Man GLG Flexible Bond

MONTHLY SUMMARY REPORT: 31 MAY 2019 **REPORTING CLASS:** Man GLG Flexible Bond Fund I H USD Acc

FUND AIM

Man GLG Flexible Bond is a long-biased credit fund with the flexibility to invest across the full range of credit and fixed income asset classes. Its principal aim is to achieve long-term capital appreciation.

A complete description of fund aims is set out in the fund's prospectus.

FUND RISKS

The value of your investment and the income from it may rise as well as fall and you may not get back the amount originally invested. Prior to investing in the Fund investors should carefully consider the risks associated with investing, whether the Fund suits their investment requirements and whether they have sufficient resources to bear any losses which may result from an investment in the Fund. Investors should only invest if they understand the terms on which the Fund is offered. Investors should consider the following risks and where appropriate seek professional advice before investing: **Market Risk, Counterparty Risk, Currency Risk, Liquidity Risk, Financial Derivatives Instruments, Leverage Risk, Emerging Markets, Non-Investment Grade Securities**. More details can be found in the risk glossary.

Prior to making investments investors should read and consider the fund's offering documents.

PERFORMANCE STATISTICS (SINCE INCEPTION)

	Reporting Shareclass
Annualised Return	2.97%
Annualised Volatility	4.19%
Sharpe Ratio[2]	0.48

[2] Sharpe ratio is an absolute measure of risk-adjusted return, negative Sharpe ratios are not shown as they can be misleading.

Past Performance is not indicative of future performance. Returns may increase or decrease as a result of currency fluctuations. Performance data is shown net of the reporting class Ongoing Charge Figure (or TER), performance fees and transaction costs and gross of taxes with gross dividend income reinvested, and does not take into account sales and redemption charges where such costs are applicable. Other share classes may charge different fees.

COMMENTARY

The Fund returned 0.47% in May and 5.17% year to date 2019.

The sudden deterioration in trade negotiations between the US and China, as well as a continued slide in economic data prompted a strong risk aversion in financial markets in May. US treasuries were at the forefront of investor repositioning, with the US 10 year yield down 37bps over the month.

Credit markets responded relatively negatively too, as risk aversion in markets halted the very positive momentum seen earlier in 2019. The Barclays global high yield index declined by 1.0% during the month.

Against this negative backdrop, the Fund's credit exposure detracted 0.46% during the month, 0.33% of which came from investment grade and 0.13% from high yield.

Longer dated credit did well in May, boosted by falling yields in core government bond markets. Tesco and GE, some of our conviction names that have performed well during the credit rally in 2019, contributed positively again this month, even if their spreads widened slightly. Italian credits, such as Generali and Unicredit were a particular weak spot for the Fund in the month as they were buffeted by political headwinds in addition to the tough environment for credit.

The Fund's active government bond positioning, at an average of 27% of the portfolio, was a positive contributor, 0.69% in total, as core government bond markets rallied strongly.

The Fund sold exposure to European peripheral debt, following the sudden increase in volatility in May, and used proceeds raised to increase exposure to core government bonds, predominantly through a higher weighting to US treasuries, Germany, France, and initially to a lesser extent gilts. As Brexit negotiations also took a sudden turn for the worse, long dated gilt exposure was added in the Fund too.

In currencies, with European elections looming and safe haven currency positioning thought more necessary a Japanese yen position versus sterling was added to the portfolio, in order to bolster further the portfolio's quality characteristics. Currency positioning added 0.24% to performance in May.

Market outlook

At present there remain significant ongoing issues to resolve between the US and China on trade, following the imposition of tariffs by the Trump administration and retaliatory measures by the Chinese government. At a point where global economic data had already been on a weakening trend, the impact of these trade tensions on global supply chains and investment can probably continue to further undermine global economic growth in the coming months. As a result Central banks, notably the Federal Reserve, can continue to move in the direction of policy accommodation through rate cuts and/or more QE and policy guidance.

Economic data that followed the breakdown in trade talks– but which crucially do not yet reflect the impact of renewed Sino-US tensions - showed weak industrial production and retail sales in both the US and China, and weak PMIs from Europe, particularly Germany, where the manufacturing PMI has been sub-50 since February.

