- Historical data may not be reliable indication for the future.
- The risk category of a Fund is an indicator but not a target or a guarantee and may shift over time.
- The lowest category does not mean a risk-free investment.
- Why is the Fund in this specific category?
  The risk category is justified by the investment in small capitalisation companies that are likely to be subject to a higher than average volatility due to a high degree of concentration, greater uncertainty because less information is available, there is less liquidity, or due to greater sensitivity to changes in market conditions (social, political and economic conditions).
- The higher the risk, the longer the recommended investment horizon.

Other risks materially relevant to the Fund which are not adequately captured by the indicator are described below:

- Liquidity Risk: This risk arises from the difficulty of selling an asset at a fair market price and at a desired time due to lack of buyers.
- Operational and Custody Risk: Some markets are less regulated than most of the international markets; hence, the services related to custody and liquidation for the subfund on such markets could be more risky.
- Risks related to Shanghai – Hong Kong Stock Connect: This risk relates to securities trading and clearing through the Stock Connect.Stock Connect is subject to quota limitation which may restrict the fund's ability to invest in China A-Shares on a timely basis. In addition, the Stock Connect is novel in nature, the regulations are untested and there is no certainty as to how they will be applied, which may affect the fund's ability to enforce its rights and interests in the China A-Shares.
