Objectives and Investment Policy

Objectives and Investment Policy

The Sub-Fund aims to generate capital appreciation over the long term by implementing a qualitative and/or systematic risk-based asset allocation strategy according to which the weight of any given asset or asset class is adjusted with regard to its contribution to the overall risk profile of the Sub-Fund. Other things equal, the higher the risk of fluctuation of the value of an investment or asset or asset class, the lower its weight in the portfolio.
The Sub-Fund invests worldwide in a diversified portfolio consisting of bonds, other fixed or floating-rate debt securities and short-term debt instruments issued or guaranteed by sovereign or non-sovereign issuers, convertible bonds, equities, currencies and/or cash and cash equivalents, either directly or through financial derivative instruments or the use of UCITS and UCIs.
The Sub-Fund may be exposed to alternative asset classes such as precious metals and commodities mainly through the use of UCITS and UCIs or indices.
The Sub-Fund will implement, under normal market conditions, an expected maximum volatility level, defined according to our proprietary models, of 10.5%.
The use of derivatives is part of the investment strategy.

What does it mean?

This indicator (SRRI) represents the annualized historical volatility of the Sub-Fund over a 5-year period. Where there are less than 5 years worth of data, missing returns are simulated using an appropriate benchmark. The SRRI may change over time and should not be used as an indicator of future risk or returns. Even the lowest risk classification does not imply that the Sub-Fund is risk-free or that capital is necessarily guaranteed or protected.

Category

The Sub-Fund invests across a broad range of assets which offer investors exposure to a number of equity, fixed income, currency and credit markets. A diversified asset allocation strategy seeks to balance risk, while dynamically adapting to changing economic environments.

Are there any other particular risks?

The following risks may be materially relevant but may not always be adequately captured by the synthetic risk indicator and may cause additional loss:
- Operational risk and risks related to asset safekeeping: In specific circumstances, there may be a material risk of loss resulting from human error, inadequate or failed internal systems, processes or controls, or from external events.
- Model Risk: Models may be misspecified, badly implemented or may become inoperative when significant changes take place in the financial markets or in the organization. Such a model could unduly influence portfolio management and expose to losses.

For more details about risk, see appendix B “Risk Factors Annex” of the prospectus.