In the UK too, a deal on Brexit seems as far away as ever following an extremely poor European election result for the Conservatives and the resignation of the Prime Minister. Going forward the prospect of protracted further EU negotiations and the higher probability risk of a no deal Brexit outcome can act to undermine business and consumer confidence. The Bank of England, despite recent protestations, are unlikely to raise rates when their global peers are moving in the other direction.

Money markets priced almost three 0.25% rate cuts by year-end 2019 in the US, a significant change from only 50% probability of a 0.25% rate cut by year-end that was priced a month ago. We anticipate the Fed could now lower rates as soon as this summer, if there isn't a swift resolution on trade disagreements, and/or material near term improvement in leading indicators.

As we approach the end of Mario Draghi's tenure as ECB president, whilst interest rates remain firmly on hold into the summer of 2020 for the ECB, they maintain there are levers they can pull if necessary should the Eurozone not continue its recovery as anticipated. A new round of TLTRO's have only recently been announced, but more rate cuts and more likely longer term guidance on rates and more QE is possible later in 2019.

Fund positioning

The Fund has a government bond allocation of 32% at the start of June. After the sharp drop in global government bond yields in recent weeks, that have moved to substantially price in rate cuts and other stimulus measures from central banks, we have turned more cautious on most core government bonds in the near term. This has resulted in reducing longer duration exposure in the US, Germany, UK and France where reasonable exposure was previously held through much of May.

We invested some proceeds of sales of core government bonds into Italy that had previously lagged the moves elsewhere on continued political instability into the European elections. Holdings in short dated US treasuries and gilts remain key positions for safety and portfolio flexibility, and afford some protection from both trade tensions and Brexit risks.

Credit spreads once again look fully valued versus their longer term averages and we remain cautious about adding risk. The fund is looking to avoid credits exposed to a potential cyclical slowdown, through being highly leveraged or are still being too shareholder friendly.

The Fund cautiously adding exposure to £ Petrobras and EUR Pemex bonds in May and early June. These now look very attractively priced and trade significantly cheaper than their US Dollar counterparts. The fund took profits from short dated BHI, GE and Swedbank bonds, which have all performed surprisingly well given their credit risk and duration profiles, as the catalysts we identified around the credits have largely played out.

We chose to take profits on our Total and VW hybrid positions which we felt had become relatively expensive. The Fund also added a position in the longer dated hybrid from SES, which due to its ownership of the C-band spectrum in the US (the wavelength you need for 5G mobile signal) stands to benefit significantly from an auction process. Management have earmarked part of any potential proceeds for debt reduction.

The portfolio's income yield fell slightly to 4.7% at month end, with its yield to maturity similar at 4.0%. The 68% non-government bond exposure has a higher yield to maturity of 5.1% however.

In currencies, the Fund took profits on its Japanese yen exposure in early June, and as a result has moved to a flat position in currency exposure currently.

Model calculation (net): an investor wishes to purchase shares for Euro 1,000. With a maximum issue surcharge of 5.00%, he has to spend a one-off amount of Euro 50.00 when making the purchase. In addition, there may be custodian costs that reduce performance. The custodian costs are decided by your bank's price list and service charges.

‡Entry Charge is up to the rate indicated.

§ Please note that the Fund will, from time to time, assume exposure to equity indices for efficient portfolio management purposes.

