchange trading or western investors were excluded from Russian markets. This valuation method will be reviewed at the regular meetings of DWS's Pricing Committee.

The fund expected cash inflows of EUR 982 120.00 from outstanding dividend and interest payments by Russian companies as of the end of the liquidation date on January 10, 2024, which are accounted for off the books. However, due to the current political situation, it is not possible to forecast whether the dividend and interest payments by the Russian companies will be resumed at a later date.

### Footnotes

\* Some or all of these securities are lent.

\*\* Does not include positions with a negative balance, if such exist.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
JP Morgan EMBI Global Diversified High Yield Index in EUR

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure .....	%	59.564
Highest market risk exposure .....	%	66.237
Average market risk exposure .....	%	63.123

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.59, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 93 776 391.99 as of the reporting date.

### Market abbreviations

**Contracting party for forward currency transactions**  
UBS AG.

### Exchange rates (indirect quotes)

As of June 28, 2024

U.S. dollar ..... USD      1.069950      =    EUR      1

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are valued to a minor extent at derived market values.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
Bloomberg Commodity Index Total Return

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure	%	74.504
Highest market risk exposure	%	126.187
Average market risk exposure	%	101.988

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 2.45, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled USD 216 934 975.47 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

### Market abbreviations

#### Contracting parties for derivatives (with the exception of forward currency transactions)

GS = Goldman Sachs Bank Europe SE  
JP = J.P. Morgan SE

#### Contracting parties for forward currency transactions

Morgan Stanley Europe SE and UBS AG.

---

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### Footnotes

- \* Floating interest rate.
- \*\* Does not include positions with a negative balance, if such exist.

## DWS Invest ESG Asian Bonds

### Composition of the reference portfolio (according to CSSF circular 11/512)

JP Morgan ACI - Investment Grade

### Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	40.376
Highest market risk exposure	%	87.942
Average market risk exposure	%	62.593

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled USD 6.59 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

### Market abbreviations

#### Contracting parties for forward currency transactions

Citigroup Global Markets Europe AG, Deutsche Bank AG, Morgan Stanley Europe SE and UBS AG.

### Exchange rates (indirect quotes)

As of June 28, 2024

Brazilian real	BRL	5.577450	=	USD	1
Swiss franc	CHF	0.898950	=	USD	1
Euro	EUR	0.934623	=	USD	1
Swedish krona	SEK	10.616850	=	USD	1
Singapore dollar	SGD	1.355500	=	USD	1

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are valued to a small extent at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### Footnotes

- \* Floating interest rate.
- \*\* The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).
- \*\*\* Does not include positions with a negative balance, if such exist.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI All Country World Index, in EUR

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure	%	125.881
Highest market risk exposure	%	154.975
Average market risk exposure	%	140.806

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 210 208 555.75 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### Footnotes

\* The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).

\*\* Does not include positions with a negative balance, if such exist.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
80% MSCI All Country World Net TR Index - in EUR, 20% iBoxx Euro Overall Index

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure .....	%	80.743
Highest market risk exposure .....	%	96.700
Average market risk exposure .....	%	89.915

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.2, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 10 270 472.40 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

# DWS Invest ESG Dynamic Opportunities

## Market abbreviations

### Contracting parties for forward currency transactions

Deutsche Bank AG, Morgan Stanley Europe SE and State Street Bank International GmbH.

## Exchange rates (indirect quotes)

Norwegian krone	NOK	11.402031	=	EUR	1
U.S. dollar	USD	1.069950	=	EUR	1

## Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

## Footnotes

- \* Floating interest rate.
- \*\* The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).
- \*\*\* Does not include positions with a negative balance, if such exist.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI Emerging Markets Net EUR (EUR levels)

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure .....	%	93.877
Highest market risk exposure .....	%	112.205
Average market risk exposure .....	%	103.011

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

A small portion of the assets reported in this report is not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### Footnote

\* The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).

## DWS Invest ESG Equity Income

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI World High Dividend Yield

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure	%	84.458
Highest market risk exposure	%	90.861
Average market risk exposure	%	87.257

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### Footnotes

\* The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).

\*\* Does not include positions with a negative balance, if such exist.

**Presentation of the maximum limit** (according to CSSF circular 11/512)  
14.14% of portfolio value

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure	%	0.670
Highest market risk exposure	%	1.083
Average market risk exposure	%	0.819

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **absolute value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.6, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 473 360 871.26 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

### Market abbreviations

#### Futures exchanges

DB = Deutsche Bank AG Frankfurt

#### Contracting parties for forward currency transactions

Barclays Bank Ireland PLC, Morgan Stanley Europe SE, The Bank of New York Mellon SA and UBS AG.

### Securities loans

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### Footnotes

- \* Floating interest rate.
- \*\* Some or all of these securities are lent.
- \*\*\* The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).
- \*\*\*\* Does not include positions with a negative balance, if such exist.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
Markit iBoxx Euro Corporate Index

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure	%	83.859
Highest market risk exposure	%	130.401
Average market risk exposure	%	104.777

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.2, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 43 652 028.25 as of the reporting date.

