What does this risk indicator mean?

The above risk indicator ranks potential risk and reward and is consistent with the risk limits set for the Sub-Fund. Historical data, such as that used in calculating this synthetic indicator, may not be a reliable indication of the future risk profile of the Sub-Fund. The lowest category does not mean a 'risk-free' investment. The Sub-Fund's risk indicator is not guaranteed and may change over time. The Sub-Fund's risk category reflects the risk profile of the mix of asset classes in which it invests. For un-hedged currency classes, exchange rate movements may affect the risk indicator where the currency of the underlying investments differs from the currency of the share class.

Additional key risks:

The risk indicator may not adequately capture the following additional key risks of the Sub-Fund:

Operational risk: Losses may occur due to human error or omission, process errors, system disruptions or external events. The Sub-Fund invests in other funds and may be indirectly exposed to a default by the depositary of an underlying fund.

Derivatives risk: Derivatives create leverage in the Sub-Fund and may cause movements in the value of the underlying investments to amplify gains or losses to the Sub-Fund.

Objectives and Investment Policy

Objective: Seeks to achieve a positive return in all types of market conditions.

Portfolio securities: The Sub-Fund invests mainly in other regulated funds, including those following alternative strategies. It may also invest in equities, money market instruments, bonds, deposits with a maximum term of 12 months and interest rate certificates. The Sub-Fund may invest in commodities and real estate, through various instruments, including through regulated funds and may invest up to 20% in commodity index certificates. The Sub-Fund may use derivatives to reduce various risks or for efficient portfolio management.
