JPM Global Allocation Fund C (acc) - EUR a Share Class of JPMorgan Funds – Global Allocation Fund a Sub-Fund of JPMorgan Funds

LU0974381708

The management company is JPMorgan Asset Management (Europe) S.à r.l.

Objectives and Investment Policy

Investment Objective: The Sub-Fund aims to provide long-term capital growth by investing primarily in a flexibly managed portfolio of securities, globally, using financial derivative instruments where appropriate.

Investment Policy: The Sub-Fund will invest primarily, either directly or through the use of financial derivative instruments, in equity securities, debt securities (including convertible bonds, asset-backed securities, mortgage-backed securities, and covered bonds), deposits with credit institutions and money market instruments, commodity index instruments and Real Estate Investment Trusts ("REITs"). These securities may include below investment grade and unrated debt securities. Issuers of these securities may be located in any country, including emerging markets.

The Sub-Fund has a flexible approach to asset allocation and may use long and short positions (achieved through the use of financial derivative instruments) to vary exposure to different asset classes and markets in response to market conditions and opportunities. Allocations may vary significantly and exposure to certain markets, sectors or currencies may be concentrated from time to time.

The Sub-Fund may invest in financial derivative instruments to achieve its investment objective. Such instruments may also be used for the purposes of hedging.

EUR is the reference currency of the Sub-Fund but assets may be denominated in other currencies and currency exposure may be hedged.

Redemption and Dealing: Shares of the Sub-Fund may be redeemed on demand, with dealing normally on a daily basis.

Management Discretion: The Investment Manager has the discretion to buy and sell investments on behalf of the Sub-Fund within the limits of the Objective and Investment Policy.

Benchmark: The benchmark of the Share Class is 60% MSCI World (Total Return Net) Hedged to EUR / 40% JPM Government Bond Index Global (Total Return Gross) Hedged to EUR.

The benchmark is a point of reference against which the performance of the Share Class may be measured. The portfolio of the Sub-Fund may bear little resemblance to its benchmark.

Distribution Policy: This Share Class will not pay dividends.

Risk and Reward Profile

The above rating is based on the historic volatility of the simulated Net Asset Value of this Share Class over the last five years and may not be a reliable indication of the future risk profile of this Share Class.

The risk and reward category shown above is not guaranteed to remain unchanged and may change over time.

A Share Class with the lowest risk rating does not mean a risk-free investment.

Why is this Share Class in this category? This Share Class is classified in category 4 because its simulated Net Asset Value has shown medium fluctuations historically.

Other material risks:

- The value of your investment may fall as well as rise and you may get back less than you originally invested.
- The value of equity securities may go down as well as up in response to the performance of individual companies and general market conditions.
- The value of debt securities may change significantly depending on economic and interest rate conditions as well as the credit worthiness of the issuer. These risks are typically increased for emerging market and below investment grade debt securities.
- In addition, emerging markets may be subject to increased risks, including less developed custody and settlement practices, higher volatility and lower liquidity than non emerging market securities.
- Asset-backed securities and mortgage-backed securities may be highly illiquid, subject to adverse changes to interest rates and to the risk that the payment obligations relating to the underlying assets are not met.

- The value of securities in which the Sub-Fund invests may be influenced by movements in commodity prices which can be very volatile.
- Investments in REITs and companies engaged in the business of real estate may be subject to increased liquidity risk and price volatility due to changes in economic conditions and interest rates.
- Convertible bonds are subject to the credit, interest rate and market risks stated above associated with both debt and equity securities and to risks specific to convertible securities. Convertible bonds may also be subject to lower liquidity than the underlying equity securities.
- The Sub-Fund may be concentrated in, and have net long or net short exposure to, industry sectors, markets and/or currencies. As a result, the Sub-Fund may be more volatile than more broadly diversified funds.
- The Sub-Fund uses financial derivative instruments for investment purposes. The value of financial derivative instruments can be volatile and may result in gains or losses in excess of the amount required initially to establish a position in the derivative. The Management Company is required to disclose in Appendix III of the Prospectus the sum of the gross notional exposure of the financial derivative instruments used (including those used for hedging or efficient portfolio management) as the expected level of leverage. However, this figure does not take into account whether the instrument increases or decreases investment risk and so may not be representative of the overall level of investment risk in the Sub-Fund.
- Short selling may be subject to changes in regulations and losses from short positions may be unlimited.
- Movements in currency exchange rates can adversely affect the return of your investment. The currency hedging that may be used to minimise the effect of currency fluctuations may not always be successful.
- Further information about risks can be found in "Appendix IV - Risk Factors" of the Prospectus.
