

# UBS All-Rounder

## Fund Fact Sheet

UBS Asset Allocation Funds > UBS All-Rounder Funds

## Fund description

- The fund invests worldwide in equities in developed and emerging markets, in government, corporate, high-yield, emerging market and inflation-linked bonds, real estate securities and commodities.
- The fund combines four scenario portfolios that are tailored to the corresponding phase of the economic cycle: upswing, boom, downswing and recession.
- The fund aims to reduce risk (volatility) by keeping the scenario portfolios' impact on performance in balance.
- Investments are largely hedged versus the reference currency.
- The exchange rate risk between USD and CHF is largely hedged.

CASH	-7.2

<sup>1</sup> The percentages represent exposures. The total may exceed 100% as derivative instruments are used within the fund. The maximum equity component in the tactical allocation is 35%.

## Key benefits

- The fund enables investors to remain invested throughout the various phases of the economic cycle.
- No individual part of the fund portfolio can exert too large an influence on performance.
- Active economic cycle management can increase the fund's return potential.

## Scenario portfolios (%)

	Fund
Recession portfolio	40.0
Upswing portfolio	25.0
Downswing portfolio	25.0
Boom portfolio	10.0

## Risks

The fund invests in equities and may therefore be subject to high fluctuations in value. The fund offers no guarantee that its individual Scenario Portfolios, which are over- or underweighted in line with our assessment of the current state of the economy, perform well in the business cycle phase they are geared to. Phases of negative performance cannot be excluded. This requires the corresponding risk tolerance and capacity from investors. All investments are subject to market fluctuations. Every fund has specific risks, which can significantly increase under unusual market conditions. The fund can use derivatives, which may result in additional risks (particularly counterparty risk).