### Market abbreviations

#### Futures exchanges

DB = Deutsche Bank AG Frankfurt

#### Contracting party for derivatives (with the exception of forward currency transactions)

BC = Barclays Bank Ireland PLC

#### Contracting party for forward currency transactions

Barclays Bank Ireland PLC.

### Exchange rates (indirect quotes)

As of June 28, 2024

British pound .....	GBP	0.846848	=	EUR	1
U.S. dollar .....	USD	1.069950	=	EUR	1

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### Footnotes

- \* Floating interest rate.
- \*\* Does not include positions with a negative balance, if such exist.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
70% iBoxx Euro Corporates 10+ Index, 30% iBoxx Euro Corporate 7-10 Year Index

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure	%	71.800
Highest market risk exposure	%	105.723
Average market risk exposure	%	101.496

The values-at-risk were calculated for the period from January 24, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.1, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 2 867 695.00 as of the reporting date.

### Market abbreviations

#### Futures exchanges

DB = Deutsche Bank AG Frankfurt

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### Footnotes

- \* Floating interest rate.
- \*\* Does not include positions with a negative balance, if such exist.

### Composition of the reference portfolio (according to CSSF circular 11/512)

Tokyo Stock Price (TOPIX) Index - BRS only

### Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure .....	%	83.694
Highest market risk exposure .....	%	101.813
Average market risk exposure .....	%	94.070

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.2, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 45 179 685.02 as of the reporting date.

### Market abbreviations

#### Contracting party for forward currency transactions

Barclays Bank Ireland PLC.

U.S. dollar	USD	1.069950	= EUR	1

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are valued to a minor extent at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### Footnotes

\* Floating interest rate.

\*\* Some or all of these securities are lent.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
50% STOXX Europe Mid 200, 50% STOXX Europe Small 200 (Net Return)

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure .....	%	83.853
Highest market risk exposure .....	%	121.800
Average market risk exposure .....	%	101.034

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 8 092 002.57 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### Footnote

\* Does not include positions with a negative balance, if such exist.

**Presentation of the maximum limit** (according to CSSF circular 11/512)  
14.14% of portfolio value

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure .....	%	0.085
Highest market risk exposure .....	%	0.299
Average market risk exposure .....	%	0.155

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **absolute value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.35, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 130 750 360.02 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

### Market abbreviations

#### Contracting parties for derivatives (with the exception of forward currency transactions)

CIT = Citibank AG  
DB = Deutsche Bank AG Frankfurt

#### Contracting parties for forward currency transactions

Barclays Bank Ireland PLC, BNP Paribas S.A., Bofa Securities Europe S.A., Citigroup Global Markets Europe AG, Morgan Stanley Europe SE, Royal Bank of Canada (UK), Société Générale, State Street Bank International GmbH, Toronto Dominion Bank and UBS AG.

### Exchange rates (indirect quotes)

As of June 28, 2024				
Swiss franc .....	CHF	0.961832	=	EUR 1
British pound .....	GBP	0.846848	=	EUR 1
U.S. dollar .....	USD	1.069950	=	EUR 1

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### Footnotes

\* Floating interest rate.

\*\* Does not include positions with a negative balance, if such exist.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
BBG Global Aggregate Corporate EUR Hedged Index

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure .....	%	93.058
Highest market risk exposure .....	%	105.226
Average market risk exposure .....	%	99.237

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 1.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 203.397.593 41 as of the reporting date.

## DWS Invest ESG Global Corporate Bonds

---

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### Footnotes

- \* Floating interest rate.
- \*\* Some or all of these securities are lent.
- \*\*\* Does not include positions with a negative balance, if such exist.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI Emerging Markets Net EUR (EUR levels)

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure .....	%	104.678
Highest market risk exposure .....	%	118.868
Average market risk exposure .....	%	109.417

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are valued to a small extent at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### Footnotes

\* The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).

\*\* Does not include positions with a negative balance, if such exist.

Class XC	Count	62 380.000

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI World Health Care Gross Index (in EUR)

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure	%	75.846
Highest market risk exposure	%	85.367
Average market risk exposure	%	82.015

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

U.S. dollar	USD	1.069950	= EUR	1

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### Composition of the reference portfolio (according to CSSF circular 11/512)

55% MSCI All Country World Net TR Index - in EUR, 35% BBG High Yield 2% Issuer Capped Index EUR Hedged, 10% JP Morgan GBI-EM Global Diversified Index - in EUR

### Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	72.261
Highest market risk exposure	%	102.499
Average market risk exposure	%	90.040

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.8, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 71 448 343.75 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### Footnotes

\* Floating interest rate

\*\* Does not include positions with a negative balance, if such exist.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
70% MSCI WORLD INFRASTRUCTURE INDEX in EUR, 30% FTSE EPRA Nareit Developed Index

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure .....	%	108.521
Highest market risk exposure .....	%	136.408
Average market risk exposure .....	%	119.474

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### Footnote

\* The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).

## DWS Invest ESG Qi LowVol World

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI World Net TR Index in EUR

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure	%	84.755
Highest market risk exposure	%	96.646
Average market risk exposure	%	89.063

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 696 280.00 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### Footnote

\*Does not include positions with a negative balance, if such exist.