GLOSSARY

Annualised Return	An annualised total return is an average amount of money earned by an investment each year over a given time period. It is calculated to show what an investor would earn over a period of time if the annual return was compounded.
Annualised Volatility	Volatility is the rate and extent at which the price of a portfolio, security or index, moves up and down. If the price swings up and down with large movements, it has high volatility. If the price moves more slowly and to a lesser extent, it has lower volatility. It is used as a measure of the riskiness of an investment. Annualised volatility is an average annual amount of volatility over a given time period.
Credit Rating (quality)	A score awarded by S&P, Moody's or Fitch to indicate the financial strength of the issuer of a bond, and the potential for a default on interest and principal payments. For example, according to the S&P rating scheme the top credit rating is 'AAA'. The lowest rating to be considered 'investment grade' is 'BBB-'. Below 'BBB-', bonds are termed 'sub investment grade' or 'high yield'. If more than one rating agency awards a score, the best rating will be chosen. If no official score is awarded by S&P, Moody's or Fitch a rating for the issuer will be used if available.
Duration	Expressed in years and measures the sensitivity of a bond's price to a change in interest rates. There is an inverse relationship between bond prices and interest rates.
Entry Charge	The entry charge shown is a maximum figure and in some cases you might pay less. Please refer to your financial advisor or the distributor for the actual charges.
Exposure	This refers to the part of a portfolio that is subject to the price movements of a specific security, sector, market or economic variable. It is typically expressed as a percentage of the total portfolio, e.g. the portfolio has 10% exposure to the mining sector.
FX Forward	An FX forward contract is an agreement to purchase or sell a set amount of a foreign currency at a specified price for settlement at a predetermined time in the future.
Gross Exposure Rescaled	If the portfolio has a gross exposure of 120% we may in some circumstances rescale this to equal 100% for sector or country breakdowns. For example, if United States Gross exposure is 40% of the 120% in the fund, the rescaled gross exposure would be (40%/120%)*100% which would be 30% so the United States makes up 30% of the total gross exposure when rescaled.
Long Position	A security that is bought in expectation that it will rise in value.
NAV	The Net Asset Value (NAV) represents the value per share. It is calculated by dividing the total net asset value of the fund (the value of the fund's assets less its liabilities) by the number of shares outstanding.
Net and Gross Exposure	The amount of a portfolio's exposure to the market. Net exposure is calculated by subtracting the amount of the portfolio with short market exposure from the amount of the portfolio that is long. For example, if a portfolio is 100% long and 20% short, its net exposure is 80%. Gross exposure is calculated by combining the absolute value of both long and short positions. For example, if a portfolio is 100% long and 20% short, its gross exposure is 120%.
Ongoing Charge Figure (OCF)	The OCF is based on expenses and may vary from year to year. It includes management fees but excludes performance fees (where applicable) and portfolio transaction costs, except in the case of an entry/exit charge paid by the Fund when buying or selling units in another sub-fund. The charges you pay are used to pay the costs of running the Fund, including the costs of marketing and distributing it. These charges reduce the potential growth of your investment.
Performance Fee	The payment made to an Investment Manager if certain performance levels are achieved (often over and above any levels set out in the investment objective) within a set time period. Please refer to the fund's prospectus for a complete description.
Redemption Fee	This is the maximum amount by which your investment may be reduced prior to the proceeds being paid out. Redemption fees are only applicable to Man GLG Flexible Bond D H USD Div and are payable on redemptions within 48 months of subscription. During the first 36 months the fee is calculated as 2.00% of NAV. From 37-48 months the fee is calculated as 1.00% of NAV.
Running Yield	At security level, running yield is the annual income on an investment divided by its current market value. At fund level, it is a weighted average of the contributing securities, based on absolute weights.
Sector	A sector is an area of the economy in which businesses share the same or a related product or service. It can also be thought of as an industry or market that shares common operating characteristics. Dividing an economy into different pieces allows for more in-depth analysis of the economy as a whole.
Sharpe Ratio	The Sharpe Ratio is a measure for calculating risk-adjusted return, and has become the industry standard for such calculations. The Sharpe Ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. The higher the ratio the better, with a number greater than 1 usually considered good, a number greater than 2 considered very good and a ratio of 3 or higher considered excellent. As it is an absolute measure of risk-adjusted return, negative Sharpe Ratios can be misleading and are therefore shown as N/A.
Short Position	Fund managers use this technique to borrow a security and then sell it with the intention of buying it back for less when the price falls. The position profits if the security falls in value. Within UCITS funds, derivatives – such as contracts for difference (CFDs) – can be used to simulate a short position.
Synthetic Risk & Reward Indicator (SRRI)	Featured on the Key Investor Information Document (KIID), the SRRI is a measure of the overall risk and reward profile of a fund. Funds are categorised on a scale from 1 to 7 where 1 is the lowest risk and 7 is the highest. Typically, the SRRI is derived from the volatility of past returns over a 5-year period. Investors should be aware the indicator is based on historical data and may not be a reliable indication of the future risk profile of the Fund. The lowest category does not mean risk free.
Yield	Yield to maturity (YTM) is the total return anticipated on a bond if the bond is held until the end of its lifetime. Yield to maturity is considered a long-term bond yield expressed as an annual rate, coupons are assumed to be reinvested at the same rate. This takes into account the change in yield should the issuer have the desire and the ability to retire the debt prior to maturity.
YTD	Year-to-date.