### Composition of the reference portfolio (according to CSSF circular 11/512)

27.5% Dow Jones Brookfield Global Infrastructure Net Total Return Index in EUR, 27.5% FTSE EPRA Nareit Developed Net Index EUR, 25% BBG Global Inflation Linked Floating Composite in EUR, 20% S&P Global Natural Resources Net Total Return in EUR

### Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure .....	%	91.066
Highest market risk exposure .....	%	100.801
Average market risk exposure .....	%	94.530

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI World Industrials NET EUR version Composite

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure .....	%	88.984
Highest market risk exposure .....	%	114.705
Average market risk exposure .....	%	104.909

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

### Market abbreviations

#### Contracting party for forward currency transactions

State Street Bank International GmbH.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### Footnote

\* The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).

Class USD LCH.....	Count	25 616.861

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
STOXX Eurozone 50 (Net Return)

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure.....	%	87.041
Highest market risk exposure.....	%	105.605
Average market risk exposure.....	%	97.492

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### Footnote

\* The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI All Country World Net TR Index - in EUR

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure	%	94.431
Highest market risk exposure	%	106.374
Average market risk exposure	%	100.719

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.14, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 4 265 983.61 as of the reporting date.

## DWS Invest ESG Women for Women

---

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### Footnote

\* Does not include positions with a negative balance, if such exist.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
Markit iBoxx Euro Corporate Index

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure	%	90.318
Highest market risk exposure	%	113.828
Average market risk exposure	%	101.882

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.2, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 351 186 029.45 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

### Market abbreviations

#### Futures exchanges

MS = Morgan Stanley Bank AG

#### Contracting party for derivatives (with the exception of forward currency transactions)

BC = Barclays Bank Ireland PLC

#### Contracting parties for forward currency transactions

Citigroup Global Markets Europe AG, Morgan Stanley Europe SE and State Street Bank International GmbH.

U.S. dollar	USD	1.069950	= EUR	1

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are valued to a minor extent at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### Footnotes

- \* Floating interest rate
- \*\* Some or all of these securities are lent.
- \*\*\* The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).
- \*\*\*\* Does not include positions with a negative balance, if such exist.

## DWS Invest Euro High Yield Corporates

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
ICE BofA BB-B Euro HY Non-Financial Fixed & Floating Constrained Index

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure	%	84.814
Highest market risk exposure	%	107.302
Average market risk exposure	%	95.732

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.2, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 233 581 102.33. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

### Market abbreviations

**Contracting party for derivatives (with the exception of forward currency transactions)**

GS = Goldman Sachs AG

**Contracting parties for forward currency transactions**

Barclays Bank Ireland PLC, Morgan Stanley Europe SE, State Street Bank International GmbH and UBS AG.

Swedish krona	SEK	11.359500	= EUR	1
U.S. dollar	USD	1.069950	= EUR	1

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### Footnotes

- \* Floating interest rate
- \*\* Some or all of these securities are lent.
- \*\*\* The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).
- \*\*\*\* Does not include positions with a negative balance, if such exist.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
 Markit iBoxx Eurozone Index

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure	%	90.197
Highest market risk exposure	%	108.326
Average market risk exposure	%	96.525

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.2, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 129 816 400.00 as of the reporting date.

Equities	EUR	290 848 964.48
Cash at bank	EUR	65.39

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### Footnote

\* Some or all of these securities are lent.

\*\* Does not include positions with a negative balance, if such exist.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI Europe Net Index in EUR

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure	%	88.281
Highest market risk exposure	%	106.880
Average market risk exposure	%	98.312

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated by derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are valued to a small extent at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
DAX CDAX Index

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure .....	%	109.509
Highest market risk exposure .....	%	120.432
Average market risk exposure .....	%	114.153

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.1 whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 23 465 397.75 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

### Market abbreviations

#### Futures exchanges

DB = Deutsche Bank AG Frankfurt

#### Contracting party for derivatives (with the exception of forward currency transactions)

DB = Deutsche Bank AG Frankfurt

### Exchange rates (indirect quotes)

As of June 28, 2024

Swiss franc .....	CHF	0.961832	=	EUR	1
British pound .....	GBP	0.846848	=	EUR	1
U.S. dollar .....	USD	1.069950	=	EUR	1

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are valued to a small extent at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### Footnote

\* Does not include positions with a negative balance, if such exist.

## DWS Invest Global Agribusiness

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
S&P Global Agribusiness Equity Price Index

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure	%	61.030
Highest market risk exposure	%	78.327
Average market risk exposure	%	67.119

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled USD 0.00 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### Footnote

\* The prepaid placement fee is amortized over a period of three years (as specified in article 12 (d) of the general section of the fund's management regulations).

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure	%	0.887
Highest market risk exposure	%	1.248
Average market risk exposure	%	1.056

## DWS Invest Global Bonds

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.2, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 12 793 053.92 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

### Market abbreviations

#### Contracting parties for forward currency transactions

Barclays Bank Ireland PLC, Morgan Stanley Europe SE, Société Générale and State Street Bank International GmbH.

### Securities loans

The following securities were transferred under securities loans at the reporting date:

Security name	Currency/ quantity/ principal amount	Quantity/ principal amount	Securities loans Total market value in EUR No fixed maturity	Total
0.50 % AIB Group PLC (MTN) 2021/2027*	EUR	500 000	462 600.00

U.S. dollar	USD	1.069950	= EUR	1

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### Footnotes

\* Some or all of these securities are lent.

\*\* Floating interest rate

\*\*\* Does not include positions with a negative balance, if such exist.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
ICE BofA Non-Financial Dev Markets High Yield Constrained 100% USD hedged

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure	%	86.676
Highest market risk exposure	%	104.528
Average market risk exposure	%	95.071

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.4, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled USD 14 483 831.09 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

### Market abbreviations

#### Contracting parties for forward currency transactions

Citigroup Global Markets Europe AG, State Street Bank International GmbH and UBS AG.

### Exchange rates (indirect quotes)

As of June 30, 2024

Canadian dollar	CAD	1.369800	= USD	1
Swiss franc	CHF	0.898950	= USD	1
Euro	EUR	0.934623	= USD	1
British pound	GBP	0.791484	= USD	1

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are valued to a minor extent at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### Footnotes

\* Floating interest rate

\*\* Does not include positions with a negative balance, if such exist.

### Composition of the reference portfolio (according to CSSF circular 11/512)

DJ Brookfield Global Infrastructure Net total in EUR

### Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	101.154
Highest market risk exposure	%	107.407
Average market risk exposure	%	104.016

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

### Market abbreviations

#### Contracting parties for forward currency transactions

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### Footnotes

\* The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).

\*\* Does not include positions with a negative balance, if such exist.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
FTSE EPRA Nareit Developed Index (Gross) in USD

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure	%	88.013
Highest market risk exposure	%	102.008
Average market risk exposure	%	98.900

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled USD 0.00 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Investments reported in this report are valued at derived market values.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
S&P BMI Gold and Precious Metals Gross Index

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure	%	104.304
Highest market risk exposure	%	112.246
Average market risk exposure	%	108.365

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled USD 0.00 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are valued to a minor extent at derived market values.

MSCI EM Latin America 10/40 Gross Index (in EUR)

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure	%	99.168
Highest market risk exposure	%	109.269
Average market risk exposure	%	104.542

## DWS Invest Latin American Equities

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 88 863.37 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are valued to a minor extent at derived market values.

### Composition of the reference portfolio (according to CSSF circular 11/512)

Solactive ISS Paris Aligned Select Euro Corporate IG Index

### Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	92.002
Highest market risk exposure	%	129.709
Average market risk exposure	%	108.785

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.3, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 14 268 146.22 as of the reporting date.

## Market abbreviations

### Futures exchanges

DB = Deutsche Bank AG Frankfurt

### Contracting parties for forward currency transactions

Morgan Stanley Europe SE and State Street Bank International GmbH.

## Exchange rates (indirect quotes)

As of June 28, 2024

British pound .....	GBP	0.846848	= EUR	1
Japanese yen .....	JPY	171.673498	= EUR	1
U.S. dollar .....	USD	1.069950	= EUR	1

## Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are valued to a minor extent at derived market values.

## Footnotes

\* Floating interest rate

\*\* Does not include positions with a negative balance, if such exist.

### Composition of the reference portfolio (according to CSSF circular 11/512)

50% MSCI World Information Tech Index Net Return in EUR, 35% MSCI World Communication Services Index (Net) in EUR, 15% MSCI All Country World Index, in EUR

### Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure .....	%	91.187
Highest market risk exposure .....	%	101.591
Average market risk exposure .....	%	95.688

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

### Exchange rates (indirect quotes)

As of June 28, 2024

Swedish krona .....	SEK	11.359500	=	EUR	1
U.S. dollar .....	USD	1.069950	=	EUR	1

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
60% MSCI All Country World Net TR Index - in EUR, 40% iBoxx Euro Overall Index

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure	%	73.041
Highest market risk exposure	%	120.687
Average market risk exposure	%	103.585

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.4, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 101 094 051.22 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

## Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

## Footnotes

- \* Floating interest rate
- \*\* Some or all of these securities are lent.
- \*\*\* The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).
- \*\*\*\* Does not include positions with a negative balance, if such exist.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI ACWI CLIMATE CHANGE NR Index in EUR

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure	%	88.460
Highest market risk exposure	%	114.938
Average market risk exposure	%	104.527

The values-at-risk were calculated for the period from January 17, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.1, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 827 732.53 as of the reporting date.

Swedish krona	SEK	11.359500	=	EUR	1
U.S. dollar	USD	1.069950	=	EUR	1

## Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI World Index in EUR

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure	%	90.256
Highest market risk exposure	%	105.853
Average market risk exposure	%	95.731

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 254 745.98 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are valued to a minor extent at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

Class TFC .....	Count	100.000
Class XC .....	Count	100 000.000

**Presentation of the maximum limit** (according to CSSF circular 11/512)  
14.14% of portfolio value

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure .....	%	1.383
Highest market risk exposure .....	%	2.183
Average market risk exposure .....	%	1.857

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the absolute value-at-risk approach as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.18, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 1277 435.57 as of the reporting date.