RISK GLOSSARY

Market Risk - The Fund is subject to normal market fluctuations and the risks associated with investing in international securities markets. Therefore, the value of your investment and the income from it may rise as well as fall and you may not get back the amount originally invested.
Counterparty Risk - The Fund will be exposed to credit risk on counterparties with which it trades in relation to on-exchange traded instruments such as futures and options and where applicable, 'over-the-counter' ("OTC","non-exchange") transactions. OTC instruments may also be less liquid and are not afforded the same protections that may apply to participants trading instruments on an organised exchange.
Currency Risk - The value of investments designated in another currency may rise and fall due to exchange rate fluctuations. Adverse movements in currency exchange rates may result in a decrease in return and a loss of capital. It may not be possible or practicable to successfully hedge against the currency risk exposure in all circumstances.
Liquidity Risk -The Fund may make investments or hold trading positions in markets that are volatile and which may become illiquid. Timely and cost efficient sale of trading positions can be impaired by decreased trading volume and/or increased price volatility.
Financial Derivatives Instruments - The Fund will invest financial derivative instruments ("FDI") (instruments whose prices are dependent on one or more underlying asset) to achieve its investment objective. The use of FDI involves additional risks such as high sensitivity to price movements of the asset on which it is based. The extensive use of FDI may significantly multiply the gains or losses.
Leverage Risk -The Fund's use of FDI may result in increased leverage which may lead to significant losses.
Emerging Markets - The Fund may invest a significant proportion of its assets in securities with exposure to emerging markets which involve additional risks relating to matters such as the illiquidity of securities and the potentially volatile nature of markets not typically associated with investing in other more established economies or markets.
Non-Investment Grade Securities - The Fund may invest a significant proportion of its assets in non-investment grade securities (such as "high yield" securities) are considered higher risk investments that may cause income and principal losses for the Fund. They are instruments which credit agencies have given a rating which indicates a higher risk of default. The market values for high yield bonds and other instruments tend to be volatile and they are less liquid than investment grade securities.
A complete description of risks is set out in the Fund's prospectus.

Important information

The Fund is a sub-fund of Man Umbrella SICAV, domiciled in Luxembourg and registered with the Commission de Surveillance du Secteur Financier. Full details of the Fund objectives, investment policy and risks are located in the Prospectus which is available with the Key Investor Information Document in English and in an official language of the jurisdictions in which the Fund is registered for public sale, together with the Report and Accounts of the UCITS. The Fund's documentation are available free of charge from the local information/paying agent, from authorised distributors and from www.man.com.

In order to fulfil the fund's objectives the Prospectus allows the manager the ability to invest principally in units of other collective investment schemes, bank deposits, derivatives contracts designed with the aim of gaining short term exposure to an underlying stock or index at a lower cost than owning the asset, or assets aiming to replicate a stock or debt securities index.

The Fund currently has or intends to have more than 35% of its total holdings in bonds issued by or guaranteed by:

Eurofima

European Investment Bank

Governments of the following States: United Kingdom, United States, Canada, Norway, Japan, Australia, Spain, Finland, Germany, Holland, France, Belgium, Ireland, Sweden, Austria, Italy, Denmark, New Zealand, Switzerland, Poland, Hungary, Czech Republic, Hong Kong, Singapore

Inter-American Development Bank

International Financing Corp

KFW

World Bank

The value of an investment and any income derived from it can go down as well as up and investors may not get back their original amount invested. Alternative investments can involve significant additional risks.