### Market abbreviations

#### Futures exchanges

DB = Deutsche Bank AG Frankfurt

#### Contracting party for forward currency transactions

Société Générale.

### Exchange rates (indirect quotes)

As of June 28, 2024

British pound .....	GBP	0.846848	= EUR	1
U.S. dollar .....	USD	1.069950	= EUR	1

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### Footnotes

\* Floating interest rate

\*\* Does not include positions with a negative balance, if such exist.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI All Country World Index, in EUR

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure .....	%	95.642
Highest market risk exposure .....	%	107.545
Average market risk exposure .....	%	103.222

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are valued to a small extent at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### Footnote

\* Does not include positions with a negative balance, if such exist.

## DWS Invest Short Duration Credit

**Presentation of the maximum limit** (according to CSSF circular 11/512)  
14.14% of portfolio value

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure	%	0.470
Highest market risk exposure	%	0.788
Average market risk exposure	%	0.594

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the absolute value-at-risk approach as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.2, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 98 224 532.94 as of the reporting date.

### Market abbreviations

#### Futures exchanges

MS = Morgan Stanley Bank AG

#### Contracting party for derivatives (with the exception of forward currency transactions)

CIT = Citibank AG

#### Contracting party for forward currency transactions

Morgan Stanley Europe SE.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are valued to a minor extent at derived market values.

### Footnotes

- \* Floating interest rate
- \*\* Some or all of these securities are lent.
- \*\*\* The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).
- \*\*\*\* Does not include positions with a negative balance, if such exist.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
14.14% of portfolio value

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure	%	0.677
Highest market risk exposure	%	1.086
Average market risk exposure	%	0.872

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **absolute value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 1.1, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 68 063 978.79 as of the reporting date.

## Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

## Footnotes

\* Floating interest rate

\*\* The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).

\*\*\* Does not include positions with a negative balance, if such exist.

## DWS Invest Top Asia

### Composition of the reference portfolio (according to CSSF circular 11/512)

MSCI AC Asia ex Japan Net Index in EUR

### Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	93.925
Highest market risk exposure	%	109.244
Average market risk exposure	%	101.083

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI World High Dividend Yield

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

Lowest market risk exposure	%	75.552
Highest market risk exposure	%	82.953
Average market risk exposure	%	79.305

The values-at-risk were calculated for the period from January 1, 2024, through June 30, 2024, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are valued to a minor extent at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### Footnotes

\* Some or all of these securities are lent.

\*\* The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).

\*\*\* Does not include positions with a negative balance, if such exist.

\* The portfolio compositions, incomes, expenses and changes in net assets of the sub-funds managed in foreign currencies were converted into euro at the exchange rates stated below. The attached financial statements represent the assets and liabilities of the individual sub-funds as well as of the fund as a whole. The financial statements for the respective sub-fund are prepared in the currency specified in the sales prospectus while the financial statements for the fund are prepared in its base currency. If the currency of a sub-fund differs from the fund's base currency, the following is carried out within the scope of the consolidation of the individual sub-fund currencies into the fund's base currency: the difference between the net assets of the sub-fund at the beginning of the reporting period converted at exchange rates applicable at the beginning of the reporting period and the value of the net assets of the sub-fund calculated at exchange rates applicable at the end of the reporting period is shown as exchange rate valuation differences on the fund's assets at the beginning of the reporting period in the consolidated statement of changes in net assets for the fund.

Fiscal six-month period 2024 . . . . . USD 1.069950 = EUR 1  
 Fiscal year-end 2023 . . . . . USD 1.107000 = EUR 1  
 Fiscal six-month period 2024 . . . . . JPY 171.673498 = EUR 1  
 Fiscal year-end 2023 . . . . . JPY 156.635028 = EUR 1

\*\* The fund's consolidated net assets, the consolidated statement of income and expenses and the consolidated statement of changes in net assets correspond to the sum of the results of the individual sub-funds. In the case of investments between sub-funds (in which one sub-fund invests in another sub-fund of the same umbrella fund), the corresponding accounts of the fund were not the object of an elimination for the purposes of the consolidated presentation.

\*\*\* In the case of derivatives and forward transactions, the amount reported as "total assets" comprises the positive balance of the netted individual positions within the same type of product, while negative balances are included under "total liabilities".

<sup>1</sup> The sub-fund was launched on January 24, 2024.

<sup>2</sup> The sub-fund was launched on January 17, 2024.

The attached financial statements represent the assets and liabilities of the individual sub-funds as well as of the fund as a whole. The financial statements for the respective sub-fund are prepared in the currency specified in the sales prospectus while the financial statements for the fund are prepared in its base currency. If the currency of a sub-fund differs from the fund's base currency, the following is carried out within the scope of the consolidation of the individual sub-fund currencies into the fund's base currency: the difference between the net assets of the sub-fund at the beginning of the reporting period converted at exchange rates applicable at the beginning of the reporting period and the value of the net assets of the sub-fund calculated at exchange rates applicable at the end of the reporting period is shown as exchange rate valuation differences on the fund's assets at the beginning of the reporting period in the consolidated statement of changes in net assets for the fund.

Fiscal six-month period 2024 . . . . . USD 1.069950 = EUR 1  
Fiscal year-end 2023 . . . . . USD 1.107000 = EUR 1  
Fiscal six-month period 2024 . . . . . JPY 171.673498 = EUR 1  
Fiscal year-end 2023 . . . . . JPY 156.635028 = EUR 1

\*\* The fund's consolidated net assets, the consolidated statement of income and expenses and the consolidated statement of changes in net assets correspond to the sum of the results of the individual sub-funds. In the case of investments between sub-funds (in which one sub-fund invests in another sub-fund of the same umbrella fund), the corresponding accounts of the fund were not the object of an elimination for the purposes of the consolidated presentation.

\*\*\* In the case of derivatives and forward transactions, the amount reported as "total assets" comprises the positive balance of the netted individual positions within the same type of product, while negative balances are included under "total liabilities".

<sup>1</sup> The sub-fund was launched on January 24, 2024.

<sup>2</sup> The sub-fund was launched on January 17, 2024.

\* The portfolio compositions, incomes, expenses and changes in net assets of the sub-funds managed in foreign currencies were converted into euro at the exchange rates stated below. The attached financial statements represent the assets and liabilities of the individual sub-funds as well as of the fund as a whole. The financial statements for the respective sub-fund are prepared in the currency specified in the sales prospectus while the financial statements for the fund are prepared in its base currency. If the currency of a sub-fund differs from the fund's base currency, the following is carried out within the scope of the consolidation of the individual sub-fund currencies into the fund's base currency: the difference between the net assets of the sub-fund at the beginning of the reporting period converted at exchange rates applicable at the beginning of the reporting period and the value of the net assets of the sub-fund calculated at exchange rates applicable at the end of the reporting period is shown as exchange rate valuation differences on the fund's assets at the beginning of the reporting period in the consolidated statement of changes in net assets for the fund.

Fiscal six-month period 2024 . . . . . USD 1.069950 = EUR 1  
Fiscal year-end 2023 . . . . . USD 1.107000 = EUR 1  
Fiscal six-month period 2024 . . . . . JPY 171.673498 = EUR 1  
Fiscal year-end 2023 . . . . . JPY 156.635028 = EUR 1

\*\* The fund's consolidated net assets, the consolidated statement of income and expenses and the consolidated statement of changes in net assets correspond to the sum of the results of the individual sub-funds. In the case of investments between sub-funds (in which one sub-fund invests in another sub-fund of the same umbrella fund), the corresponding accounts of the fund were not the object of an elimination for the purposes of the consolidated presentation.

\*\*\* In the case of derivatives and forward transactions, the amount reported as "total assets" comprises the positive balance of the netted individual positions within the same type of product, while negative balances are included under "total liabilities".

<sup>1</sup> The sub-fund was launched on January 24, 2024.

<sup>2</sup> The sub-fund was launched on January 17, 2024.

#### Quality/Qualities:

Insofar as securities lending transactions, reverse repurchase agreements or transactions with OTC derivatives (except forward currency transactions) are concluded, collateral in one of the following forms is provided to the fund:

- Liquid assets such as cash, short-term bank deposits, money market instruments according to the definition in Directive 2007/16/EC of March 19, 2007, letters of credit and first-demand guarantees that are issued by top-rated credit institutions not affiliated with the counterparty, or bonds issued by an OECD member country or its local authorities or by supranational institutions and authorities at local, regional or international level, regardless of their term to maturity;
- Units of a collective investment undertaking investing in money market instruments that calculates a net asset value daily and has a rating of AAA or an equivalent rating;
- Units of a UCITS that invests predominantly in the bonds and equities listed under the next two indents;
- Bonds, regardless of their term to maturity, that have a minimum rating of low investment-grade;
- Equities admitted to or traded in a regulated market in a member state of the European Union or on an exchange in an OECD member country, provided that these equities are included in a major index.

The Management Company reserves the right to restrict the permissibility of the aforementioned collateral. Furthermore, the Management Company reserves the right to deviate from the aforementioned criteria in exceptional cases.

Additional information on collateral requirements can be found in the sales prospectus for the fund.

Income portion of the Management Company			
Absolute	11 909.47	-	-
In % of gross income	33.00%	-	-
Cost portion of the Management Company	-	-	-

Income portion of third parties			
Absolute	-	-	-
In % of gross income	-	-	-
Cost portion of third parties	-	-	-

If the (sub-)fund has carried out securities lending and borrowing, the (sub-)fund pays 33% of the gross revenues generated from securities lending and borrowing as costs/fees to the Management Company and retains 67% of the gross revenues generated from such transactions. Out of the 33%, the Management Company retains 5% for its own coordination and oversight tasks and pays the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) is paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing securities lending and borrowing.

For simple reverse repurchase agreement transactions (if permitted), i.e., those which are not used to reinvest cash collateral received under securities lending and borrowing or repurchase agreement transactions, the respective (sub-)fund retains 100% of the gross revenues, less the transaction costs that the (sub-)fund pays as direct costs to an external service provider.

The Management Company is a related party to DWS Investment GmbH.

If the (sub-)fund has entered into repurchase agreement transactions, these are currently simple reverse repurchase agreement transactions, and not other (reverse) repurchase agreement transactions. In case other (reverse) repurchase agreement transactions will be used, the sales prospectus will be updated accordingly. The (sub-)fund will then pay up to 33% of the gross revenues generated from (reverse) repurchase agreement transactions as costs/fees to the Management Company and retain at least 67% of the gross revenues generated from such transactions. Out of the maximum of 33%, the Management Company will retain 5% for its own coordination and oversight tasks and will pay the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) will be paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing (reverse) repurchase agreement transactions.

For simple reverse repurchase agreement transactions (if permitted), i.e., those which are not used to reinvest cash collateral received under securities lending and borrowing or repurchase agreement transactions, the respective (sub-)fund retains 100% of the gross revenues, less the transaction costs that the (sub-)fund pays as direct costs to an external service provider.

The Management Company is a related party to DWS Investment GmbH.

If the (sub-)fund has entered into repurchase agreement transactions, these are currently simple reverse repurchase agreement transactions, and not other (reverse) repurchase agreement transactions. In case other (reverse) repurchase agreement transactions will be used, the sales prospectus will be updated accordingly. The (sub-)fund will then pay up to 33% of the gross revenues generated from (reverse) repurchase agreement transactions as costs/fees to the Management Company and retain at least 67% of the gross revenues generated from such transactions. Out of the maximum of 33%, the Management Company will retain 5% for its own coordination and oversight tasks and will pay the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) will be paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing (reverse) repurchase agreement transactions.

#### Quality/Qualities:

Insofar as securities lending transactions, reverse repurchase agreements or transactions with OTC derivatives (except forward currency transactions) are concluded, collateral in one of the following forms is provided to the fund:

- Liquid assets such as cash, short-term bank deposits, money market instruments according to the definition in Directive 2007/16/EC of March 19, 2007, letters of credit and first-demand guarantees that are issued by top-rated credit institutions not affiliated with the counterparty, or bonds issued by an OECD member country or its local authorities or by supranational institutions and authorities at local, regional or international level, regardless of their term to maturity;
- Units of a collective investment undertaking investing in money market instruments that calculates a net asset value daily and has a rating of AAA or an equivalent rating;
- Units of a UCITS that invests predominantly in the bonds and equities listed under the next two indents;
- Bonds, regardless of their term to maturity, that have a minimum rating of low investment-grade;
- Equities admitted to or traded in a regulated market in a member state of the European Union or on an exchange in an OECD member country, provided that these equities are included in a major index.

The Management Company reserves the right to restrict the permissibility of the aforementioned collateral. Furthermore, the Management Company reserves the right to deviate from the aforementioned criteria in exceptional cases.

Additional information on collateral requirements can be found in the sales prospectus for the fund.

#### Quality/Qualities:

Insofar as securities lending transactions, reverse repurchase agreements or transactions with OTC derivatives (except forward currency transactions) are concluded, collateral in one of the following forms is provided to the fund:

- Liquid assets such as cash, short-term bank deposits, money market instruments according to the definition in Directive 2007/16/EC of March 19, 2007, letters of credit and first-demand guarantees that are issued by top-rated credit institutions not affiliated with the counterparty, or bonds issued by an OECD member country or its local authorities or by supranational institutions and authorities at local, regional or international level, regardless of their term to maturity;
- Units of a collective investment undertaking investing in money market instruments that calculates a net asset value daily and has a rating of AAA or an equivalent rating;
- Units of a UCITS that invests predominantly in the bonds and equities listed under the next two indents;
- Bonds, regardless of their term to maturity, that have a minimum rating of low investment-grade;
- Equities admitted to or traded in a regulated market in a member state of the European Union or on an exchange in an OECD member country, provided that these equities are included in a major index.

The Management Company reserves the right to restrict the permissibility of the aforementioned collateral. Furthermore, the Management Company reserves the right to deviate from the aforementioned criteria in exceptional cases.

Additional information on collateral requirements can be found in the sales prospectus for the fund.

Cost portion of third parties	-	-	-

If the (sub-)fund has carried out securities lending and borrowing, the (sub-)fund pays 33% of the gross revenues generated from securities lending and borrowing as costs/fees to the Management Company and retains 67% of the gross revenues generated from such transactions. Out of the 33%, the Management Company retains 5% for its own coordination and oversight tasks and pays the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) is paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing securities lending and borrowing.

For simple reverse repurchase agreement transactions (if permitted), i.e., those which are not used to reinvest cash collateral received under securities lending and borrowing or repurchase agreement transactions, the respective (sub-)fund retains 100% of the gross revenues, less the transaction costs that the (sub-)fund pays as direct costs to an external service provider.

The Management Company is a related party to DWS Investment GmbH.

If the (sub-)fund has entered into repurchase agreement transactions, these are currently simple reverse repurchase agreement transactions, and not other (reverse) repurchase agreement transactions. In case other (reverse) repurchase agreement transactions will be used, the sales prospectus will be updated accordingly. The (sub-)fund will then pay up to 33% of the gross revenues generated from (reverse) repurchase agreement transactions as costs/fees to the Management Company and retain at least 67% of the gross revenues generated from such transactions. Out of the maximum of 33%, the Management Company will retain 5% for its own coordination and oversight tasks and will pay the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) will be paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing (reverse) repurchase agreement transactions.

#### Quality/Qualities:

Insofar as securities lending transactions, reverse repurchase agreements or transactions with OTC derivatives (except forward currency transactions) are concluded, collateral in one of the following forms is provided to the fund:

- Liquid assets such as cash, short-term bank deposits, money market instruments according to the definition in Directive 2007/16/EC of March 19, 2007, letters of credit and first-demand guarantees that are issued by top-rated credit institutions not affiliated with the counterparty, or bonds issued by an OECD member country or its local authorities or by supranational institutions and authorities at local, regional or international level, regardless of their term to maturity;
- Units of a collective investment undertaking investing in money market instruments that calculates a net asset value daily and has a rating of AAA or an equivalent rating;
- Units of a UCITS that invests predominantly in the bonds and equities listed under the next two indents;
- Bonds, regardless of their term to maturity, that have a minimum rating of low investment-grade;
- Equities admitted to or traded in a regulated market in a member state of the European Union or on an exchange in an OECD member country, provided that these equities are included in a major index.

The Management Company reserves the right to restrict the permissibility of the aforementioned collateral. Furthermore, the Management Company reserves the right to deviate from the aforementioned criteria in exceptional cases.

Additional information on collateral requirements can be found in the sales prospectus for the fund.

<b>Other</b>	-	-	-

#### Quality/Qualities:

Insofar as securities lending transactions, reverse repurchase agreements or transactions with OTC derivatives (except forward currency transactions) are concluded, collateral in one of the following forms is provided to the fund:

- Liquid assets such as cash, short-term bank deposits, money market instruments according to the definition in Directive 2007/16/EC of March 19, 2007, letters of credit and first-demand guarantees that are issued by top-rated credit institutions not affiliated with the counterparty, or bonds issued by an OECD member country or its local authorities or by supranational institutions and authorities at local, regional or international level, regardless of their term to maturity;
- Units of a collective investment undertaking investing in money market instruments that calculates a net asset value daily and has a rating of AAA or an equivalent rating;
- Units of a UCITS that invests predominantly in the bonds and equities listed under the next two indents;
- Bonds, regardless of their term to maturity, that have a minimum rating of low investment-grade;
- Equities admitted to or traded in a regulated market in a member state of the European Union or on an exchange in an OECD member country, provided that these equities are included in a major index.

The Management Company reserves the right to restrict the permissibility of the aforementioned collateral. Furthermore, the Management Company reserves the right to deviate from the aforementioned criteria in exceptional cases.

Additional information on collateral requirements can be found in the sales prospectus for the fund.

## DWS Invest Top Dividend

Currency/Currencies:	<b>6. Currency/Currencies of collateral received</b>		
	AUD, CAD, CHF, DKK, EUR, GBP, JPY, NOK, SEK, USD	-	-

	<b>7. Collateral classified by term to maturity (absolute amounts)</b>		
Less than 1 day	-	-	-
1 day to 1 week	-	-	-
1 week to 1 month	-	-	-
1 to 3 months	-	-	-
3 months to 1 year	-	-	-
More than 1 year	-	-	-
No fixed maturity	128 944 100.52	-	-

	<b>8. Income and cost portions (before income adjustment)</b>		
	<b>Income portion of the fund</b>		
Absolute	71 359.24	-	-
In % of gross income	67.00%	-	-
Cost portion of the fund	-	-	-

	<b>Income portion of the Management Company</b>		
Absolute	35 679.62	-	-
In % of gross income	33.00%	-	-
Cost portion of the Management Company	-	-	-

	<b>Income portion of third parties</b>		
Absolute	-	-	-
In % of gross income	-	-	-
Cost portion of third parties	-	-	-

If the (sub-)fund has carried out securities lending and borrowing, the (sub-)fund pays 33% of the gross revenues generated from securities lending and borrowing as costs/fees to the Management Company and retains 67% of the gross revenues generated from such transactions. Out of the 33%, the Management Company retains 5% for its own coordination and oversight tasks and pays the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) is paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing securities lending and borrowing.

For simple reverse repurchase agreement transactions (if permitted), i.e., those which are not used to reinvest cash collateral received under securities lending and borrowing or repurchase agreement transactions, the respective (sub-)fund retains 100% of the gross revenues, less the transaction costs that the (sub-)fund pays as direct costs to an external service provider.

The Management Company is a related party to DWS Investment GmbH.

If the (sub-)fund has entered into repurchase agreement transactions, these are currently simple reverse repurchase agreement transactions, and not other (reverse) repurchase agreement transactions. In case other (reverse) repurchase agreement transactions will be used, the sales prospectus will be updated accordingly. The (sub-)fund will then pay up to 33% of the gross revenues generated from (reverse) repurchase agreement transactions as costs/fees to the Management Company and retain at least 67% of the gross revenues generated from such transactions. Out of the maximum of 33%, the Management Company will retain 5% for its own coordination and oversight tasks and will pay the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) will be paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing (reverse) repurchase agreement transactions.
